To make the situation more embarrassing the institution with which teachers have had most to compete—athletics—is being conducted with business-like efficiency. A Harvard professor makes no secret of his opinion that not a course in the college can show the organization which undergraduates regularly demand of athletic coaches. This is not an overstatement. Any one who has followed college athletics must have been impressed by the hard work, the drudgery, to which boys submit, their devotion never flagging meanwhile. To go out and run a mile, rain or shine, or grind away at the oar day by day, even the youngest of professors would find extremely irksome. Nor is it quite true that the hero-worship coming to members of "the team" is all that boys have in mind who go through their ordeals. Reward nevertheless comes to him who "serves" his college. He is almost sure to make a desirable club.

Recognition of this sort would not be forthcoming, however, unless the undergraduate body regarded athletics as the chief common bond among students to-day. As such, athletics have to be reckoned with. To see rich boys and poor boys fast friends because they are on the same team, or because they lose themselves in their enthusiasm in the cheering sections, is to watch a great force making for democracy. And the college "loyalty" created is no trivial thing. This we may admit without blinding our eyes to the immense follies and dangers of the athletic obsession.

And we may also say that it is only fair to admit that, with conditions such as they are, opportunities for a common bond other than athletics hardly exist. What the distracting elements are and how long they have been operative, educators are trying hard to ascertain. They consult their own memories or such a book as Professor Beers's "The Ways of Yale in the Consulship of Plancus," and observe that not more than forty or fifty years ago robust and attractive boys were glad to talk of Plato or to swap a Latin phrase, and to pay homage to one who could turn a verse or write a thoughtful essay. Since then the elective system has been introduced pretty generally, and it has been blamed indiscriminately for the change; especially on the ground that it broke up the traditions of general courses where students met together in large numbers. Harvard has apparently felt convinced of this, and is calling a halt.

Yet we believe that another result of the elective system is quite as much to blame—we mean the high specialization of instruction, by which the curriculum is split up into dozens of courses of tiny range. So circumscribed are these courses that a man of no imagination and no reading, provided only he be the product of the Ph.D. system, can often give them with apparent satisfaction; that the information so imparted has any place in education, we very much doubt. This condition, coupled with the small salaries,

has resulted in a type of instructor for which the student has little respect —certainly, not nearly so much, as a rule, as he has for the mental equipment of his athletic coach. The lack of respect, itself, is no secret. It was stated as one of the reasons for raising the large sum of money a few years ago at Cambridge; the salary of the instructor, and even of the assistant, was to be increased so as to attract more desirable men to the staff. We believe, however, with Professor Gayley and others, that by far too many subjects are offered—foreigners have often ridiculed the multiplicity—and that the mere elimination of a multitude of minor topics from the curriculum would do much toward bringing back into our faculties men who by their intellect and personality command admiration and a following. That would be a long step toward restoring intellect itself to the eminent place of honor now occupied by muscle.

PARIS BOOK NOTES.

PARIS, October 25.

"Une Cause célèbre au XVIIe siècle" (H. Champion), by Dr. Philippe Maréchal, with a preface by Arthur Chuquet of the Institut de France, and 40 inset plates of ancient châteaux and ruins, portraits and escutcheons, forms a bulky volume in which the author has laudably used family papers of an ancestor who figured largely in the case. Beatrix de Cusance, to set a crown upon her head, began by attributing to Charles IV of Lorraine a child who was really the son of her first husband, the Prince of Cantecroy-Granvelle. She had been but a few days a widow when she thus drew Charles into marrying her secretly—though he was already married. It took popes, kings, emperors, parliaments, and courts of justice interminable to put an end to the ensuing entanglement of bigamy, abduction, child-substitution (the *posthume* when he grew up persistently claiming his real father's heritage), and all the rest. The book is quite prolix, with letters and other copious *pièces justificatives*. Incidentally, it throws light on a minor period of history. Perhaps its chief interest is in its showing how real life worked out an historical romance.

"Episodes et Portraits" (second and third series: H. Champion), by Arthur Chuquet, make up two new volumes of historical miscellanies. The author, besides his position at the Collège de France, is known for his many books, chiefly on Revolutionary and Napoleonic history. A summary of the memoirs of Primi Visconti (published a year ago by Jean Lemoine: Calmann-Lévy) telling how that Italian adventurer found the Court of Louis XVI, *la plus belle comédie du monde;* Berthier's letters to Joséphine, keeping her maritally informed of Bonaparte's doings during the Italian campaign; Metternich as one more *liaison* for Madame de Lieven, Guizot's friend, who appears in so many recently published memoirs; Madame Hamelin, the Creole from San Domingo, who was one of Napoleon's best spies, and lived faithful to his memory to see the dawn of the Second Empire; curious pages from the German memoirs of an Alsatian archivist, who knew Mérimée at Strasburg and Stendhal at Rome—are a few specimen subjects with which the general reader is made acquainted, while they are indexed for the historical student.

"Versailles royal" (H. Champion), by Juste Fennebresque, treats its subject from quite a novel point of view. To the futilities of court life it opposes the multiple utilities of the royal parks and institutions, "combating a prejudice of too long standing against our kings' creations at Versailles. It is necessary to acknowledge that, while some of them have not been respected, others, let what will be done, remain indestructible." A first part gives the history and particular description of this "Petite Venise" with its Grand Canal; the vast engineering works for bringing water, and the landscape artists' work; the corporation in charge, with its flotilla, and their history from Louis XIV to the Second Empire; and the present state of things. The second part describes the Potager, with its medicinal garden for the poor, and the famous Orangerie; Madame de Pompadour's Ermitage; the replanting of parks and gardens by Louis XVI, and the itinerary of the royal walks just before the Revolution, with pathetic details of Madame Elisabeth's domain so ruthlessly annihilated; Versailles as an experiment station of war and botany, agriculture and ballooning, under Louis XIV, XV, and XVI; and, among other things, the Petit Séminaire of Madame, founded by the daughter of Louis XVI and Marie Antoinette in memory of them, and here made the occasion of a note of sharp criticism of Turquan, the latest biographer of the unfortunate princess. There are seven pages of an index of sources, documentary and printed.

"L'Effondrement du Royaume de Naples—1860" (Lausanne: Payot), by H. Remsen Whitehouse, is a French work on an historical subject which the author treated in English some years ago. It describes in chronological detail a series of events belonging to the history of our own times, from which contemporary passions and exaggeration have not yet disappeared; and it is written with unusual intelligence and moderation for such history. The minute index of proper names and the summary analysis of the various chapters published as a table of contents give peculiar value to the book for purposes of reference.

"Le Romantisme et les mœurs" (H. Champion), by Louis Maigron, professor at the University of Clermont-Ferrand, is an historical and social study from unpublished documents on a question of more than literary interest. Half an historic age, at least, was bred upon romanticism. After preliminary observations on the romantic æsthetics and ethics, their individualism, hypertrophy of imagination, and sensibility at the expense of reason and will, and the dangers of the system, our author, in a first book, treats formally of Romanticism and the Individual, its exotic and romantic tastes, and its influence on men of letters. He does not proceed by dissertation, but by flesh-and-blood examples and living words from real men and women, like Théophile Gautier. Victor Hugo, Alfred de Musset, Flaubert, and his scarcely less real Emma Bovary, Berlioz, George Sand, Baudelaire, *e tutti quanti*. Among the latter are not the least profitable witnesses, such as Philothée O'Neddy and Frédéric Soulié, in their disclosures of "misunderstood souls." The hypertrophy and its consequences, in which love, of course, demands a chapter, its neurasthenia, Satanism, *sadisme*, and suicide, are taken up successively and pitilessly in real utterances and examples. A second book, on Romanticism and Society, goes into *Antonisme*, for which Alexandre Dumas, playing with the centuries, was responsible in a disdain for all authority, and which became chattering hatred among smaller people; and into George Sand's equal disdain for conventional marriage. The third book of the volume deals with the disavowal made by the romantics themselves of romantic morality. The value of the book to all interested in literary criticism and the influence of literature on history may be estimated from the eight pages of bibliographical index. On the whole, the volume gives the high-water mark of the present reaction against the romantics, their works and words, and may be curiously compared with the sweeping religious condemnation which assailed their advent.

"La Question sociale en Espagne" (Alcan), by Angel Marvaud, is far and away the most quintessential work to be consulted by those who care to follow right reason in the present passionate and prejudiced controversies about Spain. There, as in other Continental countries of Europe, the study of revolution, socialism, anarchy, Church and State, and all the rest cannot safely be separated from that of the economic and social conditions of the people. The author has investigated at first hand, in connection with the Musée Social of Paris, the present labor movement in

Spain, in its origin before and during the Internationale, in the development of anarchy and socialism, and in the new reorganization of the Internationale under the form of revolutionary syndicalism; the condition of the industrial proletariat, with definite results of much patient research in desperate statistical sources, and in the same way the condition of the country population; individual or collective reforms undertaken independently and state action in favor of industrial and farm laborers, with the connected questions of property, schools, emigration, and land improvement. A few moderate, hesitating pages are given to the Barcelona days of July a year ago, which have excited universal curiosity and ended in darkening counsel by words without knowledge. In chapters written before those violent explosions, M. Marvaud gives facts, ignorance of which has much biassed recent controversies—the consistent growth of far-reaching social work on the part of Catholics. "Socialists are naturally the enemies of the Church, whereas the Catholic social movement has precisely its origin in the desire to struggle against socialism and to stop its propaganda in the proletarian world. . . . Conflicts may be forescen between these rival tendencies, calculated to endanger even the tranquillity of the country, if they are left alone face to face with each other." Time has quickly proved the foresight of such words. Even those who refuse sedulously to listen to any reasons and conclusions except their own will find useful the fifty pages of tables giving statistics not easily obtainable elsewhere. S. D.

Correspondence.

THE TEACHING OF LITERATURE.

To the Editor of The Nation:

Sir: The historical teaching of English has undoubtedly done much good. It has helped us to see how in each age literature is a reflection of life, it has shown us the continuity of literature and enabled us to arrange our knowledge conveniently. And yet it may be questioned whether the system has given us enough to compensate for what it has taken away. To be sure, the taking away has not been a necessity, and could, indeed, be easily prevented. The effect, however, has often been to fill the students' heads (temporarily) with names, dates, and facts to the exclusion of all else. A dull writer is studied for his historical importance, while a genius is slighted because he is not typical or epoch-making. Thus an unclassified author, for instance, Landor, has a poor chance. The questions asked in examination are not: What poetical qualities appealed to you in "Childe Harold?" but: Show how Byron exemplifies the contemporary spirit of individualistic revolt against conventions. The English instructor is *ex officio* a literary historian, and a critic as well, though the latter character requires a far higher type of mind than the former. An historian, in the narrower sense here implied, has but to record facts, whereas the critic endeavors to determine by fixed canons the artistic value of a given work. It is therefore easy to see why the absolute worth of a poem, apart from time and circumstance, is often left unconsidered.

I do not wish to be misunderstood on this point. I understand from experience the value and the pedagogical expediency of the historical method; it seems merely a case of: These things ye ought to do and not to leave the others undone. The practical result on the student should be examined. He knows that by memorizing lectures and synopses of the required readings he can pass in the course, he is lukewarm in his interest, finds the lectures dull, and has no temptation to read for himself. How shall his apathy be overcome? Obviously by teaching him to appreciate literature as such. The modern professor with a superior smile says: "Oh, we don't attempt to inculcate a love of literature; the student must do that for himself." By all means, let him—if he is able. But who, at a first reading, can perceive the possibilities of a great poem? Who does not remember a hard passage made straight or a splendid line illuminated by the comment of a friend or a teacher of the old school? Very recently a noted professor of English said to me: "We need more intensive and appreciative literary courses." By reading aloud in class, or by analyses which are not dissections, the instructor may awaken a permanent interest and a desire in the student to look deeper and apply for himself the careful sympathy which has been shown him. Perhaps this may seem like taking a leaf from the book of the despised public lecturer, but why should we not? Is the power of reading musical verse musically and noble verse nobly a detriment to a college instructor?

The ultimate question is this: What is it that makes literature worth while? Is it valuable for itself or only as a "human document" to show the life of the individual or his time? If the latter position is correct, then the work of any sixteenth century scribbler may concern us as legitimately as that of Shakespeare. Perhaps it is to avoid the risk of such a mistake that the English have been slow to introduce the systematic study of their own literature. But nearly every one feels at bottom that the true value of poetry is absolute. Genius is not a matter of evolution, says an able critic. Homer enthralls us not because he pictures the heroic age of Greece, but because he is Homer. Call the Iliad a syndicate product, you will not affect its charm. The greatest English master "was not for an age," nor need we study his age to appreciate his greatest qualities. We have followed too blindly the dictum of Taine that all literature is the result of the time when and the people by whom it is produced. From this remorseless scientific spirit we may be again compelled to take refuge in mysticism. Scott, the frankest and least affected of bards, writes: "In sober reality, writing good verses seems to depend upon something separate from the volition of the author." This something, the *vera causa* of the poet, has not yet been defined; by the doctrine of *nihil ex nihilo* it must come from somewhere, but the most minute study of environment fails to account for it. So it is that the biographical and the historical systems of teaching threaten to come between us and the apprehension of what is best in literature. Charles Wharton Stork.

University of Pennsylvania, October 31.

AMELIA BOOTH AND LUCY FEVEREL.

To the Editor of The Nation:

Sir: A comparison of some of the realistic novels of the eighteenth century with those of our own day has many points of interest. For example, let Fielding's "Amelia" and Meredith's "Richard Feverel" be read with a view to such a comparison, and it will be found that the aim of both authors is the same—to present problems and tendencies of the period in which the story is set, and to portray individuals which shall stand as types of that period. Making due allowance for the personal equation, the resulting difference lies largely in the changes in English life and thought.

Points of likeness are not hard to find when one has shaken off the bewildering effect of Meredith's bustling, crowding thoughts and unique personality; it is soon evident that both Fielding and Meredith scorn artificial sentimentalism, but have a decided taste for real sentiment, and that the attitude of each toward women is that of a kindly, though searching, analyst. In both stories the conception of the heroine's character is perhaps the best basis of comparison; and surely among Meredith's daughters (to use Stevenson's term) no kindlier choice could be made than Lucy, for the gentle Amelia might justly feel overshadowed if placed beside some of the more brilliant ladies of modern fiction. As Amelia possesses some qualities not usually found in heroines of her day, so Lucy has much of the trustful, clinging-vine sweetness now associated with the old-fashioned heroine.

Amelia's accomplishments are wholly of the domestic order, and she weeps and faints with the ease and grace demanded of a lady of refinement in her day; nevertheless, the author endows her with the somewhat unusual gifts of courage and humor. In our time, when woman's lack of humor has become an axiom (with no convincing Q. E. D., however), it is refreshing to go back into the eighteenth century and find Amelia's keen sense of the ludicrous pointed out as one of her most engaging qualities; though it must be confessed that the proofs are not especially convincing. Even so, she is in this respect rather in advance of Lucy, whose humor is more negative than that of most of Meredith's heroines.

We are apt to consider the robust heroine as a growth of the modern novel, perhaps because of the generation of pallid, delicate beings immediately preceding her; but it is to be observed that Fielding is an ardent admirer of health and vigor. Amelia's fine constitution and ability to endure are often alluded to with pride by her erring but appreciative husband; they must have been remarkable, indeed, to persevere in spite of the utter disregard of physiology indicated by her waist in Cruik-

shank's illustrations! Her personality does not suggest the Venus of Milo as strongly as that of Meredith's vigorous damsels, notably Carintbia; but tbe autbor describes honest, capable health, of a kind calculated to please even a scientific humanist.

One minor touch of similarity in the two young women is their recourse to the gentle art of cookery, on occasions when Man is to be placated or beguiled. Amelia waiting, after a misunderstanding, for Bootb to come home to the favorite supper which she has prepared, and Lucy striving to win a place in the esteem of the "wise youth" by her devotion to Dr. Kitchener, have much in common, and proceed along well established lines. As Mrs. Berry sagely observes to Lucy, "kissing don't last; cookery do."

In the matter of conversation, the difference between the two books is wide. The talk of Fielding's characters, lengthy, stilted, and detailed, does not suggest a deep penetration below the surface as a rule, while Meredith's crisp, concentrated sentences give an almost uncanny revelation of the human heart and its workings. Both Amelia and Lucy take a minor part in the conversation of tbeir respective circles; but when the eighteenth century lady has an idea to express, it is spread thin over a deal of space, whereas Lucy accomplishes wonders with half a dozen words and a twist of her expressive brows.

Amelia's life was beset with many trials, and the author sometimes makes us feel that she suffered, for instance when her husband goes to join his regiment. But it should seem that people recovered more easily from great emotional crises in tbose days, if we may judge from tbeir chroniclers. Did they really take for granted a larger proportion of open wrong in public and private life, so tbat their nervous systems were unconsciously braced for tbe ordeal, or were the writers of tbat period less skilful in portraying suffering? Tbere may be truth in both suggestions. In any event, let us be thankful that in the old books we are spared the modern clinical studies of morbid conditions, mental, moral, and physical. Surely the laws of morality and social observance are not more frankly broken now, though tbe psychological effect of wrong or misfortune may be more powerful in this more introspective age. May it not be that Meredith goes too far in this direction, overemphasizing the corrosive power of mental and spiritual distress? After the crisis of Amelia's trials, she is rapidly restored, and the last years of her life are happy. Lucy's troubles, on tbe surface, are not widely dissimilar, but with a greater capacity for mental suffering, and a more complex world about her, sbe succumbs. Here, in spite of the dramatic power and beauty of tbe closing scenes of her life, is not the older novelist the better artist, though the more conventional one? Even at tbe expense of possible inconsistency, would not most readers prefer to let the innocent young victims of tbe System pass from under tbe shadow of their wrongs and finally reap the benefit of what life holds of good? One somehow feels entitled to just rewards and retributions in the story world, and the conclusion of "Richard Feverel" seems needlessly painful.

CORINNE ROCKWELL SWAIN.

Philadelphia, November 3.

WESTERN RAILWAYS AND FARMING.

To the Editor of The Nation:

SIR: In the *Nation* of September 22 an editorial note calls attention to the work certain Eastern railways are doing for tbe improvement of farming in the districts served by them, and suggests that some Western roads might take a lesson from this. Permit me to tell briefly what two Western railways are doing in Oregon and Washington to promote the same end. For two or tbree years the two leading railways of these States have run demonstration trains over their several lines in connection with the two State agricultural colleges. The object sougbt and the metbod by which it is sought will best appear from extracts from the announcements of these trains issued by tbe traffic managers. This, from tbe announcement of one of the railways for the season of 1908:

The purpose of this movement is to encourage diversified farming through a continuous occupation of the land. . . . It is believed that existing methods can be improved through rotation systems of cropping and the employment of various cultural metbods for the conservation of moisture, and the Traffic Department, witb the coöperation of the Washington Agricultural College, has organized this course for the benefit of those directly interested in agricultural pursuits.

A bulletin by tbe same railway two years later, announcing a train to be run in connection with the Oregon Agricultural College, shows a marked development in the movement, in the amount of time given, in the extent of territory covered, and in the number of subjects presented, with a corresponding increase in the number of men from the Agricultural College and experiment stations accompanying the train as demonstrators and lecturers:

Among the subjects to be discussed, according to the conditions in each locality, may be mentioned the following: Poultry, dairying, horticulture, more and better live stock, chemistry of the soil, rotation of crops, conservation of moisture, general cultural methods.

An announcement by the otber railway of a similar train showed the equipment furnished by the companies:

It will consist of one stock car, one flat car, tbree large baggage cars, and coaches for the accommodation of the party in charge. The equipment covers in a very thorough manner dairying, poultry, horticulture, forage crops, soils. The stock-car will carry good and poor dairy cows for demonstration purposes, and first-class beef-type cows, and representative individuals of some of our leading breeds of sheep.

To these demonstration trains a hearty reception has been given by the people in all sections of the two States. They are likely for some years to come to be regarded by the colleges as valuable opportunities for agricultural college extension, and by the railways as an effective means of tbe intensive development of the country they serve. J. R. WILSON.

Portland, Ore., October 29.

CALENDAR REFORM IN GERMANY.

To the Editor of The Nation:

SIR: We have all been confused by the appearance of Christmas on a different week-day each year, by the coming of Thanksgiving on a different day of the month each year, by the variable recurrence of school terms, election dates, etc. If the German reformers agree among themselves and tben bring the rest of the civilized world to tbeir way of tbinking, all tbese difficulties will vanish.

Delegate Pachnike, in tbe Prussian Abgeordnetenbaus, has already demanded that that body take action on such a reform, and tbe mathematicians are busy all over Germany with plans for effecting the desired regularity. Ernst von Hesse-Wartegg, in the *Kölniscbe Volkszeitung*, proposes to call New Year's Day zero (0), which will leave the counted days 364 in number and begin each year with tbe same day of the week. Most of the calculators do substantially the same thing, but dispose in various fasbions of tbe additional uncounted day wbich appears with the leap years. Elsa Koopman, in *Monismus*, suggests that the leap-days be allowed to accumulate for twenty-eigbt years, and then be disposed of in an uncounted "leap-week." She would set her calendar in motion with 1911, tbus throwing her leap-years 1939, 1967, 1995, 2023, etc. She would omit tbe Sunday as Herr von Hesse-Wartegg proposes, would give January, April, July, and October thirty-one days each, the other months thirty; would set Sunday, April 14, as Easter; Cbristmas for tbe fourth Tuesday of December, Thanksgiving for tbe 29th of November. Her January, April, July, and October begin on Monday; February, May, August, and November on Thursday; March, June, September, and December on Saturday.

It is doubtful whether the standing still of tbe calendar for a week every twenty-eighth year would not occasion more confusion than the present arrangement. A calendar wbich accomplishes all that she can claim for hers and would promise to operate with less difficulty, could be constructed as follows: Apportion the months as Fräulein Koopman proposes, tben begin with a year tbat comes in on Sunday, as she does—1911, 1922, 1928, etc.—but leave an uncounted day between December and January, and in leap-years another between June and July. We may call the extra days New Year's Day and Leap Year's Day, and thus locate tbem adequately without numbers. Tbe first montb of each quarter begins witb Sunday, the second with Wednesday, and tbe tbird with Friday.

A division substantially like this has met with general favor and is possibly tbe calendar of the future.

ROY TEMPLE HOUSE.

Magdeburg, Germany, October 22.

"THE STORY OF AL RAOUI."

To the Editor of The Nation:

SIR: I have been making some investigations which lead me to the conclusion that William Beckford was not the writer of this little work. As the volume is now very rare, I transcribe the title-page of my own copy:

The Story of Al Raoui, a tale from tbe Arabic. Second edition. London: printed by C. Whittingham, Dean Street, Fetter Lane; for C. Geisweiler, Pall Mall; sold also by G. G. and J. Robinson, and H. D. Symonds, Paternoster Row; J. Richardson, Royal Exchange; G. C. Keil, Magdeburg; B. G. Hoffman, Hamburg; G. J. Goeschen, and J. G. Beygang, Leipzig. 1799. 8vo. pp. 59.

The book is entirely anonymous. The

dedication is merely signed, "The Translator." The volume comprises an English version, "The Story of Al Raoui" (pp. 10-24), a German version (pp. 25-44), and Verses (pp. 45-59). There were two editions issued in the same year. In the catalogue of the British Museum the book is entered under "Raoui," but in the Dyce and Forster copies at the South Kensington Museum, there are MS. notes attributing it to Beckford.

In the preface to the first English edition of "Vathek" Henley—not Beckford—professes that "the original of the following story, with some others of a similar kind, collected in the East by a man of letters was communicated to the editor above three years ago." Beckford rightly asserted that "Vathek" was not a translation but an original work.

In Ouseley's Oriental Collections, January-February-March, 1798 (Vol. II, No. i, p. 30) there is a table of contents of Jonathan Scott's MS. of the "Arabian Nights," and this includes the "Story of a lover whose mistress was killed by a lion." This story is printed with the Arabic text in No. iii, July-August-September, 1798, p. 349. It is No. 145 in W. F. Kirby's "Bibliography of the Arabian Nights." From this we may conclude that the decision to print this version was reached between March and September, 1798.

The story (which has strong resemblance to the Pyramus and Thisbe theme) has suffered at the hands of some of the editors and translators. One calls it the history of a courtier, which it is not; another calls it the history of a courtezan, which is still more inaccurate. Another turns Al Raoui into Al-Kavi. The "Story of Al Raoui" may mean the story of the story-teller or it may mean the story told by the story-teller. (See Chauvin: "Bibliographie Arabe," V, 117.)

The indications seem to point to Henley and not Beckford. Dyce and Forster may have been led by the mention of "Vathek" in the preface to regard "Al Raoui" as by the same author. There is another curious point. The *Monthly Review* for May, 1772, contains a notice of an anonymous poem entitled "Conjugal Love," which appeared at Cambridge in 1772. This stanza is cited:

> Then in my boys, some lovely maid I'll woo,
> Whose virtues and whose form resemble thine;
> While in your girls, shall pay his court to you,
> Some honest youth, whose bosom throbs like mine.

On which the critic quotes a verse from Gilbert Cooper's "Winifreda":

> And when with envy Time transported,
> Shall think to rob us of our joys;
> You'll in your girls again be courted,
> And I'll go wooing in my boys.

Now the poem on "Conjugal Love" identified by this quotation, appears on p. 48 of "Al Raoui." In a prefatory note we are told that "the verses which follow were long ago printed, but with more defects than their own. They are here annexed for the sake of correcting them." In 1772 Beckford, who was a boy of thirteen, was not likely to be writing and printing a poem on conjugal love. On the other hand, there is a difficulty in the fact that Henley in that year was out of England. He was then professor of moral philosophy at Williamsburg, Va. He may, however, have sent his MS. to some Cambridge friend, and his distance from the press would perhaps account for the mistakes of which he complains. Could not some one on your side of the Atlantic give information as to the Rev. Samuel Henley's American career? At present all that seems to be known is that he printed some sermons while still at the Virginian college. The probability that Henley was the author is very much strengthened, if not made absolutely certain, by the fact that "Al Raoui" was publicly attributed to him in the year of its publication. It was noticed in the *Magazin Encyclopédique* (v. année, tome 4, pp. 286-287), by A. L. Millin, who unhesitatingly speaks of "la traduction angloise de ce conte Arabe, par M. Henley." And Millin liked the story so well that he inserted a French translation of it in the same volume (p. 343). The reference to this French critique I owe to Professor Chauvin's remarkable "Bibliographie Arabe," and I have to thank his courtesy for a transcript of the article.

It is most likely that "Al Raoui" is a result of the Oriental studies of Beckford and Henley, and had remained in the hands of the latter for the sixteen years or so he mentions. This would give about 1783 as the date of composition of the little book. It looks as though Henley, when he knew that another version of the Arabic tale was likely to appear, could not resist the temptation of getting his own out in advance.

WILLIAM E. A. AXON.

Manchester, England, October 28.

CREVECŒUR.

TO THE EDITOR OF THE NATION:

SIR: For several years past I have been collecting material toward a biography of St. John de Crèvecœur, who was appointed consul to this country from France at the close of the American revolution, but who is better known as the author of the "Letters from an American Farmer." Nearly a thousand items have been gathered together in the bibliography relating to Crèvecœur, containing the various editions of his works, letters and dispatches, published and unpublished, which refer to him in any way, newspaper articles by him and about him, criticisms, notices, reviews, etc. In order to make this bibliography and the work which depends upon it as complete as may be, I should be grateful to hear through your readers of any further sources of material relating to Crèvecœur. Although many of his letters have come to light during this investigation, only one has come to my notice in this city. This is to be found among manuscripts recently given to the Lenox library by Mr. J. P. Morgan.

J. P. MITCHELL.

No. 430 West 118th Street, New York, November 3.

INDUSTRIAL EDUCATION.

TO THE EDITOR OF THE NATION:

SIR. Since industrial education means giving a "practical" training for the ordinary man's life-work, no intelligent man will deny its advantages. Man must earn his bread by the sweat of his brow, and any system of education which does not consider seriously this necessity is valueless. But industrial education does not cover the whole ground of "practical" education. A man may be an expert mechanic, and yet his skill will not suffice him if he commits murder or theft. In other words, every man is not merely a working animal, but he must be at the same time a social, a political, and a moral animal. This "practical" lesson can be best impressed by the judicious study of the record of human experience in history and literature. Industrial education is a good thing, but not at the expense of liberal education, for this, too, is a part of "practical" education.

The young man who is being trained to skill with his hands should not be deluded into believing that it is all the education he needs. Since the beginning of time there have been thousands of good workmen for every one good thinker; but progress and civilization are due to the thinkers. Surely progress and civilization are "practical" results.

POLK'S DIARY.

The Diary of James K. Polk During His Presidency, 1845-1849. Edited by Milo M. Quaife; with an introduction by Andrew C. McLaughlin. Chicago: A. C. McClurg & Co. 4 vols. $20 net.

The conditions under which Polk became President made it difficult for him to fill the office successfully. As a Jackson man he had the opposition of Calhoun, and as the one who took the prize from Van Buren, he could not have hearty support from the New Yorker. He thus had two Democratic factions against him at a time when the Whigs needed but a few votes to control the Senate. Besides Calhoun, three powerful party leaders were to be conciliated. Benton, strong with the older Jackson group, was an original Van Buren man. He was getting old, had his whims and his pride, and did not easily submit himself to leadership. He never supported Polk heartily. Buchanan and Cass, both aspirants for the Presidency, were too busy with their own prospects to unite cordially with the President for a party policy. Altogether, the situation was too complex for a man of Polk's ability. His "Diary" is witness to his perplexity.

The first trouble was in connection with the Oregon question. By the Democratic platform, which he accepted, he was pledged to demand fifty-four degrees forty minutes. Cass and the Northwest supported the demand. The extreme Southerners were willing to take less, some of them favoring the Columbia River. Polk, ever a nationalist, had to reconcile the two sides; for he could get no bill passed without the consent of both. Fifty-four degrees forty minutes meant war with England, and war could not be declared or fought without the consent of the South. Polk took a practical position, and renewed Tyler's

offer of the forty-ninth parallel to Puget Sound. It was rejected with scorn. He then recommended Congress to give the necessary year's notice for ending the joint occupation of Oregon and taking steps to establish our sole jurisdiction there. He thought that if England saw we were in earnest, she would settle the matter amicably. The plan required unity and promptness; but the disaffected men in the party supported it most grudgingly, delaying action for more than five months, until England doubted if Polk's plan would succeed at all. In the meantime, some important nominations were defeated in the Senate, through a combination of Whigs and insurgent Democrats. Buchanan gave most trouble. Although Secretary of State, he constantly desired compromise and was overruled by the President. At last it was evident that England would accept the offer she rejected the preceding summer. Polk now took the dignified position that the proposition come from the other side. Buchanan thought we should renew our offer. He was exceedingly anxious to get the affair off the political stage. Polk overruled him, but found it necessary to exercise the most careful scrutiny of the dispatches lest the Secretary of State should give the intimation of retraction which England might make a basis for renewing the negotiation. At last, he forced that Power to accept a treaty which proved satisfactory to all but the Northwest. It was charged later that he sacrificed Oregon in the interest of the South. His "Diary" shows that he of all Southerners was most bent on a firm policy with England.

The "Diary" throws little new light on the Mexican war, but it proves that Polk was not an ardent pro-slavery man. He was of the school of Jackson, opposed to Calhoun and loyal to the Union. He was an expansionist and a nationalist. He wanted California to complete our Pacific coast-line. He would purchase it, if he could, and fight for it if he must. In the same way, he desired Cuba. But he says nothing to show that his motive was chiefly to extend slavery. On the contrary, that desire is not mentioned, and it seems to have been incidental merely. Like other expansionists, ancient and modern, he was not scrupulous in his methods.

He thought the Wilmot Proviso a political trick to discredit certain Presidential aspirants, and he regretted the serious manner in which some Southerners took it. He even pronounced their action selfish and malicious. He opposed the meeting to protest against the opposition to slavery in the District of Columbia. The best way, he said, to preserve the interests of the South was to maintain the Democratic party as a national organization. Let the meeting, if it must be, appeal to the sense of fairness in the sober men in the North, let it express confidence in them and not indulge in threats or recrimination. Calhoun's resolutions, he thought, tended to disunion through their influence on the people of the South.

The best thing in the book is the revelation of the man who wrote it. He had industry, patience, capacity in detail, good judgment, fairness to his associates, and loyalty to party. He was an excellent husband, a faithful churchgoer, with Methodist inclinations, and a gentleman in both public and personal affairs. Courage, or pertinacity, was his strongest quality. He was not mentally broad, he knew not how to dominate others, and he shows little magnanimity. He had the ordinary human virtues, and the ordinary human failings. He was President through accident, but in the period from Jackson to Lincoln, there was not a larger man at the head of the government.

Polk gives us a useful picture of Cabinet proceedings. He submitted to his advisers all kinds of business. They passed on the selection of a new Cabinet member as well as on a policy of state. He repeats with fulness what he said to his associates, but says little about their replies. From this report, they seem to have been a complaisant group, all but Buchanan, who is presented as capricious, selfish, and inconsistent. "Mr. Buchanan," we read, "is an able man, but is in small matters without judgment and sometimes acts like an old maid."

The most persistent note in the narrative is the complaint against office-seekers. From the beginning to the end of the Administration he was beset by applicants. "Lazy loafers" and "my old customers," he called them; and it was a good day when he did not have to give two hours to their requests. Probably the patronage was then at its lowest plane. Partisanship was rampant, and men applied for place who had not the slightest notion what they wanted or what they could do. One applicant had heard that some treaties were to be made and thought he would be a good hand at making one. The hunger of the office-seekers, said Polk, was our greatest political danger. It disorganized parties, defeated important measures, and impaired the civil service. He vowed that after his retirement he would write an exposition of the evil for the enlightenment of the people. Unfortunately, he died before he could perform the vow.

It is natural to compare him with other prominent American diarists. He is more subjective than John Quincy Adams and not so versatile; but he wrote when public men seem smaller and less cultured. He is as straightforward as Adams and less given to personal antipathies. As a record of Cabinet activity, the "Diary" is very valuable, but in this respect, it is perhaps excelled by that of Gideon Welles, now being published. Polk tells what the President said in Cabinet, Welles tells what all the members said.

Polk's "Diary" covers the period from August 26, 1845, to June 2, 1849. Thirteen days after it ceased, the author died of cholera. For the years included, it is an important source of information. Several recent writers have used it in manuscript. Its publication extends its area of usefulness. The publishers are to be commended for using good paper and handsome type; but the index is inadequate and most of the editor's notes are perfunctory.

CURRENT FICTION.

Burning Daylight. By Jack London. New York: The Macmillan Co.

In "Martin Eden" this brilliant short-story teller produced a novel which, however fantastic, was not of the sort to be laid down half-read, or forgotten on the instant of its completion. "Burning Daylight" has some points in common with it. Elam Harnish is an Alaskan pioneer who foresees, and makes a fortune out of, the gold strike at the Yukon. Having proved himself the best man on the frontier, he leaves it, with his eleven millions, to see what he can prove himself in civilized life. There takes place no such while-you-wait conversion into a man of brilliant accomplishments and profound culture as fell to the experience of Mr. Martin Eden. Mr. Elam Harnish (known throughout Alaska as "Burning Daylight") acquires the tailoring and superficial manners of the cities, but remains himself. By nature a gambler, the only question he asks is what game he shall play. All business presents itself to him as gambling, and he quickly makes up his mind that the players are a far less "square" lot than his old antagonists at the Klondike. A supposed friend robs him of half a million; and three Eastern financiers lure him on to New York with the express intention of stripping him bare. They do get his fortune, whereupon he gets it back by a delightfully (if impossibly) direct Western method.

He goes back to the Pacific Coast hardened and sharpened as a player at the money game. His days are given to battle, and his evenings to the drink which supplies the necessary "inhibitions" to his over-active brain, and so finally wins him sleep before the next day's fight. He constitutes himself the enemy of the big operators, the owners of corporations, and the manipulators of trade. In short, it is his professed purpose to rob those who rob the poor; but he is really more anxious to beat them than to protect their victims. He becomes steadily coarsened, loses the splendid physical strength which has made him the hero of the Northwest,

and is on the road to the gross estate of the money-hog, when the love of woman saves him. He suddenly wakes to the situation, tosses away his millions, and flees with his bride to a ranch in the hills, where he earns a sufficient living by his own labor, wins back his old strength of body and youth of spirit, and becomes more than ever a man.

The remarkable thing is that, as Mr. London tells the story, not one reader in fifty will be disposed to regard Daylight's act as anything but inevitable and sensible. A possibly unnecessary touch of melodrama is supplied at the last moment by Daylight's discovery of a marvellous vein of gold on his ranch, his momentary excitement, and his final concealment of the fact, even from his wife. But this is by all odds the most interesting, as well as most wholesome, long story Mr. London has written.

The Rosary. By Florence L. Barclay. New York: G. P. Putnam's Sons.

If cleanliness is the sole requisite in a novel—and there are novels which make one think so—then "The Rosary" is entitled to unmixed praise. Besides being clean, it is single-minded and high-souled. It tells a tale of faithful love and self-denial. It enters as an expert into the experiences of the blind. It pictures men, women, places, and a parrot with a touch both light and sweet, and sometimes humorous. It is definitely religious in tone without cant. Thus much is but justice to the story. Justice to the reader requires mention of the gush, mush, slush of sentiment in which the story is served. There is gush musical centring in one song and one hymn which sound throughout the book; gush medical, matrimonial, Platonic. Much gush over Jane, the plain, massive, gentlemanly-lady heroine. She wears thoroughly described and perfectly fitting clothes. She is triumphantly athletic. Her "large capable hands" figure so often in the story that one receives the impression of a lady Briareus in golf skirts. She is proverbially plain, but highly captivating and atmospherically admonitory to boy-kind. She calls her friends "Boy," or "Dear Boy," or—to her subsequent sorrow and chastisement—"Mere Boy." In her capable, tailor-made way she has inspired all the good deeds of the story. Orderlies, doctors, and soldiers in Africa would have given their right hands for her. The flagging tennis player at the sound of "that dear voice" saying, "Play up, Dal!" smiled, and with a lightning-like serve won game and set. With one singing of a song she can sing an old comrade into an entirely new state of exaltation over her so that he exclaims in a low voice, vibrant with emotion—"My God! Oh, my God!" Yet this same lover three years later can be deceived into thinking for weeks that the voice of the nurse who is ministering to his blindness is not his Jane's, and that that voice proceeds from the supposed low altitude of a "little dainty person" and not from Jane's five feet eleven inches. Possibly three years of battening on two articles of musical diet had blunted his ear. At the wedding we have sentiment sandwiched with vaudeville, the old Scotch nurse following the ceremony audibly, the English duchess giving her niece away with a short comic speech. For those who like five lumps of sugar in their music and their emotions it is the very book.

Freda. By Katherine Tynan. New York: Cassell & Co.

From the anguished moment when the lonely, ill-used orphan of eleven is rescued from beneath the cane of the debilitated villain—chivalrously rescued by Lionel Dampier, "young, handsome, generous"—to the ecstatic instant nine years later when "she held his face away from her with her two hands," all that transpires is, in the author's explicit phrase and the sage judgment of sweet sixteen, precisely *comme il faut.* Freda's life was not monotonous: she outlived the debilitated villain and the effects of hard usage, profited by the education of a *jeune fille,* with British independence turned her back on France and a French *parti,* scoured London for proof of her parentage, narrowly escaped being murdered in the slums of the East End, served luxuriously as lady's companion in a country house, single-handed captured a burglar, held at her mercy the wicked uncle who had usurped her patrimony, did good to her surviving enemies, married Lionel Dampier—maintaining throughout an aspect of enchanting loveliness and a demeanor irreproachably, adorably, *absolument, comme il faut.*

Jeunes filles can safely rely on "Freda" as a book of correct usages. In cases of debated identity "a Debrett" and Who's Who supply the only authentic clues. No such thing as a spade is ever rudely mentioned by its ugly name. Thugs and burglars are mercifully "put away" in prison. The least exalted sensations are recorded in classic phrase—even the fainting villain "knew nothing more until the late afternoon sky . . . *swam into his ken.*"

Storm and Treasure. By H. C. Bailey. New York: Brentano's.

The French Revolution continues to present itself to the ardent romancer as a fruitful field for his more or less ingenuous activities. The "Tale of Two Cities" did not exhaust the possibilities of the scene or the action of that spectacular drama. Many later stories of the Revolution have hung more closely to the fact—not a few of them far too closely, after all, since a romance is not a monograph in disguise. Mr. Bailey's instinct has led him to avoid the greater revolutionary figures as puppets for his action. And in choosing a hero like his Vicomte de Jan he has given an "up-to-date" flavor to the old story. The Vicomte de Jan, indeed, is the whimsical, indecisive, irresponsible hero of this present hour—a Septimus or Senhouse with sword and queue. He is the son of a noble who has fled from the Vendée to England. The Vicomte is summoned to play his part in that beggarly Grand Army of the Vendée which is making unreasonable headway against the republican forces. The vicomte drifts vaguely into the thick of the conflict, to find himself disgusted with the brutality and banality of it all. He declines the post of honor which is offered him at the head of his fellow-Vendéans, and expresses his opinion of them very frankly. But there is a girl of good blood among their leaders, who scorns him for his indifference to the cause. Of course, she is really attracted to him and he to her. To rescue her, he presently finds himself fighting: they are both captured by the republicans, and condemned to death. Needless to say, they escape, to suffer manifold adventures, and to be permanently united in the end, after the fashion of the youth and the maiden since romance began. The story is told with unusual buoyancy, and the Vicomte de Jan and his ally, Mr. Wild, are not less witty than their prototypes (for that is the word to use) in current fiction.

The Meddlings of Eve. By William John Hopkins. Boston: Houghton Mifflin Co.

The meddlings of Eve and her somewhat consciously quaint chronicler, Adam, with the love affairs of certain acquaintances, give this book whatever substance it may be said to have. The "clammer" here maintains his sprightliness, if with perhaps a trace of effort. The setting is the familiar one, that idyllic abode of Adam and Eve, fronted with Adam's clam-bed and, beyond, with an incidental ocean; and flanked by the magnificence of "Old Goodwin." Old Goodwin plays his whimsically benevolent part in the present leisurely action, the most blameless ogre that ever gnashed his teeth in print. To him Eve owes that balmy background of millions which gives her own personal idyl its timeliness. Where would be the peculiar piquancy in the relation of the paradisiacal pair if she were the daughter of another clammer, professional or amateur? We here find their existence in continued oscillation between clam-bed and motor-car, love in a cottage and love à la mode. The latter species of passion, to be sure, directly concerns other persons, but they themselves are delightedly involved in its conduct. Of course, everything comes out according to Eve's moving and Adam's seconding.

There seems to be no reason why Mr. Hopkins should not go on indefinitely with the mild adventures of this ingenious pair. But it is not well that a work of whimsical sentiment should have too many sequels. "Sentimental Tommy" came to a timely end; and the "Bachelor" fortunately did not carry his reveries beyond their second series.

The Siege of the Seven Suitors. By Meredith Nicholson. Boston: Houghton Mifflin Co.

A witty and wise gentleman whose business it is to cure smoky chimneys goes out to the house of an eccentric and wealthy old lady in Westchester County to deal with a flue that has fallen into inexplicably bad habits. The old lady has with her a niece whom she is determined to marry after a crotchety scheme of her own, which is the occasion of the seven suitors and of the chimney-man's surprising adventures. The besieged niece, by the way, has a sister who has a share in the adventures and in the adventurer's fate.

The interest of the tale is in the fantastically whimsical manner that Mr. Locke has made so popular. Mr. Nicholson's humor is a trifle thin if compared with that of "The Beloved Vagabond" and "Septimus," and will, we suspect, meet with very different acceptance from different readers. Those who take up the book in the right mood and bring to it a proper and docile fancy of their own, will find it charming and refreshing. Some of them may even be tempted to hunt for the mysterious Asolando café somewhere just off Fifth Avenue, though that haunt of virgin æsthetes makes a pretty strong demand on the most willing reader's imagination. Mr. Nicholson's style—and style is everything in this sort of writing—would profit if, out of deference to Lindley Murray, he would learn not to say, "It was ordered . . . that you become." That is the first sentence in the book, and it is not the only example of false sequence of tenses.

DR. JOHNSON.

Six Essays on Johnson. By Walter Raleigh. New York: Henry Frowde.

If, as the saying goes, to abuse Boileau *porte malheur*, it is equally true, and for somewhat the same reason, that to praise Dr. Johnson brings good luck. There is a tonic quality in his wisdom and in his intellectual veracity which saves the critic from the pitfalls that waylay him when dealing with more imaginative writers. Professor Raleigh always has himself pretty well in hand, even when he writes under the spell of the Wordsworth cult, but he is particularly sound in these six essays which treat various aspects of Johnson's life and works. We get the keynote of his criticism in the opening essay, which was delivered as the first Leslie Stephen lecture at the University of Cambridge. "A commonplace, I take it," he there says, "is an oft-repeated truth which means nothing to the hearer of it. But for the most perfect kind of commonplace we must enlarge this definition by adding that it means nothing also to the speaker of it. . . . Almost every number of the *Rambler* contains reflections and thoughts which cease to be commonplace when the experiences that suggested them are remembered." There is, perhaps, a hitch in Professor Raleigh's logic as it is set down, but at bottom he answers a question which every reader of Johnson must have asked himself many times. The *Rambler* and, to a less extent, Johnson's other works are filled with solemn reflections on the oldest and tritest of themes—on death and time and the vanity of life and the deceitfulness of the human heart and the consolations of religion. There is no attempt to renovate these ancientest of topics by paradox or unexpected applications, and the language is often slow and sometimes overweighted. Why, then, do these commonplace reflections on man and the world have to the true Johnsonian a meaning and a power of conviction that make the cleverness of England's modern school of essayists seem like the crackling of thorns under an empty pot? Professor Raleigh suggests the true answer. It is because, however they may sound to the inexperienced reader, they were not commonplaces to Johnson himself, but the fruit of vivid personal experience. His philosophy might be described as the sublime of the commonplace. So it is that Dr. Johnson has "come to be regarded as a kind of Chairman to humanity, whose business it is to cry 'Order, Order,' an embodiment of corporate tradition and the settled wisdom of the ages."

There is much else to commend in Professor Raleigh's essays, as he takes up the discussion of Johnson's style and other topics of the kind. His estimate of the "Lives" is admirable, and we like particularly his sturdy defence of Johnson as the critic of Shakespeare. After comparing two statements from Johnson and Coleridge and showing that the earlier critic has not been superseded, Professor Raleigh, who has shown himself in his other books to be in no wise blind to the virtues of the romantic movement, continues:

> He has been neglected and depreciated ever since the nineteenth century brought in the new æsthetic and philosophical criticism. The twentieth century, it seems likely, will treat him more respectfully. The romantic attitude begins to be fatiguing. The great romantic critics, when they are writing at their best, do succeed in communicating to the reader those thrills of wonder and exaltation which they have felt in contact with Shakespeare's imaginative work. This is not a little thing to do; but it cannot be done continuously, and it has furnished the workaday critic with a vicious model. There is a taint of insincerity about romantic criticism, from which not even the great romantics are free. They are never in danger from the pitfalls that waylay the plodding critic; but they are always falling upward, as it were, into vacuity. They love to lose themselves in an *O altitudo.* From the most worthless material they will fashion a new hasty altar to the unknown God. When they are inspired by their divinity, they say wonderful things; when the inspiration fails them their language is maintained at the same height, and they say more than they feel. You can never be sure of them.

On one or two points we might take issue with Professor Raleigh. In his zeal for the great Cham he even questions Boswell's account of Johnson's voracity. Now, Macaulay's paraphrase of Boswell, which represents Johnson as "tearing his meat like a tiger and swallowing his tea in oceans," is—just a bit of Macaulay's rhetoric. But there is too much confirmation of Boswell's picture—by Chesterfield, for instance, whom, perhaps as an enemy of Johnson, Professor Raleigh does not mention—to suppose it is not true. It is a more serious, and quite unnecessary, error into which Professor Raleigh falls when he compares the attitude of authors toward pay for their work with the attitude of men in business. "Yet iron-founders and cotton-brokers," he exclaims in a fit of strange excitement, "do not, in discussing the operations of their profoundly beneficent trades, express themselves wholly in terms of genius and virtue." Quite true, and neither, for that, does the self-respecting author. But it is a fact, nevertheless, that the relation of a business man's work to his reward in money is totally different from that of an artist's or author's. The former is working in a field where ability and success are measured directly in pecuniary quantities, whereas with the artist pecuniary success can afford no such measure. We do not believe that Dr. Johnson would have countenanced the deductions made by his present critic from his famous remark on writing for pay.

Introduction to Political Science. By James Wilford Garner, Professor of Political Science of the University of Illinois. New York: American Book Co. $2.50.

This book, which is intended as a text-book for students, covers a wider range than is usual in treatises of the kind. After defining the scope and the methods of political science, it treats of the nature, form, constitution, and the essential elements of the state, and of the various theories propounded as to its origin and proper functions. It also includes chapters on the distribution of the powers of government, on the legis-

lative, executive, and judiciary departments, besides also treating of citizenship, nationality, and the electorate. A bibliography of the best literature in English, French, German, and Italian is placed at the head of each chapter, and many additional authorities are cited in the footnotes.

It is evident that a thorough discussion of all these subjects would be impossible. The author frankly confesses that he makes no pretension to having covered the field in an exhaustive manner. We notice, however, some omissions which should have been supplied. While there is a full discussion of the representative system, there is only an allusion to the system of direct legislation, while the referendum, the initiative, and the right of recall are dismissed with a few words and without reference to the form in which they exist at the present time. No mention is made of the official recognition of parties and the regulation of their primaries, which is one of the most characteristic features of American public law. Where the author discusses the distinction between bureaucratic and popular government, from the standpoint of the organization and spirit of the administrative service, there is nothing said of the civil-service reform, by which it is sought to secure the efficiency of bureaucratic government while avoiding its dangers.

The author expresses his dissent from those who, without regard to the actual facts, would solve political problems by the application of abstract conceptions. In discussing the theory of state functions he comes to the conclusion that no *à priori* solution of their relation can be found, and that the comprehensive ground of general expediency is alone common to them. Yet when he undertakes to discuss the doctrine of sovereignty, which he rightly characterizes as one of the most important topics, if not quite the most important, in political science, he is a doctrinaire of the doctrinaires. Sovereignty he regards as unthinkable unless it is unlimited and undivided. Even the limitations prescribed for making changes in a state's own constitutional organization are merely instances of self-limitation and not legal restrictions, since "it is a matter of common knowledge that such provisions have in the past been time and again set aside for other methods." But as the author himself says in another part of his book, this is "ignoring the fundamental distinction between power legally exercised and power usurped and illegally exercised."

Unless we go back to the theory, repudiated by the author, of the existence of a sovereignty of the people, independent of and superior to the constitution, it is difficult to say why such limitation is not a limitation in the true sense of the word. The importance of this point is perhaps merely academic. But his theory that there is no sovereignty unless it is undivided leads to serious practical results. Although he admits that text-writers and also the Supreme Court of the United States have unanimously held to the theory of the existence, under our Constitution, of a dual sovereignty, yet he cites with approval the statement of Willoughby, in his book on the "Nature of the State," to the effect that under our system the States "are not States but administrative districts with larger powers of autonomy than are given others." He adds that this is "legally an absolutely correct statement of the status of the so-called States of the American Federal Republic." But he does not adopt the view that the central government is sovereign. There is, according to him, somewhere a power over and above both which can redistribute the powers of government between them, and "wherever it is, there is the sovereign." He complains that the task of "running the sovereign to cover" is not easy, and "that it is difficult to say whether the sovereignty resides in the people of the country at large, or in the people of three-fourths of the States, or either." The difficulty would be increased if he had remembered the provision of the Constitution that no State can be deprived, without its own consent, of its equal representation in the Senate.

To us it should seem that there can be a question of seeking where the sovereignty in a state resides, only after it has first been established that we have to deal with a sovereign state. Such a search, if we agree with the conclusions of the author, that in this country we have no sovereign governmental organization at all, must be futile. Nor do we see how a concept, which has been repudiated by the Supreme Court of the United States and every court since the Constitution went into effect, can be said to be an absolutely correct statement of the law.

It may be that, in the course of evolution, the change which seems to be in accord with the wishes of the author will take place; that the nation, as a whole, will be supreme, and that the States will be administrative divisions with a certain amount of autonomy. But when the author asserts that they are so now, merely because they do not come up to his abstract definitions of sovereignty, he is guilty of the same dogmatism which he rightly condemns in others.

Romantic California. By Ernest Peixotto. New York: Charles Scribner's Sons. $2.50 net.

Ten years ago Charles Dudley Warner wrote a delightful book on Southern California which he called "Our Italy," because of climatic and other similarities. He also referred to that region as "Our New Italy without malaria," and for this lack and divers other reasons seemed to prefer it to Italy itself. Not a few Italians have apparently shared this preference; California has appealed to them because of its soft breezes, its blue sky and sea, its oranges and figs, and also because of its being a land of gold—"a bit of his own Latin land, and an adventurer's land, too." It is to these Italians that Mr. Peixotto devotes a large part of his latest volume; he searches out the veritable bits of the motherland to be found on Californian soil, and tells his readers what he has seen in these colonies that retain traditions intact, live the picturesque life of the old country, cultivate their patches of *basilico* for the *minestra*, dry their strings of garlic on the roof-tops, and mend their brown nets in the sunlight by the sea. He also takes us to the Italian quarter in San Francisco, one of the first to be rebuilt after the great fire, a region with genuine Italian *trattorie* and theatres, but with a language now getting mixed, like "Pennsylvania Dutch," as illustrated by a sign advertising apartments to rent and concluding with the information, "La chiave al janitor in rear."

Having paid his visits to the Italians, our author calls upon the Spaniards, inspecting the old missions, which are now benefiting by the spirit of conservation which has begun to sweep over the land; indulging in souvenirs of the past; and making excursions to some of the towns that retain the romantic charm of the Spanish occupation—towns whose thick-walled adobe houses are still roofed with pottery tiles, while the streets are cooled by alamedas of pepper trees and tall files of eucalypti. His next excursion is through Bret Harte's country, and in this chapter he seeks to confute those critics who maintain that that story-writer did not correctly portray the life of the early mining days. Jimtown, to be sure, is now Jamestown, and can be reached comfortably by the recently constructed Sierra railway; but Angels is still as much a mining camp as ever, and what one sees there and in other places shows that the embroidery Bret Harte put on his stories "is but a varnish over cold fact." Romantic California is further illustrated, in word and picture, by an exploration of the coast, and finally by a few days' sojourn among the seals and birds of the Farallones, thirty miles at sea from the Golden Gate—islands on which blow at times storms of such fierce intensity that the lighthouse-keepers must climb the winding path on their hands and knees. The fact that the Farallones can be visited only by special permit, difficult to obtain, will fortunately preserve them from the unhappy fate of Santa Catalina, off Los Angeles, which

has become a fashionable summer resort.

Even if the 219 pages of reading matter in this volume were less alluring, the profuse illustrations would make it a strong ally of the tourist maxim, "See America first." There are no fewer than sixty-eight of them, mostly in this artist's happiest vein, and no one, surely, can look at pictures like Strange Groves of Cypress Point, In the Gaviota Pass, Point Lobos, San Francisco Bay, Los Farallones de los Frayles, Cormorants on their Nests, Shasta, without developing an eager desire to visit these romantic spots.

The History of Gruffydd ap Cynan: The Welsh text with translation, introduction, and notes. By Arthur Jones, M.A. Manchester: University Press.

It is a satisfaction to receive from the press of the University of Manchester continued evidences of the work of the school of Celtic studies, established there by the late Prof. John Strachan. A volume by Tomás O'Maille on the language of the "Annals of Ulster," begun under Strachan's supervision, is announced to appear in the university publications, and the work now under review, together with another that is promised on the legal vocabulary of the "Black Book of Chirk," testifies to the activity of Manchester students on the Brythonic side of Celtic philology.

Mr. Jones's book is a useful, though hardly a distinguished, piece of work. The "History of Gruffydd ap Cynan" deals with an important figure in the national life of Wales during the early Norman period, and while it is by no means to be regarded as a trustworthy narrative, its testimony on many points, as Mr. Jones shows, cannot be left out of account. The material, at all events, is historical, rather than legendary, and its composition, perhaps in an earlier Latin form to which some indications point, may date from the generation just following Gruffydd. This possibility gives the document a special claim on the attention of the historian, and at the same time connects it with a period of great interest to the student of Welsh literature—with the century of Geoffrey of Monmouth. The "History of Gruffydd" has very little in common, however, with the legendary narrative of the "Historia Regum Britanniæ." It is rather to be associated, as a piece of eulogistic biography, with the numerous poems of praise written by the contemporary bards for the kings or tribal chiefs under whom they served. It makes a kind of prose counterpart to these most representative products of the Welsh poetry of the time.

Such is the interest of the document, which has been accessible hitherto only in late and inferior texts. Mr. Jones's chief service consists in having made an edition and translation from the thirteenth century MS. Peniarth 17, and supplied in his introduction and notes valuable explanatory material drawn from other histories and chronicles. He has made the work for the first time easily available for study. His translation, so far as we have examined it, is careful and trustworthy, and, in point of English style, it is better, oddly enough, than the introduction, in which the author had a freer hand at composition. The ineptness and occasional obscurity of Mr. Jones's language suggest an inexperienced writer or one not quite familiar with English idiom. The Welsh text of the "history," we have, of course, not been able to collate with its source. We have found no reason in reading it to doubt its accuracy, though it departs in trifling details from the excerpts of the same manuscript printed by Mr. Gwenogvryn Evans for the Historical Manuscripts Commission. But the typographical errors which disfigure other parts of the book (such as the omission of "been" (?) on p. 25, and the misprints 1908 for 1098 on the same page, *corum* for *eorum* on p. 22, *Gogadh* for *Cogadh* on p. 186, and *Earchmarcach* for *Eachmarcach* on p. 77) rather shake our confidence in readings that we cannot control.

The Intimate Life of Alexander Hamilton. Based chiefly upon original family letters. By Allan McLane Hamilton. New York: Charles Scribner's Sons. $3.50 net.

While this volume of varied interest makes no pretence of throwing a great amount of new light upon either the public career or the private life of Hamilton, it does much to complete the picture of both. We get a fresh and firmer conception, for example, of the unflinching labor which went along with Hamilton's genius in achieving what he did in the law and in statesmanship. It is made pretty plain that he had given more time, and earlier, to his legal studies than had been supposed, so that it could hardly be said, in the phrase of one of his latest biographers, Oliver, that he "began at the top of his profession." The specimen briefs and outlines of legal arguments here printed show with what care of preparation Hamilton entered court. For the rest, Dr. Hamilton draws from the family archives a store of letters and accounts relating to his grandfather's courtship and marriage, early housekeeping (specimen entries show that the high cost of living troubled people even in 1791), income from professional earnings, and so on. Particular attention is given to the duel with Burr, the conflicting testimony of the seconds being set forth fully, and the medical reports being, as is natural, carefully weighed. In the matter of Hamilton's parentage, the facts are printed without either mystery or exaggeration, so that the reader is put in a position to understand what and how little force there was in the charge that he was illegitimate. Nearly thirty illustrations and facsimiles add to the value of the book, which is handsomely printed with full appendices and an index. The author's style is adequate to the matter, but a little loose at times. Thus, in referring to Hamilton's affairs with women, his grandson speaks, with a severity which we presume was not intended, of his *lâches*. It is probable that what he had in mind was the less offensive law term, "laches."

Notes.

Chatto & Windus are publishing a handsome edition of Stevenson's "Prayers Written at Vailima," illuminated in missal style by Alberto Sangorski; also his "Virginibus Puerisque" and other essays in type designed by Herbert Horne, and in pocket form "Father Damien" and "Talk and Talkers."

Bret Harte's "Salomy Jane," with illustrations in color by Harrison Fisher and Arthur Keller, is in the hands of the same house.

Dr. Gollancz, who has been appointed director of the Early English Text Society, has induced the society to issue, as a memorial to the late director, Dr. Furnivall, the founder of the society, facsimiles of great MSS. of old English literature. Donations to the fund may be sent to Dr. Gollancz at King's College, London.

"The Life and Times of the Right Honourable Cecil John Rhodes, 1853-1902," by Sir Lewis Mitchell of the Executive Council of Cape Colony; "Edgar Allan Poe: A Critical Study," by Arthur Ransome, are announced for immediate publication by Mitchell Kennerly. Somewhat later will appear a series of essays entitled "Interpreters of Life," written by Prof. Archibald Henderson of the University of North Carolina, on George Meredith, George Bernard Shaw, Maeterlinck, Wilde, and Ibsen.

Admiral Paulding, U. S. N., is the subject of a biography by his daughter, Rebecca P. Meade, announced for early publication by the Baker & Taylor Company, who will also issue "The Paper of Lending Library Books," by Cedric Chivers.

Richard W. Hale of No. 60 State Street, Boston, American secretary and treasurer of the Selden Society, advises us that the delayed volumes of the publications of that society for 1909 and 1910 are expected before the end of the year.

Longmans, Green, & Company have become agents in the United States for the sale of the publications of the University of Manchester. The same firm has arranged with the trustees of William Morris for the publication of a collected edition of his works in twenty-four volumes. The edition will be limited to one thousand and fifty copies.

B. W. Dodge & Company will publish this month "The Memoirs of Prince John de Guelph," and "When Cattle Kingdom

Fell," by J. R. Stafford, a story of Western life.

"Hidden Water," by Dane Coolidge, is in the press of A. C. McClurg & Company.

Wallace Irwin is publishing with B. W. Huebsch "The Teddysee," an epic of "Big Noise."

T. Fisher Unwin has in preparation "The Unfolding of Personality," by H. Thiselton Mark.

At the first meeting of the new session of the British Academy, on November 16, Prof. W. P. Ker will deliver the first Warton lecture, on "Thomas Warton and the Poetry of the Middle Ages."

A "Scots Dialect Dictionary," compiled by the Rev. Alexander Warrack, with an Introduction by W. Grant of Aberdeen, will be issued before Christmas by W. & R. Chambers.

The third volume of papers bearing on the war of 1870, which are published by the French government, is in the press. It is one of a series of probably twenty volumes, which are to be issued in the next ten or fifteen years.

There were 83 Rhodes scholars from the United States in residence at Oxford during the academic year 1909-10, with 79 from the colonies and 12 from Germany. Jurisprudence was the course of study pursued by the largest number, and a student from Washington, F. D. Metzger, gained the highest honor in it, natural science and history being the subjects ranking next in popularity.

The Berlin Academy has commissioned Dr. Kuno Meyer of Liverpool University to arrange for the publication of the manuscripts of the late Prof. Heinrich Zimmer, the well-known Celticist. Their subjects are, roughly: the earliest Irish literature; Patrick (a work embodying exhaustive investigations); the Celts and the Urbevölkerung, treating of the Zahlensystem Zeiteinteilung, matriarchy, polyandry, etc.; the so-called Celtic spirit in English and French literature (in opposition to Matthew Arnold); the abuse of the term Celtic; notes on Irish and Welsh grammar; the Arthurian legend, etc., etc. The complete works will be printed by the academy in their original form; the unfinished papers are to be edited by Dr. Meyer and brought out in the *Zeitschrift für Celtische Philologie* (Max Niemeyer, Halle).

One dramatist's method of starting to work on a play is suggestive of Freytag's formulas of rising and falling movements, climaxes, and catastrophes. As described by Vanderheyden Fyles, in an article entitled "Dramatists at Work" in the November *Metropolitan*, Eugene Presbrey first draws a diagram. He begins with a line representing the desired rise and fall of dramatic interest. "The effect suggests the record of a fever patient's temperature on a trained nurse's chart; the previously blocked-out acts—three, four, or five—corresponding to the hours on the chart. Then Mr. Presbrey returns to his starting point and traces lighter lines representing the different characters, and showing where they rise and fall with the main story; where meet; where separate; where cross; where end." But this is a very individual method. Most playwrights seem to have a rather haphazard way, not only of beginning, but even more, of ending, the final form of the play often not being determined until after actual presentation before an unconsciously collaborating audience has disclosed its real weaknesses. Pinero is another exception: "The peculiarity (and confident daring) of the system lies in the fact that the playwright finishes each act as completely, as irrevocably, as though it was a drama in itself. . . . Once he regards it finished, he has it printed and turns to the next act."

The extraordinary amount of knowledge displayed in Dante's works has been as puzzling to his commentators as the like phenomenon in Shakespeare's plays. Bruni, in his "Life of Dante," explains that "by study of philosophy, theology, astrology, arithmetic, and geometry, by reading histories, by turning over many and varied books, by vigil and sweat in his studies, he acquired the knowledge which he was to adorn and expound in his verse"; but this is lacking in details of time and place. Barbara Smythe, in "Notes on Dante's Education," in the last number of the *Oxford and Cambridge Review*, thinks it may be safest to assume that the poet was almost entirely self-taught. "That Brunetto encouraged him in his studies, as Bruni tells us, is likely enough; that he actually gave him instruction is improbable." How long and at what time he studied at the Universities of Bologna and Padua are uncertain, despite the testimony of Boccaccio as to the former and of Benvenuto da Imola as to the latter. Boccaccio's words are not precise: "The first elements, as above set forth, he got in his own native city; and thence, as to a place richer in such food, he repaired to Bologna; and when already verging towards age he went to Paris." Benvenuto is more definite. "In his youth he studied natural philosophy in Florence, Bologna, and Padua." But, while certain passages in the "Commedia" support the last quotation in its reference to Bologna, there is no known proof of Dante's having studied at Padua "in his youth." The probability is "that he went there in 1306." His statements that Boethius's "De Consolatione Philosophiæ" and Cicero's "De Amicitia" were unknown to him until he was twenty-five years old, and that he had not previously studied philosophy at all, make it plain that he had received no learned education in his youth, but do not necessarily preclude the possibility of his having been at a university. Much would depend upon what he studied while he was there.

For Petrarch's little-known "Secretum" Prof. J. H. Robinson, in the *Romanic Review*, claims the distinction of being the earliest example of honest and comprehensive self-analysis that we possess. In three short dialogues between St. Augustine and himself, Petrarch reveals the bitter conflict in the breast of the "first modern" between temporal ambition, a doubting desire for literary fame, and the mediæval view of life as a mere probation. Augustine points out the dangers of Petrarch's inability to carry through his ascetic meditations, adding:

> So it comes to pass that, as many things brought into a narrow space are sure to interfere with one another, so your mind is too choked up for anything useful to take root or grow. You have no settled plan, but are turned hither and thither in an amazing whirl; your energies are never concentrated; you are never wholly yourself.

It is the trivial anxieties of ambition that distract him:

> And your reading, what does it profit you? From the mass that you have read how much sticks in your mind, how much takes root and brings forth fruit in its season? Examine your mind carefully, and you will find that all you know, if compared with your ignorance, would bear to it the same relation as that borne to the ocean by a tiny brook shrunk by the summer heats.

Petrarch pleads a consciousness of his own insignificance, really, he is told, the most noxious form of pride. Augustine encourages the allegorical interpretation of Vergil, no matter whether Vergil himself when he wrote thought of it or not. Professor Robinson's analysis of the "Secretum" is to be continued.

The Voltaires, Rousseaus, and Montesquieus of Southern secession have not unnaturally been somewhat neglected for the Dantons and Mirabeaus. In an article in the current number of the *South Atlantic Quarterly*, Henry G. Ellis partly supplies this lack of attention by a consideration of the "Influence of Industrial and Educational Leaders on the Secession of Virginia." The divergence between the eastern and the western sections of the State was clearly shown in "the acrimonious discussion that preceded disunion." Each section had its industrial and educational leaders. When the slavery question began to eclipse in interest the tariff, Thomas R. Dew, professor of political economy at William and Mary, became an active pamphleteer defender of the "peculiar institution." His "Essay on Slavery" appeared in 1833, and, long before his death in 1848, what he wrote was "read with avidity and eagerly adopted by many of the slave-holders of the entire South." The leading exponent of the western section was also a prominent educator. In 1847 the Rev. Henry Ruffner, D.D., published "An Address" which he had delivered at Lexington. "This was the famous Ruffner Pamphlet, and it became, to a large extent, the gospel of the west." Ruffner spoke solely as an economist, denouncing slavery as an economic evil. Following the appearance of this pamphlet, a new leader arose in eastern Virginia, this time an industrial representative, Edmund Ruffin, who, besides being a practical planter, for years had been an authority in agricultural matters from New England to Georgia. He had grown rich through slavery, and his experience thus joined with his editorial training in enabling him to defend his views with a reasoning at once forcible and clear. In December, 1856, he published in the Richmond *Enquirer* an "Essay on the Causes and Consequences of the Independence of the South." This was followed in 1857 by a pamphlet entitled "The Political Economy of Slavery, or the Institution Considered in Regard to Its Influence on Public Wealth and the General Welfare," and in that same year by another pamphlet, "Consequences of Abolition Agitation." In 1859, "African Colonization Unveiled" and "The Colonization Society" and "Liberia" appeared. In 1860 Mr. Ruffin published a four-hundred-page book called "Anticipations of the Future to Serve as Lessons for the Present Time." No doubt the unobtrusive work of the pamphleteer had a large share in the task of "bringing

the people of Virginia to the point of secession, even at the cost of half her domain."

An extensively illustrated volume of folklore and historical fact concerning peoples of the eastern Pacific has been compiled by F. W. Christian. It is entitled "Eastern Pacific Lands: Tahiti and the Marquesas Islands," and comes this week from the press of Elliot Stock, who also announces "The Oak, its Natural History, Antiquity, Folk-lore, etc.," by Charles Mosley.

Henry Frowde has put out a fourth edition of Spinoza's "Ethic," translated by W. Hale White and Amelia Hutchison Stirling. Of the excellent translation nothing need now be said. In form the book has the solid attractiveness common to the work of the Oxford University Press; only one criticism is here deserved: the absence of the number of the "part" from the running titles makes it difficult to refer to any desired proposition. In the preface, Mr. White has used Freudenthal's "Lebensgeschichte Spinoza's" to make some additions to the biographical part, and has revised the critical part. For those who wish to read the "Ethic" as Goethe read it, for its philosophical stimulus, and not as an historical student of metaphysics, Mr. White's introduction will be helpful. We think, however, that, for any purpose, he waives too lightly the letter in which Tschirnhausen asked Spinoza how he derived the various manifold world from absolute unity and mere extension. That question Spinoza never properly answered, indeed could not answer, and there runs through the whole of the "Ethic" a sophism which quite vitiates its intellectual, though not its moral, value. He who would comment fruitfully on Spinoza ought first of all to lay bare this sophistical union of the absolute and the relative in the "Ethic," and then to show where the metaphysical sophism ends and the ethical truth begins.

Another volume in that stream of amateur biography that is pouring from the British presses and finding its way to this country. R. Ellis Roberts tells us in the preface to "Samuel Rogers and His Circle" (Dutton) that his purpose is to reduce the material in the books of Sharpe, Dyce, and Clayden to convenient bulk, and to add interest to brevity. The design is laudable, and such a work, undertaken by a man trained in literature and biography, might have been highly entertaining. Mr. Roberts's telling of the story is spoiled by a considerable amount of superfluous and, at times, very amateurish commenting on things in general. It scarcely seems necessary, for instance, in a life of Samuel Rogers, to say, even if the remark were not rather childish in itself, that "the true history of Hellas will never be written unless some one has sufficient imaginative sympathy to describe Socratic or Aristotelian philosophy from the standpoint of Xantippe and Pythias." The second part of the book consists in a number of chapters of mingled gossip and criticism about various friends and acquaintances of Rogers. The gossip is often amusing, and shows considerable reading; the criticism is for the most part at once pretentious and empty. We may seem more severe upon this volume than its failings, if compared with those of its kind, demand. But something ought to be done to stem this flood of amateur biography that England is producing—fortunately, no doubt because the source-material is not abundant here, little of it comes originally from this country. These books, printed in bulky form, and sold at exorbitant prices, are probably doing as much to demoralize the book trade as any other one cause. It is more difficult to write a good biography than a good novel, yet apparently any English man, or woman, who can make grammatical sentences will turn jauntily to writing the life of any one about whom he has read a few books, or of whom he has seen a few manuscript letters.

With the publication some months ago, by the University of Chicago Press, of the first volume, chronologically considered, of Prof. W. C. Bronson's "English Poems," this admirable series of selections was brought to completion. Each of the four volumes has been noticed heretofore in the *Nation*, to wit: The Nineteenth Century, February 13, 1908, p. 153; The Restoration and the Eighteenth Century, July 16, 1908, p. 53; The Elizabethan Age and the Puritan Period, April 28, 1910, p. 430; Old English and Middle English Periods, September 8, 1910, p. 214. In addition it may said that the series, which aims chiefly to meet the needs of survey courses in college, is consistent throughout in following the methods of selection and editing which were a part of the original plans. Its superiority to Ward's "English Poets" lies mainly, we should suppose, in its greater range and in the fulness of its notes.

W. Max Reid's "Lake George and Lake Champlain" (Putnam) is an addition to the American Waterways series, in which heretofore have been included volumes on the Hudson, St. Lawrence, Connecticut, Niagara, Mohawk, Ohio, Colorado, Columbia, and Mississippi Rivers, with other volumes dealing with the Great Lakes and Narragansett Bay. Some of the writers have been well equipped for their tasks, notably Mr. Dellenbaugh, who wrote of the Colorado River, and Mr. Hulbert, whose theme was the Ohio. Mr. Reid, before writing his present volume, had already contributed to the series the volume on the Mohawk, and had published "The Story of Old Fort Johnson," that fort being the early residence of Sir William Johnson. Mr. Reid has collected a considerable mass of historical material. Unfortunately, this industry has not been allied with literary skill in using the material for book purposes. His volumes have been scrappy and disconnected chronicles. It has been possible to dip into them at almost any point and scarcely suffer for want of knowing anything which has gone before. Chronology in narrative and anything like coördination in the arrangement of material have been strikingly absent. In the present case by means of illustrations, handsomely reproduced, and with large type for the text, an attractive volume has been produced. The lack of anything like digestion of the material before the product was printed is illustrated in various chapters indiscriminately arranged one after the other. The reader finds himself entertained in one chapter by an account of Israel Putnam, in another by one of "Old Bill Harris." The story of Ethan Allen's exploit the author leaves to the hands of Judge Thompson, author of that famous book of an older generation, "The Green Mountain Boys." Material taken from Judge Thompson's book serves as two regular chapters of Mr. Reid's. Strange inaccuracies, or solecisms, not only of diction, but of actual fact, are met with. We are told that "to Columbus and other adventurous Spaniards (*sic*) is given the honor of the discovery of America," and then reminded that a party of Basque fishermen probably visited the American coast before Columbus, but no mention is made of the Norsemen, whose visits, if made at all, antedated those of fishermen by centuries. Sir William Johnson is represented as superintendent of the "Five Nations," although the Iroquois in Sir William's time comprised "six" nations. The reader will have no excuse for forgetting the drowning of Corlear, inasmuch as he is informed of it in three places—on page 48, and then, as he turns over the leaf, on page 49, and once more on page 100. The Bay of Fundy is presented to us as "the Bay of Fonda." The British ambassador has his name spelled "Brice." The scene of Champlain's famous battle with the Onondagas is not indicated, although it has been accurately identified.

Richard Watson Gilder's recollections of Grover Cleveland, which have now been published in book form (Century Co.), make little pretension to a biography; they are rather, as the author styles them, "a record of friendship." This friendship extended over more than twenty years, and in the personal reminiscences which Mr. Gilder puts down we see the workings of Mr. Cleveland's mind upon many of the problems which vexed him. It has been said that Mr. Cleveland often expressed his surprise that no one had risen to defend him; this is borne out to some extent by his letters which are quoted in this volume, although he modestly averred that he was not anxious to have an autobiography "on exhibition." There is, too, the note of despondency so often found in his letters. Writing from Princeton in July, 1905, he said:

> Mr. ——— and all the forces about him have lately importuned me, in season and out of season, to write, say twelve autobiographical articles, offering what seems to me a large sum for them; but I have declined the proposition. I went so far (for I softened up a bit under the suggestion of duty and money) as to inquire how something would do like talking to another person for publication; but that did not take at all. I don't really think I would have done even that, but the disapproval of merely a hint that the "I" might to an extent be eliminated made it seem to me more than ever that the retention of everyhing that might attract the lovers of a "snappy life" was considered important by the would-be publisher. There is a circle of friends like you, who I hope will believe in me. I am happy in the conviction that they will continue in the faith whether an autobiography is written or not. I want my wife and children to love me now, and hereafter to proudly honor my memory. They will have my autobiography written on their hearts where every day they may turn the pages and read it. In these days what else is there that is worth while to a man nearly sixty-eight years old?

"Abraham Lincoln and Other Addresses" (Century) has the charm of the clear style and the dry wit of which the Hon. Joseph H. Choate is so consummate a master. They were delivered to English audiences whose acquaintance with American history and institutions was slight. It cannot, therefore, be expected that the lectures on Lincoln,

Franklin, and Hamilton should contain much new or original matter. A cheerful optimism is the prevailing spirit of the addresses on the Supreme Court and on education. The Constitution, as interpreted by the Supreme Court, has fixed the principles regulating the respective spheres of Federal and State power with accuracy for all times. Owing to the general adoption and the complete success of the elective system an undergraduate can develop his talents to the highest degree; our people are sober and economical, and the education received in the common schools enables every citizen to judge with some degree of intelligence of the great problems submitted to him, and has made them industrious readers of the best literature. A cheerful picture indeed. But when he delivered his lectures Mr. Choate was American ambassador, and although an ambassador is no longer to be defined as one who is sent to lie abroad for his country, he can scarcely be blamed if he presents only the bright side of things.

With "The Story of the Grail and the Passing of Arthur" (Scribners) Howard Pyle completes the fourth and last volume of his illustrated transcription of Malory's famous history. Mr. Pyle has done his task of literary adaptation skilfully and with evident enthusiasm. His pictures, executed broadly with the pen, have a gravity befitting the theme. In fact, the pictures and ornaments deserved a better typographical setting than this over-heavy quarto with its scamped margins. But the book is chiefly intended for young readers, and had to be kept within a price possible for the average fond father. In this romantic vein and in the somewhat archaistic technique he properly affects for these drawings, Mr. Pyle has no rival among our illustrators. The rugged simplicity of his manner fits a theme that oddly enough captured the morbid fancy of Aubrey Beardsley. As decorations Mr. Pyle's cuts are less notable than the Beardsley travesties. In everything that makes for sound illustration only the handful of Arthurian designs in the pre-Raphaelite Tennyson bear comparison with the best of Mr. Pyle's inventions.

William Henry Brewer, professor emeritus of agriculture in the Sheffield Scientific School, died last week at his home in New Haven, aged eighty-two. He graduated from the Sheffield Scientific School in its first class, that of 1852. Continuing his education abroad, he studied at Heidelberg, Munich, and Paris, and later received the degree of A.M. from Yale, 1859; Ph.D. from Washington and Jefferson, 1880, and LL.D. from Yale, 1903. In 1858 he was appointed professor of chemistry and geology in Washington College, Pa. In 1860 he was first assistant in the geological survey of California, and in 1863 was made professor of chemistry in the University of California. In 1864 he came to Yale as professor of agriculture in the Sheffield Scientific School, and was active in that position until 1903, when he retired.

Professor Brewer had been a member of the National Academy of Science since 1880. From 1892 to 1909 he was president of the Connecticut Board of Health, and from 1894 to 1909 was president of the Arctic Club of America. He was also a member of the Connecticut Academy of Sciences, its president in 1887 and 1897; of the American Society of Nationalists, the Society for the Promotion of Agricultural Science, etc.; and held several important government positions, being on the topographical survey of Connecticut; on the commission on cereal production in the United States in connection with the tenth census; on the United States Forestry Commission in 1896, and on the scientific survey of the Philippine Islands in 1903. Chief among his published works is the "Botany of California."

Sir Clifton Robinson of England, who received his knighthood from King Edward five years ago, in recognition of his services as a builder and organizer of traction lines, died last Sunday, at the age of sixty-two. He was the author of several treatises on tramways. For one of these, "The World's Tramways," he received the silver medal of the Society of Arts in 1902.

Science.

Prof. Stéphane Leduc's "Théorie physico-chimique de la vie et générations spontanées," which has been translated by Dr. W. Deane Butcher, will shortly appear from the press of Messrs. Rebman.

"Landscape Gardening Studies" (Lane), by Samuel Parsons, is the work of a man accustomed to do rather than to talk. Its brief and almost dry presentment of the results of more than a score of undertakings of the most varied kinds is a record of achievement rather than an explanation of methods; it is only seldom that Mr. Parsons pauses to show either principles or processes. Nevertheless, the book is suggestive. Its illustrations, from photographs and plans, are worth much study; and its chapters on evergreens and rhododendrons are valuable for their advice and lists of varieties. Perhaps the most needed chapter in the book is on a Japanese tea garden, with suggestions calculated to bring hesitation to those who have yearnings toward imitation of the characteristically foreign.

Several years ago the Swiss government published a wall map of their country for school use, which was then and still is the finest work of its kind. An "Atlas für Schweizerische Mittelschulen" has now been issued, which enables Switzerland again to break former records in educational cartography. The atlas is published by the Kartographia-Winterthur - Actien - Gesellschaft, 1910 and is to be ordered through the "Sekretariat der Konferenz der kantonalen Erziehungs-direktoren" in Zurich. It contains 133 pages, with an extraordinary variety of maps, some 280 in number, mostly physical and political, but showing also language, religion, industries, geology, and products. The intelligence in planning and the skill in executing the work are admirable. Projections and scales have been systematically chosen and are conscientiously indicated. The color schemes for altitudes on the relief maps, for temperatures on the climatic maps, for density on the population maps, and so on, are uniformly graded through the entire volume. Cities are not crowded in to fill blank spaces, but are critically selected, and their names are printed in a different sized type to indicate their population. A great number of inset maps show districts of special interest. The large scale relief maps of parts of Switzerland are unusually effective in representing form. A little corner map of Switzerland, set into the maps of distant lands, illustrates relative areas. When shall we reach a standard of educational publication to be compared with that here set by the little mountainous republic of Europe?

The mathematico-astronomical public will welcome the appearance of the third volume of Sir George Howard Darwin's "Scientific Papers" (Cambridge University Press, Putnam). The title of the volume, "Figures of Equilibrium of Rotating Liquid and Geophysical Investigations," fairly indicates the general nature of the content. Of the fifteen papers included, the first, which deals with the question of geological changes on the earth's axis of rotation, discredits a current view of geologists regarding the causes and effects of the glacial period. Time has deprived the second and third papers of the relatively little value they originally had. The same cannot be said of the next four, which have to do with the figure of the earth. Before its completion the ninth paper was virtually superseded by Poincaré's now famous memoir on the equilibrium of a rotating fluid mass, a fact that Darwin was prompt to see and prompt to own. The chief of the remaining papers are devoted mainly to extension of the results achieved by the great French savant, whose genius thus accompanies and interfuses that of Darwin in this third volume as did Kelvin's in the two preceding ones.

"Education in Sexual Physiology and Hygiene," by Dr. Philip Zenner (Robert Clarke Company), is described as "a physician's message" on topics whose presentation to the young is much discussed just now, both here and abroad. A considerable part of this little book contains talks to school children and to college boys, as actually given by the author. They are said to have been directly productive of good results. There is also a general, though very brief, discussion of the scope and method of such instruction which may well be helpful to those who are interested in these questions.

Drama.

Husband and The Forbidden Guests: Two Plays. By John Corbin. Boston: Houghton Mifflin Co. $1.25 net.

Mr. Corbin is a welcome addition to the ranks of American dramatists. In these two plays he exhibits not only the powers of observation and reproduction, which are among the chief qualifications of the playwright, but the ability to select a difficult subject of permanent interest and the courage to treat it with sincerity. He says, in a breezy preface on the relative positions of the sexes and the mutual responsibilities of conjugal union, that he hopes he has not written thesis plays, but he will probably find them very commonly allotted to that category, and there is no reason why the definition should be displeasing. It is not easy to understand why a stirring comedy of life and manners

should be the less valuable, even as entertainment, because it happens to enforce a true and valuable social lesson.

From a purely dramatic point of view, undoubtedly, there is too much discussion in proportion to the action in "Husband," which is the more ambitious and important of the two plays. This does not mean, however, that the story is lacking in incident or excitement. On the contrary, it is well supplied with both. As the piece is to be seen on the stage before long, it is not necessary at this time to describe it in all its details. It is a study, and, in the main—notwithstanding its occasional extravagance—a keen, witty, veracious, and trenchant study of notorious conditions which have wrecked many a youthful romance, brought misery to many homes, and filled the newspapers with scandal. In theme and spirit it is a genuine American comedy, with a message delivered with honest conviction and well worth hearing. Antony Wayne, the hero, is a young American of the most solid type. Of unimpeachable pedigree, he has won triumphs—intellectual and athletic—at college, and comparative wealth at the bar. He has been prominent in East Side work and as a reformer; and, when the curtain rises, he is the independent candidate for an important public office, and the terror of all political machines. He married for love, and for a time was ideally happy. But as his prosperity and the number of his interests have increased, he has become more and more absorbed in his work, while his wife, Clara, childless by her own determination and with no serious purpose in life, has devoted herself more and more to social ambitions and frivolities. So they have gradually drifted apart, he finding solace only in his work, and she deeming herself cruelly neglected. Restless under matrimonial ties and aspiring to an imaginary freedom, she is beguiled by the fallacies of free love, and, at this crisis of her fate, encounters a gay young English nobleman—the betrothed of one of her dearest friends—whom she soon learns to regard as the ideal man. Lord Iffley, on his part, is fascinated by her from the first, and when he seizes a favorable opportunity to declare his passion, she, in a moment of pique, promises to leave her husband and join him as soon as she can get a divorce.

But she purposes no secret flight. Holding that her true life—a life of perfect union—is now to be fulfilled, she frankly tells her husband of her resolve, in a scene which, however clever it may be from a dialectical point of view, or effective theatrically, is scarcely in accordance with the instincts of ordinary human nature. Wayne argues passionately that she is the victim of hallucinations, that her brain has been addled by her spasmodic dalliance with subjects beyond her grasp, while she dilates upon the nobility of the free soul. The debate is ended by the entrance of Iffley, whereupon Wayne orders both out of the house. In the closing act, however, by a series of calculated and unconvincing incidents which need not be related here, Clara is made to realize the essential selfishness of Iffley, the certain unhappiness and shame of her further connection with him, and lastly, the fact that deep in her own heart the love of her husband is still strongly rooted. Thus a reconciliation is effected, while she declares her intention of playing hereafter the full part of wife and mother.

This skeleton of the main plot, without reference to subordinate episodes, is sufficient to indicate the general nature of the play. It would be easy to point out more than one weak place in the general scheme, so far as the individual actions of the personages are concerned. In the crises they are too clearly the mouthpieces of their creator. At moments of tense emotion men and women do not argue their respective cases with such reasoned particularity. But the dialogue itself is excellent—compact, clear, and characteristic, and well adapted to stage purposes. The speech of all the personages is facile, natural, and consistent. But the external traits of manner are one thing and the truths of human nature, under stress, another. For his first two acts, Mr. Corbin—on the whole—proceeds naturally and logically toward the culmination of a common but poignant domestic tragedy, but his ultimate arrival at a happy ending, is artificial and theatrical. His conclusion is a practical stultification of his premises. But it probably means the popular success of his play.

"The Forbidden Guest" is an imaginative, and, to the thoughtful, a solemn little piece, fit only for the closet, which touches scientific and spiritual mysteries, of which even the author, perhaps,—for it will not bear the test of ultimate analysis—does not grasp the full significance. It is the vision of a dying widow, who in delirium sees and talks with the spirits of the children to whom she had denied earthly existence. The treatment is delicate, pathetic, and imaginative. To the materialist, the suggested moral will appear a bit of ridiculous and ignorant sentimentality; to the religious, it will be partly true and wholly trite; to the speculative, it will be ingenious, but unconvincing. The pure scientist will say that reproduction is the rule of nature. It is a vexatious topic.

The production of "The Merry Wives of Windsor," with which the New Theatre opened its second regular season on Monday evening, is but another demonstration of the futility of the attempt to rejuvenate an Elizabethan piece by the employment of modern methods. It may prove a popular success, for it has the prestige of Shakespeare behind it, is most attractive pictorially, and is sufficiently vivacious in its illustration of comic incident, but, inasmuch as it sets its main reliance upon the extravagances of a somewhat clumsy plot, and not upon the delineation of character or the elucidation of the text, it is not entitled to much serious consideration as a Shakespearean enterprise. The play, of course, is not a masterpiece. Falstaff, who is the central figure, is but a poor replica of the Fat Jack of "Henry IV," resembling him chiefly in his size and his profligacy, but he shares many of the same attributes in an earlier stage of their development. He has, at least, the saving grace of humor, a quality almost entirely absent from the impersonation of Louis Calvert. This actor, who has displayed much versatility here, and has had a long training in the Shakespearean drama, played the part with assurance, fluency, and vigor, but in a hard, dry, monotonous manner, with scarcely a touch of mellowness, unction, or luxurious imagination. Natural, in a certain narrow sense, he may have been, but he was not Falstaffian or Shakespearean. The fact that he was suffering from a cold cannot explain the barrenness of his conception. Another vital character, subdued to a fatal naturalness, was that of the brazen go-between, Mrs. Quickly, but the tameness in this case may have been due in large measure to the extreme age of the actress, whose selection was a managerial blunder of the first dimension. The wives themselves, of course, being normal women, present no particular difficulties to any fairly well-trained actresses. In the hands of Edith Wynne Matthison and Rose Coghlan, they are a source of unalloyed enjoyment. Here the obvious interpretation was given with fine skill and buoyant spirits. The Anne Page was charming, but not at all in accordance with her author's design. Pedro de Cordoba furnished a striking and capable sketch of Pistol, and Albert Bruning was clever as Evans, but both were condemned to unconscionable extravagances. The Shallow of Ben Johnson is also entitled to a word of commendation. Of the other performers no individual mention is necessary, except in the case of the Slender of Mr. Gottschalk, who adapts himself naturally to all Shakespearean eccentric parts. The directors of the New Theatre stage will do well to stick to modern pieces until they have realized that the older drama, whether in prose or poetry, is not the new.

"Ralph Royster Doyster," the first regular English comedy, will be presented by the Philolexian Society of Columbia University in Earl Hall on Friday and Saturday evenings, November 18 and 19. The play was written by Nicholas Udall, headmaster of Eton, for the use of his pupils, and was first produced some time between 1534 and 1541. Prof. Algernon Tassin of the Department of English is coaching the cast, and the staging has been designed by Prof. Brander Matthews. As far as possible the play will be given in the Elizabethan manner.

Mrs. Patrick Campbell has been engaged by Charles Frohman to play the part of the wife in "The Foolish Virgin," an adaptation of Henry Bataille's drama, "La Vierge Folle," which was produced last

January at the Gymnase Theatre, Paris, and is still running at that theatre. It will be produced in this city on December 5.

Louis N. Parker has finished the manuscript of his new comedy, "Pomander Walk," which is to have its first production in New York in December. It is to be played here by an English company. Mr. Parker will superintend the final rehearsals. "Pomander Walk" is thus described: "England of 1805; a crescent walk around a lawn facing the Thames, and bordered by six houses. The same scene for the three acts; little plot, only a discursive narrative about the six families who live in these houses; no villain."

James B. Fagan is finishing a dramatic adaptation, in four acts, of Robert Hichens's noval, "Bella Donna."

The *Quarterly Review* has an article on "The Censorship of Plays," in which are revealed the follies and inconsistencies of this office as it is now conducted.

Music.

Grove's Dictionary of Music and Musicians. Edited by J. A. Fuller Maitland. Vol. V. New York: The Macmillan Co. $5.

No English composer except Sullivan is so widely known in the musical world as George Grove, who edited and partly wrote the first great dictionary of music and musicians in the English language. The French had their Fétis, the Germans their Mendel, and when Macmillan & Co. decided that England ought to have something similar and better, they asked Grove to carry out the project. He accepted the Herculean task while doubting the adequacy of his scholarship. As a matter of fact, his erudition proved insufficient to prevent him from allowing a considerable number of errors to get into the text, particularly in the writing of several contributors in whose accuracy he put too much faith. But these flaws were a bagatelle compared with the merits of his dictionary, which in some respects surpassed all other works of its kind. His own most important contributions, the biographies and estimates of Beethoven, Mendelssohn, and Schubert, were so comprehensive that they might have been printed as separate volumes; and he wisely put the other leading composers into the hands of special admirers and authorities; Schumann, for instance, being written by Dr. Spitta, and Wagner by Edward Dannreuther.

The first volume of "Grove," as this monumental work is now called for short, appeared in 1878, the last in 1889. The musical world moves fast, and it became evident in course of time that instead of issuing supplementary volumes it would be far better to prepare a new edition, with additions that should bring it abreast of the time. To Fuller Maitland, the critic of the London *Times*, the editorship of the new issue was assigned. The first volume of the new edition was published in 1904, and now the work is complete—a great improvement on its predecessor, not only because of the many additions, but because of certain eliminations, like Rockstro's interminable "Schools of Music," which went over the ground covered by scores of other articles in the same work. There is still a lack of proportion in not a few of the articles, as when Tablature, in which only students of mediæval music are interested, gets seven pages, while Tenor, a subject of universal interest and hero-worship, is disposed of in two columns. Tempo is discussed at fitting length by Franklin Taylor, whereas Tempo Rubato, the most important of all subjects for both vocal and instrumental interpreters, is most inadequately and incorrectly treated, both under Tempo Rubato and under Rubato. To define the Rubato in the year 1910 as "a style of performance in which *some portion of the bar* is executed at a quicker or slower tempo than the general rate of movement, the balance being restored by a corresponding slackening or quickening of the remainder," is inexcusable. Whatever the dictionary meaning of the word rubato may be, in actual musical practice it refers to tempo, that is to the pace of a whole bar, or a group of bars, and not to a rhythmic change (dotted notes) within a bar.

Upon the whole, the articles relating, like the one just criticised, to matters of expression are the least satisfactory in the Grove volumes, new and old, Riemann's "Musik-Lexicon" being far superior in this respect. Riemann also includes articles on all the prominent English and American writers of books on musical topics, whereas Maitland, with one exception (that of a contributor), omits them, though he includes German authors like Tappert and Wallaschek, in whose untranslated books English and American readers of "Grove" surely cannot be as much interested as, for example, in the writings of Ernest Newman, Bernard Shaw, or James Huneker. American composers are more considerately treated; but in the case of artists like Lilli Lehmann and Anton Seidl the most important part of their careers, which happened to be in America, is almost completely ignored. The omission of the names of two of the four most popular American singers—Farrar and Homer—might be excused on the ground that when the volume in which they belong was issued they were less famous than they are now. But why were they not included in the 67-page appendix to volume V? And why, in this same appendix, is there room for mention of the fact that the one American critic included in these five volumes has written a new book, whereas under Grieg nothing is said concerning three books, one German, one English, and one American, about that master, which have appeared within a few years? The dates of Sousa's birth and of MacDowell's death are incorrectly given; and Max Bruch, in his German home, will be surprised to read that he died in Vienna on September 17, 1907.

Probably, since Grove completed his labors, the most important change in the concert world is the rise of the Russian school. The new editor showed excellent judgment in asking Rosa Newmarch to write up the masters of this school; it was she who edited and translated Modest Tchaikovsky's life of his brother, the greatest of the Russians, and her thirty-two columns on this composer are a model of condensed information. She is by no means a blind admirer; on the contrary, she rather under than overrates his songs and pianoforte pieces. Her assertion that his songs are inferior to those of Dargomijsky and Balakirev, even if questionable, will doubtless do good in calling attention to the productions of those two men. Other important articles in this final volume are on Tone, Tonic Sol-Fa, Touch, Transposition, Trombone, Trumpet, Tuning, Turn, University Musical Societies, Variations, Violin, Verdi, Violin Playing, Wagner, Waltz, Welsh Music. The author of the five columns on the most popular of dances achieved the extraordinary feat of not even mentioning by name the younger Strauss, universally known as the "Waltz King," which is like writing on the opera without naming Wagner. He deserves praise, however, for emphasizing the importance of Schubert in the development of the waltz. Concerning the Viennese tradition of introducing ritardandos and accelerandos, the very soul of the waltz, he says that, charming though it is to a musician, it "has never been caught by any English conductor of dance music, and probably would be found impracticable in England, where dancers may be seen exhibiting their lack of sense of time and rhythm by waltzing to the music of a polka."

Mr. Maitland and his contributors have wisely adhered to Grove's principle of making the articles in this dictionary interesting to the general reader as well as to the musical student in quest of information. To this it owes much of its success, which is fully deserved; it is a monumental work, a complete musical library in itself.

Several prominent American composers have been members of the faculties of our leading universities, but so much was exacted of them in the line of teaching that little time and energy was left for their creative work. It remained for Western College, of Oxford, Ohio, to show the world

that Pegasus should not be hitched to a wagon. That institution has bestowed on Edgar Stillman Kelley a fellowship which will require him to deliver some lectures during the year, while leaving him ample leisure for composing. A better man could not have been chosen for such a post and privilege. For several years past Mr. Kelley has lived in Berlin, where he has taught, besides composing some chamber music and songs which won the cordial praise of experts.

The Parisians were pleased that Mme. Nordica should have taken the trouble to learn the rôle of Isolde in French; and still more pleased when they heard her do it. Some years ago, when she impersonated Isolde in Munich, the leading newspaper in that city declared it was a delight to find that this rôle can be actually sung, and the Parisians were similarly impressed by the American soprano's rare art of combining *bel canto* with dramatic expression. "Her success was triumphal," declared *Le Figaro* of October 21, and the critics were unanimous in their praise. The eminent composer, Alfred Bruneau, wrote in the *Matin:* "She gives to Isolde a magnificent character of proud vehemence; she imparts to it a superb nobility of attitude and expression. To sum up, her art has force, grandeur, and beauty."

The Paris Opéra Comique will present "Macbeth," an opera in three acts, founded upon Shakespeare's play, by George Bloch.

A Beethoven festival at Paris in the early summer of 1912 is being arranged, it is said, by Alfred Gutmann.

Art.

COLOR PRINTS OF JAPAN.

I.

This corrected and amplified translation of Von Seidlitz's standard work on Japanese prints* appeals both to the collector and the general student of art. With its abundant reproductions and artists' signatures in facsimile, it serves very well as an historical manual, while it has the peculiar merit of endeavoring to make an æsthetic appraisal of the material. This needed badly to be done. Such English experts as Anderson and Strange have, on the whole, approached the subject in an antiquarian spirit, while Edmond de Goncourt and Bing merely confirmed the exaggerated vogue of Hokusai and Utamaro among the pioneer collectors. The late E. F. Fenollosa, in his remarkable catalogue, "The Masters of Ukioye," 1896, was the first Western scholar to work through the entire field from the point of view both of history and pure criticism. His work, since it was merely a catalogue for a loan exhibition, has never had its due recognition, and Von Seidlitz deserves credit for accepting so candidly the judgments of his American predecessor. The emphasis of the present work, then, is precisely where Fenollosa laid it, on Kiyonaga and his eighteenth-century precursors. Here is Fenollosa's rating, which our author apparently accepts: Of first rank as artists are the precursor Matahei, Okumura Masonobu, Harunobu, Kiyonaga, and Hokusai. Such favorites as Koriusai, Utamaro, and Shuncho are relegated to second place, while to the heroes of many of us, Toyokuni of the actors and Hiroshige of the landscapes, is grudgingly awarded third rank. The early nineteenth-century prints that are the staple of the market, Kunisada, Kuniyoshi, etc., Fenollosa left in the limbo of the fourth class. This book, then, reaffirms a quite definite scale of values which the enthusiast may do well to consider. It indicates that, with the exception of Europe's first Japanese love, Hokusai, the tendency has been to collect the prints of minor importance. To possess Utamaro, Toyokuni, and Hokusai, with Hiroshige as a second choice, is still the ambition of the average amateur.

Now it is no wonder that the pioneers, the Goncourts, Duret, Gonse, Whistler, Alfred Stevens, and our own John La Farge and Russell Sturgis should have been enraptured by the first prints that came over. These earliest importations included the giant Hokusai, but for that matter what Fenollosa scornfully calls a fourth rate print was an infinitely refreshing apparition in the heyday of Victorian and Third Empire art. If the pioneers had not loved the languid Utamaro too much, should we now be devotees of Kiyonaga? Will our successors in turn have passed altogether beyond eighteenth century Japan?

II.

A Japanese amateur would be in no doubt as to the answer. For him the cult of an art which he regards as vulgar both in its spirit and processes is a deplorable aberration. We face the disquieting paradox that an art which no native adept takes quite seriously has captured the finest connoisseurs of the western world. Who is right? Or is there some misunderstanding that puts both East and West partly in the wrong? Is there perhaps a common ground on which Mr. John La Farge and Mr. Okakura Kakuzo might yet meet? These questions are all important, but have never been fairly met. Here they naturally cannot be elucidated, yet the hint of a compromise may be given. To do this we must understand the position of the Japanese connoisseur. He scorns the color-prints, first because they represent for him a decadent school. *Ukioye* (the fleeting world) is for him an unworthy subject. He condemns the practitioners of the style, both for their vulgarity and frivolity. They stand apart from that idealism which is the soul of Japan. Hear Mr. Okakura:

> The Popular School, though it attained skill in color and drawing, lacks that ideality which is the basis of Japanese art. Those charmingly colored woodcuts, full of vigor and versatility, made by Utamaro, Shunman, Kyonobu, Harunobu, Kyonaga, Toyokuni, and Hokusai, stand apart from the main line of development of Japanese art, whose evolution has been continuous ever since the Nara period. . . . Great art is that before which we long to die. But the art of the late Tokugawa period only allowed a man to dwell in the delights of fancy. It is because the prettiness of the works of this period first came to notice, instead of the grandeur of the masterpieces hidden in the daimyos' collections and the temple treasures, that Japanese art is not yet seriously considered in the West.

Here we have to do with a condemnation both æsthetic and patriotic. The absolute superiority of the traditional schools of painting is asserted, and *Ukioye* is regarded as a defection from sound national ideals. In the same spirit purists have ruled out the "gallant school" of eighteenth-century France as essentially frivolous or vulgar. And the *Ecole galante* has so many affinities with *Ukioye* that we may say that to condemn Kiyonaga one must logically scorn Watteau, while Utamaro and Fragonard must stand or fall together, both being consummate interpreters of those women whose forte is a refined sensual charm. Here we reach an ineluctable issue of principle. Is it possible honestly to like the severe portraiture of Philippe de Champaigne and the coquettish designs of Eisen, the noble abstract landscape of Sesshu, and the more literal transcripts of Hiroshige? Impressionist critics have denied that the same heart can honestly harbor these discrepant pleasures, and, clearly, the Japanese heart cannot. In the West, however, taste requires no such exclusive and doctrinal devotion. The sincerity of Théophile Gautier will hardly be impugned, and he knelt impartially at the shrines of Ingres and Delacroix. More significantly, Fenollosa, of all students of the ancient traditional painting of Japan the most learned and sympathetic, was also a most discriminating admirer of the masters of *Ukioye*. We might add that connoisseurs who, like C. L. Freer, have sought out the finest scrolls of the earlier centuries have remained unabated enthusiasts for the eighteenth-century masters. In short, the finest Western taste is flexible enough to admit the superior glories of traditional painting in Japan and still to love both the exquisite craftsmanship and the infinite human variety of the smaller art of the popular school. We evidently face one of those ultimate antitheses of race which may hardly be adjusted. Let the Oriental beware lest logical severity deprive him of some excellent pleasure,

**A History of Japanese Colour-Prints.* By W. von Seidlitz. Translated by Anne Heard Dyer and Grace Tripler. About 100 plates, including 16 in color. Philadelphia: J. B. Lippincott Co., $6.50 net.

and the Occidental lest in the easy fringe of his standards more undesirable visitants than Utamaro and Fragonard find a lodging.

III.

Admitting once for all the technical and spiritual superiority of older Japanese painting, the color-prints, both on the side of craftsmanship and subject, make an irresistible appeal to the catholic collector. As superb facsimiles after great designers, these sheets far outrank, in merely technical interest, the woodcuts after Dürer and Holbein. The cotton paper, once impregnated with pigment, gains a peculiar loveliness of texture, a chastened brilliancy quite its own. The impressions which are made without a press, by careful padding, yield an extraordinary variety of velvety black lines, cunningly varied flat tints, and even embossing of a most restrained elegance, serving merely as accent. The linear pattern is conducted scrupulously in calligraphic swirls, which yet give the character of the subject; every trick of repetition, opposition, and counterpoise is practised, and the effect remains delightfully simple and clear. Upon this carefully arranged and ever rhythmical foundation of continuous black lines is superimposed a bolder system of color masses. Nobody has understood the art of balanced spots as the painters and printers of Japan. Harmony is secured first by an instinctive equilibration of these flat masses of color, and, again, though the procedure is never allowed to annul the broad contrasts of color, by introducing a little of the neighboring hues in each mass. These humble workmen employ more flexibly that instinctive, almost mathematical, color-sense which we note in the rug weavers of the Nearer East, a faculty which has been vouchsafed but sparingly to Europe since Gothic times.

How subtly intellectual the composition of these unpretentious subjects is may be judged from the fact that the single sheets which have delighted European amateurs often turn out to be merely detached members of compositions of two, three, or more sheets. The arrangement is so planned as to be perfect, whether in the single prints or the ensemble. As regards the mind, the isolated sheet may be incomplete; as regards the eye it is unitary. Evidently, the successful articulation of compositions complete in themselves requires forethought and shrewd calculation. Formulas may help somewhat, but in technical resources the artists of the popular school are not inferior to the great masters of the earlier centuries. Even the purists, like Mr. Okakura, admit this, and merely deplore the inferior inspiration of the realists. As masters of composition, these popular artists are perhaps most engaging in those tall strips called *kakemonos*. Within these strait limits they will set a figure and accessories, sometimes several figures, horses, boats, always without crowding and always with regard to the vertical scheme. Here they achieve not merely remarkable feats in perspective, but do wonders in making figures fully expressive and satisfactory though cut into by the frame. One does not need to go to the master in this kind, Koriusai, nor yet to the rare *kakemonos* of Hanunobu and Kiyonaga; the later men will supply admirable examples. There is, for example, a Yeizan print of a Samurai with his bride, half-length figures, each with a hawk on wrist, in which the pattern undulates through curved wing and back of the falcons and tilted heads of the hunters, being held true to the vertical by spacious masses of blue. Such variety within a formal scheme is characteristic of all genial design, and especially of that of Japan.

For such reasons any lover of beautiful design, not bound by an exclusive æsthetic, will perforce admire, and, as he may, possess Japanese color-prints. It is true that the enthusiasm for them is still somewhat indiscriminating. Secondary artists are exalted, and mediocre prints are sold at absurd prices, but the amateur who is lucky enough to acquire Kiyonaga, Harunobu, or Masonobu, and is clever enough to discern good Hokusai from poor, to cull out the really desirable sheets of Utamaro, Kuniyoshi, and Hiroshige—such an amateur will not have either æsthetic or financial cause to regret his foible for the school of the fleeting world.

Since monetary value depends largely on condition, and the slightest defect in register or inequality in printing rules a print out, it is regrettable that Von Seidlitz has not laid greater stress on this matter. Happily, the cult of condition plays into the hands of the impecunious collector. He buys for a dollar or two the prints which in immaculate state are held in the hundreds. Only let him not persuade himself or his wife that, fiscally speaking, he is getting bargains. Artistically, there is much to be said for the poor print. Its defects are often microscopic, while frequently it has acquired through age and wear an adventitious beauty all its own. The present writer knows of a smoked and browned Koriusai which, though the learned deny it, is æsthetically a "unique example." In the gift and anniversary sheets, *surimono*, the dexterity of the color printers appears at its height. They love to powder the paper with sparkling foil or mica. Of these charming confections our author is somewhat scornful, considering them over-elaborate in polychromy and embossing. *Surimono* are, as a matter of fact, so hard to come by that nobody really needs to be warned against them; moreover with some tendency to fussiness they contain some of the masterpieces of *Ukioye*. A most delicate ingenuity is employed in hinting at favorite occupations or depicting favorite instruments of the person complimented.

IV.

From the early seventeenth century when the painter Matahei founded the popular school, through the years when black or hand-colored prints were the rule, to the beginnings, with three pigments, of true color printing, and Harunobu's invention of the five color blocks, in 1765, Von Seidlitz conducts the reader cautiously and with tact. Due stress is laid upon the close relation of book illustration to the derivative art. The ultimate complication of the color schemes in the artists of the early nineteenth century is condemned as sterile virtuosity. The most famous works are listed, and many signatures are reproduced. This book in short, while in no sense a complete catalogue, is an agreeable introduction to the subject, and a useful manual for the collector. If he adjusts his standards by it he will not go far wrong, for more detailed information a friendly Japanese adviser is better than many books. Fenollosa's catalogue is inaccessible and heavy reading. To study it in a print collection would be a liberal education in this branch. Next to this course would be to buy and read this excellent book which has embodied so much of Fenollosa's teaching. As for the fleeting world of eighteenth century Japan, a visit to it involves some hazard of bad company. It is a chance, however, that an adventurous spirit will take cheerfully. The courtesan, parading, dressing, bathing, reading romances, bulks pretty large in this world. But her appeal is so demure and hieratic that only a very uneasy conscience could resent her presence. She fits naturally and quite modestly into a human scheme that includes chivalric heroes, samurai hunting or in other rural disport, workmen at their trades, hardy fishermen and peddlers with their sumpter beasts, actors in rigid yet expressive poses, prosperous folk on water parties, children at play, toilers in the rice swamps—of this motley world she is in a manner the queen, but she rather partakes of its decorous gayety than communicates her own corruption. Utamaro in his later work has given her a portentous and graceful melancholy. Her features are elongated and rounded with a paradoxical resemblance to a saint of Simone Memmi. And this pathetic conception of the woman of pleasure, corresponding to the end of the great century, means that the glory of *Ukioye* has passed into decadence. There will still be place for the robust illustration of Hokusai; Hiroshige, and occasionally Kuniyoshi, will yet give us visions of that solemn Japan of forest and

mountain that overlooks eternally the fleeting world of city and coast, but the vein that has produced for nearly two centuries is exhausted. The fleeting world will lack its artist chroniclers, Fuji will aspire in the distance and will be stencilled on a million pots for the delectation of the careless foreigner, but no Hokusai will enwreath that sacred cone with expressive arabesques every element of which is an idiomatic trait of Japanese life. *Ukioye* is dead, as dead as the fêtes of Watteau and frolics of Fragonard, but it keeps a kind of life in those who love the human show and value the exquisite gesture with which a disciplined hand obeys the orders of a seeing eye. And as for the issue of frivolity, a fleeting world in the flesh or on paper must contain much to offend a moralist, but a fleeting world that wants to be exquisitely depicted is for the artist at least a most serious and consoling reality, and by the time the overt frivolity of his subject matter has filtered through his imagination the residuum should be limpid enough for a stoic. Real vision and imagination are always antiseptic. Surely we must count Watteau a serious artist—and Kiyonaga.

FRANK JEWETT MATHER, JR.

Many readers who know and enjoy European architecture would like to learn something of the conditions that gave rise to the various styles, and something of the distinctive features that characterize these styles; but find it irksome to dig their facts out of the ordinary books of the reference shelf. "Romanesque Architecture" (Macmillan), by Edith Browne, is just such a book as they desire—simple, clear, and admirably adapted to their needs. It traces the racial and political influences that brought about and modified the Romanesque style, and describes its structural development so well that one could wish the story not quite so brief. It is an uncommon pleasure in a work of this kind to find that the author is less concerned with questions of chronology or of decorative sculpture and painting than with the architectural qualities of the buildings described. The illustrations are especially well chosen. Other volumes of the series—"Great Buildings, and How to Enjoy Them"—deal with Gothic, Norman, and Greek architecture.

Dr. A. J. Evans and Dr. Duncan MacKenzie have continued their excavations on the site of the great Palace of Knossos, with important results. The exploration of the deep vault previously found beneath the Southern Porch led to the conclusion that it was a great tank for supplying the palace above it with water. This view is strengthened by the discovery of a spiral staircase terminating at what would be the water-level when the reservoir was in use. A similar rock-cut cistern was found at the southeast angle of the palace. These cisterns, Dr. Evans thinks, belonged not to the palace found above them, but to an older palace, of which all traces have disappeared.

Investigations were also conducted in the neighborhood of the "Little Palace"; here was brought to light a fine façade of Minoan masonry belonging to what was evidently an annex of the palace, and connected with it by a kind of bridge. Among the objects found here were a votive marble slab, with a beautiful relief of a youth on horseback, and a Doric metope representing Heracles and the Calydonian boar.

Of great interest is the discovery of six chamber tombs on the headland of Isopata, which overlooks the site of the harbor town of the ancient Knossos. They surpass any hitherto known of this class, both for their size and for the interest attaching to their contents and arrangement. There were found stone and bronze weapons and implements, a beautiful collection of painted vases in the best "Palace style," and a small gold signet ring engraved with a design of two goddesses clasping bands, with their shrines behind them. Of importance was the appearance of a new class of painted vessels, evidently used exclusively for sepulchral purposes, with unfixed colors, chiefly black. In the largest of the six tombs—a chamber about twenty feet square—were found two double axes and two libation vessels. The arrangement in this tomb was peculiar. To the right of the entrance was a raised stone platform into which the pit that formed the burial cist was cut; along the outer face of this platform and around the remaining sides of the chamber ran ledges, and a pier jutted out from the back wall, decorated on its front face with a column in low relief. It is possible that this chamber was used for some memorial function.

C. H. Shannon's portrait drawing of the late Dr. Furnivall has been placed in the National Portrait Gallery.

Charles van der Stappen, the Belgian sculptor and director of the Académie Royale des Beaux-Arts, who died recently in his sixty-eighth year, had decorated many structures in Brussels, among them being the Académie, the Hôtel de Ville, and the Alhambra.

The death is reported from London of Robert Walker Macbeth, the painter, at the age of sixty-two. The son of an artist of some note, Norman Macbeth, he was educated at Edinburgh and Friedrichsdorf, Germany, and later, in art, in the Royal Scottish Academy Schools. He was a member of the Royal Academy and the Royal Water Color Society, an original member of the Painter-Etcher Society, and a correspondent of the Institute of France.

William St. John Harper, an artist and illustrator, died last Friday, aged fifty-nine. As a painter, etcher, and illustrator, Mr. Harper has been prominent in the art world for thirty years, coming into general notice when he was elected president of the Art Students' League in 1881. He is best known probably for his painting of Autumn, which won for him the Clark prize in 1892, and Winter's Veil, which received honorable mention at the Buffalo Exposition in 1901. Among his other paintings are The Beach Patrol, An Opera Night, A Legend of Spring, A Fairy Tale, The Village Street, East Hampton, May Flowers, and numerous Long Island landscapes. He studied under Bonnat and Munkacsy in Paris. In 1878 he became art director of the New York *Daily Graphic*, then the only illustrated daily paper in the country. It was after this that he became head of the Art Students' League, and after filling that position for three years, took up work as an instructor in several schools, among them being the League, the National Academy of Design, Cooper Union Art School, School of Arts and Crafts, and the Emma Willard Art School of Troy, and the Summer School of Painting at Northport, L. I., with which he was associated at the time of his death.

Finance.

LENDING TO CHINA.

The recent announcement that a Chinese Government loan for $50,000,000 had been taken by New York bankers appears to have excited much surprise in Europe, and to have caused some perplexity even on our own money markets. London financial dispatches had at first expressed incredulity as to the subscribing for so large a foreign loan by a market which was resorting to European lenders to finance its own railway loans at high rates of interest. New York itself was puzzled to understand how a $50,000,000 Chinese loan could be taken here, when the very banking community which took it was advising New York city not to press a $50,000,000 loan of its own at the present time, because the American market was not in good shape to absorb it. These were perfectly natural perplexities—not less so, certainly, when it is hardly to be supposed, on general principles, that the average American investor would clamor for Chinese bonds, and when the savings banks could not be among the buyers.

It is safe to say, however, that the operation is distinct, both in character and purpose, from the bringing out of a New York city loan, or a Pennsylvania Railroad loan, or even a United States Government bond issue. In those undertakings the underwriting banker would, so to speak, be in immediate touch with the ultimate consumer, and that consumer would be the American public or the American banking and investing institutions as a whole. Our public, it is true, has taken Cuban Government loans and Japanese Government loans; but Cuba is, in a business way, a part of our own domain, and Japan's American borrowings of 1904 and 1905 were not only facilitated by our people's strong sentimental sympathy with Japan in her war with Russia, but were offered to investors at a price which yielded 6 to 7 per cent. per annum.

No recent Chinese loan has been offered at any such figure; China's outstanding 5 per cents—the rate which the new loan will also bear—are quoted in London well above par. Yet that very quotation shows that somewhere in the international investment market the price can be commanded and the market can be obtained. Presumably the American bankers who have taken the $50,000,000 Chinese 5 per cents at

95 have done so in the belief, derived from their knowledge of the whole world's investment markets, that they can find advantageous sale for them, though not necessarily in America. They agree with China to find the money; it is indifferent to China where they find it.

In London, which has hitherto been the principal market for Chinese bonds, the comment on the American underwriting seems to be that it is a notably clever achievement, not in finance primarily, but in diplomacy. It has, in fact, been an open secret that our State Department was extremely desirous of placing this loan through the United States. The Administration was in all probability the prime mover in this last operation; it certainly took an active part in insisting that to our bankers should be allotted a portion of the recent $30,000,000 Hankow Railway loan of China.

For this governmental policy there appear to be two reasons, recognized both in Europe and in America. One has to do with the stipulation, sometimes made to a borrowing state, that the proceeds of such a loan shall be invested in materials and supplies bought in the country which financed the issue. The other bears on the presumption, very common in European diplomacy, that the state which lends the money will thereafter have a controlling voice in the politics of the state which borrows it. On no other theory could such an episode be explained as the extraordinary quarrel between four European governments, after China's disastrous war with Japan, as to which should have the privilege of procuring for China the money to pay the heavy war indemnity.

This diplomatic theory, taken as it stands, would explain the wish of our Government and bankers to get China's $50,000,000 loan, and their triumph over the achievement. The question cannot wholly be ignored, however, whether the ulterior purpose is so sure to be attained. That a market holding the bonds of a government which elects to default upon the interest will take a hand in that government's internal policy—to the extent at least of receiving and allotting the yield of its customs and excise revenues—is now accepted international tradition. But that is nothing more or less than appointing a receiver in bankruptcy, and our bankers are certainly not taking Chinese bonds in the hope of such a sequel. In China's case it is pertinent at least to ask who is to be the diplomatic favorite, when (as happens to be true) four separate states are among her existing creditors. More than this, the question will intrude as to how we are to compel political good-will from China on the ground of our money-market civilities, if the Chinese Government should have other inclinations.

Were New York the only market where Peking could borrow, one might answer that financial necessity would involve political friendliness. But as we have seen, the case is just the opposite. China, to judge from current international comment, has conferred a particularly gracious favor on America in letting it have the loan. Why should not China, then, itself demand diplomatic favors in return?

This aspect of the matter gives a touch of the grotesque. If it be replied that such conduct would not be in accord with diplomatic rule and precedent, then what shall be said of Turkey? For years past, through good and ill, London has financed the needs of the Turkish Government, with Paris a more recent participant in the task. Yet when one turns to the "foreign-affairs leader" in the London newspapers of to-day, he finds it filled with indignant protests at the rumored decision of the Constantinople Government to cast its diplomatic fortunes with Germany and the Triple Alliance. England and France denounce both the irregularity and the ingratitude; but Turkey may be imagined as smiling broadly, while she points to the energetic competition among the bankers of London, Paris, and Berlin to obtain the privilege of lending.

Abridged Report from The London Times, Saturday, October 22, 1910

The Encyclopædia Britannica

THE NEW EDITION

A DINNER was held at Claridge's Hotel last night, by invitation of the Chancellor of the University of Cambridge, on the occasion of the undertaking by the University of the publication of the new (eleventh) edition of the "Encyclopædia Britannica." The Chancellor (Lord Rayleigh) presided, and among those present were the following officers of the University:

The Vice-Chancellor (Mr. Scott, the Master of St. John's), the representatives in Parliament (Messrs. Butcher and Rawlinson), the Master of Corpus Christi, the Master of Downing, the Master of Gonville, and Caius, the Provost of King's, the Master of Magdalene, the Master of Pembroke, the Master of Peterhouse, the Master of St. Catherine's, the Master of Selwyn, Sir Clifford Allbutt, Sir Robert Ball, Sir George Darwin, Sir James Dewar, and Sir Joseph Larmor.

Among the other guests were the American Ambassador, the Bishop of Ely, the Chancellor of the University of Manchester (Lord Morley), the Chancellor of the University of Aberdeen (Lord Strathcona), Lord Gorell, Lord Justice Fletcher Moulton, Lord Justice Buckley, Sir Alfred Lyall, Mr. Alfred Lyttleton, M.P.; the Vice-Chancellors of the Universities of London, Manchester, Wales, and Glasgow, the Principal of the University of London, the editor (Mr. Chisholm) and staff of the Encyclopædia Britannica, the secretary (Mr. Wright) and staff of the University Press, Sir William Crookes, Sir A. Geikie, the Hon. Arthur Elliot, the Hon. C. A. Parsons, Sir Harold Harmsworth, Sir Ray Lankester, Sir Wm. Ramsay, Mr. Moberly Bell, Mr. Edmund Gosse, Mr. Frederic Harrison, Professor Sedgwick, and Mr. Andrew Lang.

The Chancellor, in proposing the toast of "The King," announced that his Majesty had consented to accept the dedication of the new edition of the Encyclopædia Britannica [cheers], and that the President of the United States had also accepted a similar dedication.

The President of the British Academy (Mr. S. H. Butcher, M.P.) proposed the toast of the "Encyclopædia Britannica." He said, in part, that the "Encyclopædia Britannica" was a very remarkable book in its traditions. The first edition went back 140 years, but the eleventh edition had now passed into the hands of the University of Cambridge. It was to come out in 29 volumes; it had 27,000 pages, 40,000 articles, and more than 1,500 contributors. These contributors were men of great distinction, not only in this country, but all over the world; and with its India paper and some other of its physical characteristics, the weight of the 29 volumes was 80 lbs., all the volumes being compressed into a space of about two feet. [Laughter and cheers.] How did this book come into existence? Who made it what it was? Who had created this new edition? It was more than a new edition; they might say that it had been rewritten as compared with the ninth or tenth edition; and the work was due to the editor, Mr. Chisholm, perhaps, also with the help of his assistant, Mr. Philips. He had been silently at work on this edition for eight years, and had been able to produce an edition which was a quite original thing in the history of encyclopædias. He had obtained the help of expert advisers, and through the aid of *The Times* had been able to establish relations with all the world. It seemed to him that there were two interesting and original features of this new edition. The first was that the book would be a complete and uniform whole. Through all these eight years the editor had kept all the parts of the book in relation one with the other. He had kept in touch with the contributors, and had made them know what the other collaborators were doing. He so set to work that the book received a structural unity of its own. This was the first novel feature of the "Encyclopædia," because hitherto each volume had been a distinct and separate unit. Now for the first time the book, though of immense variety, was a unit. Hitherto there had been curious inconsistencies and discordant articles introduced into different volumes. They had this peculiar result from such an intellectual creation which had come into existence during an interval of fourteen or fifteen years. There was now an end of that irregularity, and this was a very great achievement. For the first time they had a real book, a book with structural unity, not a set of discordant monographs.

The second characteristic of the new "Encyclopædia" was that it kept pace with the forward movement and march of progress, and with the spirit of expansion in every domain of knowledge. They were aware that in the last thirty or forty years every form of knowledge had gone ahead at an extraordinary and accelerated rate, not only in the physical sciences, but in humanistic science—history, literature, and archæology. In order, therefore, to bring this "Encylopædia" up to date, it was necessary to revise the old one and even to rewrite it from the beginning. The new book, therefore, was no longer a mere record of the past, but it was to some extent an anticipation of future discoveries. It gave not only an insight into the past, but it gave a foresight of the future, a spirit of progressiveness, and a display of the enlargement of all the boundaries of knowledge. Surely, that was a splendid result to achieve, a splendid hope to have opened up. He observed in the list of contributors the names of writers belonging to the organized societies representing knowledge, some of the best men we had. There was, moreover, no limit of nationality in the selection of writers. Some of the 1,500 writers belonged to the Colonies, India, the United States, Germany, France, Italy, Holland, and even Japan. Those who had planned the book, therefore, and carried it through to completion, had done so inspired with the progressive spirit of science, having devoted to every branch of knowledge the kind of spirit which many would naturally feel might only belong to the more rapidly advancing forms of physical science. He believed that Cambridge was a fitting home for the new "Encyclopædia." The University was a living organism; its roots were in the past; it was a thing of gradual growth; it looked on to-day and to-morrow; and its hopes stretched out into the future. He expressed the hope that by possessing and controlling such a book as this Cambridge might become—more than it ever had in the past—an inspiring centre of world-wide intellectual life, and able to carry out not only its national but also its international function. [Cheers.]

Mr. Hugh Chisholm, who was cordially greeted, while warmly thanking Mr. Butcher for the kind things he had said about him individually, insisted that it was in his representative rather than his personal capacity that this very remarkable compliment was paid him. During the last seven or eight years he had been at the head of what had been really, though unrecognized by the world, a sort of college of research, because he knew that the sort of book they wanted to bring out could not be made without it. An encyclopædia was, of necessity, in a way, a coöperative work, but the mere collecting of the work of a number of different distinguished authors did not make a work really cooperative. What they had done in the

Abridged Report from The London Times, Saturday, October 22, 1910

The Encyclopædia Britannica

THE NEW EDITION

case of this particular edition was to make it really coöperative through the instrumentality of his editorial staff. It was universally recognized that the Ninth Edition, in spite of the faults that were due to the method of its compilation, was, on its merits, a very fine edition indeed, and he had certainly endeavoured not to lower the ideals of Robertson Smith and the editors of those days. The "Encyclopædia Britannica" was never a mere reference book. The various editions of it had been among the actual sources through which progress had been attained, in the exposition of many important branches of knowledge, and they had attempted to maintain that tradition in the present edition. But while keeping it an authoritative book and a collection of contributions from men who were making progress in all the subjects of knowledge, they had made it a very much better reference book than it was, and had given, he thought, a broader interpretation to the general principle. The "Encyclopædia Britannica" long ago ceased to be purely Scottish, but it still remained in the Ninth Edition a predominantly and rather narrowly British book. It took an entirely British point of view in a great number of subjects. The phrase in some of its articles, "in this country," meaning England, rather represented a certain mental attitude on the part of the contributors. The idea which ran through the whole of the new edition was that British interests were best served by giving the reader all the relevant information about any subject, whether it affected foreign countries or the homeland. Every single subject in the new edition was treated in what was really the only proper method, the comparative method. The book was not written purely for Englishmen, although his own feeling was that British interests covered the whole world. The important thing was to give the English-speaking peoples an insight of what was going on in other countries. That was done in a capricious way in the Ninth Edition in the legal articles, but they carried out that principle in every sort of article in the new edition. He believed that Cambridge, by disseminating through all its educational channels the contents of this book, would really be doing a great work to advance popular culture and to give a real impetus to the desire for accurate knowledge.

The American Ambassador, in reply to the toast of "The Guests," with which his name was associated, said he thought there was a general consensus of opinion among the scholars of the world that the one Encyclopædia to which they all looked for the most comprehensive, the most complete statement of facts relating to any particular subject, was the great "Encyclopædia" with which they had to do that night. He thought, also, that there was very general satisfaction among the scholars of the world that this great work of reference was passing now from private control and from private editorship into the hands and under the responsibility of one of the two great Universities which for so many centuries had been the home of national, and perhaps he might venture to say, international scholarship. There was a certain satisfaction, too, in feeling that it had passed under the control of the University of Cambridge—that one of the two great Universities which was popularly regarded at least as being specially given to scientific accuracy of investigation and to mathematical precision of statement. Those were the very qualities for which they looked most of all in a book of reference. A great scholar of Cambridge some centuries ago said that he proposed to take all knowledge as his province. The boundaries of human knowledge since that time had been enormously expanded, and no great son of Cambridge would now venture to say that he took all knowledge as his province. He might, perhaps, aspire to know everything about some one thing; he certainly could only hope after that to come up to what was an American definition of education—to know something about everything. But the one great work to which they all did go if they wanted to know something about everything was the "Encyclopædia Britannica." Far be it from him to say that there was not a very large class of subjects on which American encyclopædias were not better. He meant to say subjects in which Americans were specially interested. Perhaps to that extent their encyclopædias were one-sided. He did believe, however, that it was the general judgment of the scholars and investigators of the world that the one book to which they could go for the most complete, comprehensive, thorough and absolutely precise statements of fact upon every subject of human interest was the one for which the University of Cambridge was henceforth to be responsible to the world of letters. It was difficult to enhance the authority of the great work the University had taken in charge. But if there was one thing which could be done to enhance its reputation they had done it. They had secured the authority to send it out to the world not only under their own *imprimatur*, but bearing the great names of the two chief executives who divided between them the government of the—he had almost said the undivided and indivisible English-speaking race—a race which was united in its history, united in its language, united in its pride in the past, and united in its hopes and aspirations for the future. [Cheers.]

The President of the Royal Society (Sir Archibald Geikie) submitted the toast of "The University of Cambridge."

The Chancellor (Lord Rayleigh), in reply, said that what, perhaps, came home to him most in connection with the new edition of the "Encyclopædia" was the great advantage it would enjoy from the nearly simultaneous publication of the various volumes. Many of them might remember the absurd results which might arise from piecemeal publication as given by, he believed, the Autocrat of the Breakfast Table. He described the case of a person who, having come across only one of the early volumes, knew everything about the Alps and the Andes, but had never heard of the Himalayas or the Rocky Mountains. Continuing, the Chancellor said that his connection with the "Encyclopædia Britannica" went back some little time. He knew the former editor, Dr. Robertson Smith, who said that if he wanted an article of a serious character, inspired by wide and accurate knowledge, he generally looked for a Cambridge man as the author. It was implied, if not directly stated, that if he wanted a more general or ornamental treatment he might turn to the sister University. This was one of the matters in which, he thought, they might learn something from the sister University. At Cambridge they needed and were proud of their specialists, but even a specialist was none the worse for having command of language and grace of style.

Important New Macmillan Publications

Mr. Israel Zangwill's *new book* Italian Fantasies

The book is remarkable for individuality and for the poetic quality of its prose. All the atmosphere of Italy serves as a background for these essays on life and faith, on vanished religions, on a futile culture, on all the civilizations that have left their record, records of failure; essays on everything, in brief, of which the "radiant raggedness" of Italy sets one dreaming. But *this* man sees it from the immemorial permanence of the Hebrew race.

With frontispiece. Cloth, 12mo, $2.00 net; by mail, $2.14

Mr. B. L. Putnam Weale's *new book* The Conflict of Colour

Mr. Weale's notable series beginning with "Manchu and Muscovite," and ending with "The Coming Struggle in Eastern Asia," proved his possession of an unrivalled power of forecasting events in the East, which lends weight to his belief in a threatened upheaval throughout the world.

Cloth, $2.00 net; by mail, $2.17

The Life of Benjamin Disraeli, Earl of Beaconsfield

By W. F. MONYPENNY. With portraits, etc.
Vol. I., 1804-1837, is now ready of the great biography, which has more than ever been demanded since the appearance of Lord Morley's "Life of Gladstone." It is unquestionably the great biography of the year.

Vol. I., Cloth, 8vo, $3.00 net; by mail, $3.20

Mrs. Helen S. Wright's The Great White North

Records of the constant fascination which the Arctic region has exerted for years at high cost of human life and strength make up an absorbing volume.

Cloth, $2.50; by mail, $2.70

Stephen Reynolds's Alongshore

Word pictures so perfect as to make one forget the words—in his atmosphere of coastwise life.

Cloth, $1.20 net; by mail, $1.30

Richard Washburn Child's Jim Hands

Chronicles of a New England factory village where the social gradations are sharply marked, in spite of the link of common interest. There is a sound kernel of philosophy under even the most amusing of its episodes. *Cloth, $1.50*

Jack London's *best novel* Burning Daylight

"By all odds the most interesting, as well as the most wholesome, long story of Mr. London has written."—*New York Evening Post.* *Illustrated. Cloth, $1.50*

Jack London's *new short stories* When God Laughs

Stories which recall London's power of picturing the tense horror of fear, or the stark strength of man strained beyond conscious endurance. *Cloth, $1.50*

Mr. Lucas's *new novel* Mr. Ingleside

A leisurely commentary on the most modern phases of London life, charming because of the author's delightful power of producing a sense of intimate acquaintance between his readers and the pleasant people in his book. *Cloth, $1.35 net; by mail, $1.48*

Miss Clara E. Laughlin's "Just Folk"

No terms describe it so well as those used by *Octave Thanet,* who calls it "so human, sane, absorbing and beautiful." *Cloth, $1.50*

Charles Major's *new novel* The Little King

A new novel by the author of "When Knighthood Was in Flower," in which the heroine is the young governess of the boy-king, Louis XIV.

Illustrated in color. Cloth, $1.50

ON SALE NEXT WEEK

Mr. James Bryce's *revision of* The American Commonwealth

The author has added four wholly new chapters and enriched every other with the results of twenty years or more of continued observation of American institutions. The book is as up-to-date as it is possible to make it, and is practically a new work. *Entirely reset. Cloth, 8vo, in two volumes, $4.00 net (carriage extra)*

Miss Jane Addams's Twenty Years at Hull House

An illustrated autobiographical record of the beginnings, the history, aims and surrounding conditions of America's most widely known social settlement. *Illustrated. Cloth, 8vo, $2.50 net (subject to change)*

Miss Irene A. Wright's *illustrated account of* Cuba

A book to place beside Mrs. Higginson's fascinating "Alaska," Mr. W. E. Carson's colorful "Mexico," and Dr. Grenfell's bracing "Labrador." *Fully illustrated, $2.25 net; by mail, $2.39*

Mr. Lucas's *delightful story for children* The Slowcoach

Mr. Lucas has that gift of whimsical humor which seems specially to appeal to children, and these young folk who went a-gypsying through England are wholesome companions for our own.

Attractively illustrated, decorated cover, $1.50

The Nation.

NEW YORK, THURSDAY, NOVEMBER 17, 1910.

The Week.

The Democratic national platforms of 1900, 1904, and 1908 each contained a declaration in favor of the election of United States Senators by direct vote of the people. That public sentiment in support of this project has been steadily growing in the past ten years is undeniable. In the next Congress, the House of Representatives will be fully in the control of the Democrats, and the Senate will be so constituted that a majority can be easily commanded by them upon any proposition which could have the support of the progressive wing of the Republicans. Of course, a majority is not two-thirds, but the time will have arrived when a proposal to submit to the States a constitutional amendment providing for the direct election of Senators by the people will be in all ways opportune. Indeed, if the amendment were put forward by the Democrats, the Republicans in the Senate could not oppose it without furnishing to the other side a very acceptable bit of campaign material for the impending Presidential campaign. Campaign pledges, the merit of the case, and calculations of party expediency, therefore, all conspire to point to this move as part of the coming programme of the Democratic party.

From the very centre of Southern manufacturing industry, from Birmingham, Ala., the Pittsburgh of the South, comes a clear pronouncement for a "tariff for revenue only." In addition to declaring for this principle, Representative Underwood adds that in his judgment such a tariff would cover "the difference in the labor cost of most manufactured articles at home and abroad." As for protecting profits, Mr. Underwood declares that he is opposed to it, "believing that to protect profits means to protect monopoly." His position as ranking Democratic member—after Champ Clark, the leader of the party—both in the Committee on Rules and the Committee on Ways and Means, gives special importance to this statement of position, made so promptly after the election which gives the Democrats the next House by a large majority. That matter of the difference in cost of production, which the Republicans are now using as the second line of intrenchments for their tariff system, has got to be taken up before long by the Democrats. It is therefore worth noting that in this early utterance on the subject, by a man in a position of great influence in the House and representing a district which may be supposed to be more protectionist than any other in the South, two points are made that look away from the revised Republican doctrine. In the first place, Mr. Underwood indicates that industries must take their chances under the tariff-for-revenue plan; it is only "*most* manufactures" for which the difference in labor cost would be covered by the tariff, and the others must make the best of what they can get. And secondly, he declares that protection of profits is not entitled to any consideration at all.

Judge Baldwin of Connecticut is bearing himself as well after election as does Gov.-elect Dix. The citizens of New Haven desired to make a public demonstration in honor of Judge Baldwin's election, but he announces that his personal wishes are against anything of the kind. His preference is that his friends should wait till it is seen how he discharges his duties as Governor. He still clings to his purpose to "teach an ex-President some law," but the main thing he has on his mind is preparation for his official labors. All told, Judge Baldwin is exhibiting all of the dignity and good sense that were to have been expected of him. One thing to his credit is that he refused, though a man of means, to contribute a large sum to his own campaign. He gave a total of $4,000, which compares favorably with the $20,000 expenses sworn to by Gov. Lilley of Connecticut, and the even larger amounts paid out by other candidates for the Governorship.

One Republican victory has escaped due notice in the turmoil of the disasters which the party suffered elsewhere. The election of Robert P. Bass as Governor of New Hampshire was a significant triumph for Winston Churchill. His campaign of reform, begun in the summer of 1904, has thus received an emphatic and decisive endorsement. It is reasonable to infer that, had it not been for the persistent work of Mr. Churchill, there would have been a Democratic victory in New Hampshire. The success of Bass means the fulfilment of Mr. Churchill's ambition "to clean up" the Republican party in New Hampshire without disrupting it. In a speech at Portsmouth three years ago he announced, to the dismay of the machine leaders hoping for his final discouragement, that he was engaged in a crusade to which he was willing to give twenty years of his life.

Gov. Carroll of Iowa, himself a standpatter, just reëlected by a greatly reduced majority, has naturally turned to his own faction of the party for a Senator to succeed the late Mr. Dolliver. In appointing Mr. Young, the editor of a Des Moines newspaper which has strongly and consistently opposed the Iowa insurgents, the Governor has certainly not made a conciliatory move. He might have sought a neutral man, not actively identified with either element—if such a man there be in Iowa. Of course, the appointment is only temporary. The Legislature will in the end elect, and presumably will not elect Mr. Young, unless he should experience a change of heart. In any event, Senator Cummins will remain at the head of his party in Iowa, and will be in a position to push his avowed candidacy for the Presidency.

Mixed feelings will be aroused by the defeat of Senator Beveridge in Indiana, but, on the whole, his retirement will cause little regret. He voted against his party on the tariff bill, but in Beveridge's insurgency there was always a suspicion of acting and of expediency. His attitude on the other great public questions which came up during his two terms in the Senate often lacked the appearance of settled conviction and entire sincerity; while his inordinate vanity and constant thrusting of himself to the front, along with the iterative drip of his oratory, had caused most people in Washington to become very weary of him. That sense of fatigue seems also to have reached Indiana. Even Roosevelt, before rushing to the scene to ex-

tend his fatal aid to Beveridge, had spoken of him as "the lesser evil"; and the people of Indiana appear to have become much more sure of the evil than of the lesser.

Neither cost of living, nor tariff, nor Roosevelt, nor Republican extravagance was in the minds of the Tennessee voters, the absorbing question there being the issue raised by Gov. Patterson in his pardon of the slayer of Carmack, the insulting defiance of the Supreme Court of the State with which it was accompanied, and the subsequent coercion which he attempted when some of the judges came up for renomination. The depth of feeling which this conduct aroused was manifested by an alliance of protesting Democrats with the Republicans, in support of Hooper, the Republican nominee for Governor. So formidable did this alliance show itself to be that Patterson, who had been nominated by the regular Democrats for reelection, voluntarily withdrew from the contest, and his place on the regular ticket was taken by Robert L. Taylor. But this move, after the Democratic indignation movement had got full headway, did not serve to bring the anti-Patterson Democrats back into the fold. The rebuke had been earned, and they were determined to administer it, whether to the original culprit or his proxy. The outcome at the polls showed plainly enough that Patterson would have been snowed under if he had remained in the field. When Tennessee elects a Republican Governor in token of its resentment for abuse of the pardoning power and for disrespect to the courts, it is evident that the spirit of independent citizenship is confined to no section of the country.

State lines do not coincide with natural divisions, and the census might be made to tell interesting stories that now lie concealed, if figures were massed according to other divisions. That the population of Iowa has declined by 7,000 in the past decade is remarkable enough; but a more striking result appears when a geographical ratner than a political area is considered. Bounded by the Mississippi on the east, the Missouri on the south, the Missouri and the Big Sioux on the west, and the southern line of Minnesota on the north, is an area of 78,000 square miles, or nearly one-third larger than all New England. It comprises the entire State of Iowa and the northernmost forty-four counties of Missouri. There is probably no other portion of the United States of equal extent which contains a larger proportion of good farming land. The last decade has been one of exceptional prosperity—yet in this entire region there now live 100,000 fewer people than resided there ten years ago. Outside the cities of more than 25,000 inhabitants the decrease in population since 1900 has been upwards of 140,000. This is a kind of story that the boldest prophet would not have ventured to predict as a possibility a quarter of a century ago, and it is well worth the careful attention of political students to-day.

The narrow escape in New York from a general strike ought to be the occasion for serious thoughts about the possibility of preventing such industrial disasters. In France, the Prime Minister has announced his purpose to follow up the recent railway strike with legislation designed to do away with such a throttling of the nation's commerce. M. Briand's words are: "It is not possible that the country should go on exposed to the same dangers, year after year. Such problems must be thoroughly looked into. The government intends to study them carefully, and will not rest until it has found a solution which will protect the land from such perils at the same time that it leaves essential liberties untouched." Of course, the task in France is somewhat easier since it is so largely a question of dealing with public employees; but there appears to be a general tendency to bring all employments "affected with a public interest" within the scope of laws forbidding either a strike or a lockout without due notice or efforts to settle the matter by arbitration. This was the principle of the so-called Lemieux law of Canada, enacted in 1907. It appears to have worked well.

"All in all, the experiment of employing colored enumerators, while it involved much extra work for the Census Bureau, has been entirely successful and reflects credit upon the colored people," we read in the *Southern Workman*. It explains that more than 2,000 colored enumerators were put to work, and that in only one case, where for lack of white enumerators colored men counted the whites, was there any real difficulty. A comparison of the work of the white enumerators who counted colored people with the work of the colored census men shows that the latter took more pains with the members of their race, particularly in the matter of differentiating employments. Hence there are high hopes that the new census will throw more light on the industrial position of the colored people in the South than any heretofore. The *Southern Workman* adds that a number of Southern cities have for some time past used colored men in increasing numbers in taking school censuses. Finally, those who, like the *Nation*, have long been urging colored constabulary for the South to deal with negro crime and prevent race friction, are certain to be encouraged by the success in official positions of the census enumerators.

The *Harvard Alumni Bulletin* laments that the autumn meeting for the award of academic distinctions has not achieved its object of arousing a greater interest in scholarship. Most undergraduates, it seems, have remained away to scoff, and the recipients of the prizes have felt that the flush of achievement was somewhat chilled by the long postponement of recognition. It is therefore proposed to make the ceremony part of the commencement festivities. Whether this will do much to temper the admitted artificiality of the occasion may be a question. There will always be a killing lack of spontaneity in things of this sort; a meeting of the Phi Beta Kappa, or of the Poets' Guild, is a riot of enthusiasm in comparison. These at least are forms of organic self-expression; the other, from certain student points of view at least, nothing but a fussy faculty notion of fostering infant industry. An undergraduate class is prouder of its real scholars than faculties sometimes realize. It is usually the mere mark-getter, with slight claim to distinction in humane society beyond a certain sheepish impulse to press forward along the indicated path, who fails of being borne aloft on the shoulders of his admiring fellows. No amount of factitious reward for such successful mediocrity will greatly alter undergraduate opinion on this point, for here at least it agrees perfectly with that of the world.

All good Americans will be greatly relieved by the explanation from Professor Münsterberg's friends of the real significance of the fifteen-to-one ratio against him in the number of minutes during which the Kaiser chatted, respectively, with him and with Professor Smith of the University of Virginia. That explanation is so simple and yet so notable as another triumph of the new psychology that the wonder is only over the delay in its production. The monarch's chat with Professor Smith, while extended, was merely academic. His words to Professor Münsterberg, while few, were intimate and at the same time international in their scope. It cannot escape notice that this explanation does not come from the Emperor, but we hope no doubt will be cast upon its validity by reason of this fact.

One of the real literary wants of this nation is a Thanksgiving Proclamation "form." Not to dwell upon the waste of labor necessitated by the devising of one Presidential and forty-five State proclamations, there is the present defect, positively pernicious in its influence upon American literary style, of the English that Governors in particular delight to employ in their announcements of this annual festal day. Here, for instance, is the summons of the Governor of Indiana, disrespectfully cut by the leading newspapers of his own capital to we know not what percentage of its original length. But the fragment is enough. We have no quarrel—just now—with his conventional "never-ending procession of the seasons," "the common parent of us all," and "the corn and wine and oil of fertile fields and fruitful vineyards." We remember that Indiana is a literary State. But the spectacle of Indiana bowing "again her forehead to the ground" does give us a start from which we are hardly recovered by the assuring words, "and to the end that all may renew their allegiance and give thanks to our country's God, in conformity with State and national usage." We also fail to see the altruism of the concluding clause, in which the people of the State return thanks "for that he hath not so far dealt thus with any people."

One reason why the English Liberals are looking forward to a general election with more confidence than the Conservatives is that in recent by-elections the Liberals have scored notable successes. They carried South Shields by an increased majority, and in the Walthamstow division of Essex, where the new Solicitor-General, Sir John Simon, has just been reëlected, his majority is greater than it was last January. Then it was 2,195; on November 1 it was 2,766. This figure was attained in spite of the fact that the suffragettes and the Labor voters were against the Liberal candidate. Yet it is noteworthy that the Walthamstow poll was reduced. The decrease in the Liberal vote, as compared with the general election in January, was 1,053, while the Conservatives fell off 1,624. But the result is taken as good proof that the budget is now very popular and that the Conservatives are making no headway against free trade. It is partly in view of this latter fact that the *Spectator* once more calls upon Joseph Chamberlain to announce that, if the Conservatives are successful, they will do nothing to introduce the protective principle into English fiscal legislation. The appeal will doubtless be in vain, but so, it is generally admitted, must be any hopes which the Conservatives entertain as they face a general election.

The admission of "fashionable ladies, actors, and descriptive writers" to the Crippen trial is defended by a writer in an English newspaper, who saw no evidence in their faces of want of appreciation of the gravity of the case. He clinches his point by relating how he sat next to a celebrated actress, who remarked, "This is our real dramatic school." Such models of justice as this particular case seems to have been would never do for our stage, any more than for our criminal courts, however it may be with the British. To hold the mirror up to nature is at times difficult, at times uninteresting, and our temperament demands excitement. The result is a mad race on the part of the drama to keep even with the more animated moments of our not undramatic civilization. It is no wonder that it sometimes overleaps itself. But it was in another period of spacious times that our dramatic models were produced. Something must be wrong besides our temperament. There is either lack of the creative imagination or sad misdirection of its powers.

The sudden shock of the contrast of American manners with those of the high-bred Spaniards who had gone before in the Philippines, is regarded by a correspondent of the London *Times* as having "contributed largely to the first failure of the Americans to win the respect of the natives." And in his endeavor to deal with the misunderstanding "without hurting susceptibilities," he suggests the possibility of such Americanization of the Filipinos that in a few generations they will become aware that "a spirit of hustle and downright dealing, if at times a trifle uncouth, is better than an elaborate courtesy which has no sincerity of purpose behind it." Meanwhile, however, it is "not of good omen that the interchange of social courtesies between the better elements of native society and members of the American community is still growing less and less frequent." Well, all that our Imperialists can say is that our little brown brothers are too impatient. The very fact of their caring for courtesy and having a desire for premature display of our sincerity of purpose, is evidence of their sad backwardness. Even if we have introduced complications into the situation, that does not excuse the presumption of their official announcement that "the Philippine nation, being positively convinced that it possesses the actual capacity for self-government as a civilized nation, aspires ardently to be independent." Until our impetuous colonizers are convinced of that, all this will pass as sheer impudence.

The latest traveller to report war with Japan as imminent is the son of a Standard Oil magnate. He has been in Japan? Oh, dear, no. He has been hobnobbing with French and German army officers, and from them learns directly and certainly that Japan will attack us before the Panama Canal is finished. Two hundred thousand troops are to be landed in San Francisco for the little jaunt to Washington—by airship and balloon doubtless—and, of course, ruin and defeat will be the consequence. There is only one thing to do, avows this young militia captain, and that is to introduce at once a three years' compulsory army service as they have it in France and Germany. And he is going to begin to get compulsory service at once.

THE BEST FOOT FORWARD.

In accounting for his defeat in New Jersey, the Republican candidate for Governor, Mr. Lewis, attributes the result largely to "the wisdom of the Democratic party in selecting a candidate of the calibre of Dr. Wilson." Much the same could obviously be said of the nomination of Judge Baldwin in Connecticut and of Judson Harmon in Ohio. The voters like to support clean and able men. Even a democracy is eager to open a career for distinguished talent. This has been demonstrated again and again, but at no time more clearly than in last week's elections. In many localities the electors displayed remarkable discrimination in honoring exceptional men with an exceptional vote. Never was the moral sense of the community more successfully appealed to.

Now, this pre-election wisdom of the Democrats ought to be made post-election also. Other great struggles are before the party, in State and nation, and it cannot begin too soon to prepare for them by putting its best foot forward. This year's sweeping Democratic success is nothing like a mandate to the Opposition to take the reins of power two years from now. We have seen too many swift ups and downs in our politics, too many landslides going now to this party, now to that, to justify any notion that the country has definitely made up its mind to put the Democratic party in charge of the national government. This great blow to the Republicans was chiefly dealt by Republican hands. A vast Republican vote, discontented with the managers and policies of its own party, either went to the Democrats or was not cast at all. But this vote can be repelled as easily as it was won. The temporarily disgruntled Republicans, with the great body of independent voters, can be readily driven away by Democratic ineptitude or folly. And the great teaching of this year's campaign is that Democrats who look forward must seek to deserve success as well as fight for it, and to that end should give the posts of honor and responsibility to men whom the country will perceive to be capable of government.

Republicans are already prophesying —which is easy, but rather cold comfort—that the Democrats will make such a mess of things in the next House that the country will be disgusted and gladly fly back to the arms of the Republican party. The danger that this may happen is undeniable. Democrats in Congress have not, during recent years, made a display of great ability or unity or consistency. Their situation in the next Congress will not be unlike that which they faced in 1875, after the political upheaval in the election of 1874 had made the House Democratic for the first time in eighteen years. But the Democrats of those days rose to the opportunity. They made Kerr Speaker and put S. J. Randall in charge of their plans for effecting economies. They felt that they were on trial. It was for them to prove to the nation that they had strong and safe men in whose hands the administration of public affairs could with confidence be placed. And the steadiness and sobriety shown by the Democratic House elected in 1874 helped the election of another one in 1876. Conditions to-day may be similarly availed of, or they may be stupidly wasted. Certain it is that if the Democratic majority in the next House does not put able and responsible men on duty, stand for economy, and work out constructive plans for legislation, the party will be exposed in 1912 to as severe a rebuke as if the elections of 1910 had never brought a triumph.

It is, however, upon the State of New York that specific attention will be converged to see what use the victorious Democrats will make of their great opportunity. Of the purpose of Governor-elect Dix to give a clean and business-like administration, there can be no doubt. He will surround himself with skilled and honorable advisers, and will, we are confident, make his chief appointments with an eye single to efficiency. But it is the choice of a Senator to succeed Depew which will most quickly and definitely mark the attitude of the New York Democracy towards forward-looking and high-minded policies in the nation, and upon that choice thought and effort should immediately be concentrated. The degradation of the New York Senatorship by Platt and Depew has been one of the worst offences of the long Republican domination in this State. It will never do for Democrats who have cried out upon it not to exert their utmost power to complete the removal of that disgrace. It would be impossible to go lower than Depew, but the Democrats are bound to go much higher. If they were to make such a miserable failure now as they made after 1892 when they elected Edward Murphy Senator, despite the protest of President Cleveland, they would go far to destroy at once the respect of the people and their own hopes for the future. It is distinctly a time when a man should be selected of the very highest type.

Several excellent names are already under discussion, though some of the men mentioned say that they cannot be considered. We do not know that Mr. Shepard is or would be a candidate, but we do know that a man of his sort ought to be chosen. Ability for ability, Mr. Shepard's could fairly be matched with Senator Root's, while his mature political convictions, his deep study of our political history, his readiness in debate and his value in counsel, together with his unblemished character, would make him a Senator whom New York would delight to honor. His personal wishes are unknown to us, but such a name as his should be kept to the front so that by discussion in the press and by individual urging the great duty of choosing a fit Senator should be held in the forefront. What the party has won by going to the polls with able and even eminent nominees, it can retain only by clinging to the same high standard in appointments to office and in elections by the Legislature.

THE PENSION ROLL.

The Pension Commissioner's annual report, which has just made its appearance in full, is coincident with the publication in the *World's Work* of a series of articles by William Bayard Hale on the "staining of the nation's honor-roll with pretence and fraud"—an exposure of some of the crimes against honest soldiers and against the government, in connection with our pension system. But were this perennial uncovering of these abuses not going on, the report of the Commissioner would still deserve careful study, if only because of the demand for "dollar-a-day" pensions heard at the last encampment of the Grand Army, and the all-pervading public ignorance as to the size of the pension expenditures. Mr. Davenport, the Commissioner, records that forty-five years after Appomattox there are still 602,180 soldiers and sailors drawing pensions, in addition to 318,461 widows and dependents and 442 nurses, who together

receive annually no less than $158,332,391.82—a sum exceeded but three times in our pension history, and but four millions less than last year's expenditures.

Although there was a decrease of 25,111 in the number of pensioners the slight net reduction in the expenditures is plainly disappointing, from the taxpayer's point of view. The average annual pension is now $171.90, against $138.18 in 1906; it increased only $2.08 above that of 1908-1909, but that increase added $1,915,852.64 to the total expenditure. These larger outlays were due to increased rates authorized by Congress, applications for larger pensions, and 3,015 special pensions granted by separate acts of Congress—the worst abuse of all. How the cost would jump if the 483,000 pensioners of the civil war were to receive a dollar a day, in place of $171.90 a year, any one can figure out for himself. But consideration for the Treasury never prevents the average Congressman from passing bill after bill to "correct the record" of deserters, bounty-jumpers, and cowards. It is the easiest way for a Representative to make friends in his district. What cares he as to the character of the men he places on the roll, so long as he may tell his constituents that he got Congress to agree to 250 or 300 or 600 private pension bills? Mr. Hale has printed some splendid samples of these, among them a bill of Congressman Brownlow of Tennessee, enrolling Bradford Whaley as a private in the Eleventh Tennessee Cavalry, in which he never served, and then giving him a pension. As Mr. Hale says, Congress might as well have made Whaley a veteran of the Revolution. Yet 3,015 bills of this kind, though few so flagrant, were passed last year and approved by President Taft—resulting in an increased drain upon the taxpayers of no less than $894,495 and benefiting 6,063 persons.

It is not, however, merely the growing size of the pension which is ominous. The number of widows of soldiers of the civil war increased by 9,045, despite the ravages of death among the 211,781 who drew pay last year for their husbands' services forty-five years ago. It will amaze most people to hear that there are already no less than 27,889 pensioners of our brief war with Spain and the Philippine insurrection. There were not 27,000 soldiers in the regular army early in 1908, and, if we remember correctly, Gen. Shafter's force at Santiago was not above 18,000 men. Yet within twelve years of that brief struggle there are on the rolls 22,783 invalid soldiers, 1,183 widows, and 330 minor children, 3,072 mothers of soldiers and 512 fathers, 7 brothers and sisters, and 2 helpless children. In such measure is the government paying for the fever camps and that one conflict which most civil war veterans would have regarded as but little more than a skirmish. Every war the country has been in is now represented on the pension roll, for there are still one "daughter of the Revolution" and 338 widows of the war of 1812 obtaining government aid; while 2,042 survivors and 6,359 widows are accredited to the war with Mexico, which ended sixty-two years ago. If the same longevity prevails as in the case of the last survivor of the second war with England, we shall be paying Mexican war veterans up to 1941 and Spanish war veterans up to 1991. Already the Spanish war veterans and dependents have received $80,191,725.72, or within fourteen millions of the Mexican war pensions and sixteen millions of the total amount paid out for the war of 1812; and there were 47,295 claims for pensions pending in June, 9,135 for service against Spain or the Filipinos.

Now, if the money side of all this were the only question, it would be bad enough, particularly if we take into account the pensioning of fully 100,000 Confederate veterans by the Southern States at a cost of probably $4,500,000 to $5,000,000. They have been well inoculated, too, with the pension virus, for Georgia in 1909 pensioned 3,492 veterans at a cost of $561,077. But worse than the pecuniary aspect is the demoralizing effect of the system, which in the North, at least, discriminates not at all between good and bad, worthy and unworthy applicants, but gives above 900,000 people the idea that patriotism on the battlefield is cashable, and that it is the duty of the Treasury to hand out money, precisely as protectionists think the government owes it to them to guarantee the profits of their business. In the South the pension system menaces, as a writer in the *South Atlantic Quarterly* points out, the proper educational and social progress of that section. In the North it is honeycombed with fraud, and offers such an inviting opportunity for a President who desires to make a name for himself as a brilliant administrator and an enemy of corruption, that it is hard to see how Mr. Taft can resist the temptation to overhaul the whole business. And what we miss in the Pension Commissioner's report is an indication of a vigorous cleaning up of the pension-rolls. Only fifty-five frauds were punished last year; but the country, as Mr. Hale shows, is full of them.

NON-MANIFEST DESTINY.

In the current number of the *Popular Science Monthly* there occurs the following quotation from the introductory statement preceding the list of courses in physics offered at one of our great universities in 1894:

> While it is never safe to affirm that the future of physical science has no marvels in store . . . it seems probable that most of the grand underlying principles have been firmly established, and that further advances are to be sought chiefly in the rigorous application of these principles to all the phenomena which come under our notice. . . . An eminent scientist has remarked that the future truths of physical science are to be looked for in the sixth place of decimals.

"Then came," says the writer, "the discovery of Röntgen rays, 1895; Becquerel rays, 1896; Zeeman effect. 1896; radium, 1898; atomic disintegration, the transformation of matter, the thermal effect of radio-activity, and intra-atomic energy, 1903. I am unable to locate the sixth decimal idea in recent catalogues."

The suddenness of the change in the aspect of physical research which has taken place within the past two decades is a phenomenon of extraordinary interest; but the reflections suggested by the contrast above referred to are quite as pertinent in the domain of human affairs as in that of scientific investigation. We are all ready enough to admit in the abstract that it is the unexpected that happens, and that most long-range prophecies are vain; but, strange to say, the specific application of this maxim to the questions that constitute at once the most difficult and the most vital problems of humanity is almost universally neglected. When it comes to the great currents of human history and opinion, the doctrine of "manifest destiny" is accepted with hardly a protest by the minority, the people who try more or less vigorously to work against the current or who at

least wish that it were other than it is. Up to a certain time a movement may seem to be utopian or academic or eccentric; but let it grow steadily for some years and attain a position of real power, and the time soon comes when the word is passed all along the line that its ultimate and complete triumph is a certainty. Opposition may continue, and perhaps the very people who admit the coming event may go on acting according to their principles; nevertheless, the fact remains that the acceptance of the manifest destiny idea, in each such case, is a factor of great potency in sapping the vitality of the opposition.

Take such a matter as Socialism. There are to-day millions of people whose attitude toward Socialism is profoundly influenced by the feeling that, however little they may like it, however undesirable in itself or ultimately impracticable in its working they may be convinced it is, yet it is sure to come. The day of individualism, they feel, is rapidly passing; in a hundred ways they see the handwriting on the wall. It is only lack of imagination, they say to themselves, that prevents anybody from seeing what is so clearly patent; a few more years and everybody will see it. But in reality it takes more imagination to realize the possibility of a change in existing tendencies than to realize what results those tendencies, if unchecked by new developments, will bring about. It was easy, for example, for anybody to see, only a few years ago, that China was on the eve of dissolution and partition among the European nations; it was not easy to see that this destiny, so manifest in everything that had happened for half a century, was suddenly to be abrogated by the marvellous assertion of the potentialities of the Orient made by Japan in her war with Russia. And if it be said that this event was related merely to the special characteristics of particular nations or races, while the question of Socialism is one that turns on forces imbedded in universal human nature, the answer is simple enough. In the sea of forces involved in the socialistic recasting of human life there are unsounded depths quite as far removed from our ken as were the factors which played a decisive part in the Russo-Japanese drama.

What is true of these largest questions is equally true in regard to political issues of lesser sweep. In our own country we have seen a great growth of the importance and the power of the Federal government. That this growth has been made necessary by modern economic developments—the new relations among all parts of the country created by modern methods of transportation and communication and the new problems arising out of the modern organization of industry and business—is very true. That the process will be and should be carried still farther in certain directions few reasonable persons will deny. But to drift from this conclusion, resting on reason and judgment, into an easy-going acceptance of State impotence and central omnipotence as the verdict of manifest destiny, is a very different matter. When Mr. Chamberlain started his protection agitation in England, manifest destiny, as shown in the spread of protection on the Continent and in the alleged decay of England's industrial power, was his strongest ally. Our own imperialist venture in the Philippines would never have been made were it not for the debilitating effect of the manifest destiny idea at a time of sudden excitement and military vainglory. But the truth is we know but one thing about destiny—that it is not manifest; and we have but one duty concerning it—each in his degree to do what in him lies to shape destiny according to his conviction, not of what it will be, but of what it ought to be.

INTELLECT AND SERVICE.

In his remarkable "Statistical Study of American Men of Science," Professor Cattell arrives at the conclusion that the number of our scientific men of importance has in recent years been increasing at only about half the rate of increase of the whole population, and that the production of scientific men of the highest order has been faring far worse. This latter conclusion he bases largely on the fact that in the complete list of men who, by the judgment of their peers, deserve to rank among the thousand leading men of science there are only six under thirty years of age, and none of these in conspicuously high rank. "This," he says, "is significant and disquieting. A man of genius is likely to do his work at an early age and to receive prompt recognition. Kelvin was appointed full professor at Glasgow at twenty-two, Thomson at Cambridge at twenty-six, Rutherford at McGill at twenty-seven. Men of science of this age and rank simply do not exist in America at the present time; nor is it likely that we are faring better in scholarship, in literature, and in art."

In the earlier days of the Republic, we used to explain any deficiency of our country in great intellectual fruits by pointing to the fact that we were engaged in "subduing a continent," and that partly the material rewards and partly the inherent attraction of this labor took the flower of our youth away from intellectual pursuits. Later on, a factor different from this, though not unrelated to it, came into the forefront—the enormous and dazzling prizes offered to successful endeavor in the fields of business enterprise, the overwhelming prominence given to the pursuit of wealth at a time when fortunes unheard of in former days gave a position of power and of popular eminence such as no other form of success seemed to offer. Add to this the rapid growth of luxury and the rise in the material standards of living, and you have a situation in which a life devoted to intellectual effort, with small material reward and with little stimulus from the interest and respect of the community at large, would not often present itself to a young man of talent, energy, and high spirit as the natural goal of his ambition. Indeed, it might be said that the social atmosphere of America has constituted, in the case of our young men, an environment comparable—though, of course, with an enormous difference of degree—to that which has in all ages surrounded young women as regards their intellectual ambitions. It is not nearly so much the presence of absolute hindrances as it is the absence of encouragement and incentive, that accounts for that lack of intellectual achievement on the part of women which, until our own time, was ascribed almost universally to inherent incapacity.

To this potent cause of deflection of young men of high intellectual endowment from fields of intellectual endeavor for which they are by nature and temperament peculiarly fitted, there must, in our judgment, be added another which seems destined to play a greater and greater part in producing this effect. We refer to that exaltation of

"service" as the only worthy aim of an intellectual life which has, within the past dozen years, been coming more and more into fashion. It should hardly be necessary for the *Nation* to protest that in entering an objection to this tendency it is not actuated by any deficiency in its admiration of the man who makes his scholarship an instrument of "service" or in its appreciation of the value of his work. We do not object to praise of the scholar in politics or of the scholar in social betterment or in economic reform; we object only to the preaching of a gospel which leaves all other scholars out in the cold. If, on the one hand, you offer all the shining outward rewards of effort to those who do not go into intellectual pursuits at all, and, on the other hand, you reserve all appreciation and praise for such intellectual achievements as bear directly on the improvement of political and social conditions, you cannot expect the life of the scholar and thinker and writer in other domains to present to aspiring youth that fascination which is the greatest factor in determining the direction of his ambitions.

In the speeches at the dinner given in New York in honor of the completion by Prof. E. R. A. Seligman of twenty-five years of admirable work as scholar, teacher, and citizen, it was natural that stress should be laid on the connection between scholarship and service to the community. A better example of the combination it would be difficult to find. But nearly every speaker gave voice, either expressly or by implication, to the doctrine that only by such service can scholarship be truly justified; and one cannot help asking whether the president of Columbia University, for example, really thinks in his own heart that those who pursue studies and researches far removed from such service —Greek, for example, or the more abstract departments of pure mathematics —are mere drones, survivals of an outworn tradition that continues among us only on sufferance. We are perfectly aware that a tenuous justification might be made for these intellectual luxuries even from the "service" standpoint; but turn and twist as you will, the kind of talk that we refer to is simply incompatible with the spirit of a whole-souled devotion to the things of the mind. And yet it is precisely that spirit—the spirit of Copernicus and Galileo and Newton and Darwin—that has not only illumined the world but has furnished one of the chief refuges from the deadly grind of the commonplace and the material. Exalt service by all means, but preserve for pure intellectual achievement its own place of distinction and regard. Do the one, and applaud it, but leave not the other undone or unhonored.

THE QUEST OF THE ULTIMATE.

The number of serious books published recently with titles that calmly claim anticipation of the last word in religion is not a little remarkable. Starting boldly enough with "The Coming Religion" and "The Religion of the Future," our modern seers have apparently become impatient of unnecessary diffidence, until, flinging to the winds the few remaining limitations of their prophetic powers, they have reached the climax in "The Final Faith." Whether the writers of such books expect them to be bought as genuine pronouncements of "foreknowledge absolute," is as uncertain as whether they themselves so regard them. If they do, their sincerity is surely at the expense of their sagacity. But the publishing business will still go on, for there would yet be room for "The Final Faith, Revised." Even then we should not hope to find in its pages a statement of ultimate truth. We should look for nothing more than an advance in that direction, or even for a pushing of the goal farther away than it at present appears. Either effect would be accounted an intellectual triumph, a step toward that finality of knowledge which we as little desire as expect.

But if the piquancy of that search for a fixed goal is due in some measure to its endlessness, so that we are fain to satisfy our restless questioning with the dogma that success would mean satiety, the same does not hold in that realm of art where the interpretation of the fact is as important as the fact itself. The thrill of satisfaction at the discovery of the Pole, which was only man's natural delight in the attainment, especially the long-attempted, difficult, and perilous attainment, of an ultimate object, not because of its usefulness, but only because of the necessity of reaching what was evidently there to be reached, may have to be re-satisfied continually with other analogous triumphs. The other Pole, the partially conquered air, the stretches of space that still yield only a reluctant obedience to the breathless monsters of steam and electricity, will provoke and defy in varying degrees man's quest of the ultimate. Science looks ever forward. But with whatever of aspiration for heights ungained, it is in a frequent and eager turning to the days that are no more that art finds its comfort and its joy. There are no more durable satisfactions of the human spirit than the glory that was Greece and Florence and Weimar and Stratford. Here, in certain directions, man has apparently reached the ultimate goal, long before he had made more than a beginning upon those other paths that, crowded now with explorers, stretch ever farther and farther into the receding distance.

It is the habitual resort to these acknowledged masterpieces that casts doubt upon our philosophic dogma of the identity of attainment with satiety. In the so-called attainments of science, which are merely provisional and introductory to others equally so, there is no real test of the matter. And, furthermore, there may be a difference in this respect between a master and those who can only admire, without imitating, his skill. But surely, even for a master there is something indistinguishable from perfect contentment of satisfaction in beauty of line and color, of sound, and of the artistry of words. The difference between art and science here is absolute. One does not take the "Iliad" as a starting-point for a greater epic, or the Venus de Milo for a finer statue. Accepting these as themselves ultimate, one either gives himself up to enjoyment of them, or strives, in the scientific manner, to analyze them. In the latter event, he finds himself once more upon the endless road of investigation. In the former, he longs only to see and hear again and again and again. He has found something which, although finite, is possessed of finality.

Is this difference between the provisional character of science and the ultimate character of art inherent in the differing natures of the emotions and the reason? How has man been able to create objects of perennial satisfaction, but quite unable to discover the final truth about either them or himself? No wonder that the one power, however meagrely rewarded, however little deserving to be called "useful," has always, in the most highly cultivated as well as

in the crudest society, been deemed to have some spark of the divine in it, while the highest tribute paid by savagery or mediævalism to the wonders of the other was to credit it to a far less respectable, even if still supernatural, source. Our inquiries, however, are necessarily futile. They are of that part of the search for finality which, from all appearances, must go on forever, being itself the only surely final element in the process. It is better for the baffled mind to turn now and then from the endless puzzle of the why and the how, and to rest questionless before the finalities of finite workmanship. In his unavoidable quest of the ultimate, man must go for absolute satisfaction, not to the crucible or the study, but to the impassioned music of Beethoven, the tragic failure of Hamlet, the columned majesty of the Parthenon, and the swinging hexameters in which the gods still live.

PASCAL.

I.

During the last ten years or so there has been a marked reawakening of interest in Pascal. This Pascal revival differs from the Rousseau revival that has taken place during the same period in being French rather than international, and also in being less easy to interpret. The return to Rousseau evidently bears a close relation to the great wave of radicalism that has been sweeping over the world. As the author of a recent work on the "Social Contract" remarks, the proletarians hope to use the dogma of the sovereignty of the people to oust the bourgeois even as the bourgeois used it to oust the aristocrats at the time of the Revolution. But why this interest in Pascal, especially the side of Pascal that seems most remote from everything modern? The sympathy that appears in so many French writers is also manifest in the new Life of Pascal by Lord St. Cyres.*

In spite of the unfortunate flippancy of the preface, Lord St. Cyres's book has solid merit; it is abreast of French investigations and points of view about Pascal, and though not contributing important points of view of its own, is admirable as an exposition, worthy both in literary form and intellectual quality of its great and stimulating subject. Justice is done to Pascal in his various aspects as saint and scientist and man of the world. Lord St. Cyres handles ideas, especially the ideas that bear on the "Provincial Letters" and the whole subject of casuistry, with a keenness that is not common in English. His treatment of the more mystical element in Pascal seems to reflect in some measure the reaction against intellectualism which is attaining such large proportions, and of which pragmatism is perhaps the best known, though by no means the only, manifestation. The treatment of Pascal's conversion especially is evidently colored by certain theories of James's as to the rôle of the subliminal in religious experience. The great scientific intellectualists of the last century, who were striving to establish strict causal sequences between phenomena, looked with less favor on the "thunderclaps and visible upsets of grace," and in general on the appeal to pure intuition that one finds in Pascal. "Converts are no friends of mine," said Goethe, whose unfriendliness to Pascal in particular is well known. Sainte-Beuve never tires of trying to prove that men remain after conversion about what they were before. This point of view explains the final coldness toward Jansenism that comes out so clearly in the postscript to the sixth volume of his "Port-Royal."

We may doubt whether the special kind of sympathy for the intuitive as compared with the rational that seems to be on the increase just now is a real advance over the sturdy intellectualism of a Sainte-Beuve or a Goethe. The intellect is at best only an intermediary power; the first things and the last are equally hidden from it. What knowledge it has of either it must owe to intuition. Yet the slighting of the intellect in the name of the higher intuitions that has appeared in the more ascetic forms of Christianity has always been unfortunate. We may suspect that the slighting of the intellect in the name of the lower intuitions, that has assumed so many forms from Rousseau to James and Bergson, is exposed to an even more certain retribution. Most of the early Port-Royalists were themselves sturdy intellectualists and philosophically at the opposite pole from pragmatism. In Lord St. Cyres's phrase, they defended "a highly mystical, intuitive religion by rows of serried formulæ marching past in battle array." But in spite of all their logic and rationality, they put their final emphasis on the miraculous, on violent overturns of the natural order, and so prepared the way for the *convulsionnaires* and the Diacre Pâris, that eighteenth-century Jansenism into which Sainte-Beuve said that nothing in heaven or on earth could induce him to enter. There is already something convulsive in Pascal's conception of religion.

If this were the whole story we should have to agree with those who regard Pascal on his purely religious side as obsolete. For example, the writer of the review of Lord St. Cyres's book in the *Spectator* declares that the Pascal that really counts for the reader of to-day is the Pascal of the "Provincial Letters," whereas what we have in most of the "Pensées" are the last lingering shadows of mediævalism that have not yet been banished by the bright sunshine of the modern spirit. This point of view is all the more misleading in that it is at least half true. The "Provincial Letters" have the obvious advantage over the "Pensées" of being not mere fragments, but the finished product of a consummate literary artist, of the creator, one is almost tempted to say, of French prose. For if the empty form of the modern French phrase was perfected by writers like Guez de Balzac, it was Pascal who gave this form vital content. A Frenchman who set out to-day to write like Montaigne would be an intolerable mannerist; but Pascal's French has aged very little in either syntax or vocabulary; it remains the kind of French that every Frenchman would like to write, "if he only could." Through the French influence on writers like Dryden, Pascal may be said to have contributed to the establishing of a standard of sound prose in English.

If, however, the "Provincial Letters" show Pascal at his best as a literary artist, they are inferior to the "Pensées" in human interest. Pascal's attack on Jesuitical morality was intended for immediate effect, and so is at times too implicated in the local and ephemeral. Religion, again, in the "Provincial Letters" often appears as a mere occasion for the sparrings of theologians. Such distinctions as those between contrition and attrition, sufficient grace and efficacious grace, leave us cold. In the "Pensées," on the other hand, we are made to feel that the doctrine of grace is at the very heart of Christianity; it is in fact, the doctrine that in its triumph best measured the force of the recoil of Christianity from ancient naturalism and that in its decline has best marked the steady encroachments of modern naturalism on the inner citadel of faith. It is, in a sense, the distinguishing doctrine of Christianity as an historical belief.

II.

Some slight anticipations of grace may, indeed, be found in the pagan philosophers, especially in Plato, when he says that virtue is "neither natural nor acquired," but "comes to the virtuous by the gift of God" ("Meno"). But Plato

**Pascal.* By Viscount St. Cyres. New York: E. P. Dutton & Co. $3 net.—Attention should also be called to *The Nuns of Port-Royal* by M. E. Lowndes. New York: Henry Frowde. The contemporary documents that Miss Lowndes has collected and arranged with great skill give a specially good idea of Mother Angélique. Among recent French contributions to the study of Pascal and Port-Royal mention should be made of the edition of Pascal in the Grands Ecrivains under the editorship of MM. Brunschvieg and Pierre Boutroux, of the labors of Michaut and Brunschvieg on the text of the *Pensées*, and finally of the *Pascal et son temps* of Fortunat Strowski (3 vols., 1907-8), which has already gone into a fourth edition.

and the other Greeks could not hold the doctrine of grace in the true Christian sense because they were "terribly at ease in Zion," that is, they lacked humility—the sense of absolute dependence on a power that is above both nature and human nature. The doctrine of grace as elaborated by St. Augustine and revived by the Jansenists in almost more than its primitive austerity, was intended to sharpen a contrast not normally present to the pagan consciousness—the contrast between the utter sinfulness of man and the infinite righteousness of Deity. The gap between the human and the divine is absolute and only to be traversed by a twofold miracle—inwardly by the miracle of grace, outwardly by the miracle of the redemption. For the Jansenist, as Lord St. Cyres puts it, "Nature soon became one vast, unholy chaos, one shaking quagmire of corruption, in the midst of which rose, stark and lonely, the storm-swept citadel of Grace." Without the twofold miracle, and left to his own resources, man is helpless. The only thing noble in him, says Pascal, is reason, and yet, he adds, nothing is more "contemptible" than reason itself, being as it is the everlasting dupe and plaything of the imagination. In the name of grace, Pascal thus seeks to discredit both the reason and the imagination, the two faculties by which the modern man must live. We are forced at last, like Voltaire, to "take the side of human nature against this sublime misanthropist."

The difficulty with the doctrine of grace in its extreme forms is that it strikes one as an attempt to prop and buttress a tottering theology by establishing a spiritual reign of terror. This is especially so in the use of the doctrine by its last great exponent, Jonathan Edwards. Without grace and conversion, according to Edwards, men are suspended over the pit of hell by a slender thread that is likely to be singed asunder at any moment by the fire of God's wrath, "however moral and strict, sober and religious, they may otherwise be." We cannot blame the world for having risen in revolt against so horrible an obsession, for refusing to be frightened into heaven. But the reaction against the theological terror has resulted in turn in an almost equally violent and dangerous extreme.

"Listen, my children," said Mother Angélique to her nuns a few hours before her death, "listen well to what I say. Most people do not know what death is, and never give the matter a thought. As for me, I have feared it all my life and never let it out of my mind. But my worst forebodings were as nothing compared with the terrors now upon me." In deliberate opposition to such expressions of the theological terror Rousseau imagined the elaborate complacency and self-satisfaction of the dying Julie, whose end was not only calm but æsthetic ("le dernier jour de sa vie en fut aussi le plus charmant"). To the notion that nature is utterly corrupt and that men are "vipers spitting their venom at God," he opposes the assertion that man is good and nature beautiful (or, as some one has summed up the doctrine in its Christian Science form: I am lovely, and the world is lovely, too). Instead of making the breach in the soul between sin and righteousness so wide that no amount of good works can avail to bridge it, Rousseau declares that there is no breach at all, that evil is introduced into the soul from without; in other words, he lays the blame for evil, not on the individual, but on society; he gets rid of the theological terror by undermining the individual's sense of his own responsibility.

Not only the sentimental naturalism typified in Rousseau, but every other main current, both of the Catholic and the non-Catholic world, has been running steadily away from the doctrine of grace. From the point of view of material success no enterprise was ever so surely foredoomed to failure as Jansenism. For the virtue of absolute humility the Catholic Church has been tending to set up the very different virtue of absolute submissiveness to outer authority. The non-Catholic world, again, has been moving more and more toward a naturalistic and humanitarian view of life that is neither humble nor submissive. Good observers from Burke to Jules Lemaître have noted the entire absence of humility in Rousseau. The exultation of the scientific naturalist in man's power is as fatal to humility as Rousseau's exultation in man's goodness. As a sample of the humility of a certain type of scientist, we may take the following from Clifford:

> The dim and shadowy outlines of the superhuman deity fade slowly away from before us; and as the mist of his presence floats aside, we perceive with greater and greater clearness the shape of a yet grander and nobler figure—of Him who made all gods, and shall unmake them. From the dim dawn of history and from the inmost depth of every soul the face of our father Man looks out upon us with the fire of eternal youth in his eyes and says, "Before Jehovah was, I am."

If Luther had anticipated that figure of "our father Man" with the fire of eternal youth in his eyes (the fire, he would have said, rather of eternal lust), would he have undertaken the great Schism? All the efforts of Luther and the Jansenists have availed very little to arrest the drift of the whole world away from the doctrine of grace to the doctrine of good works. In their emphasis on good works as well as in their emphasis on submissiveness the Jesuits have merely exaggerated the modern Catholic tendency. Lord St. Cyres points out that Ignatius Loyola was the most "resolute of utilitarians." Loyola lays almost as much stress on the idea of service as any of our present-day humanitarians. According to the Jesuit one may be saved merely by being serviceable and submissive; according to the humanitarian, merely by being serviceable and sympathetic. Both Jesuit and humanitarian obscure the reality of sin, of the individual struggle between good and evil, the Jesuit by unduly encouraging the individual in the hope that he may cast off the burden of his sin upon the priest and the priest's power of absolution, the humanitarian by encouraging him unduly in the hope that he may cast off his burden on society. Both Jesuit and humanitarian emasculate the doctrine of good works not only as it might be, but as it actually has been formulated. For, if Plato anticipates but faintly the doctrine of grace, Aristotle sets forth very adequately the doctrine of good works. Aristotle, who would attach the individual by a thousand bonds to society, who even makes ethics only a branch of politics, does not, therefore, fall into the humanitarian error of making social service the goal of the individual. Society is chiefly important in the eyes of Aristotle for the aid it may give the individual in realizing his higher self; it works upon him and gives him the preliminary training in right habits only in order that it may prepare him for the supreme task of working upon himself. Everything in Aristotle, indeed, converges upon the idea of habit—an idea at once scientific and humanistic, the means by which one gradually ascends from the goods of instinct to the goods of reason.

The supernaturalist is prone to look with disdain on so uninspired a method. Thus Jansen speaks contemptuously of Aristotle and his little, choppy phrases that are unable to rise above the things of earth ("Minutiloquio suo sola terrena perscrutatus est"). In a similar spirit Holbein drew his picture of the prelates and doctors of the church, turning their backs on Christ, the Light of the World, and following Aristotle into the abyss. But Aristotle can be one of the most impressive of writers when the passion that so often lurks beneath his syllogistic dryness actually flashes to the surface. Starting as a pure naturalist with the sense of vital growth and development, he rises gradually and without confusion of the planes of being to humanistic discipline, conceived as a mediation between extremes, until from the very apex, as it were, of the humanistic virtues he glimpses a truth that transcends even the law of measure. "A man ought not," he says, "to entertain human thoughts as some would advise, because he is human, nor mortal thoughts because he is mortal; but as far as it is possible he should make himself immortal and do everything with a view to living accord-

ing to the best principle in him, which, though it be small in size, yet in power and value is far more excellent than all."

Aristotle is thus related on the one hand to the keenest and hardest-headed of our modern scientists, and on the other to Dante in his vision of the empyrean. He has perhaps been surpassed as a naturalist and certainly surpassed as a supernaturalist, but like the other great Greeks he remains unsurpassed in his humanism; and it is the humanistic virtues that are needed to give meaning to either extreme. Perhaps the world would have been a better place if more people had made sure that they were human before setting out to be superhuman. Thus Pascal, who speaks so excellently of the humanistic art of mediating between opposite virtues and occupying the middle ground between them, was not himself a humanist. He conceived of religion only as a sort of "mortal leap" from naturalism to supernaturalism. "God of Abraham, God of Isaac, God of Jacob," we read on the slip of parchment on which he recorded his conversion, "Not the God of the philosophers and the scientists." On the face of it there is something incongruous in the fact that the man who made the Great Experiment and invented the arithmetical machine, and established the first line of omnibuses at Paris, should be the same man that wore hair shirts and declared that sickness is the natural state of the Christian. Nowadays we are nearly all of us hardened and impenitent naturalists and from the Jansenist point of view altogether graceless. If we have any religion at all, we are likely to get it, like Aristotle, through nature and not like Pascal in violent opposition to nature. In general the Aristotelian method of fixing our attention upon the orderly reaping of the reward of the good works we have wrought on ourselves and the world, and of the habits we have disciplined ourselves into according to the standards of right reason, is perhaps in itself more wholesome than the Jansenist emphasis on thunderclaps and visible upsets of grace—the tremendous spiritual romanticism of St. Augustine.

III.

Having granted so much, we should hasten to add that the doctrines of grace and conversion are, after all, only the theological expression of certain profound and, we may surmise, permanent aspects of human nature. Christianity of the Augustinian type has at least the advantage of setting in sharpest relief the actual dualism between the higher and the lower self of man that even the Aristotelian naturalist is constantly tending to dissimulate and slur over. As a matter of fact, the example Aristotle set of an orderly ascent from the naturalistic to the humanistic virtues and from the humanistic virtues to religious insight can scarcely be said to have been largely influential. The main drift of the ancient world after Aristotle was toward stoicism and epicureanism, two opposite, but as Pascal insists, equally impossible views of life. This is indeed Pascal's great central generalization that he has expressed most adequately perhaps in the "Conversation with M. de Sacy" that is usually prefixed to the "Pensées." Purely naturalistic explanations of man will, according to Pascal, necessarily oscillate between stoic pride and epicurean relaxation. In either case man will remain forlorn because deprived of any firm centre in himself, of any principle that he may oppose to the vast swirl of phenomena, the endless flux and relativity of nature.

Many of the "Pensées" are simply a recasting of Montaigne, whom Pascal takes somewhat unfairly as a type of the pure epicurean; for there is in Montaigne, along with epicureanism, a genuinely humanistic element, and the skeptical mask that the humanism assumes is itself a legitimate reaction from the "horrible mania of certainty" that possessed the theological ages. When pressed into the service of the violent logic of Pascal, Montaigne loses all his geniality, and something, too, of his shrewdness and good sense. Nevertheless, the "Pensées" that still have the most interest for us are those that establish the general contrast between the man of faith and the naturalist, whether stoic or epicurean. For the modern world, like the ancient, has turned away from its traditional disciplines and is moving more and more toward a pure naturalism; and it is not difficult to detect in many apparently ultra-modern points of view a mere refurbishing of stoical and epicurean tenets. We do not need, for example, to go very deep into Sainte-Beuve to find the epicurean despair of human nature, or, if we wish a still more recent and obvious epicurean, we have him in Anatole France. We should, again, be struck by the resemblance between Taine's attitude toward life and stoicism, even if we did not know that, like many other nineteenth-century stoics, he actually sought a rule of life in the desolate and pathetic Marcus Aurelius.

Various observers have been struck by the analogy between certain symptoms that are appearing in our contemporary society and those that appeared in late Roman society, though few would go into such refinements as Signor Ferrero, who claims that Americans of today correspond psychologically to Romans of the first century, Europeans to Romans of the second century of the decadence. An analogy of this kind is always incomplete and, of course, entirely unsafe as a basis of prophecy. So far as the analogy exists at all, it is to be traced to a common cause—the hopelessness and helplessness of a pure naturalism in dealing with ultimate problems. Mr. Chesterton says we have already reached the Hellogabalus stage in this country. We are very far from having reached that stage as yet, though we may reach it in time if we think we can discard all our traditional sanctions and discover a sufficient substitute for some principle of authority, either within or without ourselves, in miscellaneous humanitarian enthusiasms. As a matter of fact, the American situation does not differ very greatly from the European one, except that we combine our increasing criminality and suicide and divorce and other familiar signs of naturalistic disintegration with a more unflagging optimism. Europeans are readier than we to admit certain modern equivalents of the *tædium vitæ* that afflicted ancient Rome. A writer named Fierens-Gevaert, who published a book a few years ago on "Contemporary Melancholy," takes as self-evident that the underlying mood of cultivated Europeans is pessimistic, and proceeds to a regular inventory of the maladies of the modern soul:

> Infections of unutterable sadness,
> Infections of incalculable madness,
> Infections of incurable despair.

The picture is probably exaggerated, and in any case would scarcely apply to England, though even in England there has been a marked falling off in what may be termed the Victorian exuberance.

Our modern world, to be sure, has, even when seen from Pascal's special angle, certain advantages over the ancient. According to Pascal, the great resource of fallen man is to divert himself; in this way he can lose in some measure the sense of his own wretchedness ("la misère de l'homme sans Dieu"). Now, when it comes to diverting ourselves, we moderns are very superior. The modern descendant of the Roman noble who "made a feast and crowned his head with flowers" has automobiles and can look forward to aeroplanes. He can count on an unending succession of scientific toys that will divert him and beguile him from uncomfortable reflections on the essential problems of his own being. In the words of Milton, "There be delights, there be recreations and jolly pastimes that will fetch the day about from sun to sun, and rock the tedious year as in a delightful dream." We not only have our delights, but are willing to pay for them. It is estimated that this country is now spending $600,000,000 a year on automobiles, moving pictures, and phonographs.

There may be some, however, who, without sharing Pascal's unduly ascetic attitude toward "diversion," are, on the other hand, unable to acquiesce fully in either a stoical or epicurean naturalism; who, in Pascal's words, feel the

need of discovering some firm island of faith in the midst of the "horrible flux of all things." Any wholesome revival of Pascal must depend on his power of appeal to persons of this kind. It is to be feared that some of the French interest that has been shown in Pascal during the past few years has been reactionary in the wrong sense. For example, Victor Giraud, applying to Pascal his own phrase, says that he remains the master of all "sorrowful seekers for the truth." This insistence on the mournfulness of the religious quest would seem unfortunate. It reminds us too much of the old gentleman who remarked that he once set out to be a philosopher, but cheerfulness would keep breaking in. The Pascal whom it is possible and desirable to revive is not the Pascal who, according to the legend, saw an abyss ever yawning at his side, but the Pascal who summed up his experience of religion in the words "Joy, certainty, peace." Of course, many of the best of the "Pensées" are of a comparatively secular character, ranging in topic from government to literary criticism. Of the strictly religious "Pensées" the most admirable are those that deal with the general contrast between faith and worldliness. After deducting everything that is morose and ascetic and mediæval and narrowly theological, the residuum of pure religion perfectly expressed is sufficient to make of the "Pensées" not merely a great French book, but one of the great books of the world.

IRVING BABBITT.

NEWS FOR BIBLIOPHILES.

The recent death of Alfred Henry Huth makes it probable, the English papers say, that the library brought together by his father, the late Henry Huth, will be put upon the market. This is one of the two or three important collections of rare books remaining in private hands in England. A catalogue in five large volumes was published in 1880. The son, in the preface to that catalogue, states that his father, born in 1815, began as a boy collecting books, though the bulk of the library was acquired after 1849. He says further:

> There were only two rules which my father particularly observed: Firstly, that every book he bought should be in a language he could read—a rule which was relaxed only in a few instances of volumes of extraordinary interest; and secondly, that every book should be in as fine and perfect a condition as obtainable—illuminated manuscripts he never bought if imperfect.

Mr. Huth's collection of editions of the Bible is very extensive, beginning with the Sykes-Perkins copy of the Gutenberg Bible, printed on paper, and two copies of the Schoeffer Bible of 1462 (the first Bible printed with a date), one on vellum and one on paper. Several block-books, a long series of Incunabula (books printed before 1500), a collection of Aldines, and a very important assemblage of Spanish books (Spanish was Mr. Huth's mother-tongue) are included; but the larger part of the great library is made up of books in English. There are twelve books printed by Caxton, twelve printed by Pynson, and fifty or more printed by Wynken de Worde. The Shakespeare collection is, next to that of the Duke of Devonshire, the finest in private hands in England, though it is surpassed by both the Folger and the Church collections in New York. Early English poetry is represented by many of the choicest items from the Daniel and Corser sales. At the Daniel sale Mr. Huth procured for £750 a wonderful collection of broadside black-letter ballads, mostly unique.

At the sale in Philadelphia by Stan. V. Henkels of the collection of Americana brought together by the late William Fisher Lewis there was keen competition for the rarer Franklin imprints. A single number of the *New England Courant*, February, 1723, with imprint "Boston, Printed and sold by Benjamin Franklin," brought $320. The "Articles of Agreement made and concluded upon between the Right Honourable the Lord Proprietor of Maryland and the Honourable the Proprietarys of Pensilvania" (1733) brought $515. The three Indian Treaties recently described in this column brought $600, $625, and $510. All books printed by Franklin are not worth such large sums, however, theological tracts by John Rutty and William Law, printed by Franklin & Hall in 1759 and 1760, selling for $5 and $3.50. Books printed by William Bradford, the prototypographer of Philadelphia and New York, do not seem to interest the collector as much as formerly, yet books printed by him before 1700 are almost as scarce as Caxtons. George Keith's "The Heresie and Hatred which was falsely charged upon the Innocent justly returned upon the Guilty" (Philadelphia, Bradford, 1693) brought only $260, and Daniel Leed's "News of a Trumpet Sounding in the Wilderness" (New York, Bradford, 1697) only $262. The first of William Penn's folio tracts on Pennsylvania, "Some Account of the Province of Pennsylvania in America" (1681), brought $500; "The Frame of the Government of the Province of Pennsylvania in America" (1682), $210; and Penn's "Letter to the Committee of the Free Society of Traders" (1683), $275. Gabriel Thomas's "Historical and Geographical Account of the Province and Country of Pensilvania and of West New Jersey in America" (London, 1698) brought $675, and "A Brief History of the Mississippi Territory," by James Hall, a missionary, a thin pamphlet printed at Salisbury, N. C., in 1801, brought $165. Of this latter only three other copies can be traced.

That the high prices paid last season for engraved views of New York are likely to continue is shown by the fact that $875 was paid at the Pardee sale at Anderson's on October 28 for the "Southwest View" and "Southeast View" engraved by P. Canot from drawings by Capt. Thomas Howdell. These two fine plates were bound in with Pownall's "Six Views in the Provinces of New York, New Jersey and Pennsylvania" (London, 1761). The volume cost the late owner $105 in the Barlow sale in 1890.

A collection of 1,600 pages of George Meredith's autograph manuscripts, representing most of his books after 1880, which are the property of Miss Nicholls, his nurse and attendant in the last years of his life, are to be sold on December 1 at Sotheby's.

Correspondence.

THE BUSY RICH.

TO THE EDITOR OF THE NATION:

SIR: Philanthropists and sociologists having occupied themselves extensively in studying the problem of the idle rich, might they not appropriately turn the trend of their fructifying thought towards the problem of the spasmodically industrious rich—especially when such industry is economically very *mal à propos?* We read much about the economic waste of the man who luxuriates in purple and fine linen and chariots, and our souls are filled with economic horror at him who breaks good glass windows that the indigent glass-worker may gain an honest penny; but how about the idle woman, who, inheriting wealth, wears ordinary tailor-made clothes, owns a car costing less than $2,000, lives in a house only reasonably gorgeous, but devotes her spare time (which is much) and energy (which is prodigious) to fomenting strikes among female workers, who, previous to her advent, expressed themselves as delighted with the conditions of labor by which they live?

In ancient times Goody X. would have been ducked in a horse pond or proceeded against legally as a common barrator, but might not we, living midway between those barbarous days and that glorious dawn when all labor shall be unionized and all industries taken over by an omniscient state—might we not hit upon a *pis aller* that should relieve the public of the annoyance of interruption of traffic and dislocation of business, and, at the same time, gratify that only too evident *penchant* of Mesdames X, Y, and Z for posing in the spot light of publicity? Is it not a sad reflection on our boasted civilization that a rich and idle woman, whose only sin is that she craves notoriety and publicity, is reduced to the degrading necessity of chaining herself to a railing in the House of Commons or to masquerading in working girls' clothes and inciting hoodlums to attacks on the police—simply to draw attention to herself? We have devoted much thought to protecting the honest working girl from her numerous enemies—is it not about time to devote a little serious thought to saving her from her friends?

These few "seed-thoughts" (that seems to be the appropriate jargon) are thrown out for the consideration of our bright and enthusiastic university students who ponder on such great questions.

A MERE MAN.

Chicago, November 8.

PROBABILISM.

TO THE EDITOR OF THE NATION:

SIR: The problem before Butler was entirely different from that before the inventors of Probabilism (see "S. D." in the *Nation*, October 13). Butler was trying to get an argument for the truth of revealed religion that would appeal to the deists. For that purpose he assumed three things as true: (1) the existence of God, the Ruler of the world, (2) the known course of nature and the truth of experience as far as it goes, and (3) the necessary limitation of our knowledge. This last was fundamental in his reasoning. We cannot have perfect

knowledge of anything because we do not have perfect knowledge of the whole. Probability therefore is the "very guide of life." As there are obscurities in nature so may there be in religion. Difficulties in nature whose Author is admitted to be God prepare us to believe that difficulties in religion are not valid objections against it. But Butler goes on to show that the balance of probability is entirely in favor of religion, and that this large probability is the conclusion from the study of nature itself. And as in everyday life absolute certainty is not attainable, and as religion is a matter of practical concern, the wise man will follow that course marked out by nature and experience as by far the more probable and reasonable, that is, he will accept revealed religion. Reade s of Newman's "Apologia pro Vita Sua ' will remember how this argument made for him a preliminary basis for faith, supplemented as it came to be by Keble's and his own reasoning.

The problem before the casuists, however, was partly pastoral and partly sectarian—pastoral, to know how rightly to deal with penitents in confession and fairly apportion penance and grant absolution, and sectarian, how to get as many as possible to come to confession and thus keep them in the church, over against the rising Protestantism. The confessional must be made attractive and the Church must appear as an indulgent mother. The application of Probabilism was one of the means of this. If the penitent had committed a deed which the confessor knew one writer held as a deed probably allowable, then the confessor must consider the penitent guiltless. Of course people, the vast majority of whom could not read their mother tongue (though the princes and other high and mighty folk who could read Latin readily were the chief beneficiaries of the system), would not run around hunting for such a lax casuist, nor turn over books in Latin for his slippery concessions. This was, in fact, the less necessary, for it was the duty of the Father confessor to suggest the lax opinion—even if it were contrary to his own—to the one confessing in order to relieve the latter's conscience. Besides, such views have a way of spreading sufficiently quickly without special search for them. Gury (Theol. Mor. I, n. 54) contemplates both educated and ignorant bringing them forward as their justification. It is well known indeed that others besides Jesuits were Probabilists, and that some Jesuits strongly opposed that kind of ethics.

That Pascal was too strict with himself does not excuse priests for being too easy with their confessing sinners.

While Wesley was a hearty admirer of some Catholic saints, as well as of the Unitarian Firmin, publishing their books and circulating them far and wide, there were plenty of antecedents for his work as a revival in a much nearer atmosphere. Besides the things I mentioned before, Jonathan Edwards's great revival, 1733 ff., made a deep impression upon Wesley. In 1736 the "Faithful Narrative of the Surprising Work of God in the Conversion of Many Hundred Souls in Northampton" was republished in London. On the very eve of his great work Wesley read that book on a walk from London to Oxford (October, 1738), and comments upon it with the characteristic words, "Surely this is the Lord's doing, and it is marvellous in our eyes" (Works, Lond. ed. 1, 160).

AN APPEAL FOR GREEK ARCHÆOLOGY.

To the Editor of The Nation:

Sir: Some of your readers already know of the unfortunate troubles in the administration of antiquities in Greece, which have led to the discontinuance of the office of Ephor General. This act deprived Mr. Kavvadias, who had rendered the cause of archæology efficient service for a quarter of a century, of his position, and interrupted the completion and publication of much of his work. In view of these facts, the leading archæologists of Europe have undertaken to raise a fund which is to be placed at the disposal of Mr. Kavvadias, in order that he may be able to finish what he has undertaken. The committee chosen to further this end represents the archæological interests of nearly every country in Europe, and in this country Prof. Martin L. D'Ooge, Dr. Edward Robinson, Prof. J. W. White, and myself were asked to be members of it. An appeal for funds has been sent out with the request that subscriptions be forwarded to the K. K. priv. Creditanstalt, Innsbruck, Austria, and it is hoped that American scholars and travellers who have of recent years had pleasure and profit when in Athens from the work of Mr. Kavvadias, so plainly evident in the museums of the city, may feel like responding to it. As the appeal was sent directly from Europe, I do not know how widely it may have been distributed in this country.

A few days ago a private letter from Prof. Dörpfeld, the first secretary of the German Institute at Athens, reached me, and in this he speaks of the fact that Mr. Kavvadias, on the twenty-fifth anniversary of his entry into office, was informed that the Greek government had taken his professorship in the university from him. This was, of course, a most serious blow, and Prof. Dörpfeld urges his own American friends to do what they can to mark their recognition of Mr. Kavvadias's efficient service to the cause of archæology and of museum management.

If it should be more convenient to any intending subscribers to contribute by personal check rather than by draft or post office order to the bank in Innsbruck, I shall be glad to receive and acknowledge such checks and to see that the subscriptions are forwarded to the committee in Europe.

INTERNATIONAL AMENITIES.

To the Editor of The Nation:

Sir: The recent hostile manifestations on the part of the Mexican populace against Americans in Mexico City show that our friends across the border are deficient in imagination. To a Mexican it is inconceivable that a human being should be burnt at a stake in a civilized community. It is also inconceivable to him that in any community the general government should be powerless to punish the offenders. In poor, old "barbarous Mexico" a mob similar to the Texas mob that recently burned a Mexican alive, would be tried, led out, and shot—probably every mother's son of them—within ten hours after the crime. That combination of races known as descendants of the Conquistadores and the Aztec (and other) Indians, may enjoy seeing a man kill a bull of a pleasant Sunday afternoon, but it remains for *nosotros los sajones* to enjoy the final tortures of a human being slowly consumed by fire and to gloat over his screams and writhings. Cuanhtemoc's feet were boiled in oil; but that was some four centuries ago, and it was not done by the Mexicans, but by a more civilized people—the Spaniards. And does it become us Americans to hold up our hands in holy horror at ancient *autos de fe*, when we reflect on modern Texas?

With the calmness of self-sufficient virtue we point the finger of scorn at our neighbors and cry: "Yaquis!" In rejoinder the Mexican hisses between his teeth, "Rock Springs!"

Which has the better of the argument?

E. L. C. Morse.

Chicago, November 11.

ELBA AND ST. HELENA.

To the Editor of The Nation:

Sir: In June last I wrote to you, asking whether there was any significance in the fact that the hero of the "Return from Elba" landed on the anniversary of Waterloo. You stated then that you did not care to prophesy who was the Wellington or the Napoleon. Are you prepared to do so now?

Max B. May.

Cincinnati, O., November 11.

SINGLE TAX.

To the Editor of The Nation:

Sir: Now that you have scotched socialism by exposing its backbone, will you not do the same for the single tax movement?

Last year the city of Cleveland elected a board of five real estate appraisers, three of whom were picked by Tom L. Johnson, which means, of course, that they are disciples of Henry George. Two of them are men of wealth, and all of high standing. These appraisers increased the land assessments for taxation purposes enormously. A small area around the Public Square was raised more than one hundred millions of dollars on the land alone.

Since that time, the secretary of the board of appraisers, Mr. John A. Zangerle, himself a large land-owner, has been going about the city giving stereopticon talks on the subject of taxation. He throws a picture of this small area of land on the screen, and tells his audience that this $100,000,000 of land value was not produced by the owners of the land and really belongs to all of the people.

Mr. Zangerle was smooth and cautious about it. He used no violent terms, as the Socialists do; but the point of his teaching is that rent is robbery. And, of course, the word rent is here used in its strict economic meaning.

Is rent robbery? Or, rather, is private appropriation of rent unjust? H. M. H.

Cleveland, O., November 11.

A CORRECTION.

To the Editor of The Nation:

Sir: In an essay on Japanese color prints in your last number, the types made me call Fenollosa's "Catalogue of the Masters of *Ukioye*" *heavy* reading. It is the last word that could be applied to one of the most intoxicating bits of criticism in the English language. I wrote *heady*.

Frank Jewett Mather, Jr.

Princeton, N. J., November 10.

THE CASTILIAN LANGUAGE.

To the Editor of The Nation:

Sir: It need hardly be said that the writer on "Pronouncing Spanish" (*Nation*, November 3) is quite right in supporting the opinion expressed by Mr. Warshaw (*Nation*, October 20), that the language used in Spanish America is good Spanish. On the other hand, it is difficult to understand how he can assert that "the Castilian pronunciation is not used [in Spanish America], just as it is not used in Andalusia, whence so many emigrated to the New World," and even that "Castilian is not a language, but a particular way of pronouncing a language," statements these which are in direct contradiction to long and well-established doctrine. For Castilian—besides Gallego-Portuguese the only important and direct offshoot of Hispanic Latin—is the language in which the heroic spirit, the intensely loyal patriotism and the fervent faith of the Castilian nation have found their typical expression. If this noble tongue in the course of time also received the more comprehensive name of "Spanish," it is because concurrently with the political ascendency of Castile over two other kingdoms of the Peninsula, Leon and Navarre-Aragon, it absorbed in a sense the idioms of these regions, and furthermore because it became the vehicle of a literature both richer and more commanding than that of the other Hispanic peoples. It is exactly this rôle of Castile and of its language in the development of Spain that gives the key to such a literary evolution as the one described by Mr. Ménéndez Pidal in his recent book on "L'Épopée castillane à travers la littérature espagnole" (Paris, 1910). Beginning with the early part of the thirteenth century, the idiom of Castile followed the conquering hosts into Andalusia and thence to the new possessions beyond the sea. It is owing to this well-known fact that the so-called peculiarities of Andalusian pronunciation are shared alike by parts of Castile and Spanish America, and that in the colonial domain the term *lengua Castellana* is by many still considered preferable to *lengua española*.

New Haven, Conn., November 7.

PROFESSOR SANTAYANA'S PHILOSOPHY.

To the Editor of The Nation:

Sir: In the review of my "Three Philosophical Poets" in the current number of the *Nation*, the critic says "there is in this [*i. e.*, in my] philosophy a disquieting touch of 'make-believe'; we are to know the hard facts of life, and then we are to weave about them our ideas as in a play and imagine these ideas to be true." If he had said "and *not* imagine these ideas to be true," he would have exactly rendered my meaning. It is a little hard, after devoting all my efforts to exposing the folly, and the want of "central veracity," in palming off one's imaginative theories for literal discoveries, as people have usually done in their precipitancy and lack of critical conscience, to be now told by an evidently well-meaning critic that it is I that advocate "make-believe."

G. Santayana.

Cambridge, Mass., November 8.

[I naturally regret that my review should seem to Professor Santayana to have misrepresented his book. At the same time it is not easy to see how any other interpretation than that of the review can be given to the sentences there quoted from the book itself, as, for instance: "The true theory [of the world] like the false resides in the imagination." Statements of a similar nature might be quoted from Professor Santayana's other works. The point at issue really turns on the meaning of the much-abused word truth; and I can only repeat what I said in the review, that Professor Santayana's philosophy seems to me at bottom a pragmatism of the imagination as the philosophy of Professor James was a pragmatism of the will.—The Reviewer.]

Literature.

WHITE'S SEVEN GREAT STATESMEN.

Seven Great Statesmen in the Warfare of Humanity with Unreason. By Andrew Dickson White. New York: The Century Co. $2.50 net.

In a certain sense this book may be regarded as a sequel to President White's well-known "History of the Warfare of Science with Theology"; but he here pursues the more vivid and concrete method of teaching by biography. Principles never exert their greatest influence until they are embodied in a man. So Mr. White has chosen seven individuals through whom to illustrate the chief advance in European statesmanship during the past three centuries. The list is significant; it contains two Italians—Sarpi and Cavour; three Germans—Thomasius, Stein, and Bismarck; one Hollander—Grotius, and one Frenchman—Turgot. It will be observed that there are no Spaniards and no Britons, for the obvious reason that since 1600 Spain has produced no statesmen of the first rank, while the British statesmen have been busy in extending and perfecting principles already acknowledged rather than in promulgating new principles of general application. This is as true of Hampden as of Chatham and Burke, of Pitt as of Russell and Gladstone. Cromwell, the transcendent British statesman since 1600, is excluded on the same ground that Napoleon and Frederick are. Having in mind Mr. White's qualifying phrase—"in the warfare of humanity with unreason"—we find his choice well justified; for this qualification rules out such statesmen as Alberoni and Metternich, whose strength lay in so combining and controlling the forces of unreason that they postponed the emancipation of humanity.

Mr. White's method is straightforward. He gives a sufficient biography of his subject; describes the time and the environment; and then states the doctrines which the man put forth, or his achievements in actual statecraft. In this way, he emphasizes what is really important and omits the superfluous. Several of his essays—the Grotius, Thomasius, Turgot, and Stein, for example—are the best in English on those men, if we judge them, as we should, by the limits which the author set himself and has consistently observed. The biography of Sarpi also is full of pith, although the account of Sarpi's posthumous persecution might be condensed; and the whole may profitably be supplemented by Horatio Brown's Taylorian Lecture. Mr. White's Cavour, while containing the essential facts, seems less artistically fused than his Bismarck, which is by far the longest of these studies, and paints what any one save a German idolater must regard as a very sympathetic portrait of the Iron Chancellor. Personal and official relations with the man, and a familiar acquaintance of half a century with Germany, have evidently contributed to the success of the Bismarck.

If we inquire what each of these seven men did to entitle him to a place in this group, we get some idea of the horrors from which mankind has emerged during the past three hundred years. Sarpi stands for all time as the champion of secular government against ecclesiastical domination. The arguments by which he resisted the pretensions of Pope Paul V will hold good not merely for Romanists, but for Greeks, or Anglicans, or any other religionists in a similar situation. What gave edge to the Venetian resistance which Sarpi led was the fact that Venice was a devout Catholic country in matters of religion. The policy of state independence from Clerical rule has gone on penetrating every Catholic nation. At each struggle forward towards liberty the people, by a sure instinct, have sought first to destroy priestly control. Thereby they follow Sarpi's example, though they know it not: and Sarpi, we need hardly point out, had behind him all the great Catholics who agreed with Dante in condemning the blending of secular and religious concerns at Rome.

Grotius also proclaimed beneficent doctrines of universal application. Mr.

White describes forcibly the awful condition of the world into which he was born, a world in which war was almost the normal state of man, and satanic cruelties were practised. Amid this welter of evil Grotius published in 1625 his work, "De Jure Belli ac Pacis," "the most beneficent of all volumes ever written not claiming divine inspiration." It asserted the rights of non-combatants; it appealed to arbitration; it urged that the solidarity of civilized nations imposed upon them the obligation to prevent any of their members from plunging into war to the injury of all; it preached tolerance. Grotius's gospel has become so integral a part of the belief of enlightened men and women, that it is hard to realize that there was a time when it was novel and denied. Yet the great book was speedily put on the Index and kept there; and militarism was never so scientifically organized as it is to-day.

The chief contributions of Thomasius to human progress were his opposition to persecution for witchcraft and to judicial torture. Perhaps it is well that mankind forgets easily, because if they remembered the atrocities which their grandfathers committed they would be paralyzed by remorse; and yet, as a warning to what lengths unreason may go, the history of witchcraft ought to be kept fresh. Protestants and Catholics were alike guilty of persecution, but where the victims of the former were counted by tens, those of the latter suffered by thousands. Against this abomination and against procedure by torture Thomasius wrought manfully, and with such success that before his death in 1728 he beheld the tide of reform rising.

These three men—Sarpi, Grotius, and Thomasius—strove to abolish evils which did not belong to any particular time, race, or creed: for ecclesiastical truculence, war-lust, cruelty, and intolerance are among the commonplaces of history. But Mr. White's remaining four statesmen devoted themselves to the more specific task of destroying or transforming feudalism. Thus we find Turgot—of whom Mr. White writes with well-merited enthusiasm—busied with affairs of commerce and of agriculture, bent on removing unjust taxes, and on opening the door of opportunity to the downtrodden classes. Turgot sought to overthrow neither the King nor the nobility, but to curtail their insatiate greed in order that those who made up the strength of the nation should share in the wealth produced by their labor and should enjoy political rights. Stein performed a somewhat similar service for Germany. To Cavour fell the still harder task of abolishing the old régime and of creating United Italy. He had to overcome not only class privilege and absolutism, but the tenacious Papal institution and the practical suzerainty of Austria over three-fourths of the Peninsula. His work on one side resembled that of Sarpi, on another that of Turgot, on a third that of Bismarck.

Bismarck, indeed, is the one statesman whose inclusion in this group may be questioned. Mr. White hardly makes clear what contribution the Iron Chancellor made to the warfare of humanity with unreason. He unified Germany, and in so doing he swept away many mediævalisms, not because they were mediæval or unreasonable, but because they interfered with the working of a centralized Imperial government in which the sovereign should be almost an autocrat. Bismarck's guiding principle was not progress, but reaction. His prototype as a nation-builder is Richelieu; as a law-maker it is either of the great Hapsburgs, Leopold or Joseph, with their enlightened despotism. Bismarck had no solution save repression or extermination for those irresistible modern tendencies which we sum up in the single word democracy. His legislation against Socialism was a flimsy makeshift, which failed from the start. In economics, he fell back on protection and subsidies. In his exaggeration of militarism he did homage to War—the embodiment of inhumanity and unreason. Even in his *Kulturkampf* he seemed to be inspired by policy rather than by principle. If it turns out that mankind cannot stand liberty, then Bismarck, as the foremost modern apostle of authority, will have a message for future statesmen; but if liberty be the goal towards which evolution journeys, those who trampled on liberty will be regarded as allies of unreason. Then Bismarck will not be grouped with Sarpi, Grotius, and Cavour, but with the welders of empire by blood and iron. The fame of having unified Germany can never be taken away from him.

We wish that Mr. White had surveyed in a final essay the course of statesmanship, which we have so briefly glanced at, and had drawn parallels, in Plutarchian fashion, between one of his heroes and another. But in these studies he has furnished material from which readers can make their own comparisons. At many points he discusses questions which press upon us to-day. He lights up his very wide range of information with personal anecdotes, and he keeps constantly before us the historical conditions amid which his heroes lived. It is almost needless to say that he confirms his statements by constant reference to sources. No other foreigner, for instance, has read so exhaustively as he in Sarpi literature. And he is essentially fair-minded, although he never hides his detestation of bigotry, superstition, and cruelty.

This book ought to do much towards correcting popular misconceptions as to what makes a statesman. Especially in America is that title bestowed with such indiscriminate profusion that it has come to mean little. An excellent series of biographies deals with some *forty* American statesmen. Judged by Mr. White's Seven, only three or four of these forty were of the great breed. His book may also reassure those persons who, judging from modern instances, fear that statesmanship is merely another name for volubility. Not one of these seven was an haranguer: all of them were men of thought; Sarpi, Turgot, Stein, Cavour, and Bismarck were men of action, while Grotius and Thomasius proved that a thinker may deserve by his pen to rank among the world's statesmen. One other fact is shown by Mr. White's heroes: inflexibility of purpose was a trait common to them all—even to Bismarck, who was unblushingly opportunist in his political dealings but steadfast in his authoritarian ideal. We predict for Mr. White's volume a wide reading among the readers whose opinion counts.

CURRENT FICTION.

Clayhanger. By Arnold Bennett. New York: E. P. Dutton & Co.

Helen with the High Hand: An Idyllic Diversion. By Arnold Bennett. New York: George H. Doran Co.

"Clayhanger" is another chronicle of the "Five Towns," as long and as minute as "The Old Wives' Tale"; and readers who found that provincial epic either dull or squalid should be fairly warned. Mr. Edwin Clayhanger is not an exciting person: a sort of Mr. Polly *sans* humor and inspiration. He is the son of a self-made printer in Bursley. His education is small, and his travels, up to that middle age at which (for the moment) we leave him, have extended several times to London, and once to Brighton. He has some mental ability and more self-sufficiency. The story is told so scrupulously from his point of view that he seems almost to have told it himself. It is all serious business to him; why should it not be to us? And if it is also rather monotonous business, why should we not feel that, too? Unless for that chance evening at the Dragon, with the Mutual Burial Club, and the vision of the ravishing Florence Simcox—unless for this one innocent lapse into a region of fleshly joys—Clayhanger's youth is unrelieved by the sowing of wild oats. Its one dream is escape from the printing-shop, and the achievement of an architect's career. But Clayhanger senior is a self-wrought product and cannot value the stuff that dreams are made on. Clayhanger junior's fight for his own future is quickly over. When the old man finally dies—this mercilessly detailed record of his lingering and doddering end the most exacting realist of us might wish

abridged—the time for dreams is past, and the son settles down to middle age, with a middle-aged sister whose share of romance has been far smaller than his own. For in young manhood he has loved and lost a girl of no ordinary type; and toward the end of this chronicle, just as a crusty and finicking bachelorhood seems to have claimed him, he finds her again. Why she has jilted him years before remains a mystery. That it is not to remain so, and that the unmitigated happiness ever after of the reunited pair is not to be taken for granted, is sufficiently guaranteed by the note appended to these seven hundred pages:

> The author will in 1911 publish a novel dealing with the history of Hilda Lessways up to the day of her marriage with Edwin. This will be followed by a novel dealing with the marriage.

"Helen with the High Hand," as the sub-title suggests, though it is also a "Five Towns" tale, represents a deliberate relaxation of Mr. Bennett's scrupulous attention to the not always towardly fact (speaking romantically) of his provincial scene. Helen and her captive uncle are a charming pair who would be altogether out of their element in an "Old Wives' Tale" or a "Clayhanger." They give play to that Puckish spirit over which, when he pleases, Mr. Bennett has full control, but which remains a very real part of him. It has amused him to chronicle the feats of Helen, and the result is amusing. But we must continue to think that the real business of this versatile writer is the serious business of interpreting his Five Towns in the light of that quiet and, if you will, sombre irony which distinguishes him from Mr. Hardy or Mr. Phillpotts.

Molly Make-Believe. By Eleanor Hallowell Abbott. New York: The Century Co.

We had heard of matrimonial bureaus and of first-aid-to-bachelor-housekeeping, but never before of professional love-letters at so much the week. Once having hit upon this novel idea, a less capable mind than the author's would have directed it to the unhappily married or to those past the marriageable age; but that a young man engaged to a Boston bud should be the chief subscriber furnishes not only the proper thorn for the rose of romance in this twentieth century, but much the right sort of flourish and bravado, too. One trembles a little for the author when one realizes that she is actually going to put through such a proposition. "The Diary of Adam" was a farcical idea, but many have wished that even Mark Twain had stopped at the mere title. And to write love-letters advertised at the outset to be professional is not easy. Miss Abbott neatly solves the problem by not being professional at all, and by making her heroine—the head of "The Serial-Letter Co."—a wee thing of impulse and surprise. For those who like them, the hero is built on Mr. Davis's rococo lines; and though the rendering of poetic justice at the close does not take long, the sentimentally-minded need have no fear of being cheated of a thrill.

The Yardstick Man. By Arthur Goodrich. New York: D. Appleton & Co.

The best thing to be said of this story is that the last seventy-five pages are markedly superior to those that precede. This, as novels go, is by no means common. The amiable dilettantism of the author's previous books has risen to real vigor and sincerity in the portrayal of the financial and moral crisis in which Jones, a "successful" business man, finds himself involved. That he emerges with credit from such a crisis is due to the generosity of a moderately young Lochinvar, Roger Mathewson, a former college acquaintance, who, as an emissary of the Pacific and Eastern Railway, comes in from the West to Manhattan, tactfully declines to run away with the "yardstick-man's" wife—she preferring, in a passing mood of revolt, his unconquerable boyishness to "Jonesey's" aridity—defeats the money baron, John P. Carnahan, and, incidentally, Jones, at his own game of stock-juggling, and then loftily refuses to drive said Jones into bankruptcy.

The tale is not unduly spun out, and the style, if not one of distinction, is, at any rate, somewhat above mediocrity. There are several faults in the story, the most grievous of which is the attempted characterization of a college professor, who is on a visit to raise funds for his beloved Credmore. His absurd mannerisms and almost as absurd language are not reflected from the mirror of nature. The author's sense of humor, for the most part delicate, here plays him false.

THE LETTERS OF ERASMUS.

Opus Epistolarum Des. Erasmi Roterodami denuo recognitum et auctum per P. S. Allen, M.A., Collegii Mertonensis Socium. Tom. II, 1514-1517. New York: Henry Frowde. $5.75.

We have already, in reviewing the first volume of this great undertaking (*Nation*, January 24, 1907), commented on the inspiring spectacle presented by the friendly rivalry of two Oxford men at work on the Letters of Erasmus, one printing them in the original, the other in an English version. The second volume of Mr. Nichols's translation carried the letters down to 1517 (see the *Nation*, January 12, 1905), and we now have the Latin text brought to the same year. Of the scholarly zeal of Mr. Allen in his laborious task we shall not speak again at length. But we may note that this second volume required more care and patience than did the first; here first we come upon letters which are printed only from rough drafts. As these were often hasty scrawls with additions wandering up and down the pages and with many deletions, the nicest judgment was required in forming a text from them.

As for the substance of these letters from August, 1514, to June, 1517, they are of course largely concerned with matters of textual criticism and with compliments which fail to bring us very close to the heart of the writer or recipient. Here and there one marks a sentence or phrase for the nice turn of the language or for the glimpse it offers into some aspect of old life. Now and then we seem to get a hint of the new style and model that were to create the literature of the northern lands, as, for instance, in such a phrase as *litteratæ voluptatis sensu tangi* (p. 97), or in such a sentence as this: *Proinde videbar mihi repperisse rationem ut delicatis animis hac arte tanquam obreperem et cum voluptate quoque mederer* (p. 94), in which an attentive ear may catch suggestions of many things to come, down to Sainte-Beuve's sad comfort in being *le dernier des délicats*. Oftener we may hear the forerunner of Voltaire, as in the words of one of Erasmus's correspondents which might well have come from Erasmus himself: *Sed quamvis cætera fragilis, studio tamen sum obfirmatissimus; quae una res me et reficit et valde consolatur* (p. 158). That is not just the tone one hears in the letters of students to-day; indeed, it sometimes almost seems as if that power of reflection and consolation in study was slipping away from our scholars, and books were becoming to them more and more a burden.

The two most important documents in this volume—and in the whole collection—are the long autobiographical letter to a certain Lambert Grunnius written from London in August of 1516, and the letter to Martin Dorp, written from Antwerp in May of 1515. Mr. Allen is inclined to agree with Mr. Nichols in holding Grunnius to be a pure figment, and we have already recorded our opinion that this is the simplest explanation of a thorny question. The letter to Dorp, which makes almost a little book in itself, is Erasmus's well-known defence of his "Moriæ Encomium" and of his desertion of theology for literature. It is one of the earliest documents in the long battle of the wits that was then opening, and one of the most interesting. Change "theology" to "philology" and we might seem to be hearing by anticipation the quarrel of Pope with his Tibbald. It would be an entertaining study, indeed, with this letter as starting point, to portray Erasmus as the first of the "wits"—at least the first in northern lands. This letter should not be left without reference to the phrases in it which give an interpretation of Erasmus's use of the

word *stultitia* often missed by his critics and biographers. It is that illusion of the heart, appearing to the reason as folly, which "overcomes all the wisdom of the world."

History of the Great American Fortunes. By Gustavus Myers. Vol. III. Chicago: Charles H. Kerr & Co. $1.50.

This volume of Mr. Myers's work takes up the achievements of certain contemporary millionaires; principally, so far as space is concerned, J. Pierpont Morgan. The book appeared at a moment when three magazines were beginning, each on its own account, a "popular sketch" of Mr. Morgan's career in serial form, the grave announcement and flamboyant advertising of which might have led the familiar Man from Mars to suppose that the foremost citizen of the Republic was being chronicled.

It has never, in fact, been wholly clear whether this unusual amount of description, biography, and analysis, in the case of a career in high finance, was recognition of the fact, sometimes alleged, that the "multimillionaire" nowadays shares the honors of public pre-eminence with the statesman and the writer of short stories, or was merely an effort to hunt down wickedness in high places. The same doubt existed regarding the prolonged embalming of John D. Rockefeller in the columns of the same magazines. The historians of Mr. Morgan throw little light on this question. Some of them, like Mr. Steffens in *Everybody's*, affect the mysterious air of a Sherlock Holmes unravelling the secret crimes of finance. They and the anonymous authorities with whom their long conversations on the subject are reported "laugh cynically," "mutter," and "whisper," as they run upon one or another clue to the Money Power's infamies. Others, like Mr. Turner in *McClure's*, apply themselves to a study of inheritances, traits, and environment, as if admitting that the subject of their discussions is interesting solely in himself. Most of them, it must frankly be admitted, approach the matter with strong signs of preconceived opinion, not of a flattering character, whose correctness they mean to prove, whether or no. Of this type of discussion, Mr. Myers's book is pre-eminent.

We hold no brief for the "multi-millionaires." We have, indeed, ourselves been assured by high authority in the railway and industrial world, and by authority as far as possible removed from the field of muckraking, that there are few if any of the prodigious American fortunes, the history of whose accumulation would not present at least one chapter of questionable business morality. Be this as it may; we insist nevertheless that when an historian sets out to tell the story of a man or a career, it is his business to tell it fairly. If one action in that career is open to grave criticism on ethical considerations, it does not follow that the next action is of necessity similar. But this is precisely what Mr. Myers takes for granted. The presumption with which he examines each successive achievement is that there must have been something wrong about it.

Now, to study a great financial operation, with a view to making sure whether it was really a "square deal" or not, is assuredly the financial historian's duty. But he must also know all the facts and circumstances before he is entitled to pass judgment. Thus, the purchase by Drexel, Morgan & Co. of a United States government loan in 1877, and their prompt re-sale of it at an advance of 1 to 4 per cent., is denounced by Mr. Myers as "one of the very worst cases ever known of the people being betrayed." Perhaps so; perhaps not. In order to criticise the affair intelligently, it is essential to know what was the real condition of the open investment market where Mr. Myers so confidently declares the government "could have disposed of the bonds without intermediaries." He gives not the least evidence of having ever examined or considered that question, or the further question, what incidental profits great international banking houses usually get for lending their credit to the placing of loans even for great foreign governments.

After this, it is not surprising to find the author denouncing the episode of 1895, when the bankers are pictured as "compelling" a bond issue and then "milking" the government on the terms. Again perhaps so, and perhaps not; the terms were certainly harsh. But we find no evidence that the author has ever reflected on the part played by inflation of the currency through the Silver-Purchase Act of 1890, and by the emptying of the Treasury through the McKinley Revenue Law of the same year. The conclusions arrived at may conceivably be correct; the method of arriving at them is not deserving of serious consideration. Historically, it is all quite of a piece with Mr. Myers's offhand acceptance, in a sentence or two, of the wholly exploded theory of the "crime of 1873."

We should hardly deem it worth while to devote thus much attention to a discussion of the sort, but for the fact that such haphazard assertions and deductions do harm, and do it, not to the men or institutions against which they are supposed to be directed, but to the cause of financial reform which they profess to uphold. That the methods of what has come to be known as High Finance in Wall Street have repeatedly been objectionable in principle, illegal in practice, and utterly demoralizing in influence, is nowadays scarcely a debatable question. The efforts of sound thinkers and independent-spirited legislators have been directed towards punishing such abuses where they can be punished, and preventing them at all times. The new insurance law and the new trust company law of Gov. Hughes's State administration; the Supreme Court decisions under the Anti-Trust Law, at the instance of President Roosevelt's Administration; the new powers with which the Public Service Commissions and the Interstate Commerce Commission have been clothed; the extension, not yet completed, of the public restrictions on capitalization of new enterprises, on recapitalization of old, and on methods of speculation in the stock exchanges—all these are steps in the same direction. Further progress in that direction will be achieved, however, not at all through indiscriminate clamor at everything done by great banking interests, but by careful, thorough, and entirely fair examination of every episode involving the old-time financial practices.

Nothing in Mr. Myers's book is more striking an instance of the wrong way of writing financial history than his description of Mr. Morgan's part in the panic of 1907. Two legends have already grown up regarding the incident of October 24, when the Stock Exchange had approached the point of general suspension of payments, and when J. P. Morgan & Co. appeared as lenders of $25,000,000, at high rates, to avert the catastrophe. One, the popular legend, regards Mr. Morgan as a sort of demigod who had answered the prayers of Wall Street and descended upon it in a benevolent shower of gold. The other —which we may term the La Follette theory, because that statesman gravely expounded it to Congress in 1908—assumes the existence of a group of millionaires who create both prosperity and adversity for their own wicked ends, and who caused with that purpose the panic of 1907, by hiding away $25,000,000 in cold cash, which Mr. Morgan suddenly produced and sold at exorbitant rates to Wall Street, when he could see no further advantage to be gained.

Both conceptions of Mr. Morgan's part in the panic are picturesque; Mr. Myers, it hardly need be said, accepts the second. One is as reluctant to destroy either picture as to destroy the time-honored narratives of Romulus and the wolf, or of Joshua and the sun. Such stories make for the winter fireside's entertainment. But the simple fact, which any one who cared to inquire might have learned, is that on October 24, 1907, the New York banks themselves were in a panic; that they had begun to refuse to lend, in violation of the soundest principles of dealing with a crisis; that the president of the Stock Exchange set forth the desperate situation to the banks, enlisting Mr. Morgan's large per-

sonal influence to support him; that the banks yielded, issuing $25,000,000 in new credits through recourse to clearing-house loan certificates; that they fixed a high rate of interest, in line with the well-established rule that only thus could the loans be sure of going to the people who really needed them; and that Mr. Morgan's house was employed to offer the bank loans on the Stock Exchange.

Quiet Days in Spain. By C. Bogue Luffmann. New York: E. P. Dutton & Co. $2 net.

The impression made by Mr. Luffmann's book is that the author has been sharing the everyday life of the Peninsula, a life still destitute of almost every domestic comfort known to modern civilization. He winters on a small estate in the bleak hills of the Sierra Nevada, and summers in the Vega of Malaga with an old woman who furnishes his table for six and eight pence a week. His book has little to say of cathedrals or galleries, art or history, nor is it the notebook of the would-be vagabond who, in search of the glamour and romanticism of Gautier's time, snapshots Spain from the third-class window and the *casa de huespedes*. The author says, "the aim has been to write provincially—to set the local fact on its ground." In this he has succeeded. A multitude of humble details lend unusual freshness to what is rather a picture than a narrative, with all the continuity and intimacy that distinguish living from sightseeing and reality from pose. That contradictions abound is proof of truthfulness, for Spain is the land of contradictions.

The author is not so happy in his reflections, for it is dangerous to generalize about a whole made up of such parts as Castile, Catalonia, Biscaya, and Andalusia, and it would lead one far afield if one began to answer the challenge of his general statements. The impress left by the Moor upon Spain is fundamental, but it is absurd to say that "all his [the Spaniard's] dreams are of the East and of the Moorish period in the West. His old romances are based entirely on Arabic themes; his modern stage characters hail from Morocco; his lover of fiction is under the spell of eyes which have captivated him in Tangier" (p. vii). To affirm that "all decrees are of a suppressive character; press censorship; no public meeting; no free education; no unions or alliances; no emigration without permit; no petitions for work nor demonstrations against rapacious authority" (p. ix), is to convey an altogether false idea of contemporary Spain. The statement that "the fingers are used alike by rich and poor in carrying food to the mouth. . . . In the highest society food is handled a great deal, and it is a mark of attention to be fed from the fingers" (p. 96), might apply to Persia, but certainly not to Spain. The author's habit of intruding upon the reader his personal views of life reminds one of Montaigne, though the manner is not so happy or naïve. It is a little startling to be told that "nothing is important which man may do. It may be necessary for the moment; at the next a new necessity will arise. Consider what any reform has ever done. Never has there been one which did not increase human misery."

For all this, the book may be heartily commended for its portrayal of provincial life, for its homely illustrations of local character, and for the many interesting facts which find no place in handbooks or among the superficial notes of the ordinary traveller.

Practical Real Estate Methods. New York: Doubleday, Page & Co. $2 net.

This volume comprises the addresses delivered during the last five years to the real estate classes of the West Side Young Men's Christian Association of New York. Some thirty different experts have here expressed themselves upon various real estate problems. Francis E. Ward, former president of the Real Estate Board of Brokers, and Joseph P. Day, the present president, are among the contributors. The public questions pertaining to realty, such as tax assessment and tenement-house regulations, are admirably canvassed by Lawson Purdy and Lawrence Veiller, respectively.

An examination of the volume reveals how various are the qualifications needed to equip the successful dealer in real estate. The realty history of the city in general and of particular neighborhoods; the law of leasing, managing, appraising, condemning, insuring, selling, and building; the tact for administration; the diplomacy of commerce; no less than character, personality, and imagination are all required.

Not only the practitioner, as well as the owner and investor, can obtain serviceable suggestions from this symposium; but the economist also will profit by its perusal. The subject of land in theoretical economics is too imperiously dominated by certain broad and rigid generalizations, such as the assumed limitation of the land supply, the automatic increase of its rent, its comparative freedom from commercial risk, and its supposed coign of vantage as regards the other factors of production. All of these hypotheses are rudely jostled by the testimony of men who make real estate dealing their profession. When the retail shops begin to relocate, and wholesale houses invade the forsaken territory, there is often "an actual drop in the value of property so replaced by wholesale [establishments]" (p. 203). The agent, it is now universally admitted, seeks the tenant; not the tenant the agent, as formerly. The trade is evidently as plastic as most other commercial enterprises; and land and its improvements are seen to be quite akin to the other instrumentalities of production. The closet economist's ideas about land remind one of what Emerson says of the young citizen's illusion about society:

> It lies before him in rigid repose, with certain names, men, and institutions, rooted like oak trees to the centre, round which they all arrange themselves as best they can. But the old statesman knows that society is fluid; there are no such roots and centres, but any particle may suddenly become the centre of the movement, and compel the system to gyrate round it.

Notes.

Dent & Sons are to bring out separately the introductions to the Everyman Edition of Dickens which were written by G. K. Chesterton.

As number three of the "Girton College Studies," the Cambridge University Press is publishing Miss M. G. Clarke's "Sidelights on Teutonic History during the Migration Period: being Studies from Beowulf and other Old English Poems."

"The Mayor of Casterbridge" in Harper's new thin-paper edition brings us to one of the three or four great books of Hardy's Wessex series—probably most readers would think quite the greatest after "The Return of the Native."

Thomas Hughes's "History of the Society of Jesus in North America" (Burrows Brothers), noticed in the *Nation* of October 27, is to be completed in six volumes, of which the third volume forms the second instalment of Documents. The publication of the second volume of Text is not yet announced.

The seventh series of Paul E. More's "Shelburne Essays," just issued by Putnams, contains twelve studies of nineteenth-century authors and movements, viz.: Shelley, Wordsworth, Thomas Hood, Tennyson, William Morris, Louisa Shore, Thomas Bailey Aldrich, Francis Thompson, The Socialism of G. Lowes Dickinson, The Pragmatism of William James, Criticism (dealing mainly with Matthew Arnold, Pater, and Oscar Wilde), and Victorian Literature (The Philosophy of Change). A number of these papers appeared originally, in considerably abridged form, in the *Nation*.

H. G. Wells's novel, "The New Machiavelli," the publication of which Duffield & Co. have postponed until January, sketches the rise of the hero to political fame, and his renunciation of the great prizes which England offers her successful leaders.

Henry Frowde, publisher of Prof. Edward Suess's "The Face of the Earth," writes to inform us that the fifth and concluding volume of the work will contain the index.

Emily James Putnam is publishing, with Sturgis & Walton, "The Lady," or studies of ladies of various nations, contemporary

and otherwise. The same house announces "The Children's City," a sketch by Esther Singleton of resources of New York city, as a pleasure-ground for young people.

New publications from the press of Scribners for the month of November include: "Franco under the Republic," by Jean Charlemagne Bracq, professor of romance languages in Vassar College; "What Is Art," by John C. Van Dyke, and "Tales of Men and Ghosts," by Edith Wharton.

The Putnams will issue simultaneously in England, America, Germany, France, Sweden, Norway, Denmark, Holland, and later in Spain, Italy, and Russia, an enlarged edition of Mr. Angell's book, "Europe's Optical Illusion," under the subtitle, "The Great Illusion." The author attempts to establish the thesis that, owing to the growing complexity of the modern credit system, it is a physical impossibility for one nation to benefit economically by the conquest of another. "A Short History of Women's Rights," by Eugene Hecker, is also in the hands of the Putnams.

The same firm, as the American representatives of the Cambridge University Press, announces: "The Works of Francis Beaumont and John Fletcher," vol. lx, edited by A. R. Waller, and containing "The Sea Voyage," "Wit at Several Weapons," "The Fair Maid of the Inn," "Cupid's Revenge," and "The Two Noble Kinsmen"; "The Persian Revolution of 1905-1909," by Prof. E. G. Browne; "The First Part of King Henry IV," edited by J. H. Lobban; "The Idea of God in Early Religions," by Prof. F. B. Jevons: "A Geometry for Schools," by F. W. Sanderson; "Commercial Relations of England and Scotland, 1603-1707," by Theodora Keith, with a preface by W. Cunningham, archdeacon of Ely; "The Binding Force of International Law," by A. Pearce Higgins, and "The Presentation of Reality," by Helen Wodehouse.

Henry Holt & Co. are reprinting Prof. Henry A. Beers's two books on "English Romanticism" in the eighteenth and nineteenth centuries.

William Howe Downes, art editor of the Boston *Transcript*, is preparing the authorized biography of the late Winslow Homer, and would be glad to hear from persons possessing any of Homer's letters.

Fifty-two new volumes were added in October by E. P. Dutton & Co. to Everyman's Library. We select a few of the titles: Sir Walter Scott's "Lives of the Novelists," with an introduction by Professor Saintsbury; the completion in three volumes, with index, of Gibbon's "The Decline and Fall of the Roman Empire"; "The Conquest of Granada," with an introduction by Ernest Rhys; Bede's "Ecclesiastical History of the English Nation," with an introduction and notes by Vida D. Scudder; Matthew Arnold's "On the Study of Celtic Literature, and Other Critical Essays," with an introduction by Ernest Rhys and a supplement by Lord Strangford and reprints from Nash's "Taliesin"; Hazlitt's "Lectures on English Poets" and "The Spirit of the Age," introduced by A. R. Waller; "Theology in the English Poets, Cowper, Wordsworth, Burns," by Stopford A. Brooke; Minor Elizabethan Drama, Vol. I, "Pre-Shakespearean Tragedy," selected, with an introduction, by Prof. Ashley Thorndike; Minor Elizabethan Drama, Vol. II, "Pre-Shakespearean Comedy"; "Aucassin and Nicolette," and fifteen other Mediæval Romances and Legends, selected and newly translated by Eugene Mason; Huxley's "Lectures and Lay Sermons," with an introduction by Sir Oliver Lodge; "The History of the Adventures of Joseph Andrews," with an introduction by Professor Saintsbury; Sir William Smith's "Smaller Classical Dictionary," revised and edited by E. H. Blakeney; Spinoza's "Ethics" and "De Intellectus Emendatione," translated by Andrew J. Boyle, with an introduction by Professor Santayana, and John Stuart Mill's "Utilitarianism, Liberty, Representative Government," with an introduction by Prof. A. D. Lindsay.

The Nobel prize in literature has been awarded this year to Paul Johann Ludwig Heyse, who for half a century has been in the forefront of German literature, as poet, dramatist, and novelist.

The *Geographical Journal* for November contains an account of a journey down the east bank of the Euphrates, by Gertrude L. Bell. It is a little known region, but it is full of ancient ruins, the location and investigation of which were the main object of the journey. The first Transandine railway connecting Buenos Aires and Valparaiso is described, with maps, sections, and illustrations, by W. S. Barclay. One important result of it, he asserts, will be the establishment of a regular line of steamers from Chili to Australasia. Now it is first necessary to go to San Francisco or Vancouver. Other articles relate to New Zealand, Russian Turkestan, and the Himalayas.

The University of Cambridge has taken over the copyright and control of the Encyclopædia Britannica and will issue from the Cambridge University Press, at the beginning of the year, the eleventh edition, a completely new work. India paper will be employed, by which the weight and bulk will be reduced to one-third of its present size. The new work will be issued, in twenty-eight volumes, as a complete whole, instead of volume by volume as previously.

That worse than being unemployed is being unemployable, and that the first state leads directly into the second, are the basic facts in a vigorous article by Edith Sellers in the November *Cornhill*. For the improving of both conditions, she urges technical training for the young, compulsory evening classes, sanatoria, insurance against invalidity, people's kitchens, penal colonies, colonies for inebriates, and, especially, reformed casual-wards, which, instead of being stepping-stones to the workhouse, will fulfil their purpose of helping men who are out of work to find work, and of helping them to keep themselves fit until work is found. For these last objects she suggests a labor bureau in every casual-ward, good food and beds, the opportunity of resting instead of working while there, and, not of least importance, their reservation exclusively for genuine work-seekers. The place for a work-shirker is a penal colony or a prison. A casual-ward ought to be kept as a refuge for decent men overtaken by misfortune.

The future of China is declared by Gilbert Reid, who is the director-in-chief of the International Institute of that country, to be neither partition nor revolution, nor yet federation with Japan. In an article in the *World's Work* for November, entitled "China—A Permanent Empire," this writer outlines the government of the China of the future as that of an empire similar to Germany, although he does not make this comparison in so many words. The time for dismemberment, he says, was China's moment of folly in the Boxer uprising of 1900, with a declaration of war against the whole world, and a most outrageous massacre of innocent men, women, and children. But there were four reasons why partition did not then take place. The first was the efforts of Sir Robert Hart in behalf of China, despite his own heavy losses in the outbreak. The second was the prompt action of Secretary of State John Hay in urging upon the Powers the advisability of maintaining the autonomy of China. The third was the position taken during the outbreak by strong viceroys in arranging that no foreign troops should infringe on the jurisdiction of the central and southern provinces, so long as they should stand aloof from the Boxer campaign; and the fourth, which seems sufficient in itself, was the conviction of the generals and ministers of the Powers that occupation of more than Peking and the metropolitan province was beyond their reach. The conditions that make revolution improbable are the newly-trained army, the counter-plans of the so-called reform party, and, mainly, the lack of a leader. Neither of the two men who might have accomplished it, Li Hung Chang, and, more recently, Yuan Shih Kai, chose to attempt it. As for federation, China is unable to appreciate such friendship as Japan displays in Korea and Manchuria. The future is to be a government of Emperor and Parliament, with decentralization of the power now, at least nominally, focussed at Peking. Division of functions between the Executive and the Legislature will thus be paralleled by another division between Peking and the twenty-one provinces.

We trust the Ball Publishing Company of Boston will be encouraged to continue its admirable series of reprints. Not long ago it gave us an interesting volume of essays by Francis Thompson which had never before been collected. This was followed by the audacity of a third series of Matthew Arnold's "Essays in Criticism," and now we have a selection from the journalistic work of John Davidson, under the title of "The Man Forbid and Other Essays." Edward J. O'Brien, who edits all these volumes, is happier, and briefer, in his Introduction here than he was with Arnold, and shows clearly the place of Davidson as one of the originators and leaders of that school of crackling, paradoxical, sententious style which is carrying everything before it among the reigning London wits, and which reaches its consummation in G. K. Chesterton. Some of the *genre* pictures, indirect critiques, and dialogues in the present collection sound a bit thin to ears accustomed to the enormous impertinence of Messrs. Shaw and Chesterton and Galsworthy, but, as a whole, we relish this revival of one whose tragic death is still so fresh in memory.

Every teacher of English in a college of any size knows the almost insuperable difficulty of providing the reading material for a course in the general history of English literature. No library contains duplicates enough to meet the needs of a class of four or five hundred, and extremely few students can afford to buy everything that is

requisite. Into this economic opportunity there has flowed within recent years a stream of wholly inadequate little poetical anthologies and slender volumes of prose selections compiled in haste by light-hearted instructors for light-hearted publishers. The situation obviously called for a well-edited volume or two of manageable size, with opaque paper, clear type, and the capacity of an old-fashioned folio. Professor Manly at the University of Chicago approached the mark with two volumes, one for prose and one for poetry, of some 500 double-column pages each—a really substantial provision for a year's reading. Professors Cunliffe, Pyre, and Young at the University of Wisconsin now go a step farther and present a single volume of some 1,000 pages of similar style, containing both prose and poetry—"Century Readings in English Literature" (The Century Co.). The book is a credit to the publishers, and, so far as we have examined it, to the editors as well. We should like a little of Pepys's "Diary" to match the generous extracts from Boswell, a few letters of Chesterfield, or a part of his essay on decorum, or an essay of Hazlitt in lieu of some of the twenty pages of George Meredith's knotty verse; and so, we think, would most college students. On the whole, however, the "Century Readings" covers the ground from Chaucer to Meredith in a notably satisfactory manner, and, as a make-weight, the editors have thrown in a translation of "Beowulf" and "Gawain and the Green Knight."

In "The Silent Isle" (Putnam), A. C. Benson has written his Impressions—or confessions—of life in perhaps a more rambling, intimate way than in any of his seven other volumes. He chooses, as he says, not to record his views in a single picture, but rather to sketch a hundred details, seeing life "from a simple plane enough, and with no desire to conform it to a theory, or to find anything very definite in it, or to omit anything because it did not fit in with prejudices or predilections. The only unity of mood which it reflects is the unity of purpose which comes from a decision"—this decision being to live upon "simpler and more rational lines," in consequence of "a deliberate belief that conventions were not necessary in contentment." So Mr. Benson lets fly a shaft here and there at the shallowness of literary discussion, at the cock-sureness of the modern young man, at modern biographers, and what not. In one passage upon the writing of books Mr. Benson seems to answer those criticisms of his former works which have charged him with lack of fixed purpose. The author has finished the book with which he has lived for months, and dispatched it to the press:

> And then comes what is the saddest experience of all; it will pass into the hands of friends and readers; echoes of it will come back to me, in talk and print; but it will no longer be the book I knew and loved, only a part of my past. And this is the hardest thing of all for a writer, that when others read one's book they take it for a flash of the present mood, while the writer of it will see in it a pale reflection of a time long past, and will feel perhaps even further away from his book than those who criticise it, however severely. If my book is criticised as I write it, or directly after I have written it, it is as though I myself were maltreated; but when it appears so belatedly, I am often the harshest critic of all, because my whole point of view may perhaps have shifted, and I may be no longer the man who wrote the book, but a man of larger experience, who can judge perhaps more securely than any one else how far behind life the book lags. There is no season in the world in which the mind travels faster from its standpoint than when it has finished a book, because during all the writing of it one has kept, as it were, tensely and constrainedly at a certain point; and so when freedom comes, the thought leaps hurriedly forward, like a weight lifted by an elastic cord that has been stretched almost to breaking.

It is easy to speak ungraciously of certain traits of Mr. Benson's writing—the monotony of his theme, the disquieting contrast between his rather self-centred epicurean life, as he portrays it, and his everlasting preaching of the creed of love, unselfishness, and consideration for others—but on the whole his is one of the quiet voices making for reflection against the prevalent worship of strenuousness and indiscriminate activity. It is encouraging to know that his successive volumes find so large a circle of readers. We could wish that he might feel inclined to vary his appeal by throwing his next volume into the form of discursive fiction. By far the best sections in "The Silent Isle" are, in our judgment, the sketches of the people that flit across the pathway of the recluse, and this gift of characterization might be employed more copiously and to better advantage.

Whatever may be thought of his poetry, Prof. William Cleaver Wilkinson has at all events erected a very respectable monument to industry in the writing of his epics. There are three of them—a "Saul," a "Paul," and a "Moses"—in four personable octavos, with which is associated, in completion of his poetic labors, a fifth volume of miscellaneous verse (Funk & Wagnalls). What is at first so striking about the array, which is nothing less than imposing in its library habiliments, is the fact that such a bulk of verse should ever have got itself written at all in "this ghastly thin-faced time of ours," when a first effort is usually sufficient to exhaust a poet's vitality and conviction. Nor is it less amazing to consider the motives which must have nerved a writer against the discouragements of such a particular task as this. For that an epic in one volume, much less in two, should find audience of any kind, to say nothing of one fit, though few, even the most sanguine could hardly believe nowadays. Not that it would be fair to deny Professor Wilkinson's performance certain merits. But as a whole his epics are, frankly, unreadable. In a way they combine a kind of Miltonic intention, with a kind of Browningesque execution. They have all the enginery of epic—elevated action, set similes, supernatural machinery, blank verse—everything which an epic should have, except the inspiration at once popular and literary, the universal moral appeal, intense and immediate, which does, or did once, vitalize such a production. And there is the point: in a time which has as a whole no moral insight to speak of, epic, like tragedy, is—it will not do to say impossible, for there is Professor Wilkinson to confute such a statement—but devoid of influence. Under these circumstances that a poet should be able to bring three works of the kind to pass, is evidence of remarkable force of character. And the pity of it that the waste of such powers—for wasted in a measure they are—is evidence also to the unhappy conditions under which our more ambitious literary work is done, in moral and intellectual solitude, and with a desperate persistence on the poet's part in his own sense of relative values right or wrong.

The Blacks have added to their list of sumptuously illustrated books about places an attractive volume entitled "Pompeii" (painted by Alberto Pisa, described by W. M. Mackenzie). The narrative is written with knowledge, and with a literary quality not too common in works of this character. The twenty illustrations in color as well as those in black and white are well-selected and excellently rendered. The book is imported by the Macmillan Co.

In "The Buried City of Kenfig" (Appleton), Thomas Gray sets forth with great thoroughness all that can be gleaned from old annals and documents regarding that interesting town in South Wales. Its known history, he tells us, begins with the Norman Conquest, but the city is older, the earliest mention of it being in 893 A. D. It was destroyed by a sand-storm—the fate of so many cities in this sandy region—some time between A. D. 1246 and 1317, and the only existing remains at the present day are a portion of the wall of the castle, situated at the top of the hill, which forms a picturesque detail in the lonely landscape. The task undertaken by the author of telling the history of a city destroyed six hundred years ago, and only occasionally mentioned by old chroniclers, is one that required great patience and conscientiousness. The book shows both these qualities, and it is, therefore, the more pity that much of its value is detracted by the inappropriateness of its style. In a few chapters, indeed, in which the old buildings of Kenfig are described or extracts from old documents of its history are given, scientific language is used, such as becomes a scientific subject, and these pages will be appreciated by the interested student. But the author seems to have desired to capture the layman as well as the student, and doubtless, if he had had the gift of making the past live in the present, he might have exercised a universal appeal. But, unfortunately, Mr. Gray's imagination is not of that stamp, and all he can do, in his fear of boring his imaginary casual reader, is to fill his pages with sentimental meditations clothed in flowery language. His style is, indeed, described by Walter de Gray Birch, the writer of the preface, as "bred of pure naturalness and keen observation," but whether these are its characteristic qualities, the reader may judge for himself from the opening paragraph of the book:

> Overhead birds are singing with heart-felt joy of life this glorious summer morning. All around me are hillocks of golden sand, tipped with pleasing contrast of colour by the green of the sea-sedge, with which they are clad in part. The soft summer wind whispers its sad note through the waving rushes as it comes from over the great waste of triumphant sand which seems as it were out of place so far from sound of murmuring sea.

To write a book of 230 closely printed pages about a little group of islands which contain only some nineteen square miles of land, and a population of less than twenty thousand souls, presupposes an interesting community, or an author most interested in his subject. In W. B. Hayward's "Bermuda" (Dodd, Mead), we have

both, and the combination produces a result attractive alike to the reader, who has never seen the "vexed Bermoothes," and to one who has dwelt there always. It is divided into two parts, historical and descriptive. The history of the islands, for the general reader, at least, has the merit of almost complete novelty, and is told in a style at once simple and direct. From the successive wrecks which had given the Somers Islands such a bad name, from the days of struggle and starvation of its early inhabitants, through slavery times, until, feeling neglected by England, it was, not unwillingly, robbed of its English gunpowder to help our Washington fight English troops, and then of its struggles as a whale-fishing, shipbuilding, not too loyal colony, until the outbreak of our civil war, and then of the glorious days of blockade-running, Mr. Hayward picks out of his mass of documents the salient details of Bermuda's history, and so builds up a story that has no dull moments. In the chapter on literary associations, he has brought together in entertaining fashion pretty much everything that has been said about Bermuda, from Shakespeare to Mark Twain; and even one familiar with the island will probably be surprised to learn how many men of letters have written of it. And they all praise its amenities—all save Anthony Trollope, who, in contrast to our author, says: "It seems to me there can be no place in the world as to which there can be less to be said than there is about this island." The last four chapters deal with Bermuda of the present, and are in the nature of a guide book. Taken together, the two parts of the book are a history and a description of a place singularly interesting and comparatively unknown. The book is well printed, although its photographic illustrations lack somewhat in artistic merit and fail to give the atmosphere of the "Enchanted Islands," as only the pencil of an artist adequately could do.

Zeitschrift für Kolonialsprachen is a new periodical, edited by Professor Meinhof of the Hamburg Colonial Institute, the first number of which appeared this month at Berlin.

An album-like book, "Photographing in Old England, with Some Snapshots of Scotland and Wales," by W. I. Lincoln Adams, editor of the *Photographic Times*, is the literary and photographic record of a summer tour. It addresses chiefly the public of amateur photographers, and gives practical advice as to outfit, developing facilities, and choice of view. Excellent is the counsel that prints should be ruthlessly trimmed until they come into some sort of compositional unity. The publishers are the Baker & Taylor Company.

The publishers, G. Laterza e Figli of Bari, have undertaken the publication of what will virtually be a complete *corpus* of Italian literature from its origins to the present day. The coöperation of the most distinguished scholars of Italy has already been obtained, and some six hundred volumes are promised, each edited with a minimum of critical apparatus, but a maximum of textual accuracy, by the scholar most competent to deal with it. The volumes which have already appeared—two containing Bandello's novels, one of Gozzi's "Memorie," and a fourth containing a representative collection of "Lirici Marinisti" edited by B. Croce—give a most favorable impression of the series, both as to its scholarly character and its outward garb. The same publishers have also collected a half-dozen of Signor Croce's earlier essays on seventeenth-century literature under the title of "Saggi sulla Letteratura italiana del Seicento."

The death is reported in his sixty-seventh year of James C. Brogan, a scholar of distinction, and a writer, translator, and compiler for several encyclopædias. He was born in Ireland and educated at Maynooth College, but came in early manhood to this country. Before the breaking of his health he had reviewed a number of books for the *Nation*.

James Frothingham Hunnewell died recently in Boston, after having been in ill-health for six months. He was born in Charlestown in 1830, and during his long life wrote extensively on history. Among his works are: "Bibliography of Hawaiian Islands and Civilization of Hawaiian Islands," "The Lands of Scott," "Bibliography of Charlestown and Bunker Hill," "Voyage of the Missionary Packet," "The Imperial Island," "The Historical Monuments of France."

Dr. Ludwig Holmes, a Swedish clergyman, who was decorated by King Oscar II for his eminence as a poet, died last week in Philadelphia. He was born in Sweden in 1858 and received his early education there. He spent the greater part of his life in Illinois, and there held important offices in the church. King Oscar honored him in 1897 with the jubilee token in silver, and in 1901 with the blue ribbon, which is the highest award for literary merit. Five years later Dr. Holmes was knighted with the insignia of the Cross of the Order of Vassa. His best-known work is a volume called "Dikter af Ludvig."

Science.

THE AFTERMATH OF DARWINISM.

Charles Darwin and the Origin of Species. By E. B. Poulton. New York: Longmans, Green, & Co. $3.

Concealing Coloration in the Animal Kingdom: Being a Summary of Abbott H. Thayer's Discovery. By Gerald H. Thayer. New York: The Macmillan Co. $7 net.

No chapter of Darwinism has held naturalists more entranced than that concerning the rôle of color of animals. Before Darwin it was recognized that the color of an animal might serve to protect it from enemies, adapting the animal to its environment, and thus fulfilling a "purpose." Color was *designed*, in brief, for protection from foes, and these foes likewise were designed to pursue each kind of animal and destroy it, the relation being so cunningly devised that the balance of nature was maintained.

After Darwin the origin of color was explained by its usefulness either in leading to escape from enemies or in allowing an easier approach to a victim. The former kind of coloration is known to-day as protective coloration, the latter as aggressive resemblance. A further development of the same theme has led to the recognition of mimicry and warning coloration. Mimicry means resemblance to another kind of animal or plant, either through a similarity in coloration or more especially through a resemblance in form. Warning coloration means that the animal, being noxious to possible foes, advertises its offensiveness by exhibiting itself conspicuously.

These matters have received elaborate treatment in two recent publications. Professor Poulton of Oxford, an ardent disciple of Darwinism, has brought together in book form some six lectures and addresses published in connection with the recent centenary celebrations of Darwin's birth. G. H. Thayer, the son of the artist, A. H. Thayer, applies and develops the views of his father in regard to the rôle of concealing coloration in animals.

With the exception of certain highly questionable hypotheses relating to mimicry in the butterflies of North America, there is little that is new in Professor Poulton's book. The author goes over the old ground with obvious relish, and has little to say, except what is derogatory, about the splendid advances that have been made since Darwin's time in the study of variation and heredity. The occasion may excuse, perhaps, the sentimental tone of the addresses, but hardly the lack of critical judgment. If the scientist sometimes advertises his emancipation from that very human weakness, credulity, he has only to read what has been written on this topic of animal coloration to humble his pride. Starting with a reasonably good case, the advocate of the rôle of protective color in nature is led by insensible steps to the wildest flights of undisciplined imagination.

This is well illustrated also in Mr. Thayer's beautiful book. With great skill and insight he points out some of the remarkable ways in which animal coloration might serve as a protection. His admirable illustrations of the effects of counter shading draw attention to a matter of interest to every student of nature. His photographs make good his claim that the lighter under-color so prevalent in animals serves to make them invisible to us, and therefore *presumably* to some of their enemies, but whether the protection is needed or of vital importance to the animal as a protection against its enemies is a point taken for granted rather than demonstrated. His account, moreover, of the rôle of protective markings of animals, while full of interest, yet impresses the naturalist as too often a feat of the imagination

rather than a contribution to zoölogy. For example, many of the cases that the naturalist has described as warning coloration because they have seemed to him to be obviously conspicuous are cited by Mr. Thayer as in reality protective if looked at from the right point of view. The case of the skunk made invisible by his white stripes that break up his contour against the sky line—the sky line, that is, of the grub on which he feeds—will appear fantastic, to say the least; and when roseate spoonbills and red flamingoes are projected against glowing sunsets and sunrises, one wonders whether this is art or science. The artist forgets that the devices which on a large scale seem to him to protect the animal, occur also in microscopic animals, where they can scarcely be supposed to represent all the shifting scenes of the forest; and while this difficulty does not, of course, disprove the conclusion that the larger markings may be useful, yet something more than an enthusiast's account of the possible protection offered will be necessary to establish the view that such effects have any significance in the battle for existence.

The death is reported from his home in Stamford, Conn., of Uriah Cummins, in his seventy-eighth year. He was the inventor of thirty successful mechanical devices. Besides writing upon scientific subjects he was the author of tales, historical and fanciful, dealing largely with the Indians of western New York.

The death is reported of Désiré-Jean-Baptiste Gernez, the French physician and chemist. He was born at Valenciennes in 1834, and studied at the Ecole Normale Supérieure, in which he was appointed professor in 1881. He wrote numerous scientific treatises, and in the sixties collaborated with Pasteur in the study of vines and the diseases of silk worms.

Dr. Henry Wurtz, chemist and scientist, died at his home in Brooklyn last week in his eighty-third year. Dr. Wurtz, who was born in 1828, was a graduate of Princeton University and also of the Massachusetts Institute of Technology. He was chemical examiner in the United States Patent Office at the beginning of the civil war, as well as professor of chemistry in the National Medical College at Washington. Subsequently he was editor of the New York *Gas Light Journal*, and was one of the judges at the Philadelphia Exposition. He wrote numerous scientific treatises and discovered and named the minerals Huntilite and Animikite; the mineral Wurtzilite was named after him.

Drama.

"THE THUNDERBOLT."

"The Thunderbolt" of Sir A. W. Pinero, first played in England more than a year ago with a comparatively small measure of public success, was presented in the New Theatre here on Saturday night, and proved to be a work of rarely high quality. A popular piece it is not likely to be, for the humor of it is drab and cynical; the story, although both interesting and dramatic, is devoid of romance or sensation, and the personages, drawn with admirable veracity, are, with two exceptions, wholly unattractive. But as a genuine play, reflecting the manners and morals of a class and a period, and deriving its significance from the revelation of character under the stress of circumstance, it is, perhaps, the highest achievement of its author. Some of his most successful productions—"The Gay Lord Quex," "The Second Mrs. Tanqueray," and "The Notorious Mrs. Ebbsmith," for instance—models of stage craft in their way, are more or less suggestive of insincerity, of a calculated theatricalism, but "The Thunderbolt" is free from all suspicion of this sort. Neither in topic nor in treatment does it provide any cheap or glittering bait for the multitude. On the contrary, it is one long, bitter, satirical attack upon hypocrisies and meannesses common to all mankind, but attributed especially, in this instance, to the smug British middle class provincial. The immediate theme is the heartless and abominable conduct to which professedly respectable and religious persons will resort in order to maintain a false position or procure pecuniary gain.

To illustrate it—the story need not be given in detail—Pinero introduces a family group consisting of a reputed rich contractor, James Mortimore, his brother Stephen, and a sister, Rose, married to a Col. Ponting—all eminently respectable folk, who, for many years, have ostracized another brother, Edward, who has "gone into beer." When Edward dies, however, leaving a vast fortune behind him, without any apparent will, they all assemble in his house, like birds of prey, eager to seize upon their inheritance as next of kin. They all know that Edward had an illegitimate daughter, whom he worshipped, and whom they had expected to be his heiress, but they tacitly agree to ignore her moral rights and leave her to shift for herself. Only a fourth brother, Thaddeus, a poor musician, who has outraged their finer feelings by marrying Phyllis, the daughter of a small tradesman, for love, upholds the actual, if illegal, rights of the orphan. It turns out—and the scheme is handled with extraordinary naturalness and dexterity—that Edward really did make a will leaving his whole estate to his daughter Helen, and that Phyllis, finding it accidentally, and tempted beyond her strength, destroyed it. At the moment when "the family" are about to grasp their fortune—the expectation of which already has led them into various absurd extravagances—Thaddeus, too honest to profit by the fraud and resolved to save his wife at all hazards—declares the existence and purport of the will, and accuses himself of its theft and destruction. The scene of the confession, perfectly natural in its occurrence, is one of the most ingenious and, because it is natural, one of the most truly dramatic that any modern dramatist has devised. And it is wrought with a realism that is a triumph of minute observation. In general effect it is sordid, mean, repulsive, but it is undeniably and horribly true. On cross-examination Thaddeus contradicts himself so hopelessly—and here, too, Sir Arthur's cleverness is brilliant—that his wife's guilt is made manifest. Thus all the claimants, pillars of British respectability, are put at the mercy of the illegitimate child whom they have conspired to defraud. She, a proud, intelligent, honest, self-reliant creature—pitying Phyllis, who has made full confession, and satisfied with her father's recognition—declines to assert her rights, and, incidentally condoning a felony, agrees to an equal division of the estate, counting herself as one of the family.

But the value of the piece consists not in the incidents of the story, but in the vigor and truth of its satire and the veracity of its characterization. All the personages have their distinct personalities and are absolutely alive. And they are embodied with artistic fidelity at the New Theatre. Louis Calvert, Albert Bruning, A. E. Anson, Ferdinand Gottschalk, and E. M. Holland are the most distinguished figures in an eminently satisfactory cast. The performance was a striking illustration of the advantages of the stock system.

Oscar Wilde's whimsical comedy, "The Importance of Being Earnest," was revived in the Lyceum Theatre, on Monday evening, with considerable but not brilliant success. In London it has just had a very long run, but there it probably was better played. The piece shows its age very clearly. Some of the particular social follies which it ridicules have made way for others, and much of the humor—never wholly original—long ago became conventional. But the farcical situations and the epigrammatic cynicism of the dialogue, are still potent sources of amusement. Every scene bristles with smart phrases, but the wit in them is seldom of that rich quality which will bear reflection or repetition. Much of it is tricky, shallow, or obvious, and nearly all of it is suggestive of labor under the lamp. Flashes of anything resembling inspiration are rare. Nor is the satire in itself effective, for there is no energy or purpose behind it to make it real. All is conceived in the same light mood of indifference or even of utter cynicism. As drama, of course, the piece is of no account. It is insignificant and preposterous. But it will always be more or less amusing to persons seeing and hearing it for the first time. The present representation is only moderately good, none of the players being oratorically capable of giving full effect to the artificial dialogue.

Messrs. Dent have announced a new series called "The Shakespeare Circle," in which Shakespeare's plays will be carefully prepared for reading classes. They are to be cut so as to bring each within the compass of not more than two hours and a half. "The Merchant of Venice" and "As You Like It," both edited by Dr. Alfred P. Graves, will be the first to appear.

Madam Lillemohr Halversen, a Norwegian actress who has won considerable reputation in Christiania by her interpretations of the heroines of Ibsen, will soon make her first appearance on the London stage in "The Whip," at Drury Lane. An opportunity, of course, is an opportunity, but this seems to be somewhat of a descent.

The Coburn Players are to produce, at their second matinée, for the first time on any stage, "Alcestis," a poetic drama in English verse, by Blanche Shoemaker Wagstaff. The mythological story is closely followed.

Charles Frohman has decided to make a Christmas revival of Pinero's "Trelawney of the Wells," in which Ethel Barrymore will have the part of Rose. This piece was a great success when it was originally produced here with Mary Mannering and Hilda Spong in the cast.

The unabated popularity of "Henry VIII," at His Majesty's Theatre, in London, forces Sir Herbert Tree to abandon his original intention of producing Alfred Noyes's fantastic play, "The Forest of Wild Thyme," at the end of the year. He denies, however, that this piece has been shelved. He hopes to make it his Christmas attraction next year.

The dramatists whose works have been produced at the Comédie Française during the last twenty-five years entertained Jules Claretie at luncheon in celebration of his "silver wedding" as administrator of that theatre. Sixty-two authors were present, and M. Claretie's health was proposed by Paul Hervieu, the academician, and Paul Ferrier, president of the Society of Dramatic Authors. In his reply, M. Claretie pointed out that the House of Molière was more hospitable and less formidable than was sometimes believed. Both the public and the critics expected more of it than they expected elsewhere. M. Loubet once asked him why people were so severe in judging the Comédie Française. "Ah! Monsieur le Président," he replied, "c'est que nous sommes le Gouvernement." A government which had 171 curtain-raisers and 600 or 700 plays which it might produce, and only 365 days in the year to produce them in, required three or four theatres, if it was to satisfy all those who offered it new pieces for production. Then there were the actors—and actresses. As M. Claretie put it succinctly, "there are eyes—sometimes very beautiful—that shine like daggers."

Laurence Housman has just given a public reading in London of his play, "Pains and Penalties," which recently encountered the veto of the censor. The piece proved to be a dramatization from official sources of the later career of Queen Caroline, who is depicted as an innocent victim. Commenting upon the play, the London *Times* explains that the usual inference that there is something "not nice" in plays held up by the censor does not apply to "Pains and Penalties," in which unpleasant subjects, so far as they exist, are treated with delicacy and good taste. The real justification of the censor's decision lies, according to the *Times*, in the fact that the lives of George IV and of his pathetic Queen are not far enough in the past for an audience to distinguish an author's subjective treatment from the objective reality.

Music.

BERLIN AND NEW YORK.

It is now generally assumed that Berlin is the musical centre of the universe. It certainly is the goal of thousands of students from all parts of the world. America contributes so many of these that not a few of the more prominent teachers have found it expedient to follow them and reopen their studios there, sometimes with the same pupils they had at home. Of miscellaneous concerts and recitals Berlin has a greater number than any other city—sometimes more than fifty in a single week. The Royal Opera gives performances ten months a year, as against the five operatic months of New York. Does it not follow that Berlin is the world's musical metropolis? But this is to judge merely by quantity. If New York hears fewer musicians than Berlin, it is because here little attention is paid to any but the best, who never fail to visit us. In this way, too, we escape the deadening glut of music with which Berlin is afflicted.

Berlin has no better orchestra than the reorganized Philharmonic, or the visiting Bostonians, or the New York Symphony Orchestra. Nor has it a greater quintet of conductors than Gustav Mahler and Max Fiedler in the concert hall, Arturo Toscanini, Alfred Hertz, and Cleofonte Campanini (for ten performances) in the opera house. Operatically, we are as far ahead of Berlin as Berlin is ahead of us in choral music. Doubtless the Berlin Opera devotes more time to rehearsing than our Metropolitan does; but, after all, three rehearsals, with the world's greatest singers in the cast, lead to better results than thirty rehearsals with mediocre artists. We send young singers to Germany to get an education and experience, and the successful ones we promptly claim again as our own.

This has been the situation for years, and now a new humiliation confronts Europe. We are getting, as usual, not only the best foreign singers, in addition to our own, but the leading composers are beginning to honor us by giving our Metropolitan Opera House the privilege of first staging their new works, and, in addition, they cross the ocean to superintend their production personally, thereby emphasizing the compliment they pay us. Probably the première of "Madama Butterfly" would not have been a failure in New York, as it was in Milan; consequently Puccini is taking no chances with his "Girl of the Golden West," but puts it into the hands of his countrymen, Caruso and Toscanini; while Humperdinck, for similar reasons, gives us the first opportunity to hear his "Children of Kings."

Next year it is likely that several other composers for whose new or forthcoming operas the Metropolitan has acquired the sole producing rights for this country—Debussy, Charpentier, Leroux, Salvayre, and Ravel—will cross the ocean to see them launched. The time may come when these visiting composers may feel tempted to make New York their headquarters, just as, for a number of decades, the leading Italian and German composers made Paris their field of activity. The French school of grand opera was built largely by four Italians—Lulli, Rossini, Cherubini, Spantini—and two Germans—Gluck and Meyerbeer—while a third German, Offenbach, was chiefly responsible for the world-wide vogue of French opera bouffe. The great opera composers whom France herself produced learned much from these resident foreigners. Why should not history repeat itself?

Giulio Gatti-Casazza, now sole manager of the Metropolitan Opera House (Andreas Dippel having been transferred to Chicago), showed courage in beginning the season with so serious a work as "Armide" on what is supposed to be more a social than a musical occasion. Gluck's opera, though first produced in 1777, had never been sung in America, and the infrequency of its performance, even in Paris and Berlin, must have made it clear to the manager that it probably would not make a strong appeal to modern taste. However, he had at his command a bigger cast than Gluck could have dreamed of—a cast including Caruso, Fremstad, Homer, Amato, Gluck, Gilly, Reiss, De Segurola—and funds sufficient to provide scenic marvels calculated to hypnotize the spectators into a fairy-tale mood in which they would more readily overlook the foolishness of the libretto. Quinault's libretto, which Lully had already set to music a century before Gluck, has for its heroine a Saracen princess, who, with the aid of sorcery, first attempts to kill and then to win the love of the Crusader Renaud, who is the hero of Tasso's "Jerusalem Liberated." He succumbs for a while, but is rescued by two other knights, who, with magic sceptre and shield, overcome Armide's magic arts. Much of Gluck's music is as antiquated as this style of plot, and it cannot be said that there is as much melodic invention in this, his last opera but two, as there is in his "Orfeo," written fifteen years sooner. In its splendidly realistic choruses, however, and in some of its recitatives, it foreshadows modern developments surprisingly. For us it is difficult to realize what an audacious operatic novelty "Armide" must have been in the last quarter of the eighteenth century. To Gluck's contemporaries it seemed as revolutionary and as much music of the future as Wagner's "Lohengrin" did to the Germans in 1850.

The literary works of Wagner, thirty-five in number, which are not included in the "Gesamtausgabe," have been edited by Dr. Julius Kapp, and will be published shortly by Schuster & Loeffler.

Mme. Sembrich will present at her second recital in Carnegie Hall on Tuesday afternoon, December 6, a unique programme, on which she has been engaged for several years. It will be made up entirely of the folk-songs of various peoples, beginning with the days of early Greece, and presenting specimens of such songs in every nation. Mme. Sembrich will sing these numbers in their original tongue. With many of them she is familiar, as she speaks fluently Polish, Russian, German, Italian, French, and English, while she has studied the others with natives of the countries from which the songs were selected.

The executive committee of the Symphony Concerts for Young People announces the scheme of the concerts for the thirteenth season. The first, fourth, and fifth programmes will illustrate the symphonic development of music by the German, French, and Slavic nations, and will show how the national character, history, and environment have influenced the music. The sixth concert will be a spring festival of symphonic dances, in which the music of the symphonies which breathe the spirit of spring and flowers and the influences of nature will be interpreted by professional dancers in costume. On December 17, "The Children at Bethlehem," a Christmas mystery play by Gabriel Pierné, will be presented with scenery, costumes, chorus of children, singers, and orchestra. The third concert will be devoted to the old negro melodies sung by Miss Kitty Cheatham, who has made a thorough study of these wonderful songs, now fast disappearing.

The Oratorio Society will revive Eduard Grell's "Solemn Mass" at its opening concert, Tuesday evening, December 6, at Carnegie Hall. This famous setting of the church office, though written by a modern composer in 1863, is in the contrapuntal style of three hundred years earlier.

Paderewski was the chief speaker at the Chopin centenary celebration at Lemberg, a few weeks ago, which was attended by members of the Polish nobility and by eminent men from other countries, among them Alma Tadema and Jules Claretie. The pith of Paderewski's remarks is given in these words:

> We Polish musicians are the children of one father, Chopin. But he is a tree the branches of which reach to the sky, whereas we are mere twigs. He was the greatest of Polish patriots, for in the tones created by him we hear the wild cry for freedom, for liberation from the chains of thraldom. Therefore, all honor to him, because he not only introduced his country's music with his strains into the world of art, but also demonstrated to all mankind by his works that Bismarck's assertion that there is no culture in Poland is untrue. As surely as there is a heaven there is a Polish culture, and in the name of this culture and of Chopin I shout, "Long live Poland!"

It is reported that the directorship of the Vienna Hofoper will be held by Weingartner until March, 1911, when he will be succeeded by Hans Gregor, now director of the Berlin Komische Opera.

Art.

JOHN LA FARGE.

Even to those who have known the feeble condition of Mr. La Farge for the past half year the notice of his death on Monday, at the Butler Hospital, in Providence, R. I., will bring the shock that accompanies all great losses. Mr. La Farge was born in New York city in 1835. His father was an officer in the French navy, who drifted to America in 1806, and married a Miss Birsse de St. Victor, cousin of the celebrated French critic. Her father, a miniature painter of some talent, gave his grandson his first lessons in drawing.

When a young man he found himself in Paris with a desire to try his hand at painting, and he procured a letter of introduction to Couture, who soon recognized his American pupil's originality, and advised him to go away and study by himself. "Your place," he said, "is not among these students. They have no ideas. They imitate me. They are all trying to be little Coutures." Up to this time Mr. La Farge had not definitely made up his mind what profession to follow, although his education had been legal more than anything else. He returned home and entered a lawyer's office, and it was many years before he ceased to struggle against his destiny. At length he found a friend and master in William Hunt, whom he followed to Newport, R. I. Hunt had been a pupil of Jean François Millet, and was the first interpreter of the French school in this country. In 1860 La Farge married Miss Margaret Perry, a granddaughter of Commodore Perry of the battle of Lake Erie fame, and they made their home in Newport.

From 1859 to 1870 Mr. La Farge was engaged in illustrating "Enoch Arden" and Browning's "Men and Women" for the *Riverside Magazine*. He had become a great admirer of Japanese art long before that art was generally known in this country, and his work showed the Japanese influence. Among the illustrations, which were drawn on wood, was The Wolf-Charmer. Years afterward, when he was in Japan, a copy of this drawing was shown to him in the studio of a well-known Japanese artist, who greeted him as the "Wolf Man," and said: "You must have painted this with a Japanese brush."

While he was at work on these illustrations his sense of color was developing, and his mind was bending toward decorative work. He was a friend of H. H. Richardson, the architect, who obtained the order for building Trinity Church, Boston, in 1876, and engaged La Farge to do the decorations. This work was just completed when Mr. La Farge was asked to decorate St. Thomas's, in New York, which he did with the Three Marys at the Tomb, and Christ and the Magdalene, which were destroyed when St. Thomas's was burned. These and The Ascension, in the Church of the Ascension, in Fifth Avenue, were his principal religious mural decorations.

It is probable, however, that he will owe his lasting fame to his stained-glass windows. In that particular branch of art he was a pioneer, for he invented a new kind of glass, and he had to give his personal attention to the making of the material from the beginning. When he was visiting England in 1872, he was attracted by some stained-glass of Burne-Jones. On his return home he was invited to design a window. He had remarked that the English artist's work had ceased improving; that the modelling of form was merely the copying of a delicate and often a weak drawing. The designer had become separated from his workmen, so that, however beautiful his designs might be, the results were not satisfactory. He made up his mind that he would follow the design through its entire course of manufacture. The situation he described as follows:

> There were no good painters on glass, even of a fairly low degree, and the choice of glass was extremely limited. We received here only the poorer and less artistic samples of material, the better being culled by the good European workers, and moreover, as all importations were commercial, they were made, as they always are, to appeal to the largest and widest mediocrity of taste.

In the course of an illness he amused himself by combining various tones of glass by "plating," that is, placing sheets of different colors one over the other. A soap dish, made of glass in imitation of white china, stood on the window sill. It was an imperfect piece, that is, it was not strictly opaque as white china, is, but was opalescent. He noticed the beauty of quality it gained by being imperfect, and also that when it stood alongside what is known as "pot-metal," the ordinary stained glass, this opalescent quality caused it to take on the suggestion of a complementary color in harmony with that of the piece of pot-metal, so that when associated with a piece of violet glass it showed a golden yellow, a pink flush when laid on a piece of green glass. It occurred to Mr. La Farge that to obtain the diversity of form and the shadows in colored glass, then done by painting, it would only be necessary to have this opalescent glass made first without color and then with variations of color. In 1878 Mr. La Farge made what is probably his most important work of this class, the so-called Battle Window in the Memorial Hall at Cambridge, Mass. He used in it almost every variety of glass, and even precious stones, such as amethysts. Most of his windows were built up with leads after the usual fash-

lon. Towards the end of his life he tried fusing the patterns together without leads, or joining the glass by thin filaments of metal fused to the glass and plated on—a variation of *cloisonné*. Of these experiments the most remarkable was the Peacock Window now in the Worcester Art Museum.

But Mr. La Farge was not only a painter and a maker of windows. He was a man of literary instincts as well, as was shown by his letters from Japan. His most esteemed book is "Considerations on Painting," a suggestive but difficult work. He published also two volumes of essays on the old masters, and one on the Barbizon school, entitled "The Higher Life in Art." His mind, almost to the end, was alert to respond, and readers of the *Nation* will remember the letters he contributed on various subjects not many months ago. He was also an occasional reviewer in these pages.

For a generation, indeed, he has been the most salient artistic personality in America. In culture no artist since the Renaissance has surpassed him. Through his acquaintance and by the charm of his wisdom—he was one of the most delightful talkers of his time—he exercised a powerful influence upon other artists and upon cultured America generally. His books carried where his finely modulated voice could not reach, and had he painted nothing, had he never made his beautiful inventions in stained glass, he would still be remembered beside Charles Eliot Norton as an æsthete and, in a manner, a moralist.

As a prophet his quality was peculiar. Our pathfinders of the spirit have almost invariably been of a single type—the Puritan. Emerson, Lowell, Norton—in all of these there has been a marked strain of other-worldliness. None of this in John La Farge. He accepted the world blandly and with shrewd sagacity, somewhat in the spirit of those Jesuit fathers from whom he received his first instruction. He represented to us the mellowness of the Catholic civilizations of Europe, and his subsequent study of Eastern philosophies merely confirmed him in a kind of gentle pragmatism. Mankind was his subject, and he found it unfailingly engrossing. The sages of Japan and the mild aborigines of the Pacific passed under his observation. From both he learned much, and of both he made some of his most brilliant pictorial records. Few men of our time have combined so universal a curiosity with so complete a tolerance, and such opportunities for contact with the simplest and with the most sophisticated of men. To this first-hand knowledge he added extraordinary reading in poetry and philosophy. Thus he was, in the Baconian sense, a "full man"; his slightest talk readily veered to the greatest issues, and while he abjured philosophies, he abounded in concrete and picturesque wisdom. He was one of the great talkers, and it is to be hoped that some record of his oral wisdom has been kept.

In his art the scholarly and retrospective cast of his mind was possibly a limited good. It may have been more valuable to us, as a link with the past, an induction to the study of the great styles, than it was to him. With his range of memories it was inevitable that the appeal of other men's art should be as strong as that of nature itself. He retained, then, despite great gifts as a colorist and master of monumental design, a sort of eclectic quality which may make against the permanency of his fame. It is possible that he was greater as a man and a pervading influence than as a painter. And yet when one recalls the thousands of beautiful and scholarly designs, all marked by a certain largeness, that he has left behind, one is reduced to simple gratitude. In a day of small things, a great and well-rounded personality has expressed itself both in paint and in words; and somehow by this simple fact the commonplaceness that affects so much of our art and literature seems offset. In a very true sense, the astute worldling, John La Farge, stood like Athanasius against the world.

For his extraordinarily successful inventions in stained glass he is sure to be remembered. He brought back the glow and sparkle of mediæval glass, and added resources of depth and opalescence undreamed of by the early artisans. To dignify this new and lovely material, he contributed many of his best designs. Purists say that these were too pictorial, preferring the more conventional patterns of the Gothic tradition. We think the fairer way is to take them quite frankly as gorgeous translucent pictures. How remarkable they are may be realized simply by comparing any of the numerous faithful imitations with a fine La Farge window. In connection with this work and with the mural painting which he practised assiduously, he revived the old system of the studio as a populous workshop. So commanding was his personality that he made very able men his mouthpieces. Their work is completely merged with his, and sometimes they cannot even identify their own contributions to great compositions. Wherever Mr. La Farge was, his leadership was acknowledged. At every point his distinguished career confirmed the truth that it is the man of imagination who is the real man of action.

As one takes leave of this great spirit, visions of his works are haunting. Strange fairy-tale people pass by, grave saints and benign philosophers, flowers shimmer in an opalescent mist as they never do on earth, palms wave beyond blue water, serrated ridges cut into the upper blue, below brown savages solemnly perform strange rites and dances. One would gladly rest a while and muse in the quiet Church of the Ascension which his imagination has made one of the most appealing personal monuments. But the glory of paint and glass fades from the mind as one recalls a quiet, rather quizzical voice, an elusive measuring glance, and lips that dispensed that experience which is beauty and that fantasy which is highest wisdom.

We have already noticed Johanna Kanolt's useful little "Guide through the Old Pinakothek of Munich," and now merely record its appearance in an English translation by Clara Hellwig, with twenty-four illustrations. (Munich: Heinrich Jaffe.)

"Landscape and Figure Composition," by Sadakichi Hartmann (Baker & Taylor) is a collection of plain and practical papers written originally for the *Photographic Times*. These counsels are primarily for photographers, and for this reason crowded figure compositions are not considered. The method is that of proceeding from the underlying relation of lines and masses to the pictorial effect. Many diagrams and reproductions of modern pictures are given, and the author's criticism of such current work is interesting, and usually judicious.

The celebrated animal painter, François Vuagnat, died recently at Geneva, the city where he was born.

The death is reported from Copenhagen of Julius J. Exner, professor of arts at the Academy of Fine Arts. He was born in 1825.

Finance.

AN "AFTER-ELECTION MARKET."

On the Stock Exchange, the day before the voting of November 8, Steel common shares sold 12½ points above their price at October's opening. Reading had risen 8⅜ points, Union Pacific 10⅛, St. Paul 4⅝, Amalgamated Copper 6¼. October's routine news had been either of negative character or distinctly unfavorable; therefore Wall Street's assertion that the action of prices was a "preëlection boom" was reasonable. On Monday before election, the strong drift of expectation was that the outside public would show great enthusiasm at a Democratic victory, especially at a victory in New York.

Some parts of this expectation did not come to pass, but the Democratic landslide did. When the House of Representatives, held for sixteen years by good-sized Republican pluralities, was turned over to the Democrats by a majority of more than fifty; when all the great "pivotal States" swung over to the Opposition—Ohio and New Jersey polling the largest Democratic majority in their history—and when even such famous Republican strongholds as Iowa and Pennsylvania were barely saved from a similar fate, there could be no doubt

of a Democratic landslide, and of a landslide of such proportions as has occurred only four times in the past half-century. Wall Street's predictions were fulfilled.

But the stock market did not respond as Wall Street had imagined. After the news of Tuesday's voting, Wednesday's market opened here very close to Monday's level, then crumbled rapidly away. Such losses were made, on that day and the next, as 5¼ points in Steel, 5⅛ in Union Pacific, 5⅝ in Reading, and 5½ in St. Paul. Some stocks lost all of their October rise.

There were various explanations. The election had been "overdiscounted." The prophets had forgotten that the election-week booms of 1908 and 1904 occurred on the basis of 2 per cent. money and plethoric bank reserves, neither of which exists to-day. There had been too much company in the October rise, and too many "tips" to sell on Wednesday. Finally, Wall Street had so converged its mind on the "Roosevelt issue" as to forget the uncertainties involved in a general landslide. Such was the week's philosophy.

The last of these "arguments" is the only one which calls for serious financial consideration. It is true that great victories sometimes go to a party's head; they did so with the English Liberals, after their sweeping victory of January, 1906; they did so with our own Democratic party after November, 1892. But it must also be observed that Wall Street, after receiving the election news, appeared to forget its own pet reassurance of the past few months, to the effect that a Democratic House, pitted against a Republican Senate and President, could do nothing definite, and hence would make for peace. In so far as that consideration ever had any force, it still remains.

But apart from all such purely political considerations, it is possible to attach more importance than is warranted to the break on the Stock Exchange after election. If prices declined when election results were known, they had at all events risen with equal violence beforehand, in expectation of those results; and in processes of this sort, the Wall Street of to-day has its eccentricities.

There are three reasons why a political election is a favorite "argument" for the Stock Exchange. One, and not the least important, is that it happens on a stated date. The Wall Street temperament is not such as to be satisfied with assurances that its health will be better in a month or two, or that it must be careful for several weeks in order to escape relapse. The doctor who gets Wall Street's fee is the practitioner who says, "You are pretty sick; I find numerous symptoms of chronic disorder; but on Wednesday, at 10 A. M., you will be restored to perfect health, and can diet and riot as you choose." Another reason for the election argument's popularity is that things sometimes happen as a result of an election. There have been elections when the success of one candidate might have decreed disunion for the United States, or unlimited greenbacks, or resumption of specie payments, or free coinage of silver, or prosperity of which he was the advance agent, or a war of classes, or a boom in stocks.

The third reason makes an even stronger appeal to the speculative temper; because, while no one can surely know beforehand whether these results are predestined by a given electoral vote or not, it will at any rate be possible forever afterward to declare that such subsequent events as did occur were caused by the election. This reasoning is familiar; it may even be used so courageously—on Wall Street, in Congress, and on the stump—as to declare, fifteen years afterward, that the sequel of 1894 was witnessed in 1893. Chronology, indeed, which plays small part in political reasoning, may be made to play as little in finance. Every one knows that the only reason why the financial reaction of 1910 was not caused by the Supreme Court's decision in the Oil and Tobacco cases was that the decision had not been handed down. But no evasion like that is possible for elections. Elections occur when the law prescribes, and if the community's mood is opportune, it can be shown that they caused whatever happened afterward, if not what happened before.

This being so, it may seem strange that Wall Street, having industriously pinned its faith to a sort of financial Christmas stocking which was to come with the vote of November 8, should have switched about on November 9, and proceeded to break the market. But the trouble lay, very largely, in the high pitch to which our speculating millionaires have carried the process of anticipating events through Stock Exchange operations, two or three weeks ahead. It is difficult to imagine how this process can be carried very much further without reversing all the usual methods of inference from a rise or fall in stocks. A financial market where prices should habitually advance on announcement of unpleasant news, and break when the news was favorable, would properly belong to such a world as Bernard Shaw or W. S. Gilbert pictures; yet we have latterly come pretty close to such a market, when Stock Exchange prices rose violently in October on news of a really unfavorable nature from the London money market and the American steel trade.

Perhaps, therefore, it will never be susceptible of convincing proof, whether or not last week's "after-election break" meant that the financial community was dissatisfied with the electoral results. If it did mean dismay and fright, then there would at least be presented the interesting spectacle of Wall Street, after helping along that result by voting Democratic Tuesday, and while cheering heartily on Wednesday over the actual news, resorting simultaneously to the Stock Exchange to express its disapproval.

SECOND EDITION, NOVEMBER, 1910

AMERICAN MEN OF SCIENCE

A BIOGRAPHICAL DIRECTORY

Edited by J. McKEEN CATTELL

A Biographical directory requires revision if it is to maintain its usefulness. Nearly a third of the names in the present edition are new, and the sketches which appeared in the first edition have in nearly every case been revised. The amount of work required to prepare the revision has been as great as that given to the first edition. There has been no change in the general plan of the work. Greater strictness has been observed in confining its scope to the natural and exact sciences, and for this reason a few names included in the first edition have been omitted. Efforts have been exerted to make the book as complete and accurate as possible. There are, of course omissions, if only because some men will not reply even to repeated requests for the information needed. The thousand leading men of science have been again selected by the methods that were used before, and stars have been added to the subjects of research in the case of 269 new men who have obtained places on the list. The editor's object in selecting this group of scientific men has been to make a study of the conditions on which scientific research depends and so far as may be to improve these conditions. There are printed in an appendix the two statistical studies that have been made.—From the Preface to the Second Edition.

This directory should be in the hands of all those who are directly or indirectly interested in scientific work.

(1) Men of Science will find it indispensable. It gives not only the names, addresses, scientific records and the like of their fellow workers, but also an invaluable summary of the research work of the country, completed and in progress.

(2) Those interested in science, even though they may not be professionally engaged in research work, will find much of interest and value to them in the book.

(3) Executives in institutions of learning and others brought into relations with scientific men will use the book constantly.

(4) Editors of Newspapers and periodicals will find it to be one of the works of reference that they will need most frequently.

(5) Libraries will find the book to be a necessary addition to their reference shelves.

The second edition of the Directory extends to more than 600 pages and contains more than 5,500 sketches. It is well printed on all rag paper and bound in buckram with leather label. Although the work has been increased in size by more than 50 per cent., it is sold at the same price as the first edition.

NEW BOOKS FROM THE DUTTON LIST

ORCHIDS FOR EVERYONE

By CHARLES H. CURTIS, F.R.H.S.

MEMBER OF THE R. H. SOCIETY'S ORCHID COMMITTEE, AND FORMERLY IN CHARGE OF THE ORCHID COLLECTION AT THE ROYAL GARDENS, KEW.

Containing a series of 50 direct color photographs by Mr. T. Ernest Waltham, reproduced with the greatest possible care so as to present a correct likeness in color and form of the living flower. The half-tone illustrations are worthy of special mention. $6.00 net.

The various families of Orchids are reviewed in a new manner, and in each case the best kinds receive prominence, and readers will not have to wade through interminable lists and descriptions to find the particular information they need.

To the connoisseur and to the advanced student of the intensely interesting subject of Hybridization the book is certain to appeal strongly by reason of its advice, descriptions, and illustrations in colors of some of the most wonderful novelties, side by side with those of the more popular, cheap, but not less beautiful kinds.

The book is produced for the purpose of making Orchids and Orchid Cultivation more general and popular, and while of sufficient importance in matter and appearance to warrant the attention of the wealthiest owners of collections and the most skilful of growers, it is of the utmost practical value to the student and the "beginner."

The Author is Assistant Editor of the *Gardeners' Magazine*, a member of the Royal Horticultural Society's Orchid Committee, and was formerly in charge of the fine national collection of Orchids at the Royal Gardens, Kew.

THE BUCCANEERS IN THE WEST INDIES IN THE XVII. CENTURY

By C. H. HARING. With 10 Illustrations. Demy 8vo. $3.50 net.

This is the first attempt to write a critical account of the privateers and semi-pirates who, in the seventeenth century, sacked Spanish towns and preyed upon Spanish commerce along the shores of the Caribbean Sea and neighboring waters. In the introduction the Spanish system of treasure-fleets is described, with a brief sketch of the French and English freebooters of the previous century who set the example for their buccaneer successors. The volume not only gives a narrative, according to the most authentic available sources, of the more brilliant exploits of these sea-rovers, but, what is of greater interest and importance, traces the policy pursued toward them by the English and French governments. The writer has availed himself of manuscript materials in the Public Record Office and of Spanish papers preserved in London and Paris, never before consulted on this subject, and altogether has made a distinct contribution to the history of the English colonies in the West Indies.

THE AVON AND SHAKESPEARE'S COUNTRY

By A. G. BRADLEY, Author of "Round About Wiltshire."
With 30 Illustrations in Color, by A. R. Quinton. Demy 8vo. $3.50 net.

Many books have been written on Stratford and the Shakespeare country, which touch incidentally on the upper reaches of the Avon; but this most beautiful, perhaps, of streams, can bear upon its tide countless appreciations. In the present work the author begins with Tewkesbury (where the Avon and the Severn meet), its Tudor buildings and the noble Abbey Church. The reader is then taken through the many picturesque villages for which the Avon valley and Cotswold foothills are famous, and by Pershore and Evesham with their splendid monastic remains and associations, thence, still among orchards and half-timbered villages and interesting churches, to Stratford, Warwick and the Shakespeare country, finishing with a chapter on Rugby, the highest point of consequence on the river.

JOAN OF ARC

By GRACE JAMES. With 12 Illustrations. Demy 8vo. $3.50 net.

This book deals primarily with the career of Joan of Arc, whose life was such a tragedy that it cannot be contemplated without wonder and pity. The tragedy was twofold, being a question both of character and of circumstance; and an attempt has been made to deal with it from these two points of view. A study of "The Maid's" mysterious and elusive personality has been supplemented by some account of the Franco of her day, of the religious, political, and social elements that made her world, and of the institutions that were powerful to determine her fate.

VENICE AND ITS STORY

By THOMAS OKEY, with 40 Colored Illustrations by O. F. M. WARD and W. K. HINCHLIFF, 50 Line Illustrations by NELLY ERICHSEN, and 11 Reproductions of Paintings and Sculpture from Photographs. Square fcap, 4to. $4.00 net.

This is a new edition of an already famous work previously published. The text of the new edition is as complete as the more expensive one, and those who have seen Venice will find especial value in the illustrations, which have caught the "atmosphere" of Venice, so necessary to the full appreciation of that unique city.

ESSAYS MODERN AND ELIZABETHAN

By Professor E. DOWDEN, of Trinity College, Dublin. Crown 8vo. $2.00 net.

"It would be wrong to leave these essays without paying a tribute to the golden literary enthusiasm, the delight in abundance of knowledge, the graceful eloquence which characterize all that the author writes. . . . His Elizabethan essays are full of knowledge and imaginative understanding. 'Elizabethan Romance' is a delightful half-appreciation of the prose tales and pastorals of Elizabethan age."—*Daily News.*

ARGUMENTATION AND DEBATE

By **Joseph Villiers Denney**, Professor of English in the Ohio State University; **Carson S. Duncan**, Assistant Professor of English in the Ohio State University, and **Frank C. McKinney** of the New York Bar.

$1.25

Contains a brief discussion of fundamental principles, appropriate suggested exercises, and nearly three hundred pages of masterpieces of complete debates. It sets forth clearly and concisely the principles of argumentation, and at the same time supplies material for the study of debating as it has been employed by able men in the defence of great principles. Much new material on the subject of briefing and debating is to be found in the book.

AN UNUSUAL NUMBER OF REVIEWS

A FEW NEW IMPORTATIONS OF

D. APPLETON & COMPANY

29-35 West 32nd Street, New York City

TWO GREAT RIVALS

By Lieut.-Col. C. P. Haggard, author of "The Real Louis XV," "Louis XVI and Marie Antoinette," etc. Photogravure frontispiece and many other illustrations. 8vo, cloth, gilt top, $4.00 special net.

Mr. Haggard is well known as a writer of interesting, popular memoirs of historical characters. In this work he has taken up a comparison of the two great monarchs of the sixteenth century, François I of France and Charles V of Spain. In an interesting yet accurate way Mr. Haggard draws a comparison between these two men who were always rivals as long as they lived, considering the personality of each and the influences of the men and women about them, and showing how apparently small and to us insignificant influences guided the extraordinary career of both kings.

UP HILL AND DOWN DALE IN ANCIENT ETRURIA

By Frederick Seymour, author of "Saunterings in Spain" and "Siena and Her Artists." With map and 12 illustrations. Demy 8vo, cloth, $3.00 special net.

The limits of this volume upon ancient Etruria have primarily been defined by the desire of the author to acquaint himself with the remoter and more sequestered sites—Vetulonia, Populonia, Rusellæ, Cosa, and Vulci, for instance—rather than with those still inhabited and oftener described. The greatest difficulty in the Etruscan enigma has been the commencement of Etruscan art in Italy. How was it that the Oscan stock became possessed of the art faculty? That, in the opinion of the writer, was brought about by the importation by the invaders from the East of the Mycenæan or Aegean civilization.

GAMBETTA: Life and Letters

By P. B. Gheusi. Translated by V. Montagu. With 8 illustrations in Collotype. Demy 8vo, cloth, $3.50 special net.

This work, written in the form of a biography, is interspersed with letters from the great Tribune to his relatives and intimate friends. M. Gheusi, by a judicious choice of the very voluminous correspondence left by Gambetta and treasured by his own circle, now rapidly growing smaller and smaller, enables us to follow the patriot's career from his entry into the humble seminary at Cahors, kept by priests, until his sudden death. In these letters we can watch month by month, almost week after week, the mental development of the greatest patriot of modern times. This work is destined to throw new light upon the character of a man who has hitherto been represented as a dictator and an ambitious demagogue.

THE BASUTOS

By Sir Godfrey Lagden, K.C.M.G. 70 illustrations and nine maps. 2 vols. Demy 8vo, gilt top, cloth, $6.00 special net.

Basutoland and its inhabitants have been a thorn in the side of the nations that have been attempting to colonize Africa. The author has lived among these people for a long time, and therefore the accuracy of his descriptions and characterizations of this remarkable race of blacks is beyond question. Furthermore, throughout the book, the reader gets an excellent history of most of the colonial governments in South Africa, and gathers a much more definite idea than is at present otherwise obtainable of the causes which led up to the Boer War.

THE LIFE OF MARIE AMÉLIE

By C. C. Dyson, author of "Madame de Maintenon." With Photogravure Portrait Frontispiece and other rare portraits and illustrations. Demy 8vo, cloth, $3.50 special net.

The life of this royal lady forms a connecting link between the Old World and modern Europe. In her time Marie Amélie encountered every vicissitude of fate. There were few people of note in Europe at the end of the 18th and beginning of the 19th century with whom she did not come in contact, and all, whether friends or foes of her husband's policy, united in admiration of her noble character. The volume contains many very interesting illustrations of the enchanting homes in which her early life was passed in Naples and Sicily, as well as rare family portraits.

TOY DOGS AND THEIR ANCESTORS

By the Hon. Mrs. Neville Lytton. Superbly and profusely illustrated. Large 8vo, beautifully bound, cloth, $7.50 net.

The author of this work is one of the leading authorities on Toy Dogs in England and, therefore, in the world. She is not only an officer in British Kennel Associations, but she has her own Toy Dog Kennels which stand among the leading private kennels in the world. The book itself is a large 9 x 6½ inch volume with several hundred illustrations, and it deals with every description of Dog which comes under the Toy Dog classification in the largest sense.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

Thomas Wentworth Higginson

"It may be safely said that there now remain very few of the personal friends of John Brown of Osawatomie who will not be surprised and deeply impressed by Mr. Oswald Garrison Villard's large and mature memoir of him. It is, as the author calls it, 'A Biography Fifty Years After,' and I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

John T. Morse, *Editor of American Statesmen Series.*

"The story has the movement of a Greek tragedy, with its simple beginning, then its creation of the sense of personal nearness, then its vague foreboding of terrible disaster, and finally its grand and fatal close. Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

Fully illustrated with portraits, and other illustrations.
With copious notes and bibliography. $5.00 *net;* postage 26 cents.

Longmans, Green, & Co.'s New Books

The World of Homer

By ANDREW LANG. With illustrations. 8vo. $2.25 net.

The main features of Homeric society, polity, domestic life, warfare, costume, armour, and religion are examined in detail, and the object is to demonstrate that the whole picture of Society which the poet presents is an accurate delineation of a single prehistoric period. That period appears to have existed at the close of "Late Minoan III," and to have been followed by the Dark Ages of Hellas.

Lectures on Greek Poetry

By J. W. MACKAIL, M.A., LL.D., sometime Fellow of Balliol College, Professor of Poetry in the University of Oxford, author of "Seleet Epigrams from the Greek Anthology," "The Springs of Helicon," etc. 8vo. $3.00 net.

These lectures deal with Homer, the Lyrists, Sophocles, and the Alexandrians, especially Theocritus and Apollonius; they also form a continuous study of the development and progress of Greek poetry.

Twenty Years in the Himalaya

By MAJOR C. G. BRUCE, M.V.O., Fifth Gurkha Rifles. Fully illustrated. 8vo, $4.20 net.

The Himalaya is a world in itself and Major Bruce has journeyed through it mountaineering, in pursuit of big game or in the performance of his professional duties, for more than twenty years.

The Week.

"President Taft's policy of a scientific revision of the tariff, schedule by schedule," says the London *Economist*, "deceives no one and appeals to no one. It is at best a plea for scientific protection, and the most that can be hoped for it is that a few of the most favored monopolists may be reduced to something like the level of protection obtained by other traders." The *Economist* is right. And the first big task confronting the Democratic party in its new position of strength will be that of placing before the people a prospect of relief more substantial than is offered by any such principle as that of making the tariff cover the difference, or alleged difference, of cost of production between this country and foreign countries. It is a curious circumstance that in one respect—and that a very important one—this new formulation of the protectionist principle goes beyond anything that used to be avowed by the protectionists themselves in their palmiest days. We refer to the entire and almost formal abandonment of the infant-industries plea. After telling us for half a century that protection was to be used for the purpose of building up industries which would ultimately stand on their feet, we are now asked to tax ourselves permanently in support of any industry, however costly, to just the extent that its extra cost may require.

The position of President Taft in regard to the Cunningham claims is made very plain by the letter from Mr. Norton, secretary to the President, in reply to the request made by Gifford and Amos Pinchot some days ago. Final action will not be taken on the claims without the previous consent of the President, after submission to him of all the evidence. The President assents to the proposal of the Messrs. Pinchot to submit to him a brief on the subject. It now rests with Mr. Taft to take such steps in regard to the examination of the whole case as will insure its decision purely on its merits, and without any complication with personal entanglements.

Judging from the past performances of Gov.-elect Foss of Massachusetts, Senator Lodge is in for a pretty uncomfortable time if he persists in his desire for reëlection to the United States Senate. There is an Ethan Allen sound in Mr. Foss's anti-Lodge pronunciamento: "In the name of the majority of the sovereign people of the Commonwealth of Massachusetts," he announces, "I demand that Henry Cabot Lodge surrender his seat in the United States Senate by withdrawing from his contest for reëlection." Behind this challenge is the undeniable fact that the election of two weeks ago was as clear a popular mandate for the retirement of Lodge as could be given under the circumstances; in defeating Draper for Governor and electing Foss by an astonishing majority, the people plainly showed where they stood as to Lodge and the whole policy and system that he represents. Now Foss says that if Lodge won't retire he will stump the State against him. Seeing that Foss's election to Congress was the first manifestation of the Democratic landslide, it looks as though he might carry the State in his war on Lodge.

The election-time lull in the New York graft investigation has been followed by developments interesting enough to satisfy the most exacting. The testimony of State Senator Travis is of special interest and importance not only because of the enormous size of the bribe which he testifies was offered him to vote against the anti-race-track bills, but because of the corroboration it presents to the story told to the committee by Assistant District Attorney Elder before its adjournment last month. The bribery allegations in that story were not statements of facts that came directly to Mr. Elder's knowledge, but were the result of information imparted to him in a conversation by ex-State Senator Gardner. Senator Travis's testimony brings the bribe negotiation itself home to Gardner. A matter that henceforth should not be lost sight of by the public is the statement made by Mr. Bruce that subpœna-servers have been looking for Harry Payne Whitney and James R. Keene since October 22, and have been unable to find them; it is to be hoped that when these men are made to testify, the heart of the story will be got at. In the testimony of Orlando A. Jones the so-called turf interests make a sorry showing; and altogether, the more the whole race-track business is looked into, the more one realizes what a degrading mess it was that Gov. Hughes set about clearing out.

Minority representation in Illinois and its corollary, cumulative voting, are attacked by the Legislative Voters' League of that State as no longer suited to conditions, and as being deleterious in their effect upon the kind of men chosen at primaries and elections. Following the civil war, southern Illinois was solidly Democratic, and northern Illinois as solidly Republican; and minority representation was adopted as a means of giving representation in the Legislature to the Republicans in the southern part of the State and to Democrats in the northern part. The alteration of this political balance has weakened the reason for the plan, and the decision of the State Supreme Court that a primary is an election, necessitating the application of the cumulative provision to primaries, has emphasized and increased its faults. As three candidates are to be elected from each legislative district, and as the voter may cast one vote for each, one and one-half votes for each of two, or three votes for one, the majority party in a district has adopted the practice of nominating only two candidates, and the minority party, similarly, only one, thus rendering the election perfunctory. The judiciary extension of the system to the primaries hampered the voters still further. The League is therefore starting a campaign for a constitutional amendment providing for the division of the State into 153 districts, each one electing one member to the lower house of the Legislature.

The fine discrimination characteristic of Gov.-elect Wilson's thinking, with which the whole country is rapidly becoming familiar, appears again in his utterance before the Business Service Lecture League in Chicago. He remarked: "It has been truly said that the

people of the country were so fast asleep that it took a brass band to wake them up. But we can't solve the problems of the day by getting in behind the brass band. The solution will come in quiet conferences." Credit where credit is due could not be more justly apportioned. The mistake of the muckrakers is not their muckraking, but their tacit assumption that it is something more than the beginning of reform; and the error of their critics is their failure to recognize the necessity of disagreeableness in the initial stages of public housecleaning.

The suggestion of a Western judge that party platforms should be transformed from their present unsatisfactory character as insincere bids for votes, jokes which by much repetition have lost their point, or literature which, like "Paradise Lost," everybody praises and nobody reads, is more commendable than his proposed method of bringing about the change. For the courts to have power by mandamus to compel their enforcement, would lead at once to similar power over all campaign promises; and this, in turn, would be a fatal blow at the most time-honored and interesting feature of our politics. When the day comes in which candidates and parties are perforce governed by reason rather than by imagination, they will look back from their meagre audiences to the good old times of 1910, and its not too responsive crowds, with real envy. Until then, we shall probably have to get along with the untechnical but not altogether ineffective form of mandamus that issues on the first Tuesday after the first Monday in alternate Novembers.

The census figures for the city of San Francisco and for the State of Indiana tell the same kind of story that has been coming from so many parts of the country—that of rapid urban growth and stationary or declining country population. The figures for San Francisco are, of course, the more remarkable from the fact that only a few years ago the city was almost completely destroyed by earthquake and fire. In the face of this experience, the population has grown from 342,782 in 1900 to 416,912 in 1910, an increase of 21½ per cent.; and when it is added that the outlying cities of Oakland and Berkeley, in the environs of San Francisco, have shown an enormous increase—doubtless stimulated, relatively to San Francisco, by the earthquake itself—the showing becomes still more remarkable. Oakland's advance has been from 66,960 to 150,174, an increase of nearly 125 per cent.; Berkeley's from 13,214 to 40,434, an increase of more than 200 per cent. Evidently, neither graft nor the fight against graft has been fatal to San Francisco's aspirations in the matter of numerical growth.

The Chicago alumni of Delta Upsilon, at their last banquet, adopted resolutions declaring that no man who failed to do his best by his college courses had done his whole duty by his college and fraternity. This statement of principles was vitalized by the establishment of a fund sufficient to supply gold medals to the Delta Upsilon undergraduates at the University of Chicago and at Northwestern who attain the highest average rank in scholarship for the year. And to add the final emphasis, at each presentation of the medals a statement is to be read, setting forth the aim of the prize and the place which, in the view of the alumni, scholarship should have in college life. This statement is remarkable in assigning to the mastery of knowledge just those virtues of accurate processes of reasoning, self-reliance, and high ideals of life and duty which we have all along understood were the peculiar merits of college athletics. For courses of study this is high praise indeed. If the fraternities are going to assume this position, English 17 and history 9, and even Greek 1, may come to be regarded as almost as important as the mysterious figures of football signals or of track records.

Andreas Dippel's avowed reason for desiring to become an American citizen takes one's breath away. We are quite accustomed to the liberty-loving alien whose ardor for our institutions impels him to seek citizenship, and we are not unfamiliar with those foreigners who love the flag for what it promises in the line of office. But Herr Dippel gives the motive of his seeking naturalization in words like these: "I wish to become an American citizen because of what I see is the future of grand opera in the United States." It is not for reasons of this nature that Patti, Paderewski, and the ageless Sarah have honored us with their presence, but the new motive is nevertheless thoroughly agreeable.

Too high praise cannot be given to President Taft for his frank and straightforward statement as to the future of the Panama Republic. There have been alarming and apparently well-founded statements that the republic was nearing a collapse and likely to be allowed to fall to pieces. Some of the Washington correspondents have even detailed just what savings could be made by the United States were all of Panama to be thrown into the Canal Zone. Now, the Panama Republic, as everybody knows, was conceived in fraud, and its independence can exist only by the protection of the United States. But shameful as our treatment of Colombia was, we at least gave the residents of Panama to understand that we were sincere in our desire to relieve them of the "tyranny" of Colombia. Others may have thought we had our tongues in our cheeks as we said so, but those inhabitants of the new republic not on the inside of the affair believed we meant what we said. The annexation of the republic now would not merely alarm all Latin-Americans and inflame them against us; but it would convince Europe that we are nothing but a set of base hypocrites. Mr. Taft's statement that we are "the guarantor of the integrity of the Republic of Panama, and therefore in a sense the guardian of the liberties of her people as secured by your Constitution," and that this "relation neither calls for nor permits annexation," is exactly to the point when it would have been easy to remain silent.

Not in many years has such disquieting news come from Mexico. Reports of violent dissatisfaction with the Díaz régime in all parts of the republic, and of actual outbreaks at various points, are meagre, partly because the Government is in control of the telegraph wires; but the evidence seems clear that political discontent, with mutterings of revolution, is more marked to-day than at any time since Porfirio Diaz made himself perpetual President. Coming so close upon the heels of the celebration of the centenary of Mexican independence, these disturbances are a sardonic comment upon much of the glori-

fication that was indulged in upon that occasion. The world will begin to think that a military oligarchy, thinly disguised as a republic, may not be the best of governments, even for Mexico. There seems little reason to doubt that the central government will be able to throw sufficient troops into the disaffected territory to put down the quasi-revolutionists; but the whole affair is a pretty severe reflection upon the methods of Diaz, and a sobering reminder of what may come after him.

The pomp and circumstance of royal progresses are to be supplemented, in the case of the Duke of Connaught's visit at the opening of the Parliament of South Africa, by a solid residuum. Sums aggregating $2,500,000 have been subscribed for the development of the Cape University, which is apparently a mere examining and degree-conferring corporation, into a teaching residential university. This is to be brought about by incorporating existing colleges as constituents of the new institution, and by creating chairs for those subjects for which a college would not provide. Funds from various sources have enabled the Cape University to complete what the Duke called its handsome pile of buildings, but the money for its expansion has come from two men. Mr. Alfred Beit has agreed to divert the million-dollar bequest of Mr. Otto Beit for the foundation of a university at Johannesburg, to the creation of a university at Groote Schuur, and Sir Julius Wernher is to make up the amount to the aggregate named. This strengthening of an existing institution instead of building a new one, reveals a wise unselfishness on the part of the donors. The existence of a great university for the whole of South Africa cannot but make still more perfect the Union which the possession of a single Parliament at once typifies and enforces.

The German Government's throwing open of its country to the admission of foreign cattle, save on the Russian side, marks a great victory for public opinion and the breakdown of one of the most interesting protection experiments the world has seen. At the behest of the Agrarians, who control the Government, the importation of foreign cattle was virtually prohibited. If Germans wanted to eat meat they must eat German meat or none at all—that was the way to protect the home industry of cattle-raising. But the Agrarians at once took advantage of the tariff to raise the price of cattle, with the result that, as the population grew, it went still higher. Latterly there has been a regular meat famine, with many thousands of people going without meat as they would without tickets to the Imperial opera. The dispatches state that the headway made by the Social Democrats in consequence of this state of affairs is what compelled the Chancellor to permit the entry of Dutch, French, and Belgian cattle. But the Socialists were not the only ones to protest. Liberal newspapers and the organs of the middle classes have been up in arms about it, and the municipalities of Berlin, Frankfort-on-the-Main, and other cities have complained loudly and bitterly to the Imperial Government. For a long time the Chancellor, like his predecessor, "stood pat." But, as in this country, the outcry against standing pat was not to be stilled.

Professor Westlake of Cambridge University has just published a letter on the Russification of Finland, in which he sets forth forcibly the "hope of Englishmen that the Czar may yet turn his Nationalists back from the fatal path." As professor of international law at Cambridge, the words of Professor Westlake have peculiar weight. He shows how ready the Finnish Diet has been to admit the supremacy of the Russian Government in all that concerns foreign affairs, but that it, and a united people behind it, are absolutely unwilling to surrender the separate existence as a Grand Duchy which Finland has enjoyed for a century. There is a vast difference, as Professor Westlake points out, between the unity of an Empire and an enforced uniformity throughout all its parts. Indeed, to insist upon the latter is a very direct way of destroying the sentiment of Imperial unity. Austria has been wiser in this matter than Russia; has left much more free play to the different races and languages under her rule. The Russian rulers say that the "general interests" of the Empire must be safeguarded by compelling Finland to extinguish herself. But it may well be argued that those interests will best be taken care of by meeting the aspirations of the Finnish people, instead of crushing them out.

Spain's favorable settlement of her claims upon Morocco is a piece of good fortune for the Canalejas Government. Not only will it heighten the prestige of the Ministry, and in that way strengthen it for its contest with the Clericals, but it will actually throw a wind-fall into Canalejas's lap. For to have obtained an indemnity of $13,000,000 from Morocco, besides some extension of Spanish territory about Melilla, must be reckoned a great help to the Prime Minister in facing his domestic problems. These are partly financial. For example, one feature of the Ministerial programme is enlarging the number of public schools—a great desideratum in Spain—and better equipping those already in existence. The Moroccan indemnity will obviously make the financing of this project easier, and avoid the grumbling which increased taxation causes.

According to a Paris report, the United States, France, Germany, and Great Britain have arrived at an agreement for the rehabilitation of Liberia. It is represented that after prolonged negotiations the four Powers named will unify and pay off the debt of Liberia by a joint administration of the customs. Unexpected is the provision that Liberia, without losing in any way her sovereignty, shall hereafter be represented abroad either by the United States diplomatic and consular officers or by special attachés to embassies and legations. France, it is reported, has insisted on harsh terms, the acceptance of which will only intensify the anti-French feeling in the little republic. It stipulates that French troops guard their posts in Liberia until relieved by well-organized Liberians, and demands the ratification of the delimitation convention of 1907, by which the French coolly helped themselves to a large slice of Liberian territory. On its face this agreement is, even with its drawbacks, a clever achievement of Secretary Knox. The problem of Liberia has had its difficulties on account of the dangerous precedents it might easily establish. For the United States to assume the direction of Liberia, many felt, was to invite our jingo politicians to reach out for similar control of a lot of South or Central American republics.

ENGLAND'S POLITICAL TROUBLES.

Such a political crisis as that which has been precipitated upon England is usually the work of extremists in both parties. The moderate men on either side would seek an arrangement, instead of rushing to battle. So they would, apparently, at the present juncture. There are both Liberals and Conservatives of weight and influence, constituting a sort of middle body of opinion, who deplore a rash appeal to the *ratio ultima*, and still maintain that a great Constitutional question can be settled by the give-and-take of responsible statesmen better than by a count of noses. Baron Courtney, a stout Liberal and a high authority on the English Constitution, spoke up last week for further conferences on the reform of the House of Lords, and protested against taking it out of the hands of Parliament and asking the man in the street to decide. With such a view, it is safe to say, both Mr. Asquith and Mr. Balfour would in their hearts sympathize. Speaking of the original plan for a conference, the Prime Minister has said that it was an experiment which, whatever the issue, "it was the bounden duty of the statesmanship of this country to attempt." And Mr. Balfour has borne witness to the earnest and honorable efforts made by the Liberal members of the conference to reach a compromise. But behind the leaders in both parties there has been a force against conciliation, and now, as the Prime Minister said in the House of Commons last Friday, "we revert to a state of war."

He still gave the Lords the chance of averting war by accepting entire and without alteration the Government's bill to limit the veto power of the upper house; but, naturally, they repudiated such a complete and immediate surrender, so that there is every prospect that the country will soon be plunged into another general election. It promises to be more bitterly contested and even more revolutionary in some of its aspects than the one of last January. For it is evident from Mr. Asquith's statement that the Liberals are now to go nearly the whole figure of Lloyd George and Winston Churchill. In addition to their fight for what they wish to make virtually a single-chamber government, they are going to fling themselves upon the labor vote. This is shown by the promise to extend old-age pensions even to paupers, and to introduce a bill to pay salaries to members of the House of Commons. This last measure has been, it is true, approved by many Conservatives, since the Osborne judgment making it illegal to set aside labor-union funds to support labor members of Parliament; and doubtless many "Tory Democrats" will be ready to accept, or at all events will not dare to oppose, the plan to remove the pauper disqualification for old-age pensions. Yet the whole manœuvre of the Government has an unpleasant look. Mr. Asquith acts like a man pushed on by irreconcilable extremists. Indeed, both English parties are to be blamed for letting the political situation get out of hand, and hurrying the country into an election for which the sound reason is not apparent, and which may result simply in making a great upheaval, but leaving the balance of parties very much as it is at present.

The Government's position is, of course, intelligible. It merely goes back to the condition of things before the conference. Mr. Asquith contends that the Liberal party cannot carry on the Government without some kind of guarantee that its work shall not be blocked by the Lords, in which the Conservatives have always a brute majority. Only by undertaking to extort some such assurance, or to force through the needed legislation, could the Prime Minister obtain the votes of the Irish and Labor members for the budget last spring. He is now merely carrying out the pledges he then made. But there has really been since a great change in the situation. The country has come over fully to the view that the House of Lords as it was has become impossible. All parties are ready to modify the hereditary principle, and to create a House of Lords that shall be more representative and more accessible to public opinion. The Lords themselves have voted to make sweeping changes in the composition of their House; and it is virtually certain that some further limitation or definition of their powers would be agreed to all round. But the hopes of a reasonable adjustment seem now to be dashed, and instead of conciliation, we are to have, after the long truce, a "state of war."

Reason as well as law is apt to be silent in the midst of war, and in the speeches already made, and the political cries caught up, we get a foretaste of the fury that is to come. Hard put to it for a slogan, the Conservatives have taken up with that of "American gold." This is at least an act of reciprocity; we know how many American elections "British gold" sought to carry. But it is really disheartening to see a man of Mr. Balfour's intellect and character asserting, as he did the other day, that what the Liberals propose is "a revolution financed by American gold." The reference is to the funds raised in this country by the Irish Nationalists. There is nothing new about this, and we believe that not nearly so large sums have been collected this year as were common in the days of Parnell. A good part of the money now procured came from the Irish in Canada, yet no Conservative will shriek about "Canadian gold." We shall hear a great deal about American millionaires seeking to buy an English election, and it may prove a "good-enough" battle-cry till after the election; but it does not raise expectations that the coming struggle will be conducted on a high level.

CORPORATION MORALS.

It is possible that the officers of the New York Central Railroad Company will be able to give a better look than they now wear to the peculiar facts relating to their figures of operating expenses, as brought out by the report of Mr. J. C. Wallace, one of the examiners of the Interstate Commerce Commission. If they are able to do so, the sooner they go about it the better. The things to be explained are not only the figures, which have much the look of having been so manipulated as to give all possible countenance to the argument that increased expenses have made necessary the proposed increase in freight rates, but also certain correspondence between officers of the company which has the appearance we are in the habit of associating with illicit desires, if not intentions. When a financial officer of a railway, after having submitted for legal advice a proposition to carry over an item of revenue to a subsequent quarter, with the apparent purpose of making a poorer showing of revenue, and having it adversely reported on, upon the ground that it is illogical, though perhaps not illegal—when such an officer writes "my only interest, of

course, is the effect that it may have upon matters now being considered," it does not look as if his interest were one that would stand impartial scrutiny. If its bearing upon "matters now being considered" were entirely legitimate, there is no good reason why he should not use plain English in referring to them.

When will corporation managers learn that honesty is the best policy, and that plain and frank statement of facts is the best evidence of honesty? If there was any justification for the New York Central in departing from its past methods of apportioning its expenses for replacement of ties and rails, why did not the officers of the company so state in submitting their figures, instead of leaving the change itself to be discovered by a Government expert? Possibly the condemned locomotives come into a different category, but it looks as though there was a remarkable concentration of that kind of thing into the particular month or quarter that is made the basis of the company's claim of need for higher rates. What could be more destructive of the weight attaching to any representations made by railway heads in general than an exposure of want of fairness or honesty in simple matters of straight bookkeeping? The company may prove itself innocent of such a sin in this case, but appearances are against it, and the Government examiner has certainly been impressed with a strong conviction that the accounts in the three items to which he refers were manipulated for the purpose of producing a false impression.

If we cannot place reliance upon statements in which the elements are, comparatively speaking, so simple and definite, how much less are we to trust assertions relating to matters of extreme complexity, on which, even with the best will in the world, it is impossible to arrive at an absolute conclusion! Take such a matter as that of the commuter business, on which the Pennsylvania Railroad was heard the other day. It is difficult enough, on its face, to believe that this or any other railway company would deliberately carry hundreds of thousands of suburban passengers at a loss, year after year. In order that such an assertion should be received with any degree of credence by the public, there must be the strongest kind of presumption in favor of the trustworthiness of any statement coming from the management of the company. But how is such a presumption, in a matter involving most delicate and elastic considerations, to be maintained, when railway men render themselves suspect in matters of mere ordinary bookkeeping? Of course, so far as the commission is concerned, it will take into account, in the matter of commutation rates, the well-known factors bearing on them other than that of immediate receipts. For instance, to the building up of suburban business as a whole, the commutation rates for daily passengers have been indispensable. But, such as it is, the argument of the companies is incalculably weakened in its general effect by a want of confidence, for which just such things as this latest affair of the New York Central are responsible.

The same day that brought this matter forward gave us an initial judgment against one of the biggest industrial corporations of the country, charged with stealing water from New York city to the extent of $525,000. We do not mean to put the question raised by the New York Central's bookkeeping into the same category with the Sugar Trust's theft either of the city's water or of the United States Government's customs dues. It is well to preserve distinctions, and there are differences of kind and of degree in dishonesty. But nothing that our corporations, and our men in "big business" generally, could do would be half so much to their benefit in the long run—we mean in a strictly worldly sense, of the moral side there is no need to speak—as the adoption of a policy of absolute candor and honesty in dealing with every requirement of the law. No one knows when the time may come when the existing organization of business and society will be subjected to tests of strength compared to which anything we have as yet gone through is the merest child's-play; and then the most crucial single element in the whole situation will lie in the confidence, or want of confidence, of the people in the essential honesty of the conduct of the great business interests. To establish such confidence is the greatest task now resting upon our "captains of industry."

NAVY-YARD REFORM.

Secretary Meyer has managed to make his recent trip of inspection of the Eastern and Southern navy yards highly profitable, in that he has found ways of saving fully $300,000. But even more important is the Secretary's determination to recommend to Congress the discontinuance of certain navy yards and the making of others really efficient manufacturing plants. That this is a bold undertaking is plain to every one who has followed the history of the various navy yards. Most of them have been of the purely political variety, depending upon Congressional log-rolling for continuance, as they did for their establishment. They have been a frequent source of corruption, direct and indirect, and sectional feeling has been invoked and war-scares created, if necessary, to ward off inquiry or to foster large appropriations. So far no Secretary of the Navy or President has been able to make headway against this abuse. Hence it is refreshing to hear Mr. Meyer declare publicly that he will take the bull by the horns and call for the abolition of all the navy yards below Norfolk, save one to be supplementary to the Guantánamo naval station about which he is most enthusiastic—apparently forgetting that nobody in that Cuban port votes for American Congressmen.

Perhaps Mr. Meyer is encouraged to attempt his crusade against navy-yard waste by the approaching retirement from the Senate of Senator Hale of Maine. Valuable service as Mr. Hale has performed by his refusal to be stampeded by the big-navy mania, he has none the less laid himself open to criticism by the skill with which he has nursed his pet navy yard at Portsmouth, New Hampshire. In this place, in one year, $790,000 was expended for laborers—with votes—who produced work valued at only $418,804. At New Orleans, in the same year, the output was worth $1,046 at a cost of $78,274; its floating drydock takes care of about one ship a year; yet the dock alone cost a million. At the Key West yard in 1907 an expenditure of $94,318 resulted in a product valued at $7,126. Senator Hale's navy yard has cost more than $10,000,000; its drydock meant an investment of $1,100,000. Yet the waterway to the yard is so bad that no battleship is docked there, and even a gunboat ap-

proaches it with great caution. At least four other yards are defective because of their insufficient channels—Key West, Mare Island, Port Royal, and Charleston, S. C.

At the last-named yard, which has cost above $4,000,000, the river is too narrow for any large ship to manœuvre. Hence, of late years it has been used as a station for torpedo-boats and destroyers. But the Port Royal yard remains the classic example of waste due to political influence. As far back as 1876 a naval board could see no reason whatever for recommending a navy yard there, but from 1898 to 1908 $1,084,346.26 was expended on it, and a costly drydock built, which has never been used because the only battleship ever docked there went aground in trying to get out. Port Royal is now abandoned save for a marine barracks, although it would have made an ideal naval training station, where apprentices and recruits could drill the year round. But instead of using it for this purpose, a few years ago Congress voted the establishment of a training station on the Great Lakes, on which $10,000,000 must be spent, and this in a climate where men cannot be drilled out of doors or venture upon the water in small boats for five months in the year. Even at Annapolis, recently rebuilt at an enormous cost, the water approaches are so poor that no battleships can lie off the Academy, where our naval officers are trained, and, according to the Coast Survey, conditions there are getting worse.

The Mare Island yard is another place where money has been literally thrown into the water with utterly reckless prodigality and solely for political reasons. Although a high official recommended its abandonment in 1898, yet in the next ten years $728,886.12 was spent for dredging the channel into which battleships venture only with the greatest uncertainty, and where they frequently go aground. During this same ten years $5,124,712.49 was spent on the yard itself. We notice that the Charleston *News and Courier* is still hopeful that Mr. Meyer will not recommend the abolition of the navy yard at its city; indeed, it says "the greatest navy yard of the Union should be situated here." Alas, for Charleston! There is on record an official report by Rear-Admiral Sumner, submitted to the Fifty-sixth Congress, in which he describes Charleston as a place *sui generis:*

> A fossil, an antique, non-progressive, and wofully and hopelessly in the rear, commercially and otherwise. Its health and sanitary conditions are shocking and disgraceful. It has no proper sewerage system. It has no adequate fresh-water supply. It is the worst hurricane harbor on the coast. It is not and cannot be made a fit harbor for heavy deep-draught vessels such as are common in this day. . . . From an engineering point of view it would seem to be an absurdity to locate a naval station anywhere in Charleston harbor.

Yet after this report was made, owing to politics, the Port Royal navy yard was moved to Charleston!

These facts are enough, we think, to show how great Secretary Meyer's opportunity is, and why we credit the report that he will recommend the closing of the Charleston, New Orleans, Portsmouth, and Port Royal yards, as also, we hope, that at Mare Island. President Taft is deeply interested in cutting down the expenses of the government. Secretary Meyer, backed up by Congress and the public, could stop the waste of millions, if naval expenditures were made as are those of a private, honestly managed corporation. Nowhere else is there a greater opportunity for making savings, except in the War Department, where the waste is going on at an even greater rate, but where there has been no real head since Mr. Root resigned.

TOLSTOY.

There was something heroic, if painful, in the thought of an old man like Count Tolstoy, leaving his home and family and setting out on a lonely pilgrimage, in revolt against a civilization he had so often denounced and in search of peace for his soul. The rest he desired came to him in the form of death, early Sunday morning, in a hut at the railway flag station of Astapova. His wife and other members of the family had been summoned, and there were six physicians in attendance. His last articulate words were in singular harmony with his life: "There are millions of people in the world and many of them are suffering. Why then are you all around the bed of one sick man?"

Count Lyeff Nikolaevitch Tolstoy was born at Yasnaya Polyana on August 28 (September 9), 1828. His father was a retired colonel who had taken part in the campaign of 1812-13, and was descended in a direct line from Peter Andreevitch Tolstoy, one of Peter the Great's co-laborers in reform. His mother, Princess Marya Nikolaevna Volkonsky, died before he was two years old, and he, his sister, and brothers, were looked after for several years by a distant relative. Their educational advantages were meagre; German governors and Russian theological students succeeded each other frequently as instructors, and none of them remained long. In 1843, Lyeff Nikolaeviteh entered the course of Oriental languages in the Kazan University, remained one year, changed to the law course, to which he adhered two years, and was preparing to go into the third course when his brothers passed their final examination. When they set out for the country, he left the university without completing his studies. Yasnaya Polyana had fallen to his share in the division of the estate; thither went the eighteen-year-old boy, and there he dwelt almost uninterruptedly until 1851, only occasionally paying a visit to Petersburg or Moscow. It is not known whether he wrote during this period, or what was the fate of his first efforts.

The desire to be with his brother and to see the country lauded by Russian poets led him in 1851 to the Caucasus, where he entered the service as noncommissioned officer in his brother's battery. Here he began to write in romantic form. It is a generally accepted belief that "Childhood, Boyhood, Youth," of which the first section was completed and sent to the *Contemporary* in 1852, was intended to serve as the beginning of a great romance drawn from family memoirs and traditions. The second part was also written in the Caucasus, as well as the series of sketches of Caucasian military life entitled "The Incursion," "Cutting Wood," and the novel "The Cossacks," which was printed much later.

Tolstoy's literary talent soon became fully defined, and his fame was established in the most cultivated circles of the Russian public. The young author occupied an honorable place in the group of favorite authors of the sixties along with Turgeneff, Gontcharoff, Ostrovsky, Grigorovitch, and Pisemisky. New ideas were seething everywhere. Lyeff Nikolaevitch, who had lived close to the people from his early youth, understood clearly his own sphere of activity. It must not be supposed, however, that he introduced the peasant into literature. Grigorovitch was the first to write tales of peasant life in 1847; Turgeneff, Tolstoy, and others merely followed in his popular footsteps.

After the emancipation of the serfs, Tolstoy was one of the few Russian proprietors who decided to settle permanently on their estates. He was for a time one of the arbiters between the proprietors and the peasants, occupied himself zealously with the schools for the people, and issued an original pedagogical journal, *Yasnaya Polyana.* In this he began to utter his views, derived from observation and experience;

and to formulate his ideas on the necessity of educating the people, and on the sort of education which was adapted to them. He also ventured to express serious doubts as to what is generally called culture (in the largest sense), civilization, and progress. In view of the wide interest which his utterances on these subjects have attracted in recent years, it is important to bear in mind the early development of the ideas which have been falsely regarded as novel. In reality, they belong to this epoch of Russia, and are not especially of Tolstoy's invention.

In 1862, Count Tolstoy married Sophia Andreevna Bers, the daughter of a doctor, born in Moscow; devoted himself to family life, which had always been his ideal, and became more absorbed than ever in his rural idyl. His moral life previous to this time has been outlined by himself in his "Confession." For many years nothing from his pen appeared, until the end of the sixties, when "War and Peace" was begun in the *Russian Messenger*. From the very first moment it occupied a place of peculiar prominence such as nothing except Pushkin's works had ever attained in the Russian literary world. One of the most remarkable points about it was the sudden revelation of the author's ability to depict women. Up to this time no well-delineated female characters had entered into his works; and here, on a sudden, a whole constellation of women, wonderfully delicate and true to life, flashed upon the reader's vision.

In 1875, "Anna Karenina" was begun, also in the *Russian Messenger*. After some years, during which he wrote "What to Do?" "Ivan Ilitch," and a number of brief stories with moral aim —which occasionally err by containing two conflicting lessons—intended for the cheap, popular library, he added some belated pedagogical matter, and issued a twelfth volume of his collected works. Since then he has written a dramatical work, "The Realm of Darkness," artstic but revolting, whose moral was wrongly construed by the peasants for whose edification it was composed; a comedy ridiculing spiritualism, called "The Fruits of Civilization"; a study from the early Christian era inculcating brotherly and sisterly love instead of passion as the true foundation for marriage, entitled "Walk in the Light"—published in English under the title of "Out of Darkness into Sunlight" —the "Kreutzer Sonata," which preaches celibacy and the extermination of the human race; "What is Art," wherein he sums up the dicta of numerous previous writers, and his own observations, and arrives at the general conclusion that "art for art's sake"—all art, in fact—is immoral and indefensible; "Resurrection," and a number of articles on social, religious, and political topics, many of which were sent direct to foreign journals for publication. These propagandist articles do not represent any essentially new idea, being, in the main, merely repetitions of his arraignment of Church, State, and all the universally accepted institutions of modern civilization, such as law courts, factories, and so forth.

It is safe to assert that Count Tolstoy's permanent place in literature at home, and more particularly abroad, will rest upon his two great novels, "War and Peace" and "Anna Karenina." In them the peculiar power of Russians to visualize a situation and to express the passionate instincts of the human heart reach their consummation. Count Tolstoy passed but little time abroad. Yet there is an international, a universal, rather than a strictly Russian quality about his best work, in spite of its absolute fidelity to the details of local life. The force of this point is best brought out by a comparison. Turgeneff spent a great part of his adult life abroad. Though surrounded by foreign atmosphere, that atmosphere never invaded his novels. He evidently remained to the day of his death a Russian pure and simple. His characters are Slav to the very marrow. His style has the brilliance and play of light of a jewel. There are few artistic and intellectual treats as delicate as that offered by the perusal of one of those severely condensed novels, which would fill thrice the space of Tolstoy's if elaborated on Tolstoy's plan; which are clothed in language that has not a superfluous syllable and that cuts like a knife. Down to the present day, he can be thoroughly appreciated only by those persons who are well versed in the finer points of the Russian tongue and Russian nature, and who can read between the lines in these productions, each of which evoked a cry and a protest from the Russians, whose tender points had been mercilessly laid bare. Tolstoy, on the other hand, had a mind of composite architecture: on one side Byzantine, on the other Renaissance. His personages are cosmopolitan to such a degree that they can be readily understood by foreigners who possess no knowledge of the language, country, or people. Anna Karenina is as true a world-type as Becky Sharp. Tolstoy's style in descriptive passages is often rugged and tautological. His effects are gained in spite of it. One never re-reads a phrase of his for its artistic beauty, as one does constantly in the case of Turgeneff.

Of Tolstoy's religio-dogmatic works it is difficult to speak justly with either frankness or reserve. That his paradoxes and contradictions are susceptible of a very simple explanation, the public must be content to accept as a fact, as it must also accept the statement that he was never crazy, despite the apparently aimless arguments of "Life," the apparently inexplicable character of the "Kreutzer Sonata" and its publication. His religious essays have comparatively little literary or philosophical value, and their moral value is equal to that of innumerable similar attempts, in many ages and lands, to induce the complicated society of to-day to beat a retreat to the utterly different conditions of primitive Christianity. We may safely assume that the permanent value of his "propaganda" (as the Russians call it) lies strictly in its softening influence upon occasional individual souls.

And his political and artistic notions were like his religious theories, were indeed in no wise separable from the latter. As Prince Kropotkin said, in a lecture delivered in the course of a visit to America, Tolstoy was at heart an anarchist. He preached a return to the Gospel; as a matter of fact, he forgot that the Gospel, in its naked simplicity, was devised for a remnant and not for a civilization. His real inspiration was Rousseau's doctrine of a return to nature, carried out in his mind to an extreme which Rousseau never contemplated. So to him the only criterion of art was the taste of the uneducated peasant, and in some of his own later works, he unfortunately tried to cater to that taste in its most brutalized form. By precept and example, he set out to show that the world could be made over by purity and brotherhood. But even among his own countrymen, his teachings fell on deaf ears. The very classes to which he especially appealed showed the least signs of heeding him. He could have spared their overflowing affection for him if they had only shown an intention of doing the things he said. It was followers his soul craved, yet followers he can scarcely be said to have had. For a time, indeed, there were groups of those who took up with the method of life which Tolstoy preached—"Tolstovtsi," they called themselves. Their coming into existence greatly heartened Tolstoy. He rubbed his hands and said: "My fire must be real if it sets others aflame!" But there was no permanent blaze. The temporary enthusiasm died out, until, as Madame Witte wrote, "There are no longer any fraternal colonies in Russia, nor are there Tolstovtsi. Only one remained—Tolstoy himself."

Tolstoy has been called a prophet. So cool a head as Anatole France declares to-day that Tolstoy is entitled to rank as "one of the prophets of the new era." This is because of his burning hatred of war, his unceasing struggle for the amelioration of society, and his passionate holding up of an ideal of humanity. When his particular message has been forgotten, he will be remembered as one of the great figures to whom otherworldly truth, as he saw it, was more real than all the rest of life. That inspiration is not a little thing. The world is not easily deceived about a great man.

It knows one when it sees him. And the universal feeling about the passing of Leo Tolstoy is of such a nature and depth as to place the spiritual greatness of the man beyond all narrow questioning.

NEWS FOR BIBLIOPHILES.

Late in 1839, though dated 1840 on the title-page, Lea & Blanchard published in Philadelphia the "Tales of the Grotesque and Arabesque," by Edgar Allan Poe. This, Professor Harrison has called "the most original volume of short stories ever published." The collection, in fact, made two volumes, and included twenty-five tales, among them some of Poe's greatest work. It is said that only seven hundred and fifty copies were printed. In June, 1841, Poe was writing to Dr. Snodgrass of Baltimore:

Touching my Tales you will scarcely believe me when I tell you that I am ignorant of their fate, and have never spoken to the publishers concerning them since the day of their issue. I have cause to think, however, that the edition was exhausted almost immediately.

On August 13, 1841, Poe was suggesting a new edition to Lea & Blanchard in a letter the original of which is in the Drexel Institute collection in Philadelphia:

I wish to publish a new collection of my prose Tales with some such title as this: "The Prose Tales of Edgar A. Poe, Including 'The Murders in the Rue Morgue,' the 'Descent into the Maelstrom,' and all his later pieces, with a second edition of the 'Tales of the Grotesque and Arabesque.'" The latter pieces will be eight in number, making the entire collection thirty-three—which would occupy two thick novel volumes.

I am anxious that your firm should continue to be my publishers, and, if you would be willing to bring out the book, I should be glad to accept the terms which they allowed me before—that is—you receive all profits, and allow me twenty copies for distribution to friends.

His publishers replied as follows:

In answer we very much regret to say that the state of affairs is such as to give little encouragement to new undertakings. As yet we have not got through the edition of the other work and up to this time it has not returned to us the expense of its publication.

This new edition was begun in 1843 by another publisher, William H. Graham. It was to be, as the cover stated, a "Uniform Serial Edition. Each number complete in itself." But only No. 1 was ever issued. This contained two stories, "The Murders in the Rue Morgue" and "The Man that Was Used Up." The publication price was 12½ cents, but a copy (lacking back cover) sold at the Frank Maier sale just a year ago for $2,800.

Meanwhile, Charles Dickens in his first visit to America in 1842 had met Poe, and on his return home undertook to find an English publisher for an edition of the "Tales." A few months after his return, that is, on November 27, 1842, Dickens wrote to Poe:

I should have forwarded you the accompanying letter from Mr. Moxon before now, but that I have delayed doing so in the hope that some other channel for the publication of our book on this side of the water would present itself to me. I am, however, unable to report any success. I have mentioned it to publishers with whom I have influence, but they have, one and all, declined the venture. And the only consolation I can give you is that I do not believe any collection of detached pieces by an unknown writer, even though he were an Englishman, would be at all likely to find a publisher in this metropolis just now.

From the above letter we might have surmised that Poe had prepared a corrected copy of his "Tales of the Grotesque and Arabesque," with additions, perhaps, for Dickens to submit to the English publishers. This, heretofore, has been surmise only, but now the book has come to light (at least the first volume has), and has been acquired by Stephen H. Wakeman of this city, adding another jewel to his wonderful Poe collection.

This book is a copy of the first volume of the Philadelphia, 1840, "Tales of the Grotesque and Arabesque" with title and preliminary matter removed. Inserted is a new manuscript title in Poe's autograph: "Phantasy—Pieces | by | Edgar Allan Poe. | (Including all the author's late tales with | a new edition of the 'Grotesque and Arabesque')." This is followed by a three-line quotation from Goethe, which had appeared on the title-page of the Philadelphia book:

Seltsamen tochter Jovis,
Seinem schosskinde
Der Phantasie.

Below this is "Three Volumes," the "Three" marked out and "Two" written above. Pasted on the back of this title-page is a manuscript list headed "Contents" and including thirty-six titles with two others marked out. On the margin is the inscription "To Printer—In printing the Tales preserve the order of the Table of Contents." The old heading at the top of the first page of text is marked out and a new one, "Phantasy-Pieces," is written above.

Poe, as is well known, was always revising his writings and, with a very few exceptions, there are autograph manuscript alterations and corrections on every page of the volume. Some of these are merely changes in punctuation, but many others are of textual importance. In the headlines of "The Fall of the House of Usher" the first three words are marked out at the top of every page. The title of "The Signora Zenobia" is changed to "How to Write a Blackwood Article," and that of "The Scythe of Time" to "A Predicament." Six lines in "The Signora Zenobia" are marked out and twelve new lines in manuscript are on a slip, pasted in, with this note: "To Printer—Substitute this for what is marked out in pencil." Professor Harrison, in his edition of Poe's Works, the latest and best edition, gives a variorum of all traceable forms of the Tales, but he did not have access to the present volume. Most of them appeared first in some periodical, then in the "Tales of the Grotesque and Arabesque" in 1840, next in the volume "Tales" published by Wiley and Putnam in 1845, and finally in the *Broadway Journal*, of which Poe was editor in the same year. A few only, however, made all four appearances. The manuscript variations in this Dickens copy have apparently never been utilized by any editor and seem to be in part unprinted, though some of the changes were adopted in the 1845 volume or in the *Broadway Journal*. Numerous examples might be quoted but space permits the citation of a few only.

The second tale in the volume, "Lionizing," was first printed in the *Southern Literary Messenger* in 1835. When reprinted in 1840 the changes, though numerous, were not important. In 1845 it was virtually rewritten. In 1835 and 1840 the name of the narrator is given as "Thomas Smith." This is altered to "John Smith" throughout, in the Dickens volume, and was changed to "Robert Jones" in 1845. At the end of the tale "William Wilson" the phrase "it appeared to me" is expanded in manuscript to "(so at first it appeared to me in my confusion)." In the *Broadway Journal* the additional words occur but "appeared" was altered to "seemed." On the same page "Not a line" is expanded to "Not a thread in all the raiment—not a line," etc. This also was used in the *Broadway Journal* but "the raiment" becomes "his raiment." Altogether this is perhaps the most interesting of the several Poe items which have been unearthed in recent years.

Correspondence.

THE PRIZES OF SCHOLARSHIP.

To the Editor of The Nation:

Sir: Your editorial on Scholarship and Athletics goes too far, it seems to me, in laying so much stress on the advantages of "the mere elimination of a multitude of minor topics from the curriculum." While it is doubtless true that many minor topics are offered for the sake of appearances by men who have no particular interest in teaching them, it frequently happens that a teacher is at his best in the minor course which appeals to him most. Personally, I do not believe that the elimination of the possibility of teaching subjects which appeal strongly to the individual teacher would do anything toward "bringing back into our faculties men, who, by their intellect and personality, command admiration." In the old days, when there were far fewer topics, and when every one was obliged to take the standard courses in Greek, Latin, and mathematics, the proportion of teachers who commanded a following by reason of their intellect and personality was not any greater than it is to-day, if, indeed, it was as large.

It seems to me that the difficulty is not so much with the number of courses—distinguished foreigners to the contrary notwithstanding—as with the kind of questions we ask. It has been my experience that the majority of examiners and quiz masters ask questions which depend more on the student's ability to memorize than on his ability to think. The average teacher lays more stress on memory than on intellect. Some teachers have a positive dislike of allowing a student to get credit for inherited cleverness. To their minds the patient drudge who will work three hours on a lesson, is more to be admired than the clever fellow who can write as good a paper after only an hour of work. The questions they ask are frequently aimed at eliminating the possibility of a man's getting through on his cleverness. Many of us have too much of the old-fashioned schoolmaster's idea that the principal thing for us to do is to make the students work.

Now the athletic coach, for whose mental equipment you say the student has so much respect, is not primarily interested in mak-

ing his men work. He is after results, and it is by results, not by the amount of work they do, that his men are judged. Many a student would willingly run ten extra miles if that would secure him the privilege of wearing the coveted initial. But under our present system the average student cannot make an athletic team, no matter how hard he tries, unless he has an unusually good physical equipment. On the other hand, he can make the first division in his class, even if he has not a specially clever brain, provided only he is willing to spend enough hours memorizing his lessons.

It hardly needs to be added that a born athlete who will not train, and who shirks his work, generally fails of recognition. I would not have it thought that I am in favor of rewarding any student who depends on sheer cleverness. I do think, however, that we ought to make it just as possible for the clever student, who is willing to work, to excel the mere drudge, as it is for the born athlete to surpass the ordinary man who is willing to spend more hours in training.

I believe that the trouble lies in the type of questions usually asked. The bane of our present college teaching is the frequency of questions beginning with "what" and "who," and the infrequency of those beginning with "why" and "how." Of course, such questions are harder to make out, harder to answer, and harder to mark than those designed to see whether the student can give back what he has heard the instructor say, or has read in the text-book. But my own experience has been that the results are correspondingly far more satisfactory.

Furthermore, if the instructor would beforehand give out a number of such questions from which he proposed to select one to be used in the daily or weekly test, he would eliminate very largely that element of chance which so many students feel is indissolubly connected with academic work. The average student, "trusting to luck" that he may get a question that he can answer, knows that the instructor will not be likely to ask any question on which a student who has read the lesson over once, carefully, cannot do moderately well, and is naturally disinclined to undertake more than the minimum amount of mental effort. If he knows beforehand, however, that there is to be no luck about it, and that he is perfectly sure to get one of half a dozen previously assigned problems, he is usually willing to take time to stop and think on those questions; provided, of course, that they have been worded in such a manner as to require thought, and not simply memory. This works particularly well when, as one result of his work, his name appears among the elect, those chosen because they have brains and know how to use them.

This leads to one more suggestion. I have come to believe sincerely in the efficacy of introducing the element of competition into scholarship, as has been so forcefully indicated by President Lowell, and is practised at West Point. I have tried the plan of posting after every written exercise a list of the class in the order of excellence, but without confusing the matter by announcing marks. The football coach does not give out percentages, but publishes a list of successful candidates, or assigns places on the first and second team. Some teachers say that it is childish to revert to anything resembling the old "spelling bee" methods. On the other hand, I have found that the posting of this list appeals to just that type of student who is normally only too well satisfied with the mark of "C," the "gentleman's grade." He dislikes to have it known that in answering questions requiring ideas, and ability to express them, he is behind his fellows. Correspondingly he enjoys being at or near the top of such a list. Furthermore, once let it be clearly understood that the list is based on the assumption that a man's ideas are his own and you eliminate the difficulty of "printed notes" and outside "seminars."

There still remains to be mentioned that old story, the tremendous influence of home atmosphere on a student's scholastic activities. So long as father and mother, and brothers and sisters, are more proud of seeing their hero wear an "H," a "Y," or a "P," than a Φ. B. K. key, just so long will our students strive more in athletics than in scholarship. And yet I must believe that if we made the key stand more for real intellectual power and less for mere faithful drudgery, the day would come when the average father would be more delighted to welcome to his office a son who could wear a key than one who could only wear an initial. HIRAM BINGHAM.

Yale University, November 12.

A FOOTNOTE TO "RICHARD FEVEREL."

TO THE EDITOR OF THE NATION:

SIR: Has it been observed that, in the 1862 volume of poems, "Modern Love," etc., Meredith gives us a poetical footnote to "Richard Feverel"? The poem entitled "Phantasy," though deservedly passed without comment by the critics of Meredith's art, is nevertheless not without interest to students of his thought. First printed (in *Once a Week*) two years after the publication of "Richard Feverel," it makes allusion to the "wise youth," and presents in theme and doctrine a curious parallel to the first of Meredith's novels. The poem relates the dream of a man who has deserted his "village lily"—whom he holds cheap, "and the dream around her idle"—for a trip abroad with "cynical Adrian." The bells of Bruges, a ballet-dancer, and the want of his village lily unite to produce a vision grotesque and fantastic enough for a Gothic romancer. The dreamer falls a victim to a delicious but unholy sisterhood, who are dragging him down to watery depths of perdition. He is saved only by an appeal to the village lily:

> Save me! save me! for now I know
> The powers that Nature gave me,
> And the value of honest love I know:—
> My village lily! save me!
>
> Come 'twixt me and the sisterhood,
> While the passion-born phantoms are fleeing!
> Oh, he that is true to flesh and blood,
> Is true to his own being!
>
> And he that is false to flesh and blood,
> Is false to the star within him:
> And the mad and hungry sisterhood
> All under the tides shall win him!

If it were not for the mention of Adrian, we might overlook the reminders of "Richard Feverel." But with that to start us, we are inclined to carry through the parallel: the village lily suggests Lucy; the "passionate Will" suggests Mrs. Mount; and the trip with Adrian reminds us of Richard's enforced absence from his young bride. The cynical Adrian represents, perhaps, an attitude towards love abhorrent equally to sentiment and physiology. As in the novel, outraged nature will have its revenge, if only in a dream. We recognize the keynote of all Meredith's work in the magnifying of nature; and especially we have an anticipation of the praise of honest Aphrodite, sung more at length in the "Reading of Life." The early poem gives such an impression of juvenility that one would like to regard it as a preliminary sketch on the theme of the novel; such an hypothesis, at any rate, would make the poem no less significant a commentary on the novel. JOSEPH WARREN BEACH.

University of Minnesota, November 15.

THE LIFE OF ALEXANDER HAMILTON.

TO THE EDITOR OF THE NATION:

SIR: In your last issue, in noticing my life of my grandfather, you criticise me for using the word *lâches* in reference to the weaknesses of Hamilton and his contemporaries. My use of this term does not imply the severe censure you suggest. In looking over my dictionaries, which include the Century, Webster's, Worcester's, and March's Thesaurus, I find it defined as "laxness," "remissness," "slackness," and "non-observance," and derived from *lâcher*, which Spiers and Surennes, Gasc and others, define as "to slacken," "to let slip," "to unbend." I really cannot see how it can be confused with anything else, although there is a French substantive meaning "a coward," "a poltroon"—which seems to be, to put it mildly, quite out of place in characterizing Hamilton.

As the word I employed is so commonly made use of by intelligent people in the way I apply it, your objections seem to savor slightly of hypercriticism.

ALLAN MCLANE HAMILTON.

New York, November 16.

[Dr. Hamilton's note confirms our suspicion that he did not intend to use a word so severe and insulting as *lâche*.—ED. NATION.]

GLADSTONE ON THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: At last a book has been published on the American government which does not call attention to the fact that Gladstone referred to the Federal Constitution as "the most wonderful work ever struck off at a given time by the brain and purpose of man." Among the excellencies of Prof. Charles E. Beard's "American Government and Politics" is the omission of this statement. He would naturally have put it in the first paragraph of page 45. One is a little surprised to find Prof. A. B. Hart in this year's edition of his "Actual Government" repeating the quotation and adding: "Mr. Gladstone was mistaken; the Federal Constitution was not a creation." This is said, with perfect seriousness, as if anybody supposed that Mr. Gladstone thought the convention of 1787 had gone up into a mountain and received the Constitution written on tables of stone, with no basis whatever in human experience. How long is this fossil, with its foolish gloss based on Mr. Gladstone's supposed ignorance, going to cumber the books on civics? EDGAR DAWSON.

New York, November 17.

PROBABILISM AND THE JESUITS.

To the Editor of The Nation:

Sir: In the *Nation* of October 27, "J. R. S." writes a letter about "Probabilism," almost every paragraph of which contains an error or a fallacy.

(1.) He intimates that Newman's Tract xc should have had weight in determining the validity of his orders; whereas, the orders of a priest do not depend upon his belief, but upon the manner of his ordination.

(2.) He criticises Rome for waiting until Duchesne's history was translated into Italian before condemning it. But the Congregation of the Index, as is well known, does not condemn *instanter* every heretical work; and it was because Duchesne's book had sufficient importance to be put into Italian that it was placed on the list of forbidden publications.

(3.) Whatever may be thought of Liguori's opinions, it is quite certain that the Society of Jesus has never made itself responsible for them. The Pope may have approved them, but the Jesuits would be bound only by the Pope's *ex cathedra* utterances. Otherwise they might be supposed to approve of certain former Papal decrees against their order. Only declarations permitted or approved by the general of "the company" can be taken as declarations of the Jesuits themselves.

(4.) "J. R. S." remarks: "No doubt Tyrrell would have lived and died a Jesuit if left alone." This is simply to say that if the general of the Jesuits had not discovered Tyrrell's heresy, he would not have punished that heresy.

(5.) To say, as "J. R. S." does, that "by a deft use of probabilism nearly everything is condoned," amounts to a perversion of the doctrine. A "deft" use of Bishop Butler's argument from analogy might lead to an equally unhappy result.

(6.) The authority of Brownson, "the greatest of all American Catholic writers" (*sic*), can hardly be sufficient to prove that the French Revolution is to be laid "at the door of the Jesuits." A. A.

Neuchâtel, Switzerland, November 5.

THE NOSE IN POETRY.

To the Editor of The Nation:

Sir: Should it not be noted that the nose is described in English poetry, as well as in that of America, India, and Greece?

In our older poetry, Chaucer alone has at least eleven noses! Of the six feminine ones, that of the Prioress was a "nose tretys"; Hate's was "snorted up for tine;" Beauty's "wel wrought"; Idylnesse had one of "good proporsioun," while that of Fraunchise

> . . . was wrought at poynt devys
> For it was gentyl and tretys.

Despairing of doing justice to the nose of Gladnesse the poet says:

> I not what of hir nose descryve
> So faire hath no womman alyve.

The men's noses are also worth mentioning. Sir Thopas "hadde a semely nose." Myrthe's nose was "by measure wrought ful right," while that of Daungere was "frounced," and "full kirked stoode." The miller of the "Reeve's Tale" had a "camuse nose," and in the "Prologue" the millers's nose is very carefully, if somewhat unpleasantly, described thus:

> Upon the cop right of his nose he hade
> A werte, and thereon stood a tuft of heres,
> Reed as the bristles of a sowes erys;
> His nosethirles blake were and wyde.

Chaucer even thought it worth while to consider that the shape of the nose might be hereditary and gives the daughter in the "Reeve's Tale" a "camuse" nose just like her father's.

A little later than Chaucer, the poet Stephen Hawes describes a lady's nose as "straight and fayre."

Nor is the nose entirely neglected by our modern poets. The very 'flower" of all noses in English poetry, a nose right under everybody's nose, is that of the petulant maiden in Tennyson's "Gareth and Lynette," of whom it is so poetically and taetfully said

> . . . and lightly was her slender nose
> Tip-tilted like the petal of a flower.

Margretta Martin.

Mount Holyoke College, November 19.

EXCAVATING THE CATACOMBS.

To the Editor of The Nation:

Sir: Your reviewer of Wilpert's latest book ("Die Papstgräber"; see the *Nation*, October 6) expresses the wish that further excavating may be made in the Roman Catacombs. That is indeed devoutly to be hoped, but money is lacking. Why should not an international fund for excavating the Catacombs be raised by some great university in your country? Subscribers would easily be found in all parts of the world. Of course, the excavating should be directed by the Papal archæologists; there can be no question of creating an international committee for that purpose. But the principles of scientific excavation are now so well known and so generally applied, that no intellectual assistance need be offered to scholars like Wilpert and Marucchi, who are surrounded by some very promising pupils. The only help needed is money. The Christian and Jewish Catacombs of Rome have been, to a certain extent, the cradle of modern thought, and of modern morals; would it not be paying a debt if the modern world, without exception of creed, belief, or unbelief, were to help towards exploring them completely? About two-thirds of the work remains to be done.

Salomon Reinach.

Paris, November 6.

COLLEGE GRADUATES.

To the Editor of The Nation:

Sir: I have just received a pamphlet advertising "The Health and Efficiency League of America," with headquarters in Battle Creek, Mich. On the first page setting forth its origin and aims, there appears in a prominent place the statement, "The small proportion of college graduates who succeed in any profession is notorious." It is surprising that a statement so wholly unwarranted could be countenanced by an organization boasting a distinguished array of officers. According to the statistics given by "Who's Who," 1910, more than 60 per cent. of the professional men listed are college graduates, and these figures would be increased to more than 70 per cent. if the names of those were included who attended college but did not graduate. The statement is all the more astonishing in view of the percentage of college graduates the Health League itself has honored by election to official position in the organization. Its list of vice-presidents, counsellors, and executive committee is composed of the names of twenty-one men. Seventeen of these names appear in "Who's Who." Of these seventeen names, eleven are college graduates, one attended college two years, four graduated from medical colleges, and only one never attended a college of any kind. It is to be regretted that so misleading a statement against college efficiency should be distributed broadcast into the homes of the land.

Literature.

THE AUTHOR OF "VATHEK."

The Life and Letters of William Beckford of Fonthill. By Lewis Melville. New York: Duffield & Co. $3.50 net.

Beckford's letters now first given to the public are not intrinsically very interesting, and the editor has lessened their value as a document by faulty transcriptions and by omissions and confusions so glaring that the perusal of his volume leaves one in a state of irritation. And besides these minor errors of editing, Mr. Melville, where he adds his own comment, has, we are obliged to think, utterly misrepresented Beckford's character and ignored what Beckford really stood for. To read Mr. Melville one would never suspect that Beckford in his strength and more particularly in his weakness was one of the most characteristic products of the romantic movement. Yet not only do his early letters fairly teem with the influences of Rousseau and "Werther" and Ossian and Chateaubriand, but he had the courage and the means to carry into practice what other men were only dreaming, and thus to become more even in his life than in his famous romance of "Vathek" a symbol of the glowing fierce aspirations and the final spiritual bankruptcy of the new generation.

William Beckford was born at Fonthill-Gifford in Wiltshire, October 1, 1760. His father, Alderman and twice Lord Mayor of London, the celebrated radical and friend of Wilkes, had inherited an enormous estate in Jamaica. By his first wife, he had a stepdaughter, Elizabeth March, afterwards Mrs. Hervey, who wrote some foolish, sentimental novels which her half-brother William lauded as a boy and caricatured in his "Azemia" as a man. The Alderman's second wife, the mother of William, belonged to the Abercorn branch of the Hamilton family. One of his brothers, William's uncle Julines, had a son

Peter, who married in 1773 Lousia Pitt, second daughter of Lord Rivers. For Mrs. Peter Beckford and her sister (apparently Marcia-Lucy), William had a profound and enigmatical attachment. At the age of ten, the boy lost his father and fell largely under the influence of his mother. Instead of undergoing the wholesome discipline of public school and university, he was, by the advice of his godfather, Lord Chatham, placed under the tutelage of the Rev. John Lettice, who seems, indeed, to have been a scholarly and sensible man, but who at least was unable to drag his charge out of the fantastic dream-world into which he had fallen.

When seventeen, William went with his "bear-leader" to Geneva, to continue his studies. From here, we have the first of his letters, some of them addressed to Mrs. Elizabeth Hervey, others apparently to the same person, although for some reason the superscription is omitted. The tone of these letters is of a frantic extravagance that might remind one of a sort of hybrid of Ossian and Rousseau, both a little mad. At the end of 1778, Beckford was back in England pouring out his youthful revolt in letters from Fonthill: "I will seclude myself if possible from the world, in the midst of the Empire, and converse many hours every day with you, Mesron and Nouronihar"; and satisfying his ambition by writing his first book, "Biographical Memoirs of Extraordinary Painters," which, for the benefit of the housekeeper who showed strangers through the galleries of Fonthill, attributed the pictures to such artists as Og of Basan, Watersouchy of Amsterdam, Herr Sucrewasser of Vienna, and the like. Mr. Melville seems to see a contradiction in this union of sentiment and burlesque in the same mind; they are, in fact, but different aspects of the romantic desire to escape from reality, and have often gone together, from the days of the double theme in Spanish drama to the magnificent audacities of "Don Juan."

After a year and a half William made the grand tour with his tutor, and in May of 1782 went abroad for the third time, travelling now with all the luxurious state that befitted the richest commoner of England. Some time in the interval between his second and third journeys, he had met at Bath Lady Margaret Gordon, with whom he fell in love, and whom he married May 5, 1783, coming back to England for this purpose. Two children were born to them; but after a union of three years his wife died, and the children, seeming, so far as the letters indicate, to have passed quite out of his mind, were placed under the charge of his mother; while he himself was hurried about Europe by his friends who, according to his biographer, were "fearful of his losing his reason or taking his life." Mr. Melville asserts that "the marriage had been an ideal union," and thinks that the memory of Beckford's loss, "acting upon an emotional nature, may have had more to do with his subsequent retirement than is generally supposed." It may be so; yet such practical endurance of grief scarcely accords with the romantic temperament as one reads the annals of those days; and indeed there is an aspect of this whole affair which is unpleasantly suggestive, but which cannot be entirely overlooked, as Mr. Melville overlooks it, without a gross misrepresentation of what Beckford stood for to his contemporaries.

Before he had met Lady Margaret and during his courtship he was writing letters filled with disquieting confessions. Especially there is a series of letters to Mrs. Peter Beckford which are filled with allusions to a thoroughly unwholesome mixture of passions which exhales the unclean atmosphere of the Schlegels and their sentimental circle. These letters are sometimes obscure, and the editor gives no help to their interpretation—rather, his story of Beckford's life is incompatible with them as they stand. Of the still uglier rumors about Beckford, which, as readers of Byron know, formed the real legend of his life, it would be desirable perhaps to say nothing. Mr. Melville declares categorically that there is not a particle of evidence to support them, and dismisses them as preposterous. Yet he himself admits that Beckford's "Dreams, Waking Thoughts, and Incidents," printed at this time, was withdrawn from circulation probably because its romantic tendency might give some color to the noxious scandals. Some of the evidence he deliberately suppresses. Thus he quotes Rogers's vivid description of a visit to Fonthill, when Beckford read to the younger man the episodes intended for "Vathek," but never published. He does not add the comment of Rogers: "They are extremely fine, but very objectionable, on account of their subjects. Indeed, they show that the mind of the author was, to a certain degree, diseased."

One of the reasons for Beckford's return to England, in 1781, from the grand tour was that he might celebrate his coming of age in a manner befitting the fame of Fonthill. The festivities, which lasted for a week, followed the usual custom of the day, and might be dismissed with a word, were it not that they seem to have been one of the influences that governed the rest of his life. "My spirits are not sufficiently rampant," he writes to Lady Hamilton, "to describe the tumult of balls, concerts, and illuminations in which we were engaged here a fortnight ago. . . . On the desert down which terminates the woody region of Fonthill blazed a series of fires. . . . On the left of the house rises a lofty steep mantled with tall oaks amongst which a temple of truly classical design discovers itself. This building (sacred to the Lares) presented a continued glow of saffron-colored flame, and the throng assembled before it looked devilish by contrast."

These scenes at Fonthill, ending with the necessary touch of diabolism, sound almost like a chapter of "Vathek," and, indeed, they certainly combined with Beckford's early reading of the "Arabian Nights" and later acquaintance with the Oriental tales then popular in France to inspire that strange book. He himself gave this explanation, late in life, to Cyrus Redding, and declared that the great hall at Fonthill, with its many doors opening into dim corridors, suggested to him the idea of the Hall of Eblis. The old tradition of Beckford's literary performance is well known—how he told Redding, in 1835, that he had written the story at one sitting of three days and two nights, during which time he never took off his clothes. Unfortunately, Beckford's correspondence with the Rev. Samuel Henley, which has since come to light, quite shatters that heroic legend. He was, as a matter of fact, at work on the manuscript at least for a number of months, and was tinkering at it at intervals for about five years. Mr. Melville undertakes to reconcile Beckford's statement with the facts by supposing he had in mind, when he was talking with Redding, not the whole book of "Vathek" as we have it, but merely one of the episodes designed for it, but never printed. That is possible, although, unless the episode was extraordinarily long, the feat becomes rather commonplace; and one or two other lapses in Beckford's memory rouse the suspicion that he was not incapable in his old age of investing his youth with imaginary powers. Beckford wrote the story in French, and to his friend Henley, a scholar of considerable Oriental attainments, was entrusted the task of furnishing notes and of making an English translation. Probably out of impatience over Beckford's dilatoriness, Henley put out an edition of his version, in 1786, with a prefatory note stating that it was translated from the Arabic. Beckford was naturally incensed at this treachery, and immediately, in 1787, published the original French with a reply to Henley's misrepresentation. We have thus the curious fact that one of the classics of our literature was written in a foreign tongue; but the correspondence between Henley and Beckford shows that the latter passed judgment on the English and virtually stamped it as his own.

"Vathek" is probably little read today, and, indeed, a good deal of its extravagant fancy and grotesque humor rings rather flat, after the lapse of

years. But the book was popular in its time, and is still one of the main documents to any one who wishes to study the sources of the romantic movement. Its theme is the *unendlichkeitsstreben* and *Titanenthum*, the insatiable thirst of experience and the self-torturing egotism, which were beginning to run like wild-fire through the literature of Europe, and which reached their consummation in "Faust." Instead of the mediæval setting of Goethe's poem, Beckford's hero is an Eastern prince at whose feet lie all the pleasures and powers of the world. Being dissatisfied with the magnificence of his predecessors, he adds to his palace five wings in which, like a Des Esseintes of the Orient, he can indulge in the quintessential charms of the five senses. His thirst for knowledge is equal to his appetite for pleasure, "for he wished to know everything, even sciences that did not exist." His power was greater than his knowledge; "when he was angry, one of his eyes became so terrible that no person could bear to behold it, and the wretch upon whom it was fixed instantly fell backward, and sometimes expired." Only one thing the Caliph cannot command in his earthly paradise —content; the stars above his head, as he stands on his tower looking down contemptuously on mankind, are an irritation to his desires and a humiliation to his pride. Then enters the tempter, in the form of a hideous Giaour, who in return for a monstrous crime offers him the possession of the palace of subterranean fire where reposes Soliman Ben Daoud, surrounded by the talismans that control the world. For a space the story is lost in grotesque adventures; but at the end, as Vathek and the Princess Nouronihar approach their goal, the imagination of the author kindles and the sense of foreboding deepens and intensifies step by step, until in the great Hall of Eblis (for to this the promises of the Giaour bring them), at the sight of the vast unresting multitude who roam ceaselessly hither and thither in furious agony or in rapt absorption, heedless of everything about them and forever avoiding one another, each with his right hand pressed upon his heart—the feeling rises to real terror and sublimity. At last the trembling pair are led to the great Soliman, seated aloft, yet with his hand, like the others, pressed upon his heart, and listening intently to the sullen roar of a vast cataract, which was the only sound that intruded on the universal silence. He tells them of his doom, and concludes:

> "In consideration of the piety of my early youth, my woes shall come to an end when this cataract shall for ever cease to flow: till then I am in torments, ineffable torments! an unrelenting fire preys on my heart."

Having uttered this exclamation Soliman raised his hands towards Heaven, in token of supplication, and the Caliph discerned through his bosom, which was transparent as crystal, his heart enveloped in flames.

The device of the burning heart Beckford borrowed from a French writer now forgotten, but he has more than made it his own. His genius was fitful and never under control; he was no philosopher or seer, but in this consummation of the undisciplined revolt of romanticism he came closer to the facts of history, and showed a profounder insight into human nature, than Goethe displayed when he resolved Faust's craving for unbridled experience in a rather futile act of sympathy.

And as the Hall of Eblis is a magnified and Orientalized image of Fonthill, so the career of Vathek is a grotesquely conceived symbol of Beckford's own life and of the romantic ideal. This is no place to go into an account of Beckford's rebuilding of Fonthill at an extravagance and with a dæmonic energy which quite bewildered his contemporaries, or to follow him through his loss of fortune and secluded days at Bath. Mr. Melville closes his introductory chapter with the words of Beckford: "I have never known a moment's *ennui*." The saying may be true, but is suspicious. Beckford was indeed of a robust physique, and had the inherited strength of very prosaic and practical forebears. *Ennui* he may have kept at bay until the end by his unceasing activity. But withal it is not easy to read his letters and the story of his insane thirst and haste in building, or to picture his obstinate seclusion from the world in an artificial and barbarously ornate paradise, without remembering the last scene of his allegory of "Vathek."

This at least is certain: One who knows the literary history of that period may be thankful to Mr. Melville for printing these letters, but he will find it difficult to accept the hero whom Mr. Melville pretends to find in them.

CURRENT FICTION.

Tales of Men and Ghosts. By Edith Wharton. New York: Charles Scribner's Sons.

The enervating influence upon our popular story-writers of American magazine "policy" does not decrease with the seasons. One recalls the announcement, made something like a year ago, that Mrs. Wharton had been booked to write a series of ten or a dozen stories "about men." Here they are in the predestined number, capably turned out according to contract. They are ingenious and readable: so much the most doubtful forecaster must have been sure of. But their ingenuity is altogether too patent: they are too clearly trumped up out of the author's fancy; even the doubtful forecaster must have hoped for better things from the writer of "The Valley of Decision" and "The House of Mirth." Her use of the short-story form is not to be complained of, since it is true that she is naturally an interpreter of the episode and the situation, rather than of action upon a large scale. Her latest essay in the novel, "The Fruit of the Tree," resulted in a not very happy patching together of several distinct and obstinately detached episodes. But the book left one with an impression of earnest endeavor, if not of actually lofty achievement. Mrs. Wharton may have enjoyed the writing of these "Tales of Men and Ghosts," but we venture to suppose that her enjoyment was upon the comparatively trivial plane of technical facility.

Not the least puzzling thing about this collection is its uncertainty of style. Two of the stories, "Afterward" and "The Letters," are (rather ineffectively) in her earlier manner—that Anglo-Gallic manner, with its nuances, its compunctions, its hiatuses; which reminds us of Bourget, when it does not go farther and fare worse by reminding us of Henry James. In "The Valley of Decision" this style seemed to have been so thoroughly assimilated by Mrs. Wharton, that one regarded her simply as one of the "psychological" school, as the cant was. Now one almost comes to doubt the spontaneity of that manner, with her. At all events, the rest of the stories here collected show hardly a trace of it. Their style is rather that alert and commonplace style of the magazine fiction of the day as turned out by an army of skilful practitioners.

Max. By Katherine Cecil Thurston. New York: Harper & Bros.

The author of "The Masquerader" has hit upon a kindred motive for her present story. It is a fresher motive than that of the Dromios: a girl who passes herself off as her own twin brother is a new engine of mystification. "Max" is the name taken in vain by a young Russian princess, who, on the eve of marriage, runs away in the disguise of a boy. She is determined to win fame by pencil and brush, in that notorious haunt of genius and nursery of fame, Bohemian Paris. But, first of all, it is her ambition to "possess herself," to remain independent of authority—above all, the authority of love. Of course, there is a man in Paris who is destined to wreck this ambition: an Irishman of the world, nearly middle-aged, who has never really loved. A quick intimacy springs up between this gentleman and the so-called "Max." If that young person's speech and action are correctly reported, it is hard to see how any man of ordinary intelligence could have failed to see through her disguise. But Rosalind so deceived her Orlando, and Portia her Bassanio: if we begin to jib at such situations, we shall have an end

of romance. He does not suspect, though a hint is given him as to Max's real sex at the very outset. Nevertheless, we are to understand that he is unconsciously attracted to the supposed boy by the charm of sex. Together they loiter innocently through the haunts of Bohemianism. Max takes a studio on the heights of Montmartre, and prepares to produce her masterpiece. She is a genius, but her disturbing relation with the man prevents the free play of her power. This fact does not trouble the reader, since it evidently does not trouble the writer. The studio and the picture-making merely constitute a popular background for the action. Presently she paints a picture of herself as a woman, and the man falls in love with it. She declares that the subject of it is her sister, and that it is impossible for him to meet her. Thereupon ensue roughness and contempt on his part, jealousy on hers, and a very pretty quarrel. There is no need of explaining what happens after this.

The Right Stuff. By Ian Hay. Boston: Houghton Mifflin Co.

The author modestly calls his story "a simple study of human nature," and cautions the reader at the outset that it was originally written for English and Scottish readers, and that the larger public to which it is unexpectedly introduced must be warned that its dialect and its handling of such matters as electioneering and game-shooting have presupposed the British familiar knowledge. Prepared then for the utmost in local quality and in slightness, the reader's resignation gives way to agreeable surprise when he finds a quite sufficiently clever little tale, small certainly, and local certainly. But its humor, sometimes clumping if you will, is at moments thoroughly delightful; and its entire course is without problem or tears. The Scottish versus the English habit of mind is the prevailing joke; of its quality may be given a specimen quotation from an Englishman in the story:

> It is no use arguing with a Scot about Burns. I remember once being nearly dirked at a Caledonian dinner because I ventured to remark that "before ye" was not in my opinion a good rhyme to "Loch Lomond."

Mrs. Fitz. By J. C. Snaith. New York: Moffat, Yard & Co.

Whatever the author's past achievements, in the present story, which is ostensibly one of adventure, he seems to possess no sure instinct and to be distracted from any one purpose. Like many a writer of detective stories, he is carried away, when the progress of events should be his first concern, by the temptation to develop other matters, such as setting and character-study. In the confusion, these, too, are not well done, and the glimpses into the country life of Englishmen of the upper-middle-class are utterly wasted. Be that as it may, the author displays the right sort of ambition for the tale-teller in despising any but a royal situation for the nucleus. He has for his heroine the daughter of King Ferdinand of Illyria, who, to avoid the inevitable Russian grand duke has made a morganatic marriage with a dare-devil Englishman. The peculiar political situation in Illyria makes an enormity of this venture; as Ferdinand's sole heir, the daughter is wanted by the royalists to perpetuate the monarchy—the oldest in Europe—and the Republicans, bent upon killing her, are equally unwilling to let her out of their sight. Between the two, she is sufficiently beset. A rescue from the Illyrian embassy in London; the necessity, when directly appealed to by the divinely rightful Ferdinand, of renouncing her husband and child; and finally, after the Republicans have assassinated the King, an escape on a saddle-bow are the steps to her ultimate happiness.

STATUTORY LAW.

Popular Law Making. By Frederic Jessup Stimson. New York: Charles Scribner's Sons. $2.50 net.

This book attempts to give a summary of the statutory law in the United States on property, and on personal, racial, and political rights; it also reviews the corporation, labor, pure food, and Trust legislation.

The author, while regretting the tendency to pass statutes on every conceivable subject, even when, according to him, it would be covered much better by application of the principles of the common law, recognizes that at the present time, to the average man, "statutes have assumed the main bulk of the concept of law as we formulate it to ourselves." His object, therefore, is to show both what has been accomplished by law-making in the past and what is now being adopted or even proposed, and in this manner to give some idea of the problems of the times which are confronting legislation to-day. Although the primary object, therefore, is to state the law as it is, the book is not merely a dry enumeration. Mr. Stimson undertakes to criticise as well, not hesitating at times to express harsh censure, as when he justly condemns the freakish legislation which so often disgraces our statute books, and the slovenly way in which so many of our laws are drawn.

Not all the views held by the author will, to be sure, meet with assent. His absolute condemnation of the tendency to confer power on commissions and of the regulation and recognition of political parties seems to run counter to the general trend of political opinion. Nor should the Sherman Act be repudiated because it dispenses with a jury and throws upon the court "the burden of determining a complicated and voluminous mass of fact." The very circumstance that the facts to be determined are complicated and voluminous would justify the exclusion of the jury, and our ancestors would not have been shocked at this so much as the author would have us believe. So it may well be doubted (and the decision of the Supreme Court in a celebrated case might be invoked to justify such doubt) whether the maxim that no one shall be compelled to incriminate himself is at the present time of such fundamental importance that its abolition would result in the destruction of our entire social structure. Exception might, also, be taken to the view that the notion of law as a custom is purely Teutonic. Commentators like Savigny and the historical school in general have shown how great a part customary law played in the development of Roman law. In France, up to the time of the promulgation of the Civil Code, the law of a great part of the country was customary in its nature.

The thought which underlies the book and which is expressed on numerous occasions is the necessity of holding fast to the fundamental principles of the common law in regulating the labor and Trust problems, and its great superiority, as to all matters relating to personal and political liberty, to the Continental system. A careful reading of the chapter in which the author reviews the English statutes which preceded the Revolution, and which are part of the common law as it was adopted in this country, will justify the doubt whether this mass of crude and undigested legislation, enacted at a time when social and economic conditions were completely different from those existing now, is as safe a guide for the regulation of our complex business relations as the author thinks.

The same may be said of the great superiority claimed for the common law in matters relating to personal liberty or safeguarding the individual against abuse of power of public officials. The author refers, for instance, to the rule that, under common law, labor contracts can never be specifically enforced, and contrasts this with the law of Continental Europe as he understands it. In the first place, it may be said that, while contracts for personal labor are not specifically enforced, in many cases virtually the same object is attained by enjoining the defendant from working for anybody else. But a complete answer is that the doctrine of specific performance is entirely unknown, at least to French law; that in it the maxim that "nobody can be compelled to do any act" is fundamental, and that damages are the only remedy where any contract is broken.

He refers again and again, in support

of his view, to the right given by the common law to sue public officials, and claims that such liability is as good as unknown to any other system. The principle is not unknown either in France or Germany, and has been greatly extended in the former country under the present Republican régime. In this country and England such remedy, which is generally of doubtful practical value, is the only one available to the party aggrieved; the state itself cannot be sued, even on its contracts, and is not responsible for the acts of its officials unless there is an express statute to the contrary. This principle has been extended so as to apply to cities or other subordinate political divisions when they act in a governmental capacity. Under this rule a person run over by an ambulance of the Health Department, or injured in an elevator controlled by the Police Department, cannot sue the city, and it is a poor consolation to him to be told that he is at liberty to bring an action against the ambulance driver or the person operating the elevator. The contrary rule prevails under the Continental system. In France, for instance, the state is liable like any other employer, and the only question is whether the action is to be brought before the ordinary or administrative courts. A striking application of this principle occurred recently in Holland, where the owners of gambling houses, which were closed by executive order and without legal process, at once brought an action for damages against the state, and won their suit.

But while we may differ with the author on these and many other points, there can be no question of the value of his work; he certainly has attained his object to make suggestions which will awaken the interest of his readers to the importance of the subject.

In the Footprints of Heine. By Henry James Forman. With illustrations by Walter King Stone. Boston: Houghton Mifflin Co. $2 net.

The charm of this record of a holiday tramp through the Harz depends upon its youthful and ingenuous quality. People were glad to take up with the author. Waiters, innkeepers, and strolling artisans told him ghost and fairy stories. On the top of the Brocken, in lieu of a Walpurgis night, he enjoyed a tolerable substitute in the *kneipe* of a university corps. There also intervened a *Fraülein* with most amiable parents. Mr. Forman's hazards of the road are not exciting in themselves, and he refrains from adding rhetorical allurements to a plain tale. He does you scenery with a certain deftness, but where he is most successful is in enjoying and conveying the sense of that gracious *Gemüthlichkeit* which persists in the unprussianized remnant of old Germany. Those who love this most specific of German qualities will find Mr. Forman an excellent travelling companion, always tactful and quietly humorous, more inclined to hint than to expatiate. Note in this regard the entrance of the Fraülein. A diligence is standing in the inn court of Heiligenstock as the disciple of Heine appears:

> As I was unstrapping my knapsack the lady in the mail-coach suddenly leaned forward to the window, and with that fleeting glance I had of her high-bred, delicate face I experienced the curious sense of vague familiarity we sometimes have on meeting strangers. Either I had seen her or met her before, or something within me leaped to meet her now. But in a moment she was again hidden in the obscurity of the coach. The postillions had finished their repast and with horsehair plumes waving in the breeze they clambered up to the box. The coach was a public conveyance, and going to Klausthal, my destination. I had a quick impulse to take passage in it and thus become the travelling companion of the beautiful lady. But conscience bred of New England education reminded me that my plan was to walk. Consideration for the lady did the rest. The coach rolled away and I remained at the table, like the bridegroom in Lochinvar, dangling "bonnet and plume," and hoping that we might meet again.

If the book labors a little under the burden of its title, it has substantial merits of its own. From the fustian and pretentiousness that infect its *genre* it is refreshingly free.

Interpretations of Horace. By the late William Medley. Edited by John Green Skemp and George Watson Macalpine. New York: Henry Frowde.

Lovers of Horace will enjoy this book and find it profitable. In it, each beautifully printed and followed by a commentary which deserves the name of interpretation it bears, are nineteen of the best odes. There is none of the usual excess baggage of learning that (perhaps necessarily) encumbers text-books of Horace. The author of the interpretations takes for granted the desirable syntactical, linguistic, and other special knowledge, and treats his literature in true humanistic fashion. Each interpretation, after an apt parallel passage or poem, begins with a paragraph in appreciation of the whole, and is then continued in a running exposition consisting sometimes of comment, sometimes of paraphrase, and sometimes of translation, which is everywhere sane, sympathetic, and illuminating. A further quality gives it effect: it is personal interpretation. To use the interpreter's own words: "Much of these informal lectures may be fitly described as the lecturer's thinking aloud with his class." It is full of life and vigor, and makes the reader feel as if he were sitting under a teacher with broad knowledge of the best in life and letters. The interpreter was professor in a denominational college which trains for the ministry, and scriptural parallels are used with fine effect; but his Christianity never interferes with a just appreciation of the pagan poet's most pagan ideas, and the poems here collected range from the Pyrrha ode to *Delicta majorum immeritus lues.* If the Horace of the interpretations is a trifle more dignified and austere than the Horace of popular imagination as fixed by Eugene Field, it is because Horace was really possessed of austerity to the point of being himself something of a preacher, and his interpreter's appreciations are those of a scholarly mind.

A quotation or two from the work will communicate its flavor. The first is from the Pyrrha ode, which is entitled "A Roman Lady Vere de Vere":

> Verses 1-13:
>
> The tone is given to the picture and the interpretation suggested, sharply and at once, by the first word, *quis,* repeated in the *cui* of verse four. Each word stings: "Who . . . for whom?" There have been many; there will be more; who is it now? Then she descends from her chamber to the *gratum antrum*—not "some pleasant cave," as Milton has it, but the pleasant grotto attached to a lordly house. It is a cool and shady nook, with its statues of Venus, its fountain, and its ferns. *Gratum* it is in itself, but yet more for its sweet associations, in the wooer's mind, with blissful meetings. Here often of late has he been received.

Again, from *Parcus deorum,* entitled "Conversion":

> But see, here is a day serene; the sky is clear, *purum;* no veil of cloud dims the blue vault of heaven.
>
> Then suddenly the crash from that pure sky, and the flame cleaves the air. . . . To this trembling soul the thunder storm out of a clear sky is a veritable theophany:
>
> The voice of the Lord is upon the waters;
> The God of Glory thundereth,
> Even the Lord upon many waters.
> The voice of the Lord is powerful;
> The voice of the Lord is full of majesty.
> The voice of the Lord cleaveth the flames of fire.
>
> It is Jehovah himself who speaks; the thunder is His voice.

It is characteristic of the interpreter that in this poem he sees, not the record of an experience of the poet himself, nor a bit of atheistic banter, but a type of experience—the conversion of an Epicurean.

The character of these interpretations will be better appreciated after a reading of the editor's introduction. William Medley taught for nearly forty years in Rawdon College, an English institution little known this side of the water, and died in November, 1908. The subjects in which he instructed are described as "Logic, Philosophy, Classics, and Introduction to the Study of the New Testament." He wrote much, but published only one work, his Angus Lectures, under the title "Christ the Truth" (1900).

Among his unprinted writings were interpretations of the "Agamemnon," the "Antigone," the "Alcestis," and the "Medea," and these interpretations of Horace, now published posthumously. He was a man of deep personal quality as well as broad and sound scholarship. Rarely to a dead scholar and teacher is accorded the high and enthusiastic praise here given. The impression left by the introduction adds to and explains that left by the interpretations; one enjoys the disciples' glowing exposition of the teacher's character as much as the teacher's glowing interpretation of Horace, and understands each better for having read the other. The book ought to stimulate good literary teaching and editing of Horace. Naturally, we could not dispense with our learned editions of the ancients; but many a teacher who reads this work of an almost unknown scholar will wish he had included all of Horace.

Time and Free Will: An Essay on the Immediate Data of Consciousness. By Henri Bergson. Authorized translation by F. L. Pogson. New York: The Macmillan Co. $2.75 net.

Not the least of the services rendered to Anglo-American philosophy by William James consisted in his employment of his great influence to draw attention to that movement of French thought of which M. Bergson is the best-known representative—a movement having close affinities with James's own doctrines, yet developed in an entirely distinctive way. A school so much talked about at home was doubtless certain, sooner or later, to gain a hearing abroad; but its vogue among us has unquestionably been much accelerated by its finding as one of its earliest champions so eminent a figure and so vigorous a fighter as Professor James. To the interest which he aroused must in large part be ascribed the zeal of publishers this year to bring out translations of Bergson; it appears that all three of this philosopher's principal writings are very soon to be available in English. The present volume is a rendering of the latest edition of Bergson's earliest work, his *thèse de doctorat*, published first in 1889 under the less expressive title of "Essai sur les données immédiates de la conscience." The English title, it is true, indicates the subject-matter of only two of the three chapters composing the volume. But those chapters are the important part of the book; the brief first chapter, on the notion of intensity as applied to mental states, though not unrelated to the principal theme, is rather loosely related, and scarcely essential to the argument. The rest of the volume, dealing with the problem of freedom in the light of the conception of "real duration" as a unique characteristic of inner states, constitutes an extremely lucid presentation of the *idée mère* of Bergson's entire philosophy.

What is called Bergsonism is not entirely a doctrine without recognizable ancestry. The germ of some of it is discernible in an important little book, "De la contingence des lois de la nature," 1874, by Bergson's teacher at the Ecole Normale, Emile Boutroux, who has recently visited America. Some of it also may be found—combined with much else—in the philosophy of a notable French thinker, too little read outside of France, Renouvier, who exercised likewise a considerable influence upon the formation of James's metaphysical ideas. Bergson is very far from merely repeating doctrines of these older contemporaries of his; but he represents the same general tendency of French thought, and part of his work has consisted in developing further certain conceptions found in one or the other, or in disengaging these conceptions from their former contexts to recombine them with one or two other familiar motives of nineteenth-century speculation. Yet the outcome of this process has as high a degree of originality as is often found in philosophical reasonings; and the principal argument of "Time and Free Will" may be regarded as an essentially novel contribution to metaphysics.

Time, as Kant had observed, is "the form of inner experience," as space is of our perception of external objects; and this, Renouvier had contended—giving up as barren and incomprehensible Kant's supra-temporal ego behind both series of phenomena—properly means that succession and duration and becoming are of the very essence of the reality that is inwardly and directly known to us. But precisely what, Bergson asks, is the nature of our time-consciousness, and what is its relation to our spatial imagery? The subtle analysis which he brings to bear upon this question leads him to the conclusion that there is in mankind a strong disposition to think time under forms borrowed from, and properly applicable only to, space, to assimilate the idea of duration to that of extension; and this, he finds, is the source of a host of errors in philosophy, including the error of determinism. All the perplexities of the ancient puzzle of the freedom of the will "come back, without our suspecting it, to the following question: 'Can time be adequately represented by space'?" Bergson's answer is a decided "No." Time past may, indeed, be translated by subsequent reflection into categories alien to its original nature; but time in actual flow has a nature unique and irreducible. Space we think of in terms of quantity, and as having all its points simultaneous with one another and external to one another, their true relations *inter se* being unmodified by change. We can ideally pass through it in any direction, can repeat the same course, can come back to the same point. Now our ideas of causal uniformity—derived largely from our experience of physical objects in space—though they refer to temporal sequences, are yet, so to say, woven upon a spatial warp. By "the same cause" we mean a set of conditions to which we can revert, which can be reconstituted without being significantly modified by the mere lapse of time. But time itself—the pure duration of inner experience—is, says Bergson, not a homogeneous and measurable quantity at all; it is, moreover, a one-directional flow whose successive moments imperceptibly inter-penetrate, which permits no repetition and no returning, and in which every later phase, merely because it *is* later, must be different from and incommensurable with every earlier one. Thus our temporal inner life is a kind of existence to which the principle that "the same cause must always be followed by the same effect" is irrelevant, since the required "sameness" can there never be wholly realized. Future time, again, is not, to one actually involved in the temporal process, "contained in" present or past; and to say that the entire content of the future is completely preformed in the present or past, that

> With earth's first clay they did the last man knead,

is simply to treat succession as if it were simultaneity, to abandon the point of view of real temporal experience, where the future always appears as in process of production through and partly by means of the present. The easy triumph of the old determinist arguments over the old freedomist arguments was due, Bergson holds, to the failure of the freedomist to utilize this distinction between the temporal and the spatial ways of thinking reality. Both parties, for example, "pictured the deliberation preceding choice under the form of an oscillation in space, while it really consists in a dynamic process in which the self and its motives, like real living beings, are in a constant state of becoming."

These reasonings can hardly be justly expounded, and they certainly cannot be adequately discussed, in brief compass. It may be remarked, however, that in his determination to make a complete severance between the temporal and the spatial categories, Bergson goes so far as to defeat his own purpose. To say that duration is pure quality with no quantitative aspect, and that its moments, though successive, are "without reciprocal externality," is itself a way of reducing time to simultaneity. Bergson's pages on this point at times singularly resemble the arguments by which Professor Royce has ingeniously sought to show that experience as a whole—the "Absolute Experience"—must be timeless.

The translation is as a rule faithful and readable. There are added a sympathetic preface by the translator and an admirably comprehensive bibliography of articles about Bergson's philosophy in several languages. The first presentation of this important contemporary to our public has been so well done that all readers of the book must lament the sudden death of the young Oxford scholar to whom we owe the service.

Mediæval Italy. By Prof. Pasquale Villari. Translated by Costanza Hulton. New York: Charles Scribner's Sons. $3.75 net.

The coronation of Charlemagne, the last event treated in "The Barbarian Invasions of Italy," forms the point of departure in Professor Villari's new work, which follows the fortunes of the peninsula to the time of the death of Henry VII. The book is written for the general reader, and offers a straightforward narrative, free from controversy and show of erudition, and based on thorough knowledge of the sources and on criticism of the results of modern investigation. The whole territory is constantly held in view. Southern Italy and Sicily are accorded—for the first time in a general history—their full share in the record. The orderly control of the many interrelated series of events is admirable. The book grows in interest and value toward the end. The concluding chapters clarify notably the events and the personalities of the late thirteenth century.

Professor Villari deals almost exclusively with men and arms. The whole period, in his presentation, is dominated by individual men, builders of states that disintegrate at the builder's death, politicians whose policies lapse into oblivion when the controlling mind is gone. Institutions appear externally continuous, but devoid of vital growth; Papacy and Empire hold power or sink into insignificance according as the men who wear the tiara or the iron crown are strong or weak. One could wish that more attention had been paid to non-military matters. The intellectual and religious life of the Middle Ages, the condition of the people, the development of commerce, even matters of such political importance as the feudal system and the conflict of the investiture, are treated hurriedly and with far less clearness than the general reader has a right to ask. In the single paragraph devoted to the Dominican and Franciscan orders (p. 267) they are differentiated only as being respectively bloodthirsty and tenderhearted. The implication (p. 266) that the "De imitatione Christi" was written in the time of St. Francis is unfortunate. Dante's "De monarchia," treated (p. 368) as of the time of the descent of Henry VII into Italy, was almost certainly not written before the last years of Dante's life. The comparison of Pope and Emperor to sun and moon, attributed (p. 259) to Innocent III, goes back at least to Gregory VII.

The translation has the prime virtue of accuracy. The only serious error is an arrangement of relative clauses which attributes to Sylvester II instead of to Otho III denial of the authenticity of the Donation of Constantine (p. 114). Sykelgaite should not be termed "high-souled" (p. 186) until she is quite cleared of her reputation for readiness with poison: high-spirited she certainly was. From the point of view of style the translation is very poor. The Italian is followed closely in wording, order, and punctuation, and the resultant English is strange and unpleasant. The Italian phrases on pp. 5 and 158 have no textual value, and should have been translated. The difficult matter of the anglicization of proper names is in general well-handled. "Walter Offamill" (p. 247) might well have dropped an *f* and changed the *a* to *the*. The typesetter is presumably responsible for the dates "1909" (instead of 1009) on p. 130, and for "1,506" and "1,528" on p. 348, for "sunt" instead of *sum* on p. 198, and for "civitatis" instead of *civitas* on p. 341.

The illustrations are well-chosen and well-made. The interesting frontispiece, from an ivory in which Otho I appears as a diminutive kneeling donor, should have a more explicit title than the somewhat misleading "The Emperor Otho I." The index is excellent.

With Stevenson in Samoa. By J. H. Moors. Boston: Small, Maynard & Co. $1.50 net.

Though Mr. Moors's copiously illustrated volume adds little of importance to our knowledge of Stevenson's character, it throws some light upon the avocations of his later years, and helps us to realize the Apian background. It is distinctly refreshing, too, because of the angle from which it was written. The author of these memoirs did not go to Samoa to hang upon the lips of Tusitala. As shopkeeper, dealer in real estate, local politician, and chairman of the Board of Works he was—is still—in the island on his own account. His plain, unvarnished tale proceeds from an interest which was rather neighborly than literary—we infer from some passing remarks that he is unacquainted with his neighbor's essay on Burns. Their relations, none the less, as the "Vailima Letters" and this book bear witness, were of the friendliest intimacy. They exchanged yarns and discussed local celebrities together, "generally in the evenings, as we sat in our pajamas on the balcony"; they conspired together against the German president of the municipal council; they collaborated on the materials for the "Footnote to History"; and Moors says, with a suggestion of pleasure in the reminiscence, that at one time Stevenson owed him above twelve thousand dollars. These are vital points of contact; Moors's opinion of his friend should be of some weight.

He finds it hard to believe in the canonized Stevenson proclaimed in the pulpits. The man he knew went to church only from deference to his mother, regarded the prayers at Vailima as something of a nuisance, was more himself in a paper-chase than in a Sunday-school on the Lord's day, looked upon the wine when it was red in the Tivoli Hotel, and was "surprised more than once in Bohemia"—whatever that may mean. Moors therefore cites with manifest delight the following brief but pointed epistle:

My dear Moors—

I hope to get down to-day, but the weather does not yet seem bordered up. We had a hell of a time yesterday; I wish the man who invented open eaves had been with us—I would have burned him to see to read by. Yours ever R. L. S.

All that this somewhat trivial testimony amounts to is that Stevenson, being neither a moral, intellectual, or social snob, was able to mix familiarly with all sorts of men on their own ground, and make them feel that he was no better than they. The defect of the critics who, like the late W. E. Henley, insist on the "real Stevenson" is their unwillingness to recognize his many-sidedness—their failure to understand that a man of letters may give to the wide world some sincere and precious part of himself which he cannot give to his nearest friends.

The most touching passage in this book is the chapter entitled "A Plan that Failed." Mr. Moors writes of the political troubles in Samoa from an inside view, but of the ladies at Vailima, we trust, from the outside. He could not help feeling that they were a little queer: for example, "the whole family—I except Stevenson's mother—worshipped at the shrine of 'My Lady Nicotine.'" What was worse, he thought, there was too much literary collaboration at Vailima. He felt a certain jealousy of the influence exerted by the women over the master of the house! And with the talent of a conspirator he bought a little island, and in 1893 secretly proposed to carry Stevenson off where he might work undisturbed and "accomplish something worth attempting"—

The important question was how to keep the ladies away from our island retreat, but he said he would manage it somehow. Meanwhile, I had myself visited Nassau, and had set a party of islanders to work. . . . Stevenson, longing for the peace and quiet of such a spot, evinced a lively interest in my account of these labors; and when we left the tower [where Moors had unfolded the plot] and rejoined our friends we drank

a quiet toast to our future happiness in Elysian fields.

This little dream of a literary paradise freed from the annoyances of Eve and her daughters was abruptly terminated by death. One may regard the affair as a bit of amusing gossip or as curious additional testimony pointing to that "other Stevenson" with the singular power of exciting personal devotion frequently verging on sheer idolatry.

Notes.

"The Life of Tolstoy," in two volumes, by Aylmer Maude, has just been published by Dodd, Mead & Co. It is a consecutive and detailed account covering the whole life.

Forthcoming books from the Oxford University Press include: "The Englishman in Greece," as a companion piece to "The Englishman in Italy," and "The Oxford Book of Ballads," chosen and edited by Sir Arthur Quiller-Couch.

D. Appleton & Co. announce for immediate publicaton "Farthest West: Life and Travel in the United States," by C. R. Enock; "On and Off Duty in Annam," by Gabrielle M. Vassal, and later "Egypt: Ancient Sites and Modern Scenes," by Professor Maspero.

Doubleday, Page & Co. are already announcing for the spring "The Children's Library of Work and Play," a series of ten volumes, each of which is to be written by an authority: "Carpentry and Woodwork," by Edwin W. Foster; "Mechanics," by Fred T. Hodgson; "Housekeeping," by Elizabeth Hale Gilman; "Metalwork," by C. C. Sleffel; "Needlecraft," by Effie Archer Archer; "Outdoor Sports," by Claude H. Miller; "Interior Decoration," by Charles F. Warner; "Outdoor Work," by Mary Rogers Miller; "Gardening," by Ellen Eddy Shaw; and "Electricity," by John F. Woodhull.

James Lane Allen's "The Doctor's Christmas Eve" is expected from the press of Macmillan November 30.

In "The Great Texts of the Bible," a new series in preparation by the Scribners, Dr. James Hastings contributes to each of the selected topics pages of homiletical exposition and illustration. It is proposed to cover the whole Bible in five years. The first volume, "Isaiah," will be published within a month. So far as the book has any one aim, it is to furnish material for sermons.

Volume XXIV of the publications of the Selden Society, Volume V of their Year Book Series, "The Eyre of Kent 6 and 7 Edward II," edited by Messrs. Maitland, Harcourt, and Bolland, will be issued in December.

The December issue of *Chambers's Journal* will contain an article by Canon Dawson on "The Morals of the Round Table; or, Malory's 'Morte d'Arthur,' compared with 'Idyls of the King.'"

As a companion volume to "American Duck Shooting" the Forest and Stream Publishing Co. is about to issue "American Game Bird Shooting."

Among B. W. Huebsch's announcements are "Democracy and the Overman," by Charles Zueblin; "The Philosophy of Plato and its Relation to Modern Life," by Edward Howard Griggs, and "Optimos," by Horace Traubel.

The Rev. Walter W. Skeat has issued a statement as to the present position of the Chaucer Society:

It appears that some of the books, upon the completion of which the regular issue for the various years depended, are not even yet wholly ready; and the result is that more money has been received than has been expended, whilst at the same time, subscribers for the years 1907-10, have not yet received the parts due to them; and a few of the issues for earlier years are still incomplete.

It has been decided therefore that the society will definitely come to a close, with the end of the present year. Such parts as are overdue will be issued at convenient opportunities. The society, which began work in 1868, was designed to publish what was most material for the study of Chaucer's text. In Dr. Skeat's opinion this has now been accomplished. The last five or six numbers embodied the results of investigations by Americans.

As a memorial to the late Dr. Furnivall, Leonard Magnus and John Munro, the deceased's literary executor, have suggested a volume consisting of a biography of the scholar written by Mr. Munro and appreciations by others. The list of those who have promised to contribute are Dr. Henry Bradley, Prof. Alois Brandl, Professor Feuillerat, Dr. T. Gregory Foster, Miss Beatrice Harraden, Prof. W. P. Ker, William Poel, A. W. Pollard, Prof. W. W. Skeat, Miss Spurgeon, Henry Arthur Jones, Mrs. Laurence Gomme, and Mrs. Stopes. Besides an edition at an ordinary price, there will be an *édition de luxe*. The subscriptions which are invited towards the expenses of publication may be sent to Leonard Magnus, 9, Gray's Inn Square, London.

Yet another account of the career of Joan of Arc is offered to the public by Mary Rogers Bangs (Houghton Mifflin). Her narrative eschews controversy and gives a purely objective statement of the facts as ascertained by recent research, couched, it is true, in the language of enthusiasm, but not colored by any attempt at systematic explanation.

To John Lane's attractive edition of the works of Vernon Lee is added "Vanitas, Polite Stories, Including the Hitherto Unpublished Story, A Frivolous Conversion." In these four short stories of souls enmeshed in the web of social circumstance the art of Vernon Lee appears with all its usual incisive delicacy, and with a somewhat exceptional grace of human compassion. Her worldly malcontents are always pathetic, and sometimes tragic. The last tale, "The Legend of Madame Krasinska," is of Poe-like intensity.

It is, for the most part, a sordid series of servants that come and go in the pages of Elizabeth Robins Pennell's "Our House and the People in It" (Houghton Mifflin). But, with the sordidness, there is so much of romance that a reader does not object to the author's retaining each successive specimen long enough for her story to come out, especially as this second-hand method of learning it inflicts a minimum of the disagreeableness that was plainly there. To an American, moreover, there is positive charm in the very definite atmosphere that envelops the chambers from which one may look out on the Thames, down at St. Paul's, up to Westminster, and opposite to Surrey. Then, besides the succession of servants, from 'Enrietter to the satisfactory and, one is glad to know, permanent Augustine, who receives the well-deserved honor of the book's dedication, there are the tenants, more respectable if less picturesque than the servants; the beggars, of that new and difficult sort that "make a profession neither of disease nor of deformity, but of having come down in the world"; and the microcosm that bears the name of the Quarter. An occasional comment, such as any servant-seeker makes now and then, does not detract from the essentially narrative character of the book. After the merciful end of one of these servants, the writer concludes:

No doubt, daily in the slums, many women die as destitute. But they never had their chance. Mrs. Haines had hers, and a fair one as these things go. Her tragedy has shaken my confidence in the reformers today who would work the miracle, and with equal chances for all men, transform this sad world of ours into Utopia.

He would be a churlish sportsman or nature-lover who did not enjoy E. P. Stebbing's "Jungle By-Ways in India" (Lane). Of the many other books on this subject, all save two or three are serious even unto dulness; but this is different. It is like the off-hand, rapid-fire talk of a good friend who has just returned from a camping trip, and finds pleasure in sitting opposite the reader, telling his stories very much at his ease, and illustrating with rough sketches and droll diagrams on the backs of envelopes. Besides the reproductions of photographs, there are many simple sketches by the author, and they are of the most abstemious sort. There is never a line that could be spared. Crude and rough though they are, they serve their purpose excellently, and even with the sambar stag, whose antlers as drawn represent a four-foot length, we do not quarrel, for that is the way big antlers often look to the hunter who sees them in the wilds. Many persons will regard these impressionistic sketches as one of the most interesting features of the book. Mr. Stebbing is a keen and truthful observer, and an honest chronicler of his own adventures. He has hunted about all kinds of India big game south of the Himalayas, and he has vivid stories to tell of the home life of elephants, tigers, leopards, bison, sambar, axis deer, barasingha, bear, wild dogs, monkeys, and other species. His sense of humor is as rare—in books of big-game hunting—as it is welcome to the reader. He calls the barking deer "a funny little beggar"—as it is—and the cheerful confidence of the unconventionality is really refreshing.

In "Second Chambers: An Inductive Study in Political Science" (Frowde), J. A. R. Marriott takes for granted that a bi-cameral legislature is essential to the continuance of democratic government. He bases this assumption not on any abstract considerations but on the practical unanimity with which the system has been adopted by the civilized world. His object is primarily to explain the functions of the existing Second Chambers, and secondarily, to reach some conclusions which may assist in solving the

burning question of the reform of the House of Lords. It may be doubted whether the appeal to history is as conclusive an answer to those who desire the abolition of the House of Lords as the author claims. In the great majority of instances quoted, the second chamber finds its reason of existence in the federal character of the country under consideration; in many others, to the country's strongly monarchical and undemocratic nature. France is, perhaps, the only modern democracy where a more or less successful attempt has been made to organize a chamber which may be said to represent the great social and industrial interests in the country. But none of the proposals made for the reform of the House of Lords, which are discussed at length in this work, would result in the creation of a chamber of this character; they might cause the exclusion of some of the notoriously unfit, but would not, certainly as long as the hereditary principle is not entirely abandoned, procure the creation of a really representative body, capable of checking effectually the power of a democratic House of Commons. In fact, at the end of the book, the author virtually gives up his case, and admits that it is seriously open to question "whether restriction of the powers or alteration of the structure, or both in combination," will compose the constitutional differences. He admits that there is a considerable party which favors the referendum in place of such reorganization. The fact that such a new and untried experiment can find such support, would seem to indicate that sentiment rather than reason dictates the statement in another part of the work that the question of the abolition of the House of Lords is outside of the domain of practical politics.

Former students at Yale as well as those of the present generation will not be displeased at the appearance of a "new and further enlarged edition" of Prof. Henry A. Beers's "The Ways of Yale in the Consulship of Planeus" (Holt). Written without ulterior motive and distorted little, apparently, even by the glamour which usually attaches to retrospect, the book commemorates instructively a time that is no more—a time, that is, when the college world was rather more than now a law unto itself. The curriculum was built upon the ages, with its elements of Latin and Greek and mathematics and philosophy and science, and feared no encroachment from the fluttering changes and demands of the outer world. Then Socrates and Plato, reincarnate, waged war on error, and another Horace quaffed ale into the night, while New England snows fell, feeling that peace that passes all understanding. All in all, it was a simple life they lived, with the perspective created by acquaintance with former times actually shaping their judgments of present needs. Athletics ran their course, even intercollegiate athletics, without usurping first importance. The thing that strikes one most in the book is that, whatever a boy's propensities, whether to grinding or idling, his joys and sorrows were closely connected with the intellectual atmosphere of the college.

The author of "The Spaniard at Home" (McClurg), Mary F. Nixon-Roulet, aims to depart from the point of view of the ordinary tourist and to describe Spain, for the first time in English, from the standpoint of the native. A praiseworthy undertaking if the writer be qualified for the task. Unfortunately she proves her incompetency on nearly every page. The first thing to strike the reader's eye is the ignorance displayed of the Spanish language. To give a list of her errors would be useless. Most of them are repeated several times, so that they are scarcely to be ascribed to bad proof-reading, although misprints abound. When the author makes such a mistake as to write *parita* for *perrita* or *semule* for *sémola*, it is apparent that she has learned by ear a few words and phrases and written them down without troubling to look them up in a dictionary. One chapter is entitled Fetes and Festas! *Bebe* is not a Spanish word, as the author seems to think. All told, the reviewer has noted 274 similar errors in the use of Spanish, an average of nearly one mistake to a page. It is needless to say that an author so ignorant of the Spanish tongue is utterly unqualified to discourse upon Spanish literature. That chapter might better have been omitted. In the chapter on education, pages 249-251 are taken almost bodily out of Fitzmaurice-Kelly's "History of Spanish Literature" with neither quotation marks nor credit. If it were worth while, the "deadly parallel" might here be employed with telling effect. The Spanish point of view appears in an apology for the bull-fight, the argument being the usual one that other sports, too, are cruel. The best chapters are those devoted to descriptions of life and customs, but these pages also are replete with misinformation.

"The Book of Friendship" (Macmillan) is an anthology of verse and prose in twelve parts, covering such diversities of the friendly relation as Childhood Friendships, Inarticulate Friendships, Friends in Need, Brothers in Arms, Odd Companions, and Boon Companions. Nor are its sterner possibilities blinked, since the section entitled When Friends Are Parted includes Austin Dobson's "Dr. Johnson and Mrs. Thrale" and Browning's "The Lost Leader," as well as "David's Lament for Jonathan" and Shakespeare's "When to the sessions of sweet silent thought." But the bulk of the little volume is made up, as is fitting, of selections concerned in one way or another with friendship's happier moments. These selections range from the abstractions of Emerson and Carlyle to the facetiousness of Horace, the animation of Dumas, the seriousness of Thomas Hughes, and the delicacy of Stevenson. And while no anthology is to be swallowed whole, or even read very consecutively, this one presents the characteristic agreeableness of this literary form in the piquant incongruity of successive selections. Frederick Denison Maurice's "Friendship of Books" loses nothing by following Cowper's "Epitaph on a Hare." The drawings, by W. T. Benda, are in good taste and add to the value of the pages they adorn, but the introduction, by S. M. Crothers, is rather labored. Its place might well be taken by something of the same writer less formally, if at all, introductory.

From the office of the *Publishers' Weekly*, the American agents, we have received "Whitaker's Reference Catalogue of Current Literature" for 1910. This, as is well known, consists of the catalogues of the English publishers (there are 195 houses represented in this issue) bound together in two large volumes. The Index, by authors and titles, now occupies a third volume, itself of more than a thousand closely printed, double-column pages.

In his "Strikes: When to Strike, How to Strike" (Putnams), Oscar T. Crosby makes an attempt to discuss in a simple manner such fundamental questions as the morality of the strike, the purpose of the union, and the nature of the boycott and picket. Although the volume doubtless will fulfil the author's purpose to "help a few busy men, wage-earners, and wage-payers, to clearer vision and wider charity," it is far from being comprehensive, and gives the impression at times of being hurried.

Walter Sichel's "Sterne: A Study" (Lippincott) rests its claim to existence upon two grounds: a presentation of fresh material about Sterne and a fresh characterization of Sterne. It does not justify itself upon either ground. The professedly new material is either not new or not important. It is unimportant that Mrs. Sterne was a cousin of Mrs. Montagu, the "Queen of the Bluestockings." It has long been known that Mrs. Sterne was "gey ill to live wi'." It is unimportant whether Sterne went abroad with a pupil just *before* or just *after* his marriage (p. 34n), and whether "D'Estella" was *in* York or *near* York (p. 34n). It is unimportant that Sterne changed his opinion of Dean Fountayne (pp. 110-112); that his "dear Kitty" de Fourmentelle may have been a kinswoman of Richard Berenger (p. 132), and may have written to him a letter puffing "Tristram Shandy" (p. 135), and may have sung at Ranelagh some doggerel composed for her by Sterne (p. 147). Upon Mr. Sichel's early rather than late dating of Sterne's acquaintance with Warburton (p. 155), Mrs. Vesey (p. 166n), and Selwyn (p. 251n), rests no such radical difference in one's estimate of Sterne as does rest upon Professor Cross's early dating of Sterne's flirtation with Lady Percy. Nor does it matter greatly that "Janatone," the innkeeper's daughter of Montreuil, probably married, and went to England, and met Eliza Draper (p. 245). These chronicllings of small beer possess interest enough to justify their being communicated, say, to *Notes and Queries*—not enough to justify a book. They are meagre gleanings of a field which Professor Cross has harvested. Though Mr. Sichel's footnotes everywhere acknowledge his obligation to Cross's "Life," he seems not to have seen Cross's edition of Sterne's Works (1904; reprinted 1906). This edition contains the letters which Mr. Sichel cites from the old editions, and all but an inconsiderable one or two which he cites from supposedly unpublished MSS. Moreover, it arranges the letters chronologically; so that Mr. Sichel is mistaken in supposing (p. viii) that they "have been left dishevelled." Finally, it contains the "Journal to Eliza," which Mr. Sichel believes himself to be publishing for the first time (pp. viii, 17). A closer study of Cross's "Life" would have prevented other blunders. We should be glad to learn, too, how Mr. Sichel knows that "'Slawkenbergius' is an actual person" (p. 208). We had supposed him to be a creature of Sterne's brain. By way of characterization and criticism this book likewise offers, for the most part, matter that is either trifling or not new, or, if new, unduly expanded. Altogether we can see no justification for this biography of Sterne.

Gordon Home's "Motor Routes of France" (Macmillan) exactly meets the needs created by the new method of road travel. For the route covered—from Havre, by Rouen, through Touraine to Biarritz, a short excursion over the Spanish frontier to Pamplona and San Sebastian, the northern slopes of the Pyrenees, Provence, the Riviera, and back to Dieppe by the valleys of the Rhone and Loire—it is a complete guidebook for the motorist. The practical notes, hints on touring, road warnings, and directions for drivers are supplemented by a log of the author's car, and each day's run has a map on which are to be found precisely those details required by a novice on the road. The type is large, yet the volume can easily be slipped into an overcoat pocket. The book is evidently the result of large experience, and the descriptive and historical text is equally well done. It is to be hoped that the author will be encouraged to do for other parts of Europe open to motor travel what he has done in this book for France, and in previously published ones for England. The colored illustrations add to its attraction.

"Ribbon Roads" (Putnam), by A. T. and B. R. Wood, is another story. It has no value for the motorist, being simply a pleasant account of a motor journey whose practical side receives no attention. It belongs, in short, to that amazingly large class of books on travel for which there is no discernible *raison d'être*. How many travellers in any land—Spain, for instance—leave an indelible record of their impressions? or how many impressions are worth such a record? The few of permanent value, even though they be, like Gautier's, out of date, can be counted on the fingers. The rest are writings on sand. Mr. Home's book possesses distinctive value, and is designed to meet a real need. "Ribbon Roads" may be classed with the letters from abroad which, before the days of motors and Lusitanias, filled the magazine page of the weekly newspaper.

A few months ago the Gesellschaft der Bibliophilen sent out to its members, as one of its regular publications, the third and concluding volume of "Schillers Persönlichkeit." The work was originally planned and undertaken for the society by Prof. Albert Leitzmann of the University of Jena, who set out to collect Schiller's recorded conversations and all the authentic accounts of significant facts in his life, as well as the utterances concerning his personality based on immediate association and impressions. Becoming too much absorbed in other scholarly pursuits, Leitzmann resigned the task in favor of Max Hecker of Weimar, who brought out the first volume in 1904. When the second volume was well under way Hecker was in turn forced by his duties as collaborator on the Weimar edition of Goethe to turn over the completion of the collection to a third editor. Julius Petersen of Munich has seen it through to the end. The student of Schiller will find in these three volumes, conveniently arranged and carefully edited, the widely scattered original sources, some hitherto unpublished, which, together with the poet's works and letters, comprise the raw material of a Schiller biography. Purely literary notices of contemporaries, that throw no light on Schiller the man, are excluded from the compilation, so that, except for one newspaper extract, there is no overlapping with Braun's three-volume "Schiller im Urteile seiner Zeitgenossen." The notes contain a list of sources with their earliest publication and important variant readings, and refer to some of the more important literature on various documents, without attempting to abstract all the accepted results of critical research in this field. They further correct some of the errors in the documents themselves and furnish some commentary on points that need it. A full index adds to the convenience of the work for reference. The print and paper are of a character well calculated to delight the eye of the true bibliophile. Although the whole work will not take the place of an interpretative biography, it does enable the reader to obtain a vivid picture of Schiller in his every-day life and at his work, seeing him through the eyes of his contemporaries and hearing him through their ears. It deserves the same warm reception in America as has been accorded to it in Europe, but, unfortunately, like the other publications of the society, it will not be obtainable through the ordinary channels of the book trade, except occasionally at second hand.

One of the books of real value evoked by the Risorgimento semi-centennials, which Italy has been celebrating, is "Milano e la Lombardia nel 1859," by Col. Carlo Pagani (Milan: Cogliati). While the author's forte is military criticism, he shows a thorough acquaintance with the political situation during the momentous year when Cavour forced Austria to declare war and Napoleon III to champion the Italian cause. Col. Pagani refers to much material not easily accessible on this side of the water. His opinion, evidently formed with deliberation, carries weight. We note that he maintains the traditional Italian contentions, first, that the Piedmontese troops reached Magenta in time to give the Austrians their quietus, and, next, that they drove Benedek from the heights of San Martino, after the French were already victorious at Solferino.

The Rev. Francis Dent died last Sunday. He was born in Ireland in 1840; came to this country when nine years of age, and graduated from the College of the Franciscan Monks. With Fathers Leo and Eugene, he founded the first Italian mission in this city. After a year, as father superior in the Franciscan home at Winsted, Conn., he had charge of a church in Hartford. He went to Rome in 1878, and lived there until 1906, and was present at the burial of Pope Leo XIII and the coronation of Pius X. Father Dent was the author of several books on religious subjects, one of which, "The Temporal Domain of the Popes in the Divine Plan," won him leather seals from Popes Leo and Pius. He was engaged at the time of his death in writing the last chapter of "The Blessed Virgin."

Wilhelm Raabe, the novelist and writer, died last week in Brunswick, Germany. Known under the pen name of Jacob Corvinus, he started to write in 1856, and, oddly enough, his first work, "Die Chronik der Sperlingsgasse," proved to be most in demand, having reached in 1905 the forty-first edition. "Der Hungerpastor" has passed through twenty-five editions. Many of his stories are in two volumes, some even in three. One of his best books, "Horaker," shows successful humor. Other characteristic stories are "Abu Telfan" and "Der Schüddcrump." On his seventieth birthday, in 1901, the University of Göttingen honored him with the doctor's degree.

Science.

Methods of Attracting Birds. By Gilbert H. Trafton. Boston: Houghton Mifflin Co. $1.25 net.

This is a practical discussion of the subject of befriending birds in winter as well as in summer, and, from the point of view of the birds, is especially timely just now. Mr. Trafton remarks that

the reasons for attracting birds around our homes are twofold: first, the protection of the birds, and second, the resulting benefits that accrue to man, both on account of the great economic value of these birds to the farmer in his struggle with injurious insects, and also on account of the pleasure derived in helping and watching the birds.

Mr. Trafton gives special attention to the economic factor. He says that

the progressive farmer does not begrudge the expense entailed in securing a spraying outfit and the annual outlay involved in its use. With an expense so small that it hardly needs to be taken into account, the farmer may have very efficient insect-destroyers in the flocks of birds which may be attracted around the farm—destroyers which do not require the time and supervision of the farmer to render them effective, but which of their own accord are constantly at work from sunrise until sunset, freeing the farm from its insect enemies.

It needed no expert ornithologist or entomologist to make this discovery; anybody who is at all intelligent about birds knows that they are indefatigable in the destruction of harmful insects; and yet the actual number of persons who have a really clear appreciation of this important fact is amazingly small, and includes an infinitessimal percentage of farmers—the very ones who are most concerned. Mr. Trafton's little book is, therefore, in its purely economic aspects, a valuable contribution to agricultural literature, and its usefulness is heightened by the simplicity of its style, the clarity of its descriptions, and the practicability of the devices suggested. Nesting-houses of various kinds, so designed as to attract the especially useful birds, like the swallows, blue-birds, chickadees, martins, and wrens, and costing but a trifle, are described and pictured by means of line-cuts and half-tones, and there are also chapters on Attracting the Winter Birds, on Drinking- and Bathing-Fountains, on Planting Trees, Shrubs, and Vines, Bird Protection in the Schools, and Bird Photography. Mr. Trafton acknowledges his indebtedness for many suggestions

to such well-known ornithologists as Frank M. Chapman, Dr. A. K. Fisher, Ernest Harold Baynes, and Edward H Forbush, while his book was prepared

"with the support of the National Association of Audubon Societies after consultation with its officers, with whose express approval it is now issued."

The Cambridge University Press is to bring out "Principia Mathematica," by Dr. A. N. Whitehead and Bertrand Russell, a work whose aim is "to show the dependence of mathematics upon logic by deducing from purely logical premises the elementary propositions of its various branches." The first volume, which is soon to appear, is entitled "Mathematical Logic and Prolegomena to Cardinal Arithmetic"; the second volume, "The Principles of Arithmetic"; the third, "The Measurement and the Principles of Geometry."

A new and revised edition of "Diophantus of Alexandria," by Sir T. L. Heath, is promised by the same press. This will be most welcome, as the previous edition is now out of print.

"The Farm Book," written and illustrated by E. Boyd Smith, which will be issued by Houghton Mifflin Co. November 26, undertakes to interest Bob and Betty and other juveniles in ploughing, reaping, milking, and all the rest of farming.

The leading article in the *National Geographic Magazine* for November is a description of scenes of every-day life in Korea and China, by William W. Chapin. Of its fifty illustrations, thirty-nine are in color, reproductions of photographs colored by a Japanese artist. The value of lignite as a new source of power, if burned in a gas producer, is demonstrated by Guy E. Mitchell.

"The Science of Living, or the Art of Keeping Well" (McClurg) is the rather appealing title under which Dr. William S. Sadler succeeds in giving an extraordinary amount of information in about four hundred pages. He skips gayly from one topic to another, often with a dubious generalization or a happy disregard of fundamentals. On the whole, however, it may be said that in most matters the essentials are given in such a way that the reader is not dangerously misled. Many writers of repute are drawn upon, but not always with perfect understanding, and the numerous illustrations darken the text quite as often as they illuminate it. Selections of food and diet are treated at some length and with details and tables not easy for the general reader to understand. Dr. Sadler, a frank "two-mealer" and a believer in a low protein level of requirement, appears to recommend a food supply which gives too few calories. He asserts that most of us have a "protein habit" and have developed a kind of "protein tissue intoxication." A certain heredity of this habit is held to explain racial differences in diet, an explanation whose ingenuity is more apparent than its validity. The author gives ten sample breakfasts and dinners, each estimated to contain a thousand calories, and also other tables of food values which the beginners will not readily interpret. The "menus" are vegetarian in character, but are not strictly orthodox. The epicure will find them entertaining and curious, but he will hardly feel himself seriously tempted to give them a trial.

The death is reported of Felipe Valle, director of the Mexican National Observatory at Tacubaya.

Drama.

PROTECTING NATIVE DRAMATISTS.

It is not likely that much more will be heard of the latest agitation in favor of some plan—apparently a trade conspiracy—for the protection and encouragement of the native American dramatist. In the first place, it does not seem to have any backing except that of an inconsiderable performer, who has profited largely by the use of foreign material, and, in the second place, it proposes the application of a boycott against all foreign plays which, without the aid of inconceivable legislation, could not be proclaimed, and could not, in any circumstances, be enforced. This protection idea, of course, is rooted in utter fallacy—for art does not need coddling for its development, but fair and open competition—but it is so common that it may be worth while to cast an eye over the existing theatrical situation and see how the case stands.

The first point to keep in mind is that the interests of the public at large, not of a restricted class, are paramount; the second is that it is useless to fight against the law of supply and demand. Broadly speaking, the best plays of their class—there are exceptions, of course, to every rule—will yield the largest commercial return. If plays of foreign origin make the most money in the United States—a proposition which is by no means universally, even if it be approximately, true—the logical presumption is that in the public judgment at least they are of superior quality. As a plain matter of fact, they very often are. It is little short of idiotic to suggest that they ought to be excluded, in order that inferior compositions might enjoy a monopoly. The truth is that within the last half-a-dozen years substantial fortunes have been made in this country by young dramatists with crude sensational pieces exhibiting the worst characteristics, while devoid of the artistic workmanship, of their foreign prototypes. Many of these have been destitute of any redeeming feature, some of them have been vile enough to be stopped by the police. On the other hand, it is most pleasant to know, many native dramatists, within the same period, have won fortune with genuine American plays, both serious and comic, which were not only innocent, but of substantial dramatic and artistic merit.

It is clear, therefore, that the American drama has not been suppressed, but is growing. That it has been hampered cannot be disputed. So has the English drama, and much in the same way. But one reason—not the only one, however—why English and Continental plays occupy so many of our theatres, is that the theatre is an older institution on the other side of the Atlantic than it is here, and the dramatic output there is larger. There is also in Europe a larger body of play-writers of established reputation. A comparison of the English and American fields would show that the former is much the richer in older men of proved dramatic ability.

But there is abundant promise in the swelling ranks of the younger men in this country. It is too soon yet to pronounce final judgment upon the abilities of such sensationalists as Eugene Walters, Edward Sheldon, Rupert Hughes, Jules Eckert Goodman, Porter Emerson Brown, J. Hartley Manners, and W. J. Hurlbut. They are all suffering still from the exuberance of youth and have not learned how to distinguish between strength and violence. But they all show signs of dramatic instinct, as well as a keen sense of theatrical situation, and when, with experience, they have acquired moderation, they may all go far. C. M. S. McLellan may yet add to the reputation which he earned with his "Leah Kleschna." John Corbin, in his "Husband," furnishes a pledge of much higher achievement in the near future. This is an immature work, but evinces grasp of form and power of expression, and is marked by clear and courageous purpose. Thompson Buchanan reveals humor, originality, and theatrical capacity in "The Cub." Rachel Crothers has demonstrated ability of no common order in "The Three of Us" and "A Man's World." She is observant, imaginative, humorous, and creative. Edward Knoblauch has written "The Shulamite." Butler Davenport came near to writing a first-rate comedy in "Keeping Up Appearances," and there is true comedy in the "Her Husband's Wife" of A. E. Thomas. Charles Rann Kennedy, a new American, has written two of the most remarkable plays in the last decade in "The Servant in the House" and "The Winter Feast." And then there is Percy MacKaye, the author of "Sappho and Phaon," a piece of high artistic and dramatic merit, and "Joan of Arc," an eloquent and imaginative romance. Unfortunately, his genius is wayward and has strayed of late in perverse and unprofitable ways, but nevertheless it is a force to be reckoned with. On the whole, the native playwright does not appear to be greatly in need of protection. He has to face a powerful opposition, but that is wholesome, and ought to be inspiring.

But he, in common with his English rival, does need a fair measure of opportunity. It is not opposition that is hurting him, but the lack of it. The

whole stage in England and America is groaning and smothering, because the greedy, ignorant, and demoralizing commercial system, which has no other principle than the seizure of the immediate dollar, and no regard for either art or morals, has secured the control of the majority of the theatres of both countries, and so made itself the arbiter of what shall be played and who shall play it. The public virtually no longer has a voice as to the character of the dramatic entertainment which it prefers. "Runs" are a matter of preordination. If a play fails in one city, it is not withdrawn, but is started on its predestined circuit. In this respect one syndicate is just as evil as another. The "long run" is equally fatal to the development of actors and the creation of dramatists. The sooner the opposing syndicates cut each others' throats, the better for actors, writers, and audiences. What the American playwright should pray for, is not protection, but a free fight. And there are signs that it is coming.

Walter Prichard Eaton, for several years an industrious writer on dramatic subjects in the daily and periodical press, has revised a number of his essays and collected them in a volume entitled "At the New Theatre and Others" (Small, Maynard & Co.). On the whole—although many persons of wider experience than the author will disagree wholly with some of its judgments—it is a clever and entertaining book, full of sharp observation and lively humor and a wholesome spirit of independence. Mr. Eaton at least knows the contemporaneous theatre well, has ideas of his own and expresses them with indisputable ability, if with a somewhat injudicious dogmatism. Some of his dicta, for instance, on the old and modern schools of acting, the meaning of versatility, etc., would have been greatly modified, doubtless, if he had had any actual acquaintance with the more finished players, on either side of the Atlantic, of forty or fifty years ago. He has some trenchant and true observations on the evil wrought by the syndicate system, and on the benefits of the open theatre, but is, it may be feared, somewhat too sanguine concerning the immediate outcome of existing managerial rivalries. One syndicate is very much like another. But, of course, opposition is a good thing in itself. His estimates of the genius of some modern stars need not be disputed, but they will not be approved by veteran playgoers. About the work of the New Theatre he writes with point and discernment, and his papers on Clyde Fitch and Augustus Thomas are both excellent.

Sir John Hare writes to a London journal as follows: "I shall be extremely grateful if you will contradict a statement, which I believe has emanated from America, to the effect that I am to visit that country professionally in the spring."

Gustav Amberg announces that he has completed arrangements with the management of the Irving Place Theatre by which Herr von Possart will appear at that playhouse for a special engagement of two weeks, beginning on Monday, December 26. Herr von Possart, who is in the front rank of living actors, brings his own complete company, and will make a brief tour of the principal American cities. His repertory will include "The Merchant of Venice," Shylock being one of his most famous impersonations; "Nathan the Wise," "Friend Fritz," and "Fallissement," by Björnsen. With all these plays his name has long been associated in the minds of Germanic playgoers. He comes to America only by special permission of the Prince Regent of Bavaria, without whose consent it is not possible for him to appear outside his native country. His company is recruited exclusively from players in the regular organizations of the Court Theatres in Munich and Berlin.

Bernard Shaw's new play, "The Dark Lady of the Sonnets," is to be presented for the first time, in London, by the National Shakespeare Memorial Committee, at two matinées, organized for the benefit of the scheme. The author himself speaks of his piece as merely an interlude, which in performance will last only half an hour. The characters are limited to four—Queen Elizabeth, Mary Fitton (the Dark Lady), Shakespeare, and a Beefeater. The theory that the Dark Lady was Mistress Fitton has been adopted, and Mr. Shaw has availed himself of the opportunity to attack the notion that Shakespeare was an illiterate. Shakespeare, according to Mr Shaw, was the son of a merchant, who considered himself a gentleman, and married a woman of good family, who considered herself a lady, at a time when the modern conception of a middle class did not exist.

The success of the latest play of H. H. Davies, "A Single Man," which has just been produced in London, seems to depend largely upon the power of a single scene. It opens, apparently, in a vein of clever but not very sincere light comedy. A middle-aged bachelor falls in love with a pretty little girl, not yet out of her teens, and, being shy, begs his typist to undertake his wooing for him. She fulfils her task with an earnestness which shows how much her heart is set upon her employer. Succeeding in her suit, she cannot bear the contemplation of his happiness, and soon the old bachelor begins to think that he, too, may have made a mistake. One evening, as the typist is about to leave him, and he is preparing to dine alone, he asks the former to share his solitary meal, and, with the first sip of champagne—an unknown liquor—her tongue is loosed and she betrays the love that is in her. This scene is said to be managed with charming delicacy and imagination, and to raise the whole play to a higher level. And it is admirably played by Cyril Maude and Hilda Trevelyan.

The death is announced from Rome of Henrietta Hobson, once a very popular English actress, and for many years the wife of the well-known Henri Labouchere, the editor and owner of London *Truth*. In 1860 it happened that she and one other—Henry Irving—were picked together out of a crowd of applicants by the manager of the Theatre Royal, Manchester. Bristol was another of the towns where (those being the days of stock companies) she learned her business and won admirers. She was among the many well-known players who at one time or another appeared on the stage of the old Prince of Wales's Theatre under the Bancrofts; but her chief successes were won at the Queen's Theatre, in Long-acre. She was one of the brilliant company brought together by Alfred Wigan to play in that theatre at its opening in 1867—a company which included also Henry Irving, Ellen Terry, Charles Wyndham, Lionel Brough, and J. L. Toole. Later she herself assumed the management of the house. One of her productions was Mr. Labouchere's version of Sardou's "Patrie," called "Fatherland," in which she played with great success the part of Dolores (Countess Rysoor). After her retirement her days were spent chiefly at Pope's Villa, Twickenham, and later at Mr. Labouchere's villa near Florence.

Music.

Correct Principles of Classical Singing. By Max Heinrich. Boston: Lothrop, Lee & Shepard Co. $1.50 net.

My Voice and I. By Clara Kathleen Rogers. Chicago: A. C. McClurg & Co. $1.50 net.

Most people think it must be great fun to be an opera or concert singer, but Sir Charles Santley wrote at the age of seventy-four that no gold or applause could repay the toil and the disappointments of a singer's life. Judging by his descriptions and those of other great artists one gets the impression that singers, every time they appear in public, have to endure hours of mental agony comparable to that of a man awaiting the hour when he is to be hanged; and few, if any, are exempt. Max Heinrich, admired for thirty years as one of the best of oratorio and lieder singers, declares that he has known nearly all of the celebrated singers and players of our time and none of them was exempt from this battle with the nerves. Young singers are assailed by it fully twenty-four hours before the actual moment of the ordeal:

> A beating heart, flushed cheeks, spasmodic respiration . . . sometimes literally to the point of nausea; . . . the restless, perturbed sleep of that last night before the concert; the fear of the critic; the fast-approaching hour; at last the moment of actual appearance—heart in mouth—ah! who among you has not been condemned to live through this agony?

Stage-fright is only one of the many difficulties that confront singers. Mr. Heinrich divides these difficulties into two kinds, the mechanical and the intellectual. Under the first head come voice production and placing, and breath control; under the second, phrasing, diction, tone color, and personality. To each of these he gives a chapter, writing about it in a rambling way. While correct voice production and placing are of the utmost importance, he thinks most students give too much time to it, to the neglect of the intellectual problems—those which make an artist of a singer. The author relates, with pardonable pride, how he once sang for the

redoubtable Hans von Bülow. Beginning with a Schubert song, he added another, and followed it up with one by Schumann. Bülow came closer to the piano, but made no comment till Mr. Heinrich (who was playing his own accompaniments) got to the middle of Brahms's "Wie bist du, meine Königin?" when the great pianist suddenly hit him forcibly on the back and exclaimed: "You are a liar! You said you were a singer! You are not a singer; you are an artist!"

What Bülow meant by this becomes clear to any student or teacher or mature singer who will read this book. Max Heinrich is a singer of the Wüllner type; he showed to Americans long before Dr. Wüllner crossed the ocean that there are things in vocal music more important than a beautiful voice—more important not only from an æsthetic point of view, but as a means of swaying an audience and making every one eager to come again. After discoursing on diction, on the art of coloring tones, and the meaning of personality, the author proceeds to discuss oratorio singing, with especial reference to the traditions relating to recitative. He speaks scornfully of opera singers who flounder when attempting oratorio, which, like Ffrangcon Davies, he evidently regards as a higher form of art than opera. Whether it be so or not, need not now be discussed. Recognizing the importance of details, Mr. Heinrich devotes the last hundred pages of his valuable little book to excerpts in musical type, from oratorios and songs, with hints as to coloring, phrasing, diction, and breathing. An important feature in these directions is the use of special signs to indicate not only where the singer is to breathe, but where he is not to do so, untimely breathing being the most frequent cause of incorrect phrasing, which both mars the melodic curve and makes the words unintelligible.

Clara Kathleen Rogers's book is also concerned with those higher problems of singing which have come more to the fore since Dr. Wüllner visited us. It is dedicated "to those who follow art not as a means of distinguishing themselves, but of fulfilling their highest possibilities." By inheritance and experience she is well qualified to write on the art of singing. Her father, John Barnett, is referred to by Grove as "the father of English opera," and her musically gifted mother was a daughter of the famous violoncellist, Robert Lindley. She studied under such eminent teachers as San Giovanni and Hans von Bülow, sang in opera and concerts with the Parepa Rosa and other companies, and finally became a teacher. Her stage name was Clara Doria, and she was born in 1844. Seven years ago she wrote a book entitled "The Philosophy of Singing," which was favorably commented on.

Her new volume is not so egotistic as its title, "My Voice and I," might seem to indicate. There is nothing personal in the book, her own voice and art not being referred to at all, although she does introduce here and there valuable illustrations drawn from her long experience as a teacher. In choosing that title she was guided by the desire to indicate that, unlike most writers on the art of singing, she wished to discourse on the relation of voice to the singer rather than on its relation to its physical organ. Laryngology is useful to throat specialists, and teachers should know about it, as an aid in locating faults of tone production; but students are not only not helped by such knowledge, but actually hindered. What they need is a model; they must have opportunity to hear good singers and thus get into their minds correct ideas of the tones they wish to emit, whereupon the throat muscles will instinctively produce them. This is supposed to have been the "old Italian method."

In his "Psychology of Singing" David C. Taylor developed the same idea; and it is surprising that Mrs. Rogers does not refer to his book. However, her treatment of the same theme has many interesting features, and there is much additional information and discussion of value to all singers and teachers. Her remarks on the superiority of dramatic singing to merely beautiful singing are particularly commendable.

Mrs. C. Milligan Fox has been busy among the peasants of Ireland noting down folk songs, not a few of which, she is convinced, have never been put into type. She has in press a book entitled "The Bunting Papers and Memories of Irish Harpers," and will lecture on this topic in American cities this season.

Another American has been honored. Paderewski, who last July presented Poland with a magnificent monument to the Polish kings at Cracow, was to have given a recital at the Chopin centennial in Lemberg, but owing to an attack of rheumatism, he had to give up the project. Asked to name the pianist whom he would prefer to take his place, he suggested Ernst Schelling, who was at once accepted by the committee. He gave a Chopin recital, which justified his selection.

Concerning Lillian Nordica's brilliant success as Isolde at the Paris Grand Opéra, the London *Telegraph* says:

The student element in Paris took special interest in the venture, and there were scores of pupils of the Conservatoire and of all the famous teachers to be seen among the audience. They were not the least impressed by the extraordinarily pure and perfect rendering of the title rôle. The singer's voice was as superb as ever. Her method, her style, and her masterful art were a revelation to the young aspirants to the operatic stage, whose number is legion in Paris.

By way of celebrating the seventy-fifth birthday of the greatest composer (with the exception of Bizet) that France has ever produced, a Saint-Saëns concert was given in Paris a few weeks ago, in which Ysaye and Hollmann took part. The programme included a new work by the aged master, entitled "The Muse and the Poet." He calls it a symphonic poem, but it is really a concerto for violin and violoncello, with orchestral accompaniment. The themes are said to have a melancholy character. Other works by Saint-Saëns played on this occasion were the symphonic poems "Phaeton" and "Omphale's Spinning Wheel," the "Andromache" overture, the "Heroic March," the violoncello concerto, and the "Rondo Capriccioso."

Art.

MR. VEDDER'S REMINISCENCES.

The Digressions of V. Written for his own Fun and that of his Friends. By Elihu Vedder. Many illustrations by the author. Boston: Houghton Mifflin Co. $6 net.

At the beginning of this book the banner of whim is flaunted in a most curious combination of prefaces and perorations interlarded with digressions. Mr. Vedder is open-hearted; the wholly decorous or systematic reader is eliminated at the outset. Throughout the recollections the method is circular. No association is resisted; far-away events are linked together in surprising fashion, yet the whole gives a fairly unified impression of shrewd and delicately self-conscious old age groping tenderly back for the vestiges of youth and more vigorous manhood. To increase the composite character of the story, poems in the artist's lettering, with pictorial settings, are interpolated as half-titles to the main sections. Of course this autobiography, depending not on journals but on memory, is emphatically "Truth and Poesy," but the many ingredients combine in a portrait essentially consistent and credible.

The most charming part of an autobiography is likely to be the childhood chapters, and Mr. Vedder's is no exception. His own childhood was passed between old New York, the still Dutch town of Schenectady, whence the family sprung, with casual schooling at Moriches, Long Island. We glimpse the manners of a simpler time, and catch some racy tang of characters rich in idiosyncrasy. The inventive streak in Elihu Vedder is ascribed to an ill-balanced English uncle, who left the lad as inheritance a kind of alchemist's laboratory and the quest of perpetual motion. What made young Vedder a hero among the boys was his Cuban trips. There his father sought an uncertain fortune, while the motherless boy varied an erratic schooling with deep draughts of tropic indolence. Of this life Mr. Vedder tells with gusto. An extract may illustrate the easy literary fashion of the book:

Guanahai was an easy going place, both in manners and customs. My bed was of

rawhide, as smooth and hollow as a Japanese lacquered bowl. You simply slid down to the middle of it—the sheet became a rope under you, and was discarded. A sheet, a pillow, and a mosquito-net formed the outfit. My dress was equally simple: A pair of trousers, a shirt worn outside, a pair of low canvas shoes, a sombrero. Add to these a pair of spurs, a handkerchief around the waist, another about the neck, another tied on the head, and the sombrero on top, and I was dressed for the day. I must not omit the long practical knife, thrust into the handkerchief at the waist. And the day consisted of a visit to a coffee or sugar plantation, and the evening of sitting with chair tipped against the wall of my friend, the apothecary's shop. That is—when I did not go to a few houses beyond to sit and gaze into the eyes of Dolores.

These very eyes here turn languidly upon the reader from an unskilful boyish sketch which yet tells of the premature splendors of this Cuban sweetheart. Almost from infancy Mr. Vedder has kept his sketches, and these records dotted through the pages are an extraordinarily interesting feature of the book. One may regret that he has not presented more of those admirable chalk studies of recent years which are known only to the few privileged to examine his portfolios, but in making up the pictorial record irrespective of quality he has shown a sound autobiographical instinct. This reluctance to put his best foot forward is very characteristic of the book. Our author wishes to be liked merely as "V," the friend, the wit, and boon companion; he requires no official admiration and almost evades it. Of what is perhaps his most important work, the decorations in the Congressional Library, he tells no more than that he tried to make the paintings accord with the architecture. When he praises his own work it is likely to be some little study that has never left his studio. Only in the matter of the famous designs for the Rubáiyát does he give expected explanations, and then briefly. Similarly, in portraiture of his friends at Rome, he passes the celebrities, Charlotte Cushman, the Storys, and others, with a mere word, while he expatiates upon the good fellows of the Caffè Greco. There was Simmit, the zoölogist, who after simpler information had been absorbed would reveal the secret that the elephant gave birth to its young in carefully corded packages. There was Rauch, who, as he grew poorer and his dog older, found that meat did not agree with him. It continued to agree with the dog. For these vignettes of forgotten people—of Thomas Hotchkiss, who should have disputed the laurels of Inness; of Bonaiuti at Florence, who consumed a life in teaching and copying, while planning a single masterpiece eventually to be colored "in the manner of Titian"—for these amiable *ignoti* one can dispense with the great of the earth. We hope that Mr. Vedder may yet communicate his reminiscences of his celebrated acquaintance; his reticence in the present shows sound autobiographical tact. Too free an introduction of persons of importance would have sadly changed the character of the most informal of tales.

Rather oddly, Mr. Vedder has omitted from the illustrations what one regards as his important works. There is no material for the estimation of the illustrator of Omar and the mural decorator. Instead, we have intimate sketches, some in colors, closely associated with the text, we have always "V," and never the decorator of the Bowdoin Art Gallery, of the Congressional Library, and the C. P. Huntington house. It is not an art that is presented for criticism, but a versatile, whimsical, highly self-conscious personality that is to be taken or left. Here is a boy that invented a religion, a man who contrived phonetic alphabets, an autobiographer who expresses himself readily in both verse and prose of unliterary effectiveness, who passes blithely from pathos to buffoonery—a flexible, insinuating, multiform personality—here is "V," and according to your temperament you will take his book to your heart or put it on the family index.

It is a book of all sorts; no methodical review is possible, and in sampling it we can do no better than transcribe one of those extraordinarily vivid passages which crop out startlingly from the average texture of pathos and mirth. It is a Cuban scene.

> In going to the fishing grounds, we drifted along the coast in the dark, warm, tropic night, kept from going ashore by the land breeze, which came off to us laden with the strong smell of earth, and the odor of the flowers, the air tremulous with the trilling of thousands of tree-toads, sounding like innumerable silver sheep-bells. The starry sky was mirrored in the sea below, so we seemed between two skies, except when below the wave a phosphorescent track, like a shooting star, marked where some big fish was chasing a smaller one; for while all seemed peace, and in the mind of a lone boy thoughts akin to worship arose, in Nature all about him it was pitiless war; and death kept pace with life. This was impressed on me one day by a vision of sudden death which I have never forgotten.
>
> I was following the padron, who was casting his net. We were wading in the clear water, waist-deep, when I saw something on the bottom and called him back to look at it. It seemed a vigorous mass of vitality, of a rich velvet brown, and had large eyes. The padron at once tore it up from off the rocks, and it as quickly embraced his arm with its tenacles. This did not seem to concern him, for he managed to get at the under side of the animal, and fumbling at its very vitals, brought it to his mouth and gave it a quick, sharp bite. At once over this rich brown live thing, spreading to the end of its arms, passed an ashy pallor, the arms fell limply off, and he threw the dead thing into the basket at his back.

Surely, the painter has digressed in another art with surprising success. Lafcadio Hearn himself need not have been ashamed to avow these paragraphs.

On one occasion young Vedder almost persuaded Emerson that the artist must live abroad among the archives of his trade. After a fitful struggle in New York in war-time, "V" went back to Rome to practise his own preaching for many years. At Paris he had already passed through the classical atelier of Picot, at Florence had studied with the literalist Bonaiuti. There he fell under the influence of the Pre-Raphaelites. In short, every reactionary or obsolescent school had a hand in his training, and it is remarkable that he weathered his education. He writes in rueful self-analysis:

> My pictures always have to me a home-made air which I don't like. I mean, they lack the air of a period or school, and this—I say it seriously—seems to me a great defect. I commenced with a great love of color and a strong sense of the solidity of form; but drawing killed the color, and atmosphere weakened the form, and reduced me to what I am. I loved landscape, but was urged to paint the figure; thus my landscape was spoiled by the time devoted to the figure; and the figure suffered by my constant flirting with landscape. What I felt strongly, I could strongly express in the sketch, but the finished picture killed the feeling—and then in addition, all became sicklied o'er by the pale cast of thought. I was accused of having imagination.

To such self-criticism nothing may profitably be added except that this minute training and eclectically cultivated sensibility, made Mr. Vedder an ideal illustrator of the quatrains of Omar. A somewhat moody and highly sensuous quality that overweights much of the work, here gains interpretative value. The influence of Blake is freely admitted, but this homage to the poet painter is temperamental and never sinks to obvious imitation. It would not be surprising if the public verdict were right in accounting this peculiar blend of Persian and modern mysticism Mr. Vedder's most permanent achievement. Among Mr. Vedder's many artistic inventions this autobiography is not the least noteworthy.

In "The Story of Spanish Painting" (Century Company) Charles H. Caffin shows his familiar qualities of ready sympathy and literary deftness, and, profiting by the compactness of the theme, produces a more unitary effect than he did in the similar handbook on the painting of Holland. El Greco finds in our author an unwavering advocate, Ribera a discreet apologist. The closing sentiment of the chapter on Greco is characteristic enough to be quoted.

> He (Greco) will help us to an understanding of other great artists of expression such as Michelangelo, Giotto, the nameless artists of the Byzantine period, and the known and unknown masters of Buddhistic art.

We can imagine this appealing with bene-

dictional force to a lecture audience, but closely analyzed it means that a peculiarly remote and cloistered manner of painting is the portal to the central styles. Probably no reader will commit the absurdity of approaching Giotto through Greco, and yet so persuasive is Mr. Caffin that he should hesitate to expose his flock to these hazards. There is an ancient Madonna at Seville which displays a "union of the feeling of Cimabue and Fra Angelico." No harm is meant by such analogies, but violence is done to clearness of appreciation. Take again the definition of impressionism:

> When we speak of an Impressionist, we mean one, who, in literature, or drama, or painting, or sculpture, colors his impressions according to the moods of his temperament.

Clearly such a definition would comfortably include Claude Lorrain, Ruysdael, Monet, and Winslow Homer. It would exclude only completely frigid artists if such there be. We regret especially Mr. Caffin's careless use of language in all generalizations, because the substance of his concrete criticisms is sound, agreeably expressed, and likely to do good. This book, as its predecessors, will be popular. More's the pity then that an occasional rhetorical sally of an extraneous sort may make the reader suspect that the business of generalization is a mere occasion for bandying fine words. The book is attractively made and well illustrated.

The successful exhibition of Chinese and Japanese works of art at Munich in 1909, and the large Mohammedan exhibition recently held there, indicate a very lively interest in the development of these departments of Oriental culture. Additional evidence of it is furnished by Dr. Oskar Münsterherg's "Chinesische Kunstgeschichte," the first volume of which, treating of painting and sculpture in the pre-Buddhistic period, has just been published by Max Schreiber in Esslingen on the Neckar. The second and concluding volume on Chinese architecture and artistic handicraft will appear in 1911. The author has devoted himself with diligence and ability to the study of the growth and character of civilization, and especially the evolution of the fine arts in eastern Asia, and has embodied his researches in several works, including a history of Japanese art in three volumes (1904-1907). Chinese art, it is stated, began to be influenced by that of Greece and Rome as early as the eighth century before the Christian era, and reached its highest point of perfection about twenty centuries later (A. D. 960-1280). The masterpieces produced during this period exerted a marked influence on European art, especially perceptible, our author suggests, in the paintings of Leonardo da Vinci, Rembrandt, and Watteau. The Chinese emperors, as a rule, were ardent lovers of works of art, and devoted themselves with great zeal and good taste to making collections of them. The gallery of the Emperor Huitsung is said to have contained 6,192 paintings, all of which were destroyed by invading Tartars. The catalogue in twenty volumes still exists, but the pictures can be seen only in a few Japanese copies. These constantly occurring devastations account for the disappearance of the originals, so that it is now impossible to find them in any part of the immense empire, or to form any proper conception of the quantity produced or of their inestimable value. Dr. Münsterberg has opened an entirely new and extremely interesting field of research, and has already gathered considerable material pertaining to the subject. The book is richly illustrated, containing fifteen colored plates and 321 engravings in the text. The price of the first volume, unbound (pp. xvi, 352, 8vo.), is twenty marks, or five dollars.

Justin Chrysostome Sanson, the French sculptor, died in Paris a fortnight since, at the age of seventy-seven. He was the author of many busts and medallions of celebrities, and had exhibited at the Salon for the past fifty years.

Finance.

THE COMMISSION AND THE CURRENCY.

In his speech the other day before the Academy of Political Science, Senator Aldrich said of the Monetary Commission's work:

> We commence to-day, I think I may safely say, our work upon another and even more important phase of the difficult task which has been assigned us. We intend to commence immediately the work of examination with a view of completing our work and of making our report of a plan, of some plan, for the approval of Congress at the earliest practicable moment.
>
> What we now propose to do is to seek counsel and to invoke the calm judgment of economists, of students, of men of affairs, of bankers, and business men, with reference to the work which we have in hand.

On the basis of this statement by the chairman of the Monetary Commission, Washington advices have been predicting efforts to bring about the immediate enactment of a currency and banking bill at the coming final session of the Sixty-first Congress. It is difficult to share that particular expectation. This session of Congress will expire by law on the fourth of March, and it would be an unprecedented feat to construct, propose, consider, and enact, in that short interval, so complicated a scheme of legislation as the reform of the banking system. It will be said, perhaps, that the Specie Resumption act was passed in the last weeks of an expiring Congress, whose Republican majority had just been defeated at the polls. But the subject of specie resumption had been before the people for a decade; intelligent opinion, in and out of Congress, had pretty solidly crystallized on the practical basis of reform, and the drafting of the law was simplicity itself, compared with the present problem. To-day, even the party at present dominant in Congress is not agreed regarding the plan of currency reform. It is doubtful if the Monetary Commission itself has reached any formal conclusion as to plans and alternatives; to the public, at any rate, the views of most of its members are unknown.

These facts are not recited for the purpose of discountenancing the discussion. On the contrary, it is high time that the Monetary Commission, which has been in existence since May of 1908, should take measures toward some definite proposition or propositions. This is an indispensable first step, because, as Mr. Jacob H. Schiff has correctly said, public discussion is bound to be largely suspended until the Commission makes its own report. That report might submit one plan or more than one; it might present the Commission's unanimous judgment or it might embody majority and minority conclusions. But until some conclusion is officially reached, it will be difficult for the community at large to look upon the discussion as practical.

Opinion at Washington seems to be that such a report would favor, exclusively or alternatively, the Central Bank expedient. This impression has presumably arisen from the fact that the Central Bank has been avowedly favored by Mr. Aldrich, chairman of the Senate Finance Committee, and by Mr. Vreeland, chairman of the Banking and Currency Committee of the House. After adjournment of this Congress, however, neither Senator Aldrich nor Mr. Vreeland will occupy his present chairmanship; indeed, it is a rather curious fact that, out of the eighteen members of the Monetary Commission, no less than eleven have either died, or announced their retirement from public life, or been defeated for reëlection. Exactly what will be the bearing of this fact on the Congressional prestige attaching to the Commission's recommendations, it is somewhat difficult to say; but the fact itself cannot be wholly dismissed from calculations of legislative probabilities.

The strongest argument for a reform in our banking system, based upon a centralized reserve and centralized power of issue, was stated, in a recent address by Paul M. Warburg, who thus set forth what he deemed the *sine qua non* of effective reform:

> Cash reserves must be centralized into one strong organization where they will be available when needed, and where they will command such confidence that they will not be withdrawn except for actual circulation or gold exports.
>
> In order to secure the free return of cash into the central reservoir there must be some means of exchange between the central reservoir and banks, so that banks may rely on their ability to build up with the central reservoir a credit balance against which they may draw cash if necessary. This medium of exchange must be commercial paper.
>
> Fluidity of credit must be our final aim. A sound financial system must mobilize its commercial paper and make it a quick

asset instead of a lock-up. Mobilized commercial paper must finally become the most important basis of our financial structure instead of bonds and loans on Stock Exchange collateral.

This statement of the case touches a most serious evil of the existing system—the evil which many practical observers consider largely responsible for the others. It is the practice of accumulating in the larger city banks the country's temporarily idle credit fund, of paying interest for the use of it, and of lending it out, in prodigious sums, to houses which use it for Stock Exchange speculation. In this practice, and not in any defect of note-issue powers, the student familiar with the history of Wall Street will almost invariably find the explanation of our 25 and 50 per cent. call money rates. It is this practice, also, which explains why the regular autumn harvest movement so frequently involves collapse of financial values. How much it may have had to do with the peculiar banking phenomena of the panic of 1907, is at least a question worth considering.

As matters stand to-day, the currency and banking discussion will largely converge on the question whether the very desirable reforms prescribed by Mr. Warburg can be effected only through a Central Bank, or can be reached by a different reorganization of our banking machinery. The further problems of the part which a Central Bank, considered by itself, would play on our financial stage, and of the attitude of the other sections of the country towards such an institution, will also come up for due consideration.

Just Ready

Townsend and Goodenough's Essentials of Calculus

By **E. J. Townsend,** Professor of Mathematics, University of Illinois, and **G. A. Goodenough,** Associate Professor of Mechanical Engineering, University of Illinois. 354 pp., 8vo, $2.00.

This volume, based on the author's "First Course in Calculus," meets the needs of those colleges and technical schools in which the time devoted to calculus is limited to a three-hour course for the year, or perhaps a five-hour course for two terms. Thruout much emphasis is placed upon the applications of calculus to practical problems.

HENRY HOLT AND COMPANY, NEW YORK CHICAGO.

(JUST PUBLISHED)

Hunting Camps in Wood and Wilderness

By H. HESKETH PRICHARD, F.R.G.S., F.Z.S., etc.; author of "Through the Heart of Patagonia," "Don Q.," etc. Introd. by F. C. Selous. (Small quarto, 100 illustrations, $4.00 net.)

The author is an English big-game hunter, and a sportsman of world-wide repute. This volume tells of experiences in British North America and Patagonia.

THE LADY

By EMILY JAMES PUTNAM.
(Crown 8vo. Illustrated. $2.50 net)

A brilliant book and a substantial contribution to the history of feminism, this volume presents studies of the lady as distinguished from the woman, beginning with the Greek Lady, and concluding with the Lady of our Slave States.

A FEW PRESS OPINIONS ON THE RICCARDI PRESS BOOKS:

"Mr. Horne's type is one of extraordinary brilliance and legibility. . . . There is no doubt that this fount of type is one of the best ever cut."-The Athenæum, London.

"A magnificent edition. A model of grace and distinction."-The Oxford Magazine.

"A beautiful edition; nearly, or really, perfect."-The Saturday Review, London.

"Rarer than a black swan-a perfectly printed book."-Times of India.

"The Riccardi Press has enriched us with . . . perfectly printed books. . . . Well worthy of comparison with the best work of Morris."-The Pall Mall Gazette, London.

Of the above-named Riccardi Press Books, a limited number of copies are still available at the published prices, although the Publisher reserves the right to raise the prices without notice. Orders unaccompanied by remittance in full cannot be executed. Orders will be executed in strict rotation as received, or may be forwarded through any recognized American house.

*** *Prospectuses of all or of individual Volumes will be sent post free to any address on request.*

MR. PHILIP LEE WARNER, Publisher to The Medici Society, Ltd.
38, Albemarle Street, London, England.

SOME SCRIBNER HOLIDAY BOOKS

The Poems of Eugene Field

Complete edition. With portrait. 8vo, $2.00 net.

Here for the first time all the verse written by Eugene Field has been collected into one volume—the poems in "A Little Book of Western Verse," "A Second Book of Verse," "Songs and Other Verse," etc.

The great demand for Eugene Field's writings, which arises from his great popularity among people of all ages and all localities, has led to the publication of this attractive and convenient book—one that resembles in form the one-volume editions of the New England poets, as does the author's hold on the people resemble their popularity.

ART

A Painter's Progress

By WILL H. LOW.

With 16 full-page illustrations. $1.50 net. Postpaid, $1.65.

Mr. Low succeeded the late Russell Sturgis and Mr. John La Farge as Scammon Lecturer at the Chicago Art Institute, and the six lectures which compose this volume were the most popularly successful so far delivered. The book records the writer's artistic life so far as this may illuminate the artistic record of past and present in this country, and is full of entertaining reminiscences as well as of instructive data and suggestive commentary.

What Is Art?

By JOHN C. VAN DYKE.

Studies in the Technique and Criticism of Painting. $1.00 net. Postpaid, $1.10.

This book expounds the painter's point of view as distinct from that of the connoisseur, the collector, or the museum director, which, he thinks, has, for the past twenty years, monopolized discussion among us to such an extent as to obscure the consideration of art as art, in considering it as a curiosity or commodity.

Romantic California

By ERNEST PEIXOTTO

Author of "Through the French Provinces."

"His own illustrations, from black charcoal Cypress Gardens, or sepia-washed Santa Barbara Mission, to pencilled outline of Greek Theatre, seem from prosaic present day New York rather 5,000 miles to the east than to the west.

"The author guides his readers, with the aid of pen and pencil, through the missions and the remains of the Spanish occupancy, to picturesque points within reach of San Francisco, to the Farallones and Pescadero Point and the Sierras. He takes them among the Italian vine growers, to the Bohemian Club entertainment under the giant trees and in the track of Bret Harte's heroes. It is a delightful book, an effective counterblast to the commercial and material spirit of prospering California."—*New York Sun.*

80 illustrations by the Author. $2.50 net. Postpaid, $2.72.

A Voice from the Congo

By HERBERT WARD

Formerly Lieutenant under the Explorer Stanley.

Illustrated with the author's sculpture, photographs and sketches.

"We value and commend this work as one of the most living and picturesque descriptions of African human nature, pure and simple, which we have ever read."—*Literary Digest.*

The *Cleveland Leader* says:—"We have had records innumerable of African hunting trips, African explorations, and the like, but the human side has been overlooked. It is this which gives piquancy to 'A Voice from the Congo,' in which the author, who started in to chum with the natives when he was fifteen and has been at it ever since, knowing their language and getting at their very heart, tells things, new, quaint and interesting about them."

The *Chicago Evening Post* says:—"And of an order, even higher order, in the artistic scale are the sculptures which are here reproduced in photograph, the work of Mr. Ward."

$2.50 net. Postpaid, $2.75.

BIOGRAPHY

Moliere: His Life and His Works

By BRANDER MATTHEWS,

Professor of Dramatic Literature in Columbia University.

In this brilliant study of Molière and his plays and his times, Professor Matthews presents the most complete, masterly, and notable biography in English of the great dramatist. He sets forth the facts of Molière's life stripped of all the legends that have gathered about them.

8vo, about $2.50 net. Postpaid, $2.75.

The Intimate Life of Alexander Hamilton

By DR. ALLAN McLANE HAMILTON.

By his grandson, the distinguished New York alienist. Treats particularly his relations with his family and his friends, his tastes, his amusements, and his methods of work. Dr. Hamilton has used many letters of Hamilton which have never before been published.

With 25 full-page illustrations. 8vo, $3.50 net. Postpaid, $3.72.

Cimon and Pericles

By BERNADOTTE PERRIN, Professor in Yale University

With frontispiece. $2.00 net. (Postage extra.)

This is a translation, with introduction and notes, of Plutarch's "Cimon and Pericles," uniform with his splendid "Themistocles and Aristides," which came out a few years ago. While it furnishes a wonderfully clear translation of the original, retaining the atmosphere and spirit, it elucidates many points, and brings extraordinary interest into the work with notes that show remarkable knowledge and great research.

Charles Scribner's Sons **153 Fifth Ave., New York**

Free Library 29 Dec 10

The Nation

VOL. XCI.—NO. 2370. THURSDAY, DECEMBER 1, 1910 Reg. U. S. Pat. Office. PRICE TEN CENTS.

SCRIBNER HOLIDAY BOOKS

The Poems of Eugene Field

With portrait, $2.00 net

Here for the first time, in direct answer to the demand for a convenient home edition at a moderate price, all the poems of Eugene Field are collected into one volume—one that resembles the volume editions of the poems of such men as Lowell, Holmes and Lanier—as the author's hold on the people resembles their popularity.

WORKS OF SCHOLARSHIP

The French Renaissance in England

By SIDNEY LEE

$2.50 net.

"In this scholarly and curiously interesting volume, Mr. Sidney Lee traces the influence of the French Renaissance upon the literature of England—an influence which caught fire and bloomed for thirty years, culminating in the supreme genius of Shakespeare. The subject is of much interest, and Mr. Lee has brought to it not only great learning and care, but an obvious and well-directed sympathy. Mr. Lee has done his task most admirably."—*London Times.*

Cimon and Pericles

By BERNADOTTE PERRIN

Professor in Yale University.

With frontispiece. $2.00 net. (Postage extra.)

This is a translation, with introduction and notes, of Plutarch's "Cimon and Pericles," uniform with Professor Perrin's Plutarch's "Themistocles and Aristides," published a few years ago. While it furnishes a wonderfully clear translation of the original, retaining the atmosphere and spirit, it elucidates many points, and brings an extraordinary interest into the work with notes that show remarkable knowledge and great research.

The Conflict between Collectivism and Individualism in a Democracy

By CHARLES W. ELIOT, D.D.

President Emeritus of Harvard University.

90 cents net; postpaid, $1.00.

The lectures are three in number, covering this conflict, first, "In Industries"; second, "In Education and Social Life"; third, "In Government." They were given by Dr. Eliot in 1909, as the Barbour-Page Lectures.

BOOKS FINELY ILLUSTRATED

The Story of the Grail and the Passing of Arthur

By HOWARD PYLE

Profusely illustrated. $2.50 net; postpaid $2.75.

"We have nothing but praise for this the fourth of the 'books written and illustrated by Howard Pyle,' to quote his publishers' announcement, and we hope that the whole series will find its way into every household where children and cultivated people desire good reading-matter."—*Literary Digest.*

Romantic California

By ERNEST PEIXOTTO

Author of Through the French Provinces.

80 illustrations by the author. $2.50 net; postpaid $2.72

"Even if the 219 pages of reading matter in this volume were less alluring, the profuse illustrations would make it a strong ally of the tourist maxim, 'See America first.' There are no fewer than sixty-eight of them, mostly in this artist's happiest vein, and no one, surely, can look at pictures like Strange Groves at Cypress Point, In the Gaviota Pass, Point Lobos, San Francisco Bay, Los Farallones de los Frayles, Cormorants on their Nests, Shasta, without developing an eager desire to visit those romantic spots."—*The Nation.*

A Voice from the Congo

By HERBERT WARD

Formerly Lieutenant under the Explorer Stanley.

$2.50 net; postpaid, $2.75.

"We value and commend this work as one of the most living and picturesque descriptions of African human nature, pure and simple, which we have ever read."—*Literary Digest.*

"A certain freshness and charm, and the power of conveying in words a vivid pictorial impression."—*London Athenæum.*

"And of an order, even higher order, in the artistic scale are the sculptures which are here reproduced in photograph, the work of Mr. Ward."—*Chicago Evening Post.*

SECOND EDITION READY NEXT WEEK
John Brown: A Biography Fifty Years After
By OSWALD GARRISON VILLARD
SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK:

HORACE WHITE
"In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE
"A biography replete with facts and marked by courage and candor, learning, and justice."

W. E. CONNELLEY in the Topeka CAPITAL
"The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Washington (D. C.) STAR
"Mr. Villard draws a compact, vivid, historic picture of the terrible focusing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fairmindedness."

THOMAS WENTWORTH HIGGINSON
"I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY
"Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HENRY WATTERSON in the Louisville COURIER-JOURNAL
"No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Fully illustrated with portraits, and other illustrations. With copious notes and bibliography. $5.00 *net. Postage* 26 *cents.*

Boston HOUGHTON MIFFLIN COMPANY New York

SIGNIFICANT BOOKS

MY BROTHER'S KEEPER
By CHARLES TENNEY JACKSON
Author of The Day of Souls
Illustrated by A. W. Brown
$1.50 postpaid

Rand, the central character, is perhaps the greatest egoist ever painted. There's a genius in the book. —*Chicago Inter Ocean.*

Mr. Jackson's novel is the best we have read for many a day—an impressive, earnest study of an important American problem.—*Indianapolis News.*

The Unlived Life of Little MARY ELLEN
By RUTH McENERY STUART
Author of Sonny, etc., etc.
Illustrated by Ruth S. Clements
$1.00 postpaid

A most tender little story, in which the author, with the delicate strokes of her accustomed art, has mingled humor and pathos with telling effect. The heart that can withstand her moving power is hard indeed. With a quaint and winsome simplicity, she has caught the issues of marriage and birth in a touching tragi-comedy of mother-love.

BY INHERITANCE
By OCTAVE THANET
Author of The Man of the Hour
Illustrated by Thomas Fogarty
$1.50 postpaid

By Inheritance is a very remarkable novel, the next book in its kind to *Uncle Tom's Cabin;* far superior to *Dred* in a rivalry often vainly attempted by others. Octave Thanet has placed herself near the head of American writers of fiction. —*Thomas Wentworth Higginson.*

THE GOLD BRICK
By BRAND WHITLOCK
Author of The Turn of the Balance
$1.50 postpaid

Mr. William Dean Howells recently said that Brand Whitlock's *13th District* is our best political novel. He also called attention to the fine literary skill, right literary method and true literary ideal of his political short stories now collected under the striking title, *The Gold Brick.*

The NATIVE BORN
or THE RAJAH'S PEOPLE
By I. A. R. WYLIE
Illustrated by John Newton Howitt
$1.50 postpaid

The Native Born is the book of the hour in England. It has made a profound impression. *The London Globe* says: It is a real pleasure to be able to say of a new novelist that with his first novel he has achieved, if not greatness, the next best thing—the right to be reckoned among the best of his contemporaries.

THE MAN HIGHER UP
By HENRY RUSSELL MILLER
Illustrated by M. Leone Bracker
$1.50 postpaid

We enthusiastically commend this work of fiction dealing with the strenuous yet ascending political life of the present. It is essentially big and vital. Terse, effectively humanized, replete with rapid action, this is a tale which men especially will admire and enjoy.—*Chicago Record-Herald.*

IN AFRICA
By
JOHN T. McCUTCHEON

Mr. McCutcheon's book on hunting big game in Africa is at once uniquely valuable and uniquely interesting. It is a significant narrative, packed with information of a novel and exciting expedition. The author sees with an artist's eye for color and a reporter's eye for human interest, and *In Africa* is a notable contribution both to our knowledge of human nature and to our knowledge of natural history. Details are given for the guidance of any who may intend a similar hunting trip.

Superbly Illustrated with many Remarkable Photographs and Drawings by the Author. Size 6½x9. Cloth, $3.00 net, or postpaid, $3.20.

NO LIBRARY IS COMPLETE WITHOUT THE WORKS OF

COUNT TOLSTOÏ

The London BOOKMAN says: "Tolstoï is the greatest man of the age."

The NATION says: "It is safe to assert that Count Tolstoï's permanent place in literature at home, and more particularly abroad, will rest upon his two great novels, 'War and Peace' and 'Anna Karénina.'"

Ask your bookseller to show you the Crowell editions of *"Anna Karénina," "War and Peace," "Cossacks," "Ivan Ilyitch," "What is Art?" "What is Religion?"* etc. Also the beautiful uniform edition in 12 volumes, containing all of his novels, short stories, religious books, dramas, and important essays, translated by Nathan Haskell Dole, Isabel F. Hapgood, Aylmer Maude, and others.

Buckram, $18.00. Half Calf, $30.00. Send for catalogue.

THOS. Y. CROWELL & CO., New York

Important New Macmillan Publications

NEW BOOKS ON PUBLIC AFFAIRS—SUBSTANTIAL, OF PERMANENT VALUE

Mr. James Bryce's *new edition of*
The American Commonwealth
With added chapters and complete revision
The book is really far more valuable than if it were entirely new, for Mr. Bryce shows us first his impressions of twenty years ago, then the modification of opinion which the events of these fruitful years have brought about.
Entirely reset. Two volumes, Cloth, $4.00 net.

Chas. R. Van Hise's *valuable work on*
The Conservation of the Natural Resources of the United States
The work is an essential to any one who would follow intelligently the hot discussions of conservation; it is compact, impartial, and illuminating.
Cloth, $2.00 net; by mail, $2.14.

William Stearns Davis's *suggestive description of Roman luxury*
The Influence of Wealth in Imperial Rome
There is something startlingly modern in this account of financial panic, political graft, domestic extravagance, millionaires' gifts to the public—all hundreds of years past.
Cloth, $2.00 net; by mail, $2.14.

T. G. Tucker's
Life in the Roman World of Nero and St. Paul
It discusses the life of the people from different points of view, so that a reader may fully put himself in the place of a Roman under the empire.
Illus., $2.50 net; by mail, $2.71.

NEW BIOGRAPHIES

Twenty Years at Hull House By Jane Addams
The founder of this most fruitful of modern efforts toward an understanding of social conditions tells that exceptionally interesting story of Hull House, whose history is in fact her own.
$2.50 net; by mail, $2.68.

Memories and Impressions of Helena Modjeska An Autobiography
The book reflects to an unusual degree the vivacity, courage, and personal charm in which the famous actress was remarkable.
$4.00 net; by mail, $4.24.

The Life of Benjamin Disraeli By W. F. Monypenny
The great biography of the year, prepared from original documents, unpublished letters, and a great mass of carefully digested contemporary material.
$3.00 net; by mail, $3.18.

Reminiscences By Goldwin Smith
The most competent, most comprehensive survey of the political and economic life of the last sixty years was that made by the brilliant cosmopolitan whose recollections are edited by his secretary of long standing, Mr. Arnold Haultain.
Cloth, 8vo, $3.00 net; by mail, $3.20 (subject to change).

William Ewart Gladstone's Religious Correspondence
The deepest interest, the controlling motive, of the statesman's life was his religion; hence the illuminating quality of these volumes, essential to a full understanding of the great man.
Two 8vo volumes, $5.00 net (carriage extra).

ILLUSTRATED DESCRIPTIVE BOOKS

Miss I. A. Wright's *new book on* **Cuba**
A fascinating companion to Mrs. Higginson's "Alaska," Mr. Carson's "Mexico," and Dr. Grenfell's "Labrador"—all books to lure the traveler away from hackneyed, overcrowded European highways.
Cloth, decorated, illus., $2.50 net; by mail, $2.69.

Helen S. Wright's *new book on*
The Great White North
An absorbing, simply told résumé of the exciting adventures of the many expeditions which year by year, with tremendous effort and thrilling courage, increased the distance of man's travel "farthest North."
Cloth, decorated, illus., $2.50 net; by mail, $2.69.

Mr. Clifton Johnson's
Highways and Byways of the Rocky Mountains
A handsome volume on the order of his earlier descriptions of informal travel through America from New England to the Pacific Coast, attractive and informing.
Cloth, cr. 8vo, illus., $2.00 net; by mail, $2.14.

Dr. Edwin E. Slosson's
Great American Universities
There is capital insight and no little wit displayed in this discriminating account of the special characteristics of the largest of our institutions of higher education. A capital book for any one who is considering the choice of a college for his son.
Cloth, illus., $2.50 net; by mail, $2.70.

Mr. Israel Zangwill's *new book of*
Italian Fantasies
In the dreamy atmosphere of Italy Mr. Zangwill has allowed himself to follow one witty, wise, and always clever train of associated ideas after another, expressing the poetic result in these really remarkable essays.
Cloth, decorated cover, $2.00 net; by mail, $2.14.

ONE OF THESE BOOKS AT LEAST SHOULD BE DROPPED IN EVERY CHRISTMAS BOX

The Nation.

NEW YORK, THURSDAY, DECEMBER 1, 1910.

The Week.

All the glowing predictions of important Republican enactments during the coming short session of Congress are cruelly shattered by Speaker Cannon, who is now in Washington. Uncle Joe is not lacking in sympathy with the proposed legislation, but sets his experience against other men's hopes. "It has been my experience," he placidly remarks, "that when a party has been beaten at the polls, it has been unable to enact such legislation at the ensuing short session of Congress." In Mr. Cannon we evidently have a case where old experience doth attain to something of prophetic strain. And in this instance he is in line with other seasoned prophets like Congressman Mann. What they have in mind is not so much unwillingness as impossibility. In the short session, the passing of the necessary appropriation bills takes up so much of the time that any other legislation has to be enacted virtually by consent. Especially in the Senate, the rules permit any two or three determined men to kill for the session any measure to which they are resolutely opposed. Hence we may as well resign ourselves to the prospect of a session legislatively barren.

Of the strength of the sentiment in favor of Edward M. Shepard's election as United States Senator from New York, there can be no manner of doubt. The remarkable thing about the many expressions of opinion that have appeared is the simple statement of his manifest superiority, in point of qualification for the office, to any other candidate that can be named. This, it is felt on all hands, will hardly be disputed. Mayor Gaynor's words were: "He is the man above all others to represent New York State at Washington." The same sentiment is expressed, in varying forms, and with or without specification of detailed reasons, by one representative man and representative newspaper after another. Commenting on the Brooklyn *Eagle's* remark that "more Senatorial qualifications centre in him than in any other member of the party who is now proposed for the office," the Syracuse *Herald* says: "The press of this State, with very few exceptions, will cordially subscribe to this estimate of Edward M. Shepard." And this up-State newspaper goes on to argue against giving any weight to the consideration that Mr. Shepard's election would make both the Senators residents of New York city, pointing out that the fact that Roscoe Conkling was a resident of the little city of Utica did not prevent a Democratic Legislature from electing Francis Kernan, of the same place, as his colleague.

The anti-Lodge press in Massachusetts is concerned lest the Senator, imitating Speaker Cannon, obtain his ends by summoning Democratic assistance. The Boston *Herald*, which is friendly or neutral, declares that Mr. Lodge "seems confident of enough support from the Democratic side of the Legislature to offset any possible Republican insurgency." "The answer of Republican progressives to this threat," says the Boston *Common*, "should be a flat refusal to go near the caucus." The caucus surely seems unnecessary to bind Republicans already committed to Lodge, and those opposed to him are, it is to be hoped, of sufficient backbone to refuse to enter the caucus or be bound by it. As the Boston *Common* says, in this case the caucus is "a device of machine politicians to fetter personal conviction." Altogether, Mr. Lodge's situation is one of growing interest. Arrayed against him are all the Republican progressives in Massachusetts, the men who sympathize with Cummins, Beveridge, La Follette, and their wing of the party in the nation. Yet their chief spokesman is to be the Democratic Governor-elect, since no Republican of any prominence has dared to come out openly against Senator Lodge.

Pathetic despair over the failure of popular government has suddenly darkened the sky of a few newspapers hitherto noted for cheerfulness. Thus the Indianapolis *Star*:

> It is impossible to derive any reassurance from at least one aspect of current affairs, and that is the ominous discouragement of modest merit in public life.

This conclusion sets one searching for the premises, which, in the editorial quoted from, are so far away that one finds himself almost back at its beginning before he comes upon them. But they are well worth the trouble of discovering. Sometimes, it seems, you can get the attention of the people to a fight over organized privilege, "but often in a critical emergency they will fail." For example:

> In the recent election, two champions of the square deal were beaten—Roosevelt and Beveridge.

So there we have the new synonyms for "modest merit."

The attempt of the Baltimore City Council to segregate the negroes of that municipality by prescribing zones within which they may live is so obviously doomed to defeat in the courts as to be hardly worth discussing. It is so conspicuously an interference with the constitutional guarantees, and is so fundamental a blow at the right to hold property, that no honest court could for a moment sustain it. To parallel it, one must recall the Pale in Russia and the mediæval attempts to prescribe residence districts for each and every guild or class of citizens.

> SAN FRANCISCO, November 23.—The Court of Appeals of the First District sustained to-day the conviction of Abraham Ruef, and denied him a new trial. Ruef had been sentenced to fourteen years' imprisonment and was at liberty on bail.
>
> Ruef's attorneys will be allowed forty days in which to prepare an appeal to the State Supreme Court.

And if at the end of the forty days, and at the end of the argument before the State Supreme Court, and after that court has taken due time to consider the various metaphysical subtleties that may be interposed between Ruef's crimes and his punishment—if, after all this, Ruef shall finally, years after his prosecution began, come down to serving a term of imprisonment, how much will be left of the moral effect that would have been produced had this notoriously corrupt politician been promptly visited with the penalty of his crimes when they were first brought home to him? That is what would have happened under the business-like and efficient methods of the English courts. Is there

a single human being in this country who imagines that these delays and uncertainties, these gigantic struggles that are necessary to compass the punishment of a single rascal, have any relation to the accurate ascertainment of the truth?

Under analysis, Mr. James J. Hill's somewhat gloomy forecast of the industrial situation resolves itself into the declaration that the country is likely, next year, to proceed at a slackened pace in construction and expansion. But we imagine that the majority of observant people had reached the same conclusion before reading Mr. Hill's St Paul interview. There were numerous reasons for such expectations. One arose from the knowledge of all experienced men that what Wall Street calls "boom times" never continue uninterruptedly; that it is the habit of all industrial communities, and of the United States especially, to move forward, in a sense, by fits and starts—in other words, to overdo the expansion so far in one year or series of years that a subsequent period of relaxation is inevitable while the country is growing up to the rapidly expanded facilities, and is liquidating the debt contracted to introduce them. Another and more immediate reason for belief in slackening activity lay in the feeling of thoughtful business men that there was something unreal and unsubstantial in the "boom" which followed so swiftly on the heels of 1907. All other great panics in our history have been followed by a season of much more thorough rest and recuperation.

The internal revenue figures for the fiscal year ended June 30, with their showing of a great increase in the manufacture of liquors, are doubly curious, as not only coming in the face of the prohibition and local option movement, but also as contrasting with the extraordinary decline in the consumption of liquor in the United Kingdom which has been reported in recent British official figures. However, the figures do not have quite the significance that may at first sight be attached to them. The amount of distilled spirits, for example, is stated as 163,000,000 gallons, being "30,000,000 gallons more than the year before," which seems to show an astonishing growth of the use of spirits; but if we look further back into the figures we get a very important modification of our conclusions. For the fiscal year 1909 was virtually even with 1908, when the amount was 134,000,000 gallons; and the preceding year, 1907, gave the vastly greater total of 175,000,000 gallons. So the fact is that the prohibition agitation caused a very great drop in the production of distilled spirits, and what happened in the last fiscal year was only a recovery from that drop; even so, the amount was 12,000,000 gallons less than it had been three years ago.

There is one point raised in the Government's bill of complaint against the Sugar Trust upon which it is devoutly to be wished that the Supreme Court may find it in its heart to lay down the law in broad and illuminating language. There is probably no question connected with anti-monopoly legislation that touches the interests both of consumers and of independent producers, in all fields, more nearly than that relating to exclusive dealing under compulsion. The Government's complaint in the Sugar Trust case charges that "by using their great power they [the defendants] have successfully demanded that brokers and other intermediaries should handle their products alone, and have forced them to treat rival products unfairly and unlawfully, and for a long time they wrongfully induced members of various wholesale grocers' associations throughout the country to purchase and handle their sugar exclusively." It was largely with a view to enacting express prohibitions of such practices in place of the general and indefinite provisions of the Sherman Act that President Taft and others, not very long ago, advocated the repeal or modification of that act and the substitution in its stead of legislation of a more specific character.

A law suit of national importance has been begun in Ohio against the county commissioners of Licking County. It has been brought under the Ohio Anti-Lynching law by the administrator of the estate of Carl Etherington, the detective of the Ohio Anti-Saloon League who was lynched by a mob in Licking County, because of his activities in procuring evidence against lawless saloons. Gov. Harmon promptly removed the Mayor of the town, in accordance with this same law. Now, the question of money damages has come up. There are those who have held for years past that under the common law actions would lie against negligent civil authorities who took possession of persons accused of crime and failed to protect them from the fury of Judge Lynch. The Ohio law directly makes the county liable, and this test case which will settle the constitutionality of the law will be watched all over the Union. Should it be upheld, it is bound to prove a great deterrent to mobs. It is all very well to hang or burn a man out of hand, but when you have to pay a high price for the afternoon's entertainment, it is apt to appear differently both to lynchers and complaisant city officials.

The death of George F. Seward removes a citizen of whom New York could well be proud. An insurance-company president who knew precisely what answer to give to grafters and political blackmailers, he was wherever he went a standing refutation of the stupid charge that all New York business men in high positions are there merely to subvert the liberties of the people or to make money illegally. But Mr. Seward was far more than a mere business man. He was a diplomat of experience, great skill, and wide vision. As consul, consul-general, and minister to Korea and China for nineteen years, Mr. Seward knew the East as did few Americans. And far from having any contempt for the Oriental, he brought back from China a profound respect for the Chinese and an ever-ready indignation at their bad treatment by his country and his countrymen.

The ghost of the Hilprecht controversy has risen again, with every indication, however, that this is to be the "positively farewell appearance." Professor Hilprecht has presented his resignation both as professor of Assyriology at the University of Pennsylvania and as curator of the Babylonian Section of the university's Archæological Museum. It only remains for the board of trustees to take action, and it is difficult to see how, acting in the best interests of the institution, they can do anything else but accept. The controversies in which Professor Hilprecht has been involved have for many years been a disturbing

factor of a most serious character both within and without the University of Pennsylvania. He has divided the university into two camps. Outside of the university the cause of archæology has also been affected by the doubt and the confusion created in the public mind; and so on all sides a state of affairs has been engendered which ought to be brought to an end. The affairs of the University of Pennsylvania are about to be handed over to a new president, who appears to have the confidence and esteem of the faculty and the student body; and it is particularly important that the new administration should not be handicapped at the start.

Though the present attempts at revolution in Mexico—they can hardly be called more than attempts—came upon the world as a surprise, they have been long preparing, and their causes have not been hidden. As Diaz's power became more absolute, he used it more despotically. Though he had no real reason to fear political opposition, he would not brook it. Even free discussion got to be distasteful to him. Examples have been frequent and recent of his muzzling of editors and expulsion of candidates for even minor offices whom he did not approve. This plan of squatting on the safety-valve could not be persisted in for years, even in Mexico, without leading to an explosion. It seems to be the fact, also, that the very growth of industries and manufactures which has come about under the Diaz régime has furnished the means for a revolutionary propaganda. Workingmen cannot be assembled in great numbers without supplying a *nidus* for ideas opposed to tyrannical government. We have seen this to be true in Spain and Russia; we are now seeing it to be true in Mexico. That President Diaz is greatly perturbed by the uprising against him, the telegrams from Mexico assert, and it is easy to believe it. A serious revolution now would be not only an unhappy clouding of his closing years, but a severe impeachment of the wisdom and success of his rule. It is not to be seriously expected that he will change his methods. To a man of his mould, the lesson of the troubles will very probably seem to be that he has not made his policy of repression enough like iron.

Though it was only a mutiny, and not a revolution, of which the Brazilian navy gave an exhibition in the harbor of Rio de Janeiro, it is an apt illustration of the danger of such toys as Dreadnoughts in undisciplined and reckless hands. The mutineers submitted themselves to the Government, but with a formal guarantee of amnesty, so that they will not be dealt with as military law would require. That being so, they have gained a good part of their object, and will also have established a vicious precedent. Indeed, last week's performance was probably inspired by the memory of the events in 1893 when the warships terrorized the city, defied the Government, and tied up commerce for several weeks. There is now a new precedent for a third mutiny.

Ireland is as gallantly to the fore as usual in the English election. The Ulster Unionists are already highly resolving that they will never, never submit to laws enacted by an Irish Parliament, and will pay no penny of taxes levied by a Dublin government. This is their neat way of driving home their favorite argument that the Irish Nationalists are too lawless to be trusted. If it comes to flouting laws they do not like, Ulster Irishmen will not be behind their countrymen in the South of Ireland, and will not give a fig for consistency. As for the prominence given by the Tories to Redmond and his "American dollars," this will no doubt make the Irish leader stronger than ever, though it may turn the scale in some close elections in England. It is somewhat comic that the "cry" of resisting the break-up of the Union by the use of American money should have been started by an Irishman, Mr. Garvin. The lead of this Irish editor has been followed tumultuously by the most respectable Conservative newspapers, which are always ready to recognize Irish political genius when it is enlisted on their side. But all this fierce denunciation of the venality of the Irish Nationalists might prove awkward if it turned out that the Irish held the balance of power in the next Parliament. In that event, Mr. Balfour would be as ready to make a bargain with them as Lord Salisbury was, and the propbecy of Lord Charles Russell might be fulfilled: "On my word, I often think that we shall get Home Rule from the Tories."

A new physical feature in Russia is significant of a new economic fact. This is the farmhouse of the peasant who has availed himself of M. Stolypin's Land Act, and is seeking to establish himself, in the language of an English newspaper correspondent, as a yeoman freeholder. The wisdom and the success of the experiment are shown by the circumstance that, after four years of operation, there have been less than three per cent. of protests from the new farmers, and these not because of any desire to go back to the old commune, but only because some of their neighbors have procured better bargains than they have. Many of the clergy are said to be opposed to the new system, on the ground that the migration of families to isolated farmhouses will be detrimental to the church.

Japan has given due notice of her intention to terminate her commercial treaties which went into effect with most of the leading nations on July 17, 1899. They were to be in force for twelve years, subject to termination, at the end of that period, on a year's notification in advance. The treaty with the United States contained a clause which apparently entitles our Government to insist that the whole shall be in effect until July 17, 1912; but even so it is known that our State Department has already concerned itself with the negotiations for a new agreement. The existing treaties, soon to be abrogated, contain a stipulation of fixed rates of duty on 150 specified products, when imported into Japan; and it is partly in order to levy protective rates on these articles that the Japanese Government has sought a free hand. The move has evidently troubled Japan's faithful allies, the English, and a deputation of British merchants has waited upon the Foreign Secretary to ask that steps be taken to keep English exports to Japan upon their present favorable footing. Sir Edward Grey replied that Great Britain could do nothing to prevent Japan from enacting a protective tariff. This will, of course, be hailed by the British protectionists as proof that the policy of free trade robs the Government of power to bring protected countries to terms by retaliation. But there seems no good reason why, because British trade with Japan is to be injured going, it should also be injured coming.

MR. KNAPP AND THE RAILWAYS.

Mr. Knapp, chairman of the Interstate Commerce Commission, must have managed to instil a somewhat Delphic quality into his speech to the Railway Business Association last week. Thus, one of the newspaper headlines the next morning read: "Knapp Flouts Our Railroad Laws"; another, "For Railway Competition"; a third, "Fears Competition More Than Monopoly"; a fourth, "Head of Commission Favors Higher Rates." As a matter of fact, no one of these captions describes at all correctly the actual burden of Mr. Knapp's remarks, which derived such importance as they possess largely from the official position of the speaker and from the occasion on which he uttered them.

We must confess to a little doubt on our own part, however, as to the full scope intended by Mr. Knapp for some of his observations, and to a good deal of doubt regarding the propriety, under existing circumstances, of just such a public discussion by a member of the Interstate Commerce Commission. The questions on which the speaker touched, such as railway competition, railway combination, and railway revenue and dividends, are topics which largely underlie the rate controversy now pending before the Interstate Commerce Commission. Whether Mr. Knapp's views on these subjects were correct or not—and much of what he said was entirely sound—the uttering of them, *ex officio*, by the chairman of the Commission ignored the fact that the inquiry now pending is of a quasi-judicial character. The speech can hardly be called a fortunate precedent.

We also feel compelled to criticise Mr. Knapp's remarks for a certain obscurity in his dealing with some highly important questions, which may be explained, but would hardly be excused, by the fact that the speaker realized on what delicate ground he was treading. For instance, we find it somewhat difficult to understand what the Commissioner meant by "the system of unbridled competition which it is still our policy to enforce"—"a mistaken policy." If he was talking exclusively of the railways—the context seemed to indicate that he was—then we fail to see the basis for his statement. Enforcement by the Government of unbridled competition among the railways is about as far as we can imagine from a correct description of the present status; on the contrary, the whole crux of the present rate discussion lies in the fact, admitted by both sides, that competition has virtually ceased to exist in the function of railway rate-making, and that therefore restriction and supervision over the making of rates must be undertaken by the Government.

If, on the other hand, Mr. Knapp intended to set forth a view that competition is an obsolete means of progress in the field of industry at large, then he was taking upon his shoulders a pretty heavy burden of proof. We are quite aware that such a view has found wide acceptance, even in certain economic circles; but the argument, so far as it has been sanely and intelligently conducted, has in our judgment directed itself against what, in the earlier chapters of our industrial history, used to be known as "cut-throat competition." Even the more plausible of the arguments on that basis have encountered some difficulty in escaping the inference that monopoly, or if not monopoly then State ownership, would be the logical desideratum. But both these alternatives Mr. Knapp expressly rejected.

Exactly what Mr. Knapp means by the remark that "the error and futility of our efforts to make stationary rates I believe has been fully demonstrated," we find it difficult to understand. It is not conceivable that he applied this description to the power, newly granted to the Interstate Commerce Commission, of reviewing and in its judgment vetoing an advance in rates. That policy has never been asserted by the Government as a policy for stationary rates; and, in fact, the argument for a stationary price for anything that is sold has been made most persistently, not by the public authorities nor by the travelling and consuming public, but by an advocate so far removed from their position as the Chairman of the United States Steel Corporation. From his views on the policy of stationary rates, Mr. Knapp draws the conclusion that railway freight and passenger associations should be legally sanctioned. This is a conclusion at which very many thoughtful minds had already arrived; but scarcely, we imagine, through the process of deduction adopted by Mr. Knapp.

We have dwelt at some length on this speech, especially in its references to competition, because it seems to us to embody a good deal of the hasty and sweeping generalization which has of late become too familiar. All of us know the argument which begins with the assertion that "we have outgrown competition," and most of us, after listening awhile, have carried away the lurking suspicion that the presumption fairly launched the argument on the way to socialism. Mr. Knapp, for instance, correctly finds in old-time railway competition the root of the evils of discriminating rates, and therefore concludes that competition itself belongs to a bygone age. One might have wished for a word on what competition has done for railway service, and for Mr. Knapp's idea as to whether that service, at its best, would or would not have been achieved, and would or would not be likely to be perpetuated, without the stimulus of competition, and without the knowledge that unfit service would mean failure in the race, and consequent loss of that return on investments in the railway which Mr. Knapp would apparently somehow guarantee.

THE DISSOLUTION OF PARLIAMENT.

Events in England have marched with unexampled swiftness. Scarcely had we heard of the failure of the Conference when it was given us to understand that another general election was imminent; and now we have the actual dissolution of a Parliament not yet a year old, with writs issued, the voting to begin immediately, and the new House of Commons to be chosen before Christmas. Such speed is almost unprecedented, and the whole procedure finds no parallel in the Constitutional text-books. It is the more important, therefore, to give close heed to what the leaders of the two parties say about the political crisis.

Let us first look at the Conservative position. This was stated by Mr. Balfour in his speech at Nottingham, and again in his reply to the Prime Minister in the Commons, as also by Lord Lansdowne in his statement in the House of Lords. It is, in brief, that, in the first place, there is no Constitutional warrant or political necessity for the abrupt procedure of the Ministry; and, furthermore, that the end avowed—namely, a reconstitution of the House of Lords, and a readjustment of its relations to the House of Commons—could be reached by fair discussion and mutual concessions in the existing Parliament. There

is undeniable force in the first point. The Government has not met with a defeat. No measure was pending on which it was desirable to take the opinion of the country. No Government bill had been rejected by the House of Lords. Here was a Parliament only ten months old, with an overwhelming coalition majority in the House of Commons; yet no business is attempted; no parley with the Opposition is sought; but a dissolution is rudely announced. On the other hand, if the object aimed at is to make over the House of Lords, here are the Lords themselves undertaking their own reform and passing the Rosebery resolutions, which, if not entirely satisfactory, at least furnish a basis for debate and for settlement within the Parliament. Under these circumstances, what could be more arbitrary, what more precipitate, than rushing into a general election on a stale register and at a time most disturbing to trade?

To this Conservative argument, which we have stated as strongly as possible, the Liberals make a vigorous reply. Mr. Asquith declares that he is facing, not forms, but realities. Technically, it may be true that the Ministry has not been blocked by the Lords, but, in actual fact, it has been. The veto resolutions which passed the Commons in April by large majorities, were certain of contemptuous rejection in the Lords. Mr. Balfour openly conceded this. Indeed, he made the admission, logically disastrous to his cause, that "an election could not be deferred for more than a relatively small number of weeks or months." That was on the safe assumption that the Lords would not agree to the plan of the Commons. Well, then, says Mr. Asquith, why delay the inevitable issue? The whole thing has got to be decided by the people, and they may as well do it at once as to wait. According to the implications of Mr. Balfour, there would have to be a general election every year—that is, every time the Lords threw out a Liberal measure. They threw out the budget last year, and were forced by the electors to accept it. If the Government should again send up the Education Act of 1906, or the Plural-Voting bill, they would throw them out again, and on each one force an appeal to the country. That sort of thing cannot go on. The general procedure behind particular bills must be fixed once for all. The Liberal party cannot tolerate the continuance of that condition of things in which, as Mr. Balfour once incautiously boasted, the Conservative party "would control, whether in power or whether in Opposition, the destinies of this great Empire."

This Liberal policy of Thorough is dialectically strong, beyond all question, but the doubt remains whether, in practical result, it will much advance matters. It is possible, though not probable, that Mr. Asquith will come back with such a greatly increased majority that the Lords will scuttle before him. But it is not at all likely that the country will give so clear a voice on the main question that the Government can proceed triumphantly to demand that the Lords shall accept the veto resolutions without altering a word. Even if they did, the infinitely difficult matters of detailed legislation would have to be threshed out in Parliament, and would almost infallibly lead to another Conference—or to another general election. Indeed, it is broadly hinted that what the King now hopes for, or even expects, is that the election will leave the balance of parties so little altered as to necessitate a second Conference which shall not fail like the first. In that event, all the throes of the general election would have done little but put the affair back where it was before.

At present, of course, Mr. Asquith is taking a high hand. He describes himself as going out to consult the will of the people, and declares that the Lords will have to submit themselves to it. This raises the question of the "guarantees" which he may have received from the King. On that point, he would not speak in the Commons, urging that the King must be kept out of party warfare. But Mr. Asquith's statement of last April is recalled, when he said, speaking of such a crisis as has since arisen, that a dissolution of Parliament would, "in no case," be resorted to, "except under such conditions as will secure that in the new Parliament the judgment of the people as expressed at the election will be carried into law." This is generally understood to mean a promise by the King to create enough Peers to force the veto resolutions through the House of Lords; and the inference is that Mr. Asquith has obtained such a pledge from King George. But that monarch may have agreed simply to use the influence of the Crown in other ways: by persuading the Lords to desist; or by insisting upon another Conference which shall not break up without ending the controversy. In any event, the country is facing the general election with many misgivings, in which such sober Liberals as Lord Courtney plainly share, not knowing what secure harbor lies beyond the troubled seas.

THE NEGRO AND THE UNIONS.

Mr. Gompers, in a telegram to the National Association for the Advancement of Colored People, made haste to deny that in his recent speech before the Federation of Labor Convention he had said "anything derogatory to the negro race or proposed to read the negro out of the labor movement." As reported, he had conveyed the impression that he wanted all negroes eliminated from unions because we could not expect "a people with all their traditions tending to tear down, to understand the fundamental philosophy of human rights; this is not a theory but a condition with which we have to deal." Not unnaturally, from Booker Washington down there have been protests. If the labor-union movement has any justification, it is because it intends or was originally intended to aid those classes least able to help themselves, the classes beset by ignorance and prejudice and exploited by greed and cunning. It is precisely for these reasons and the inability of the working women to vote that the movement to organize women workers in unions has been making headway in New York city.

If to become a philosopher first is essential to the acquirement of a union card, it is obvious that many cards would have to be revoked. Labor unions that draw the color-line or refuse admission to Italians or other nationalities give the lie to the union assertion that theirs is a movement for true economic equality and genuine democracy. But if Mr. Gompers denies that he attacked the negro race and wished to exclude them from the unions, there is nothing in his utterances at St. Louis or elsewhere which we have seen that indicates an earnest desire to enroll many negroes among his supporters or to give them a real welcome. He dwells upon the difficulties of handling the colored workers; he does not seem to declare that these are precisely the difficulties the union movement likes to

grapple with and meet. As a matter of fact, his attitude reflects, in the main, that of the unions throughout the country. Few welcome the negro with open arms, though there are some that do so, notably in the mining districts of Alabama. Some, like the engineers' union on the Central of Georgia Railway, would confine him to the lowest grade of engine-labor, while others, particularly in the North, are sullenly indifferent, or admit only a few men of color, if any.

Take the situation in New York city. According to Miss Mary White Ovington, who has given years to investigation, there were, in 1906, one hundred and two trades or divisions of trades which have no negro members. This discrimination, Miss Ovington feels, is due to the fact that there are few skilled negroes in the labor market, and that the union, "endeavoring to maintain a high standard of living for its members, may decide for a time to adopt a policy of restriction of membership," by means of excessive entrance dues, or by admitting for a long time only the friends of the men already in the organization. Miss Ovington finds that, while this policy bears hardest upon the negro, the Jew suffers from it, and to a smaller degree the Italian. But both of the latter are, in New York, in so much larger numbers that the unions feel them to be more of a menace to the institution, and therefore are more ready to admit them. "This discrimination is primarily economic, not racial, but it is hard to determine where economic motive ends and race or caste discrimination begins." Men in plenty are debarred solely because of their color; have not the locomotive engineers put the word white into their constitution?

So far as the American Federation of Labor is concerned, it originally took the position that it would admit no union which discriminated in its charter against the colored man. But that high ground has been abandoned. In 1902, it recognized the legality of excluding negroes from local unions, central labor bodies, or federal labor unions; national unions which expressly exclude negroes are now affiliated with the Federation and, in 1902, the Stationary Engineers altered their by-laws so as to exclude negroes. At the Atlanta University conference on the negro artisan in 1902, a list was given of forty-four of the most important unions, several with a membership of over 30,000, which have not a single negro member. Obviously, in view of this drift in his organization, it is highly significant that while Mr. Gompers denies having advocated the *putting out* of negroes from unions, he does not deny having advocated their not being admitted.

To those who do not believe in the unionization of all laboring men, who, while admitting the benefits gained by organization, feel that there ought always to be a large body of free labor to offset the evils of the unions, this attitude of the Federation and its leader will give some satisfaction. Excluding the negroes means that there will be a steadily growing body of skilled and unskilled laborers available for those who wish to employ non-union labor. For Mr. Gompers and his workmen, in the long run, the proper policy is to admit negroes and to ask for them the education which, in many sections, is virtually denied them. But even should a reactionary policy of rigid exclusion prevail, it cannot keep the negro down industrially; it will doubtless handicap him in many sections, but the only people who can keep the negroes in an inferior economic and social position are the negroes themselves. A race that has risen so rapidly against such wonderful odds is to be held back by no organization of workingmen, however powerful.

NEW YORK IN THE CENSUS.

State after State tells the now familiar story of rapid urban growth and slow increase, or even decrease, in rural population. New York is no exception to the rule. The total population of the State, by the census of 1910, is 9,113,279, an increase of 1,844,385 above the figures of ten years ago. The rate of increase is 25.4 per cent. for the decade; a result the more striking in that it marks the fifth consecutive decade showing a percentage of increase greater than that of its predecessor. The Civil War decade, naturally enough, showed only 12.9 per cent. increase, which was by far the lowest in the history of the State; but 1870-80 gave only 16 per cent., and 1880-90 only 18 per cent. The decade preceding the one now closing showed an increase of 21.1 per cent., and now we have 25.4 per cent., which is on a par with the decade of 1850-60, and which has not been materially exceeded since the early years of our history. In 1820-30 the rate of increase was 39.8 per cent.; but since that time 27.5 per cent. is the highest rate recorded.

But while the State as a whole shows this rapid growth of population, there are no less than twenty-four out of its sixty-one counties which have either actually declined or been virtually stationary in numbers. There are fifteen counties that have less population now than they had ten years ago, and there are nine others in which the rate of increase in the decade has been less than 2 per cent. These are, of course, rural counties. And how largely the list of this class of counties would have to be increased if the urban population in counties mainly agricultural did not come to the rescue, only a careful examination could disclose. Of course, the later publications of the census, dealing with the occupations of the people, will give information bearing directly on the degree in which the farming population is failing to hold its own, either relatively or absolutely; but even without this, interesting conclusions might be drawn from a detailed examination of the data.

The causes of this drift of population so long familiar in New England—and in old England—are too deep-seated to encourage the expectation that any great change will take place, in the near future at all events. The most fundamental cause is the enormous extension and cheapening of facilities for transportation and communication. And this operates with two-fold efficacy, in that it affects both the economic and the more strictly human aspect of the situation with about equal force. On the one hand, we have the most fertile land, or the land most easily worked on a great scale, in any part of the country brought into direct competition with the land that may have been occupied and tilled a century ago, when the advantage of a hundred miles, or two or three hundred miles, in proximity to a market was decisive; such a thing as a special local market for staples can hardly be said to exist nowadays. And, on the other hand, the railway and the telegraph and the cheap magazine and the one-cent daily paper have made the idea of going to the city familiar to every farmer's boy, and placed the possibility of doing so within his easy reach. The

forces making against the maintenance of the population of outlying farming districts are such as cannot be gainsaid.

There is one element in the case which perhaps has not received the attention to which it is entitled. In spite of all the talk that there has been in various quarters about the rich getting richer and the poor poorer, and about modern inventions and discoveries having done nothing to lighten the burdens of the working people, the fact is that the past half-century has witnessed an enormous rise in the material standard of living of the masses. Physical discomforts which were regarded as matters of course a generation or two ago, except for the favored few, are now thought of as almost intolerable hardships; and the long hours of unrelieved toil in the fields which the grandfathers of the young men of to-day looked upon as part of the order of nature offer anything but a satisfactory prospect to the minds of the youths of the present generation. There may be many a case in which, in spite of the competition of Iowa and Kansas, the farmer in central or western New York might make the two ends meet as his father or grandfather did, were he content to work as unremittingly as they did, and to get on with as little of the comforts and luxuries of life. In connection with this aspect of the matter, it is to be remembered that the rise in the prices of agricultural produce—a rise not merely absolute, but also relative in comparison with other things—is a very recent thing. If it should be maintained, it is by no means impossible that it will have a marked effect in encouraging the maintenance and growth of our rural population, a thing devoutly to be wished.

Both the New York and the Ohio census may serve as a reminder of the large share which the big States of the Union have in the composition of the House of Representatives. New York's share of the total population of the country has more than held its own; Ohio's has nearly done so. Like New York, Ohio shows a greater percentage of increase during this decade than in the preceding; the rate from 1900 to 1910 was 14.7 per cent., as against 13.2 per cent. from 1890 to 1900. The equal representation of the States in the United States Senate gives rise to some anomalies, and there may possibly lurk in it a certain amount of danger; at the time of the silver agitation, the fact that a little group of thinly settled Rocky Mountain States had a power in the Senate vastly disproportioned to their population was a real grievance. But on the whole, the arrangement works well enough. It is desirable, in a polity like ours, that something else should have weight besides a mere count of heads; the individuality of some of the small States has always been a source of national vitality, and it is well that their importance should be maintained at a point above that marked out by size of population alone. That there are evils, actual or potential, connected with the extreme disproportion that exists in some cases cannot be denied; but it is not likely that they will ever be very serious. In the House of Representatives, a few large and wealthy States have together a commanding position. Thus, in the present Congress, out of 391 members of the House, there fall to New York 39, to Pennsylvania 34, to Illinois 27, to Ohio 23, to Massachusetts 16; so that 139 members, or more than one-third of the whole membership of the House, come from these five States.

GOOD RECORD OF THE PHILIPPINE ASSEMBLY.

As throwing an important light upon the capacity of the Filipinos for self-government, we have seen nothing of late to compare in interest with the examination in the current *Political Science Review* of the recent extraordinary session of the Philippine Legislature. This article is from the pen of Mr. James A. Robertson, the librarian of the Philippines Library, and is written in an unbiassed and scientific spirit characteristic of the journal in which it appears. Mr. Robertson is an American familiar with American legislative customs and procedure. Yet he does not hesitate to declare that this special session of the Philippine Legislature, which met on March 28 last and adjourned on April 19, "marks an epoch in the history of the Philippine Islands." This statement, Mr. Robertson declares, "is no idle panegyric," but is based upon his personal attendance at many sessions and his acquaintance with various members of the Assembly. The session as a whole he declares to have been remarkable in these respects:

> For the discipline exercised by the Speaker; for the earnestness displayed by the Representatives in general; for their dignity of bearing; and for their freedom from jingoism; and, outwardly at least, from party passion—outwardly, I say, because considerable party passion and personal feeling did at times creep into committee and secret meetings. In general, it may be said that this Assembly in its quietness and dignity of action, has established a precedent that can well be taken as a form for future sessions.

That the Speaker's discipline was due to caciqueism, or bossism, Mr. Robertson admits to have been freely charged in Manila, and he thinks that there may be some truth in the charge, precisely as the warmest defenders of Speaker Cannon have admitted that he bosses the House, but declare that he bosses it well. The Philippine Cannon, Señor Osmena, is also charged with having been too subservient to the Philippine Commission which forms the upper house of the Legislature, and to the Governor-General; but the Assembly's refusal for a second time to pass the Government's irrigation bill (for which Mr. Forbes has just appealed anew to the October session) shows pretty plainly that the Assembly is not altogether dominated by the Palace. Of course, Mr. Robertson does not suggest that all the legislation proposed was wise or judicious; "sometimes, indeed, it bordered on the ridiculous." But of what American Legislature could this not be said? One humorist desired to put the famous Constabulary Band up at auction; and there was a movement in committee seriously to cripple the civil service; but the matter was straightened out when the bill came before the Assembly.

Coercion by party leaders and a sheepish cleaving to party lines were also to be observed in Manila. Much of the work was naturally done in committee, and here Mr. Robertson thinks there was a lack of smoothness as well as a tendency to waste time over details which he thinks will disappear as the legislators become more experienced. On the whole, however, the delegates were "men of relatively superior intelligence, alert, and anxious" for the welfare of the Philippines. Mr. Robertson was struck by the fact that, while elected to represent certain localities, the delegates were keenly conscious that they represented also the whole of the archipelago. There was considerable sectionalism, but the growth of a larger feeling of nationalism was quite apparent; as racial antagonism among the Filipinos dies out there will come "a feeling of solidarity and homogeneity."

As for the parties, the Nacionalistas, under Speaker Osmena, supported the Government, although pledged to independence; the Progresistas, who espouse the Taft policy of making progress slowly toward independence, were the Opposition. Nothing reflects more credit upon both parties, in our observer's opinion, than their refusal to seat Dr. Dominador Gomez, the labor agitator with a prison record, whose case was, by a vote of 44 to 29, referred to a committee that brought in a remarkably clear and able report, absolutely disqualifying Dr. Gomez. All in all, seventy bills were reported and discussed, many of them passed, but some defeated. Agriculture and allied industries received especial consideration, and so did matters of sanitation. In accordance with the Governor-General's desire, a "calamity fund" for use in possible emergencies was established by the Assembly. The organic law of the city of Manila was amended so as to confer upon it the right to grant certain franchises; the period during which timber and stone may be taken from public lands without fees, when used for necessary fuel or building purposes and not for commerce, was extended to ten years. The general appropriation bill, the failure to pass which was the cause of the extra session, was also voted. In this bill the various estimates of several departments, endorsed by the Government, were not accepted. In the exercise of an intelligent judgment the Assembly cut some of these and increased still others. The important irrigation bill was debated for five or six days, only to be laid upon the table until the October session.

When the first regular session of the second Philippine Legislature opened in Manila last month, Mr. Forbes had comparatively little to recommend. He reported that the loss in customs receipts due to the Payne-Aldrich tariff was more than offset by increase in miscellaneous and internal revenue receipts, and he asserted that under the new tariff there had been a quickening of trade throughout the islands. Beyond the irrigation bill, which Mr. Forbes earnestly urges anew, he recommends pensions for civil servants of long service, betterments in the lowest courts, a law to prohibit slavery or involuntary servitude, an increased penalty for cattle-stealing and forging public documents, and a fund to fight the locust pest. Altogether, it appears, first, that there are no gravely vexing public problems requiring legislative action, and, secondly, that the success of the Philippine Assembly is not only far beyond what might have been expected, but ground for the early award of other opportunities for self-government.

SWISS NOTES.

ZURICH, November 10.

Plans for the new university buildings at Zurich have been completed and adopted, and their execution will be begun at once. The site is the old one which commands a fine view of the town and of the lake. The cost of the new buildings will be five and a half million francs. Of this, a considerable part will be spent on the Biological Institute. An additional sum of a million francs will be devoted to the construction and installation of an Institute of Hygiene. Even as in the United States, great attention is being paid to this subject at the Swiss universities. Not many weeks ago, the Institute of Hygiene and Bacteriology at the University of Berne was inaugurated in the presence of the entire faculty and many foreign visitors. The chief address was delivered by Professor Kolle, dean of the medical faculty. Germany was represented on this occasion by Gaffky of Berlin, who is Koch's successor, and France by Vidal of Paris. The Berne Institute is thoroughly modern; and special attention will be given to the study of contagious diseases.

The magnificent collections in the National Museum at Zurich have been somewhat damaged by smoke. The building is close to the central railway station. There was not room enough to enclose all the fine objects in glass. The result has been that some of the ancient textiles, such as vestments, altar-cloths, and handkerchiefs became blackened. It was found necessary to have them cleaned with great care. For the present, many of them have been stowed away for their preservation. Among those thus concealed from the visitor's view are the collection of the "Mödeliplatz," and the famous baptismal *couverture* brought from Fribourg. It is proposed to build a new wing for the museum, or else to transfer these frail treasures to the neighborhood of the Polytechnicum where the smoke will not reach them.

The Cavour anniversaries recalled the fact that the Italian patriot was half-Swiss. His mother was the cultivated Mademoiselle Adèle de Sellon of Geneva, whose sisters made brilliant marriages among the French nobility. For many years Cavour made frequent visits to Geneva, and had always close affiliations with Swiss statesmen and men of letters. He wrote for the *Bibliothèque Universelle;* and it is not improbable that his ideas of freedom and democracy, if not derived from his acquaintance with the Federation, were at least encouraged by his Geneva associations. From Turin he wrote: "If Geneva was not separated from Turin by Mont Cenis, I would have come to ask your hospitality, for I know no intellectual atmosphere more healthful than that which one breathes in Switzerland."

At Berne there has appeared an interesting although fragmentary book of travel. It is an account of the explorations of Dr. Walter Volz, who three years ago met a tragic death in Bussania. This volume contains his biography, and all his scientific and literary remains. Many of these are memoirs and letters written on the spot, during his sojourn in eastern Asia, Polynesia, and East Africa. The adventurous and energetic character of the author, as well as the valuable information which he collected, make this a graphic picture of the regions with which he was so familiar.

During the recent meeting at Bâle of the Swiss Association for the Investigation of Nature, Professor Ostwald delivered an interesting lecture before the "Ido" Universal Language Society. After referring to the progress towards unity and organization in the world, he said that the introduction of the aeroplane had quite changed man's place in nature. Man is a tri-dimensional being; but hitherto his life has been only bi-dimensional. Now, thanks to flying machines, the scope of his activity has been extended; and, moreover, the boundaries formerly separating nations are likely to become less defined. With this increasing cosmopolitanism and unification, there is more than ever a demand for a universal speech. At present, 50 per cent. of the time in German schools is taken up in teaching modern languages. This great waste should not continue. He suggested that some civilized state should take the lead and insist upon the acquisition and employment of a world-language within its territory. It seemed to him that Switzerland with its central position in Europe, and its somewhat international population, was destined to adopt this course. He added that, should such a language be adopted, a central academic authority would be necessary to preserve the purity of the new tongue, and check the development of dialects. A. A.

NEWS FOR BIBLIOPHILES.

In 1640 an otherwise unknown missionary who was laboring among the natives of Guatemala printed a small treatise, whose punning title may be literally rendered "The Pointer Pointed with Short Points on the Manufacture of Vegetable Ink." The appearance of the surviving copy of this curious publication is said to suggest rather strongly that the inventive friar manufactured his type as well as his ink, and doubtless his

press as well. Guatemala was the fifth American city to possess a press, when, in 1660, the first professional printer opened his shop there. A bibliography of the city presses, "La Imprenta en Guatemala, 1660-1821," has just been published by José Toribio Medina of Santiago de Chile—a large volume of above seven hundred pages, containing 2,642 titles, besides introduction and notes.

Although a separate government, both civil and ecclesiastical, Guatemala has always been distinctly within the sphere of Mexican influence. It was to Mexico, therefore, that Payo de Ribera, a son of the Duke of Alcalá, naturally applied for a printer, as soon as he discovered that there was no one to help him get out the latest book he had written, in the city to which he was sent as bishop in 1658. The man procured was a good workman, but he maintained the reputation of his craft for thriftlessness. Some of his debts had to be paid before he could get away from Mexico, and the rest of them were among the considerably increased obligations which he bequeathed to his son, along with the printing outfit. The conditions were not favorable to prosperity for those who were dependent upon a reading public. In spite of its university and its European officials, Guatemala was essentially a frontier metropolis. The printing office for more than a century was subject to the varying intellectual activities of the local ecclesiastics or the equally uncertain activity of the civil officials. Only eighty-four titles are recorded for the forty years before 1701, as against two hundred and thirty, for sixty years, at Puebla, or some three hundred and fifty for the same period in Cambridge and Boston. During the eighteenth century, Guatemala much more nearly held its own, turning out just above a thousand titles, as against twelve hundred for Puebla. The forty-seven hundred titles credited by Hildeburn to the Philadelphia press between 1685 and 1784 gives the most convenient basis for comparison with what was going on in English America.

In both Guatemala and English America, religious publications constitute the majority, funeral sermons leading everything else, though followed rather closely by ordinations and installations. So far as interest goes, however, in this group, the Spanish books have all the advantage, for the Protestant theologians had no occasion to devise anything to compete with the brilliant pageantry, the decorated arches, and elaborate holiday processional floats which are perpetuated in these carefully executed Southern engravings. It is hard to say whether the next place in importance belongs to church rows or to unqualified theological treatises. One reason for this doubt is that it is quite impossible for any one not intimately acquainted with the particular disagreement of the moment to tell whether a treatise on a matter of pure theology was not subtly designed to bolster ulterior contentions.

Doubt also arises in deciding where to place many of the briefs for law suits, which kept the Spanish printers busy for a full century before the lawyers in the English colonies began to be reckoned with as patrons of the press. A large proportion of the Spanish litigants were connected with religious establishments, and it is often difficult to guess, from the titles of the briefs, whether the dispute arose from claims to rights in real property or to the payment of dues, or from matters dependent on spiritual opinion. There is plenty of evidence of quarrels, in church and out, in the English colonies, but they did not often get into print until the eighteenth century was well along. Questions of inheritance, of dower rights, and the like, which kept so many Spanish colonial lawyers busy, were probably not of sufficient money value in the English colonies to justify resort to the printing press.

In one line the Guatemala press did almost nothing, and in another nothing has survived whereon the Boston and Philadelphia printers found their most profitable activity. These two go far to account for the numerical bibliographical advantages of the English communities. There is evidence to show that the Spanish planter from the very beginning of printing demanded his almanac as regularly as any New England farmer, but the earliest surviving copy recorded is dated 1792. The first newspaper in Guatemala was issued for the month of November, 1729. It appeared once a month until March, 1731, each issue consisting of four leaves measuring about 7x5 inches. It was not until 1797 that another attempt was made. The weekly *Gazeta de Guatemala* began in February of that year, and continued throughout the Revolutionary period, the account of the vicissitudes occupying more than twenty pages of Sr. Medina's Bibliography.

As to books of economic or industrial interest, the Spanish colonists furnished for treatises on mining and metal-working a market rather larger and more important than that open to the agricultural and veterinary handbooks which were distributed largely by the itinerant venders that traversed New England. The Sociedad Economica de Amantes de la Patria was organized in 1796, and the reports of its annual meetings and prize distributions seem as promising as those of the philosophical, historical, and agricultural societies which came into existence during the same decade in Boston and Philadelphia. The next year, that in which the *Gazeta* began its weekly career, witnessed the opening of the Guatemala Museum. The awakening interest in this sort of thing developed steadily for a decade, when it was rather abruptly turned aside to give way to the agitation concerning the relations between the colony and the mother country. Guatemala was out of the main current of revolutionary excitement, and this very fact gives significance to the evidence that here, as in the other parts of Spanish America, there was a constantly increasing expression of sympathy with the movement toward independence.

Correspondence.

THE FRESHMAN ENGLISH COURSE.

To the Editor of The Nation:

Sir: There is in this country at present a widespread ferment and discussion concerning the teaching of English literature and composition. The discussion has a peculiar application to the freshman English course because of the unique place which that course occupies in the curricula of most of our universities. It is as a rule required of all undergraduates, and it furnishes the greater number of these with all the university training they are to have in English. On the other hand it makes, for the remainder of the students in it, an introduction to the advanced courses in English, and hence it is important that it should give these students a proper basis for their further work. The two aims are not in my judgment incompatible, but they increase the importance and complexity of the problem. Another matter which adds to this complexity is the division which must be made between the teaching of English literature and English composition..

The prevailing method of conducting this freshman English work is as follows: The subject is divided into two courses, one to teach composition and the other literature; the composition course requires a study of various "models of style" and the writing of a large number of themes upon easy subjects, in which work the main emphasis is placed upon form, and not upon ideas, the purpose being to give the student a command of good clear English which he will find useful whenever in later life he has any ideas to express. The literature course is usually a rapid survey of the history of English literature from Alfred or Chaucer to Tennyson. The idea is to give the student a bird's-eye view in order that he may understand, so to speak, the possibilities of the subject, may have his curiosity excited by different periods and authors, and be thus stimulated to further reading and study, and that he may have from the beginning a clear idea of the place of each author in what is often called the evolution of English literature.

To the writer it seems that these methods do not work. This letter is an attempt to explain the nature of a course, now being given for the third year at Indiana University, based upon the opposite theory: namely, that the value of English literature is something quite distinct from its history or from the analysis of its form and technique, that this literary study of literature, as it might be called, should precede a formal or historical study of it; that the only way to teach students to write is to make them think of *what* they are writing, not *how* they are writing, and that the most economical and interesting way to teach composition is in connection with the study of literature, making the themes a means of testing the student's grasp of ideas about literature which he is expected to understand.

The most fundamental idea concerning any subject is its place in the world of knowledge, and its value to life. To understand this is a long task, but the student must begin some time, and it is when he is entering the university, when he is mapping out his education and choosing his life work, that such ideas are most interesting and most valuable to him. Probably university teachers take it too much for granted that their students know why they are studying a particular subject, and neglect what is very necessary: namely, to indicate the general importance of the subject, its relation to other knowledge, and the good which the student may expect to get from it. If the student is to plan his own education he needs all the help of this kind he can get. It is especially true of

English literature that undergraduates study it blindly, not thinking much about what they want or what they could reasonably expect it to do for them. Whereas in many subjects the value is obvious, on the other hand the value of literature is not obvious, and a good many people who are studying, and some who are teaching it, would have difficulty in giving a sensible reason for the way in which they are spending their time. The problem then is not to give the student, first of all, a history of English literature, nor a knowledge of the principles of style, but it is rather to give him a conception of the whole subject, some notion of literature as a record of a certain kind of thought, and to make that notion as clear and definite and full of meaning as possible. The phrase "the meaning of literature" smacks of various unpleasant and sentimental associations, but, if we have the courage to disregard these for a moment, it is plain that some idea of the meaning of literature is the most important thing to be taught in the freshman course. We should select from the best of our English writers as many works as can be studied carefully, and no more, covering an extent of time and a variety of material wide enough to give the student some notion of the range of the subject, and read these for their meaning (that is, to get out of them as fully and completely as possible the most important things that the author was trying to say), bringing to bear on this work just as much study of history and of style as will aid the student and not retard him. Perhaps one cannot go far with this in one year, but the student's knowledge, as far as it does extend, will be real, involving thought and sense of proportion, as well as memory.

The writer hopes in a book now in preparation to explain in more detail how the scheme can be carried out in a one-year course, but one point briefly stated here will make the idea a little clearer. Any discussion of this problem involves a discussion of the nature of beauty and the discipline which will aid in its perception. Without going beyond the average freshman's depth, one may lay down the proposition (which is confirmed, I believe, by common experience), that up to a certain point the perception of beauty is a matter of intelligence. This idea will take the student far enough to make the distinction between sentimentality and real feeling. Again, the freshman may be easily made to see that underlying any sound achievement of intellect must be a certain honesty and perseverance, which one may call intellectual morality, so that the problem of appreciating beauty becomes for the beginner the task of laying a foundation of intellect and morality upon which such appreciation, if sound, must rest. In other words, the first thing the student needs in order to understand literature is to learn to think, and to think honestly. His freshman course in English ought to make clear to him the necessity for this, and it ought to force him to do it. That nine-tenths of our freshman students are developed far enough to understand and to act on such ideas may be easily proved by experiment, if it is not taken for granted.

Now a one-year survey of the entire history of English literature—a "seeing literature" course, as it has been called—will not do what we have just pointed out as the task of the freshman course. It is not "seeing literature," but seeing history by the back streets. To stuff the student's memory to the bursting point with facts and opinions about literature, the basis for which he has not time adequately to examine, is neither to teach him to think honestly nor, indeed, to think at all. A study of literary technique is likewise inadequate. The point to literature lies in what is said, not in how it is said. The importance of form is second to the importance of subject matter, and the study of form (of lifelong interest, if rightly understood), is meaningless unless this fact of its secondary and merely contributive place is grasped. The only kind of a course that will do for the student what we have just laid down as the desirable thing to have done is a course which is concerned with principles as well as facts—principles illustrated by a study of the meaning of certain works of literature.

The study of English literature is intimately connected with the study of English composition; so intimate is this connection that the two subjects can be much better taught together than separately. Such a treatment of literature as I have outlined will involve the discussion (though not the settlement) of many difficult questions—the relation of literature to education, to science, to politics, to religion. In the end it will come down to a consideration of the point of view of various writers toward different phases of life. The effect of it should be to make the student think about life as intelligently and seriously as he can. Now there is no way of making sure that the student understands what he is being taught, that he is really thinking about his work, so good as requiring him to write essays on various subjects connected with it. And it is difficult to find subjects on which the student will write with more interest.

In the high school the student gets great benefit from writing "little stories of daily life," simple essays on his ordinary work and play. He is learning to put his daily experiences on paper, and for a few years the task will be absorbing and profitable. These events are the most real and important ones in his mind. But when he enters college, another world, the world of ideas, is opening before him. If he is a success, this new world becomes more real and more important to him than the incidents of his boarding house or football field, and about this he should write, if his writing is to be training in thinking, which alone will make it worth while. It is a great fault with most of our elementary courses in composition in the colleges that they make no advance over high school courses so far as subject matter is concerned, and the student is compelled to write about things in which he has no longer a fresh interest. Why should be "studie and make hymselven wood" writing a description of a college building by moonlight, a performance which has no interest or value, either to him or to his teacher? But if he is writing about something which is actually a part of his work, something which demands thought and excites interest, then the student can be made to understand the infinite difficulty and infinite importance of saying exactly what he means.

FRANK AYDELOTTE.

Bloomington, Ind., November 22.

A BOOK OF BEGINNINGS.

TO THE EDITOR OF THE NATION:

SIR: In your comprehensive and sympathetic estimate of the art work of John La Farge, there is a slight mistake in the statement that "From 1859 to 1870 Mr. La Farge was engaged in illustrating 'Enoch Arden' and Browning's 'Men and Women' for the *Riverside Magazine*." It is true that he drew for the *Riverside* (begun in 1867), and that some of his designs showed the Japanese influence which you properly note. But the "Enoch Arden" was a separate volume, and one of such significance, in the history of American book-illustration, that it deserves a word to itself. A certain Boston publishing house had, as I remember it, planned an illustrated edition of that poem, without consulting the poet's "authorized" publishers, in that day of general scrambling for English books which could not be copyrighted in America. Messrs. Ticknor & Fields, accordingly, hastily arranged to issue an orthodox edition, with illustrations of so ambitious a character that their volume might head off its rival. Their "Enoch Arden" of the holiday season of 1864 was the result. Its pictures were somewhat distressingly varied in style and merit; some of the scenes and figures were drawn by the veteran, F. O. C. Darley, in his weakest and most superfluous manner; while others were by Mr. W. J. Hennessy, whose 'prentice work in the illustrated weeklies and elsewhere showed a promise hardly fulfilled in later years. But a great and lasting distinction was given to the volume by eight drawings by La Farge, and four by Vedder, which, on the whole, for originality and a somewhat prodigal display of youthful strength, ushered in the modern period of American book illustration. La Farge's The Island Home, for instance, was purely Japanese, and, as far as I know, the first unmitigatedly Japanese picture drawn by an American artist; while The Solitary and Philip and Annie in the Wood were revelations of a method new in the United States. Similarly strong and striking, and, in their way, frankly impressionistic, were Vedder's The Rescue—a sweep of waters, with a brave swimmer reaching to succor a drowning man, whose two hands (strongly suggestive of the later Rubáiyát) clutch the air in a last struggle—and Enoch Passes Away, a bold and startlingly effective picture, in which Enoch, with rapt vision, passes once more over a swirling ocean, into the arms of Christ on His cross. Perhaps, however, La Farge's The Seal of Silence is the strongest of all these remarkable pictures: a radiant angel, with finger pressed on lip, illustrating the line, "Not to tell her, never to let her know." All these woodcuts were engraved with the utmost care by Marsh, Anthony, Davis, and others of the best exponents of a subsidiary art, which in America, as in England, made "the 'Sixties" a term synonymous with the thought of attainment in designing and engraving on wood. These titles, by themselves, mean nothing to the reader of to-day; but if any one will turn to this volume, in its first edition, before the plates were marred by reprinting, I am inclined to think that he will agree with me in the impression that it was the most important American book illustrated

by woodcuts up to the date of its issue. To examine it now, when, by a coincidence, the same season is marked by the death of Mr. La Farge and the publication of the autobiography of Mr. Vedder, reminds us that it bore somewhat the same relation to book illustration in America as was borne to British art by the famous pre-Raphaelite illustrations for Tennyson's poems, issued by Moxon in 1857. As Mr. Vedder himself modestly says:

> Serious book-illustrations were unknown in the beginning of that short period, at least with us, but were established before it was through. It commenced about the time that I made those now-forgotten illustrations for "Enoch Arden."

CHARLES F. RICHARDSON.

Dartmouth College, November 21.

GLADSTONE ON THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: It is a surprise to find Professor Dawson, in the *Nation* for November 24, assuming as a foregone conclusion that Gladstone did not mean to be taken literally in his dictum that the Federal Constitution was the "most wonderful work ever struck off at a given time by the brain and purpose of man." Alexander Johnston, who was Woodrow Wilson's immediate predecessor in the chair of political economy and jurisprudence at Princeton, assuredly was not of this opinion. In the *New Princeton Review* for September, 1887, he published an essay entitled, "The First Century of the Constitution," devoted in part to refuting Gladstone's statement, and making plain what has, of course, become mere truism since examination and appraisal by his illuminating intelligence, that the Constitution was the result of long processes of evolution, and in no sense a marvel of instantaneous creation. But had any one else pointed this out before? And had Gladstone's seriousness been previously questioned? It is not likely, for Professor Johnston, "one of the ablest and most brilliant contributors to American political science," always considered this essay as among his most important and original pieces of work. T. PERSHING.

Germantown, Pa., November 28.

THE KEY ALPHABET.

TO THE EDITOR OF THE NATION:

SIR: The committee of the National Education Association appointed to prepare and recommend a key alphabet for uniform use in indicating pronunciation in all cyclopædias, dictionaries, gazetteers, text, and reference books, have submitted a preliminary report which has appeared in the *Journal of Education* (Boston) for October 20. The report is the result of the co-operation of three different committees, that of the National Education Association having joined with like committees from the Modern Language Association and the American Philological Association.

As was natural under the circumstances, the members of the committees were not unanimous on all the propositions considered. There is, however, an important point on which it appears to me that all could have agreed, but concerning which there seems to have been either failure to concur or failure to consider. The carefulness of the committee is attested by its readiness, expressed in the preliminary report, to welcome suggestions before the submission of the definitive report. It is due to this general invitation that I submit the following considerations:

The committee's use of the symbols *iu* for the sound of *u* in the word *mute*, by the committee written *miut*, is a transcription which I believe to be inadvisable both on theoretical and on practical grounds. It is inadvisable on theoretical grounds, for the sound is neither a dissyllable nor a diphthong, as the spelling *iu* would indicate. The fact, which everyone will doubtless admit, that a *y* is concerned in the sound would lead one to expect a *y* (the letter adopted by the committee to symbolize the first sound in the word *yes*) rather than an *i* (as seems to be advocated by the committee) not only in the transcription of such words as *you* and *union*, but also in that of words like *mute*.

It is inadvisable on practical grounds, for the spelling, if adopted, would tend to create confusion. Combinations containing an *i* before a vowel other than *u* occur, in which the committee would probably say that *y* is not involved. Compare, for example, not only the *ia* of *piano* (the instrument), but the *ia* of words like *pictoriat*, *medial*, and *Fenian*. On the other hand, the *i* in the last syllable of *million* and *onion*, the committee would doubtless consider a *y*. Now, it seems to me that to use *iu* in the transcription of the *u* of *mute* (*miut*) would lead one to expect an *i* also in the transcription of *million* and *onion;* and if these words be so transcribed, the symbol *i* would unnecessarily be made to do service for two distinct sounds, viz., the *i* of *pictorial, mediat,* and *Fenian* and the *y* sound involved in *mute, mittion,* and *onion*. Why not reserve the *i* for the *ia* of words like *pictorial* and use the symbol *y* for the *y* sound involved in words like *mute?* If this is not done, would not the spelling *miut* for the latter word suggest the pronunciation *mee-oot?*

The study of foreign languages would also be facilitated by this distinction; and the introduction of foreign words into English might then be accompanied to a less degree by the appearance in our dictionaries of such fantastic pronunciations as *pi-u* instead of *pyu* for *più, pi-ano* instead of *pyano* for *piano* (soft), and *fi-asco* instead of *fyasco* for *fiasco*.

A uniform system of key notation is certainly "a consummation devoutly to be wished," and the committee is to be congratulated on its being able to present, in such diversity of opinion, an alphabet as satisfactory as the one it proposes.

University of Maine, November 20.

ROOSEVELT DEFENDED.

TO THE EDITOR OF THE NATION:

SIR: I have been for many years a faithful and deeply interested reader of the *Nation*, and have been greatly profited thereby. It has done more than any other paper during the past twenty-five years to guide my own thinking on political subjects. I have been all the more deeply grieved and disappointed to see it assail Mr. Roosevelt while he with splendid courage was fighting and defeating the unscrupulous bosses of his party, the Trusts that have corruptly used money to accomplish their own selfish ends, and the commercialized press that has been hand in glove with them—such forces as the *Nation* has continuously opposed ever since I have been familiar with it. Whatever may be Mr. Roosevelt's faults (and I have often criticised him for them) they are insignificant when compared with his virtues and with the great service he has rendered the country. Notwithstanding the defeat of the Republican party, the cause Mr. Roosevelt represented is not down. Nor will he remain in obscurity. One may feel sure that he will rise again, and will yet do splendid service for his country.

WM. O. CAMPBELL.

Munich, Germany, November 12.

THE INTERNATIONAL WHO'S WHO.

TO THE EDITOR OF THE NATION:

SIR: The publishers of the "International Who's Who" have recently favored a number of persons with a proposal to insert their names and biographies in that volume, upon condition that they subscribe in advance for one copy of the completed work, at a cost of five dollars. Many public libraries, as well as individuals, may be led unsuspectingly to purchase this book upon the supposition that the list of names contained in it is as representative as the editors know how to make it. It seems due the public, therefore, to call attention to the fact that purchasers of the "International Who's Who" will really be getting merely a list restricted in part at least by the willingness of those included to pay five dollars in advance. Such a list can scarcely be regarded as an extremely useful work of reference. It should be added, lest unfair misapprehensions be caused, that this publication appears to have nothing in common with the English or the American "Who's Who." A. O. L.

Literature.

THE YOUNG DISRAELI.

The Life of Benjamin Disraeli, Earl of Beaconsfield. By William Flavelle Monypenny. Vol. I. 1804-1837. New York: The Macmillan Co. $3 net.

Lord Rowton was Disraeli's biographer designate, and when he died, after spending some years in amassing his material, without having really begun writing the authorized Life, there was a sense both of defeated expectation and of loss. But Mr. Monypenny's first volume removes all fear that a first-class subject for biography might suffer for lack of a writer to do it justice. To as much sympathy with his hero as Lord Rowton could have had he adds a critical detachment and a power of independent judgment which that intimate of Disraeli could scarcely have displayed. Skill in handling and arranging the matter, together with a swiftly moving and often pointed style, also goes to the making of this book, which must be pro-

nounced an excellent performance that arouses the highest hopes for the volumes yet to come.

It might seem hazardous to deal separately with Disraeli's youth, yet the experiment is justified both by the extraordinary interest which attaches to his beginnings, and by the fact that the period covered lends itself to treatment as a whole. If it be true that a man's character is developed and his driving thoughts marked out before he is thirty, we may well fix an exclusive attention, for a time, upon the early years of a remarkable career. And without being didactic about it, Mr. Monypenny makes it clear that Disraeli's leading qualities, and even his political convictions (or preferences), were sharply differentiated before he had reached the mid-path of life. It is a fascinating unfolding of the man that he makes for us—fascinating and astounding. Not even Disraeli himself could have imagined a romantic being combining more amazing characteristics than we see his to have been, or running a more incredible course. Precocious, enormously conceited, extravagantly dandified, dowered with a double portion of assurance and impudence, he yet possessed a genius which enabled him to carry off what would have ruined an ordinary man, and to impress himself upon hard-headed men of the world and seasoned statesmen as one even in his youth to be reckoned with. His own recorded predictions of his coming greatness may be partly ironic—for Disraeli could on occasion mock at himself—but the impression he made upon others is unmistakable. At the age of twenty-six he went to dine with Bulwer, Charles Villiers and Alexander Cockburn being also at table, and Bulwer wrote: "If we had been severally taken aside and asked which was the cleverest of the party, we should have been obliged to say, 'the man in the green velvet trousers.'" Disraeli's talented sister Sarah believed him from boyhood to be destined to the highest things; and the lady who afterwards became his wife, and whom we barely meet at the end of the present volume, declared to her brother: "Mark what I say—mark what I prophesy. Mr. Disraeli will in a very few years be one of the greatest men of his day." For once, masculine judgment and feminine intuition agreed.

The absolutely new material which Mr. Monypenny presents is not extensive, but is highly revealing. It consists partly of autobiographic fragments. These are frankly admitted to be "somewhat imaginative." Disraeli was never fully delivered from the sentiment of Contarini Fleming: "If a person have imagination, experience appears to me to be of little use." His own account of his ancestry will not bear critical examination. The author plainly warns us that "Disraeli, with his infinitely subtle and elusive mind and character, is a perpetual snare to the unwary who place too literal a construction upon his isolated words and actions." But his letters to his family, particularly to his sister, are human documents which shine by their own light, while most suggestive of all is the so-called "Mutilated Diary." Here Disraeli spoke to himself with as much sincerity as he could ever master, and many of the entries search his character deeply while betraying his boundless ambitions. "Nature has given me an awful ambition and fiery passions." "They shall not say I have failed." "I am only truly great in action. If ever I am placed in a truly eminent position I shall prove this. I could rule the House of Commons, although there would be a great prejudice against me at first." These secret communings are, of course, more meaning than his jaunty published predictions that he should in time give a fine exhibition of the true manner of a Leader of the House of Commons and also as spokesman for the Government in the House of Lords. But we do not, in fact, need to go beyond this volume to become convinced with Mr. Monypenny that Disraeli had a "dæmonic ambition." It was this together with his masterful will that enabled him to strangle his vehement passion for the first woman with whom he fell in love, because a marriage with her would have hampered the career which he had marked out himself.

Disraeli's early novels are dealt with interestingly by Mr. Monypenny. He gives cool estimates of what they were in themselves, astonishing productions for a mere boy, no doubt, yet with no sustained imagination and defaced by enormities of style; and also shows what and how much they reflected of Disraeli's own experiences and attitude. But from the first the wondrous youth felt that fame did not beckon him to literature. "Poetry is the safety-valve of my passions, but I wish to act what I write," says the Mutilated Diary. The novels were well enough in their way as bringing in money and winning notoriety—"and notoriety to Disraeli was at this time as the breath of his nostrils"—but public life was the thing for which his soul thirsted. His early attempts to break into it are here narrated in full, no effort being made to suppress the evidence that Disraeli had at first an easy political conscience, and was ready to go with either party or any leader that could advance him. This toying of his with convictions and his dallying with rival politicians brought upon him the terrible bludgeoning from O'Connell. But the undaunted Disraeli, whose courage was as great as his impudence, rejoined with rapier-thrusts, and, he wrote to his sister, "every one says I have done it in first-rate style." The entry in the Diary was: "Row with O'Connell in which I greatly distinguish myself." It was this vigor of audacity, combined with unusual gifts for public speaking, which steadily heightened Disraeli's public reputation, till at last "the inarticulate Tory squires" came to look to him as a heaven-sent Mercurius, and, after repeated failures, returned him to Parliament. With his election to it the first volume closes.

Grandson of a banker, Disraeli needed a great deal of money, but long had little. One of the painstaking and also illuminating features of Mr. Monypenny's book is his full disclosure of the youth's many financial ventures and his constant embarrassment for lack of funds. Disastrous stock-jobbing, the flat failure of a newspaper in which he induced Murray to invest $130,000, with several literary disappointments and a habit of living far beyond his means, loaded Disraeli with a frightful burden of debt. For a long time he was in daily fear of arrest, and had very carefully to arrange it, when agreeing to speak at a political meeting, to make sure that his eloquence should not be cut short by the sheriff's man. The fortune which he later married had not come to him when this volume ends. But full recognition had come; he had tried his powers; his "Oriental tendency" had declared itself; and we leave him with his captivating youth forecasting the unexampled triumphs of that manhood into the history of which we may hope that Mr. Monypenny will soon lead us.

CURRENT FICTION.

The Finer Grain. By Henry James. New York: Charles Scribner's Sons.

He thought he had already, poor John Berridge, tasted in their fulness the sweets of success; but nothing yet had been more charming to him than when the young Lord, as he irresistibly and, for greater certitude, quite correctly figured him, fairly sought out, in Paris, the new literary star that had begun to hang, with a fresh red light, over the vast, even though rather confused, Anglo-Saxon horizon; positively approaching that celebrity with a shy and artless appeal.

Thus characteristically opens the initial story in this latest group of Mr. James's studies. To read the sentence aloud is to realize how far the speech of print may come to vary from its natural model. The second semi-colon, flung out as a life-belt at the last desperate moment, is all that fetches one through. Nobody could have invented a more taking parody of the Jacobite style. And to this pass—to the pass of the artist who descends in his latter phases to the helpless imitation of his own manner—it may well be feared that Mr. James is destined to arrive ere long. Never has his substance seemed so attenuated, his manner so uselessly finicking, as in these five studies, as we must again

say. For they are not tales, or stories at all, so much as disquisitions apropos of certain shadowy incidents. There is no lack of the material of fiction, but the writer scorns to deal with it except with pince-nez and pincers. The affair of John Berridge thus reduces itself to bald terms: Berridge the author is made up to by the lord, and besought to give an opinion of a book written by a friend of his lordship's. The book shows itself beneath contempt at a glance; and Berridge's confusion is great when the friend turns out to be a lovely princess to whose eyes he has already succumbed. It is worse confounded when, in all her "Olympian" loveliness, she flatly demands of him a puffing preface for her tawdry romance. As an Olympian she succeeds in carrying him off in her motor-car for a loitering drive through nocturnal Paris. But the enchanting intimacy of the experience is blasted by her vulgar purpose. Heart-brokenly he confesses his inability to do what she asks.

"Then you don't like me—?" she murmurs, driven to the last feminine bulwarks.

"Princess," was in response the sound of the worshipper, "Princess, I adore you. But I'm ashamed for you."

"Ashamed—?"

"You *are* Romance—as everything, and by what I can make out, every one about you is; so what more do you want? Your Preface—the only one worth speaking of—was written long ages ago by the most beautiful imagination of man."

She cannot comprehend; and the kiss he presses upon her wondering lips at a parting which he assures her is final, merely seals his tribute to Romance. The substance of the following episodes is far less robust—a fabric of the flimsier web, it may be, rather than of the finer grain.

The Wicker-Work Woman. By Anatole France. Translated by M. P. Willcocks. New York: John Lane Co.

We have here a very satisfactory translation of a pretty unpleasant book—a portion of Anatole France's work which one rather regets to see in English. "The Wicker-Work Woman" (Le Mannequin d'osier), a novel in the series called Histoire Contemporaine, deals with the breakdown of M. Bergeret's domestic establishment and the merciless process by which he gradually extrudes his empty-headed and erring wife from his home. Bergeret is one of France's half-ironical projections of himself—a sedate university professor devoted to classical scholarship and given to detached and unworldly speculation on the universe. His life is made up of two strands closely woven together, yet utterly distinct: the serene life of the intellect which operates in his study and in his intercourse with men, and the sordid life of the body, which furnishes the only point of contact between him and his bickering household. The disjointed structure of the book appears to be an effect of design to emphasize the juxtaposition and grotesque incompatibility of the animal and the intellectual natures, the insuitability of the mind to its tenement. The divorce of M. Bergeret seems to have a certain symbolical significance; in the life of reason, it seems to suggest, there can be no truce with the body.

Now, there is something unwholesome in the intellectual detachment of M. Bergeret. In spite of his monastic withdrawal from the flesh, he is troubled at times by the visions of St. Anthony. "Were I, for instance," he says on one occasion, "to express all the fancies that crowd my mind at this moment, all the notions which pass through my head, like a swarm of witches riding on broomsticks down a chimney, if I were to describe the manner in which I see Madame Gromance, . . . the vision of her which comes to me, . . . a thousand times more waggish and indecent than that famous figure introduced in the scene of the Last Judgment on the north portal of Saint-Exupère by a masterly craftsman who had caught a glimpse of Lust himself as he leant over a vent-hole of hell; if I were accurately to reveal the strangeness of my dream, it would be concluded that I am prey to some repulsive mania." This passage suggests the snake that lurks in the garden of Epicurus; a taint of sensuality, sometimes violent, sometimes nearly imperceptible, is almost everywhere discoverable in the works of Anatole France. His serenity, one is compelled to feel, is not so much achieved as thrust upon him by the spontaneous recoil of a powerful sensual imagination. It is the serenity of disgust—a disgust which is rather the cause than the result of his philosophy.

A Successful Wife. By G. Dorset. New York: Harper & Bros.

This book may be read as a wholesome antidote to David Graham Phillips's coincident effusion, "The Husband's Story." It is in several respects an extraordinary piece of work. It presents the case of the "American woman" from a very different point of view, or, rather, it presents a very different variety of that genus from that which is now most commonly put upon exhibition. Here is no picture of the worthy but fatuous American male in the act of being bled and trod upon by the rapacious and dissolute creature whom he patiently calls wife. The shoe is quite upon the other foot. The woman who is supposed to tell the story belongs to an old-fashioned order: a sort of Griselda, with the instinct of service, of endless courage and patience, and yet with a high spirit of her own which asserts itself at the crucial moments of her experience. She has that mingling of intellectual artlessness and practical acuteness which is so common among American girls of her class. For she has a class: that of the small shopkeeper, the drummer, and the saleswoman. She herself is a stenographer, and at fifteen has become the head and chief wage-earner in a family of five. She does not lose the earmarks of class, and her story is told with remarkable consistency of style. "I don't think there is a creature living who would not love to be 'successful,' and who isn't ready to spend twenty-five cents, or even twenty-five dollars, on a book which would tell them how to succeed. You hear such a lot of talk nowadays about success!" In this utterly commonplace vein her tale is for the most part told. She has no apprehension of words as anything more than vague counters. She pronounces Swinburne "very pretty," and Mr. Kirkland's remonstrance means nothing to her, though she reports it faithfully:

"Now, for instance," he suggests, "you wouldn't call this scarlet wall of quivering foliage, this liquid-hearted corner of the woods, nice, would you?"

I said yes, that I thought it was very nice indeed.

Mr. Kirkland thereupon abandons the vocabulary, but he marries the girl, and has altogether the best of the bargain. He is an "artist," a genius, and, of course, a good deal of a scapegrace. The experience of this wedded pair is not smooth, but it is not conventionally rough, either. The woman has the fidelity and the sturdy endurance of her kind. Even in her hardest youthful struggles with poverty, she had never consented to be pitiful: "Nobody knew when I was tired, frightened, or disheartened; I didn't have feelings that were hurt, and I didn't cry." Nevertheless, there is a treasured self behind an inner citadel of this apparently commonplace nature. Eventually, the husband discovers it, and in the same moment beholds his own comparative littleness: and in that moment begins their real union.

Deep in Piney Woods. By J. W. Church. New York: Thomas Y. Crowell & Co.

In this story of the turpentine belt of Georgia, where thrive the mysteries and horrors of the Voodoo religion, that dread cult of the snake, we meet with a picture of a Southern household which has preserved from the ruin of the civil war much of its former prosperity and ease. Major Claiborne, comfortable and picturesque, if archaic in his manner of life; Brett Reed, the hero, born in the South, but trained in the North, and successful in every conflict; Savannah, the Major's daughter, and the various negroes, though all are drawn conventionally, will doubtless appeal to those to whom a romance laid in the South is ever dear. That the negro problem should enter into the plot was

of course inevitable, considering the Northern education of the hero.

A VIRGINIAN WHO WROTE ABOUT VIRGINIA.

The Old Virginia Gentleman and Other Sketches. By George W. Bagby. Edited with an introduction by Thomas Nelson Page. New York: Charles Scribner's Sons. $1.50 net.

The author of this book was born in Buckingham County, Virginia, in 1828. He studied medicine and began to practise it in Lynchburg. But the pen almost at once drew him away from the scalpel. He eventually moved to Richmond and succeeded John R. Thompson as editor of the *Southern Literary Messenger*. After the civil war he occasionally appeared on the platform. He died in 1883. This collection of his better-known writings is put before the public distinctly in the hope of winning for him a place among American men of letters.

Mr. Page is quite right in holding the sketches worth preserving. For the life they depict had not merely historical interest, but also, undeniably, a great charm. No one, probably, ever felt this charm more keenly than Dr. Bagby, and no one except, perhaps, Mr. Page himself, has ever conveyed it more skilfully. For Dr. Bagby had a distinct literary gift; not a great or impressive gift, but such a gift in prose as may be compared to that in verse of the minor poet who is as safe in his own limited sphere as the great poet is in his. To characterize his writing is difficult. Perhaps the best adjective for his distinctive quality is whimsical; but unfortunately the dictionaries do not supply a noun to correspond to it. The English writers of whom he oftenest reminds one are Addison, in the Sir Roger de Coverley papers, and Lamb, in his personal sketches. We do not mean that his achievement entitles him to rank with either. But there are passages in the title essay which would have done no discredit to Addison. "My Wife and My Theory of Wives" might have been written, almost *in toto*, by Lamb.

Some of the other papers are less successful. The humor of "My Vile Beard," undeniably funny as it is, does not rise above broad farce. Elsewhere, the newspaper flavor is often perceptible. Many of the allusions are hopelessly local or personal. Now and then a Northern reader will doubtless be moved to mild resentments—though never, probably, to real wrath. If one looks for anything in the nature of a coldly dispassionate estimate of the bygone civilization one is reading about, one will be disappointed. It is of the essence of Dr. Bagby's mood to be resolutely and consistently, even if at times a bit satirically, partisan and provincial. Occasionally, too, we are bound to confess, the chord of sentiment seems to us to be a little overstrained, and the pathetic note dwelt upon a trifle too insistently. But there is not a heavy, unreadable page in the book. And naturally. For Dr. Bagby, truly as Mr. Page can declare that "God made him a man of letters," was also, nevertheless, a newspaper writer, and a successful one. That was his chief vocation. Most of these sketches have found their way into a book because they were first widely read in newspapers. In the matter of readableness, they are not experiments. At least one, "How Rubinstein Played," is known to millions—of whom the great majority have probably never heard the author's name.

To endeavor to secure, at this late day, a wider recognition and reputation for such a writer is, we repeat, worth while. For there is here a genuine contribution to our store of sympathies and appreciations; a true transcript of a far from negligible volume of American life; something in its way as original and sincere as is to be found in any American writing whatsoever. A vast deal has been written about Virginia and about the South, and much, particularly of late years, has been written in the South by Southerners. But out of the old South, the South before the war, there came extremely little that had the quality of human verity. The best material we have for a critical view of the ante-bellum Southern civilization, particularly on its economic side, is in the books of travel of Frederick Law Olmsted, an outsider. It is true that in recent years there have appeared a number of volumes of reminiscence of that period, and some of them have decided value. But Dr. Bagby wrote out of the heart of it. What he wrote and what is here preserved is not so much a view or description or account of the old Southern life as it is an expression of it—and an expression of it in very intimate moods. To read his unpretentious sketches is, therefore, to come as near as one can come to re-entering that vanished order, that extinct civilization. It is, of course, the civilization that was largely built upon slavery as an economic basis; a civilization out of touch and out of sympathy with modern life in many ways, some of which are here amusingly exhibited. But it was also a civilization in which many foreign observers found more attraction than in anything else that the American of that day has to offer. It was the civilization which in the eighteenth century produced Washington and Marshall, and in the next century the army of Northern Virginia.

The Psychology of Religious Experience. By Edward Scribner Ames. Boston: Houghton Mifflin Co. $2.50 net.

This is one of the most important books on the psychology of religion that have appeared since James's "Varieties of Religious Experience." It covers a larger portion of the whole field than any other book on the subject that has yet been written, and it is scholarly in tone, clear in expression, liberal and unprejudiced in attitude. Its author, being both a professional psychologist and a minister, has the unusual advantage of seeing his subject from two somewhat distinct points of view, and hence avoids the limitations of either. The book may be divided into two chief parts, one dealing with primitive religion, the other with the religion of to-day; and the two are unified by the application of functional psychology to the interpretation of both, and by the thesis which runs through the entire work, that "religion is the consciousness of the highest social values."

In primitive life, our author points out, religion was a matter of social custom. And not only in a general way is this true; it is seen in all the details of religious expression. "Religion in its first form is a reflection of the most important group interests through symbols and ceremonials based upon the activities incident to such interests." These social symbols, once established, "tend to become fixed and to secure themselves against change by natural safeguards." This point of view as to social expression and custom is now applied, often most ingeniously, to several primitive phenomena such as taboo, magic, belief in spirits, sacrifice, prayer, mythology. In general, it may be said that the treatment of these phenomena is a systematic attack upon the older intellectualistic interpretation such as one finds in Tylor, Spencer, Jevons, etc., and an attempt to explain them in terms of functional psychology, as social reactions upon the environment. Belief does not come *first*, but arises rather as a consequence of activity. Sacrifice originally is not *to* the god, but is rather a ceremonial eating of the useful animal which thereupon or thereafter *becomes* the god. Prayer does not presuppose a "spirit" to whom it shall be made; it arises rather from something like interjection and the common habit of thinking in social terms. If space permitted, it would be interesting to examine in detail Professor Ames's various conclusions and his grounds for them. Certainly, some of his conclusions must be accepted, and all of them are suggestive; something, however, might still be said in defence of the older view, and it seems probable to the reviewer at least that belief in spirits had considerably more to do in the development of primitive religion than Professor Ames is willing to admit.

The last part of the book is given up to the religion of to-day, especially as found in America—its growth in the individual and its relation to various aspects of modern life. An excellent re-

view is presented of the religion of childhood and youth, in which Professor Ames takes occasion to express in no uncertain tones his disapproval of the artificial conversion and the induced revival, and to urge the importance of education in the religious life. Three excellent chapters are devoted to the place of religion in psychical experience, in which the functional point of view is again emphasized, the most important thing in religion as in life being neither ideation nor feeling, but the basal reactions from which both of these arise. The book ends with a chapter on The Religious Consciousness in Relation to Democracy and Science, the author pointing out the necessity of elasticity and growth in religion and the consequent need of new forms and symbols to express adequately the religious consciousness of the modern world.

Excellent as this book is, one closes it with a feeling that is akin to surprise, considering its large scope and its seeming thoroughness. The reader has, namely, the impression that one who should look to it for his idea of what religion is like, would come away with a very partial, not to say extraordinary, notion. And on analysis it should seem that this peculiarity is due to the extremely external point of view from which the whole book is written. Thus, there is no mention of mysticism, scant description of the inner experience of the religious individual, and slight reference to religious beliefs, the idea of "God" being treated altogether pragmatically and disposed of in a few pages, while the belief in immortality is not once mentioned. In short, one might indeed derive from the book a good idea of the ways in which religion gets itself expressed in society, but not much notion as to how religion feels to the individual. This external treatment, in its turn, seems to be due to the author's consistent and invariable use of functional psychology. Such a result is, of course, not absolutely inevitable, but it is certainly extremely natural. Functional psychology is so interested in the outcome of conscious states and their biological, sociological, and ethical consequences that it often forgets to consider the conscious state itself. As consciousness is for the sake of action, action gets almost all of the emphasis. Thus the inner life is slighted, and functional psychology which seeks (as Professor Ames explicitly shows) to absorb almost everything, ends by becoming almost everything—except psychology.

Another reason why one feels that Professor Ames's book is inadequate as a description of religion is to be found in his fundamental thesis as to what religion is. To say that "religion is the consciousness of the highest social values," if it means anything at all, certainly indicates that religion is not what most of us have understood by it. but is simply and solely social morality. In fact, Professor Ames more than once explicitly says as much. And he illustrates his meaning in various ways—for instance, by insisting that "non-religious persons" are not the unbelieving or the non-mystical, but simply those who for lack of some mental endowment are not interested in the welfare of society, whereas the typically religious people are those who work for social improvement. It is a little startling to learn that nearly all of us have throughout our lives been using the word religion in quite the wrong sense, and that it really means something altogether different from what we had all supposed. Of course, Professor Ames has a right to define his terms as he likes; but it should seem that before appropriating a common and useful, though indefinite, old word such as religion, and making it synonymous with another common word, he should at least have coined for us a new word which we might use in place of the old one. For whatever one calls it, there is in most human lives a call for help outside one's self, an upward look, a despair of the merely ethical and the merely human, and a corresponding source of "horizon, stability, and hope," not given by morality or by other ideals, and not to be described as consciousness of the higher values of society. This thing, call it what you will and value it as you will, is certainly worthy of the psychologist's study. And it is therefore somewhat disappointing to find so little reference to it in Professor Ames's admirable book.

The Shifting and Incidence of Taxation. By Edwin R. A. Seligman, McVickar Professor of Political Economy, Columbia University. New York: The Columbia University Press. $3 net.

This is the third edition of this work, revised and enlarged to 395 pages, whereas the original of 1892 covered but 184 pages. It has proved throughout this period a particularly serviceable treatise to the students of public finance. The earlier multiplication of various types of theory upon this aspect of taxation persists in this last edition. Moderns are subdivided into (1) the physiocrats; (2) adherents of the absolute theory, *i. e.*, Adam Smith and Ricardo; (3) believers in the equal diffusion of taxes; (4) capitalizers of taxes; (5) eclectics; (6) agnostics; (7) socialists; and (8) those using mathematical analysis in their discussions. This affords an ample frame on which to display varieties of opinion, but from a logical standpoint, it is a hopeless hodge-podge. At least three or four different bases of classification—such as scientific methods, agreement in conclusions, partisan attitude—are simultaneously employed to effect a single classification.

The analytic part of the work reproduces the many excellences of the earlier editions. If any of the topics should be singled out for discussion, perhaps the treatment of the capitalization of taxation (especially pp. 221-226) is the most tempting:

> When a special tax is imposed on any one class of commodities, . . . the tax will . . . fall entirely on the original owner . . . for the tax will be discounted through a depreciation of the capital value of the article by a sum equal to the capitalized value of the tax (p. 221).

Thus—the example is our own—if suddenly an annual dog tax of five dollars is levied, and the dog's owner, influenced thereto by the tax in question, and finding the dog of no further use to him, gives me the dog *gratis*, and in case I pay thereafter the annual dog tax so long as the dog shall live, then the "tax falls entirely on the original owner!" Despite the indubitable evidence of my annual tax receipts, I am told that the depreciated capital value at which I got the dog has "*virtually*" exempted me from this tax burden! This is hard for the wayfaring man to credit. Still, when a tax like the English land tax has for generations been fixed in amount, in the sense that each parcel of land is taxed annually for a certain fixed and invariable money sum; and when the land has been sold and resold subject, as it were, to this perpetual State mortgage, it is difficult to assert that the payer of the rent charge (for such the tax has become) is sensible of lessening any income which he ever had or hoped to have for private expenditure. The rarity of taxes similar to the English land tax, however, makes the argument for capitalization seldom applicable to modern taxes.

The actual process by which taxes are shifted is a tortuous and a complicated one. It is well, therefore, for the student of finance to disclose his hypotheses frankly, and to admit that almost any unforeseen circumstance may invalidate his deductions. One must shun *the academic fear of seeming academic* in these matters. The considerations are suggested by Professor Seligman's statement that a poll tax "is clearly not susceptible of being shifted" (p. 371). Yet in States where the prepayment of the poll tax is a prerequisite for the exercise of the suffrage, campaign committees have been known to assume the tax quite readily.

The Iliad of Homer. Translated into English hexameter verse by Prentiss Cummings. An abridgment which contains all the main story and the most celebrated passages. In two volumes. Boston: Little, Brown & Co. $3 net.

Mr. Cummings adds himself to the already exasperating number and variety of critics who have propounded solu-

tions of the Homeric question; for him, the Iliad is composed of "The Wrath of Achilles" by a first Homer, of additions celebrating the exploits of Hector by a second, or "Trojan," Homer, and of still further additions by a third Homer, whose touch is lighter, but whose contributions are episodical and not always relevant, and whose taste falls something short of his execution. These critical findings of the translator are reflected in the character of his abridgment; it includes most of the first and second Homers, but only the best parts of the third.

In the long and not uninteresting preface containing this contribution to Homeric vexation the author tells also in simple language the story of the Iliad, devotes a few pages to elementary directions for the pronunciation of proper names, and in the remaining two-thirds discusses the English hexameter. "English hexameter is subject to two inflexible laws: first, that every foot must begin with an accented syllable; second, that the several feet properly read must, within the laws of English versification, keep time." The second law is easily obeyed; but to the first, also, the translator yields consistent obedience, though the fact that "all monosyllabic connectives, the preposition, the article, and most pronouns and auxiliary verbs are unaccented," makes the difficulty of observing this law in the first foot of the line so great that the translator is aware of "no modern hexameter . . . wherein the law is adhered to rigidly." Other guiding principles are set forth, but are not exacting enough to be called laws; and the largeness of liberty seen to be allowable in English hexameter is so great that one is inclined to agree with the view which Mr. Cummings takes pains to criticise, that "the English language has no prosody," and to conclude that, after all, so far as hexameter is concerned, the only rules are those imposed by a delicate sense of the music of language.

As to the sum total of Mr. Cummings's translation, it neither descends to the lowest nor rises to the highest. That it is conscientiously done is evident enough, but its distinction, whether in form or content, is hardly such as to warrant a hope that it will not take its place with the forty or so unsuccessful attempts at hexameter translation which the author tells us have already appeared in print. Let us choose an example out of a possible great number, copying it without verse division:

Now, when a king he met, or man of uncommon distinction, him would he flatter in soldierly wise, but admonish him saying: "Sir, it befitteth not thee to play the part of a coward; be an example; sit down, and make the soldiers do likewise. No wise thou knowest the real designs of King Agamemnon; this is a test, a ruse, that only, and vengeance will follow. Do not we kings who were there know what took place in the council? Take care! Kings, vicegerents of Zeus, are highhanded; and this one holdeth his honor from Zeus, and Zeus, dread Arbiter, loves him."

This, with the exception of the rhythm, is good prose, but indifferent poetry. Of course, it would be absurd to demand in a translation of Homer the style of a Milton; but if verse form is to be used at all, diction and style should distinguish the work from the language of mere romantic story-telling, or even of Elizabethan prose:

> Neque enim concludere versum
> Dixeris esse satis.

Notes.

Early in December, Houghton Mifflin Company will publish a collection of Julia Ward Howe's later poems, entitled "At Sunset," upon which she was engaged at the time of her death; they were written mostly during the last eleven years, many of them for notable public occasions.

Volume XII, the last of the actual text of "The Cambridge Modern History," which will appear in a few days, is called "The Latest Age," and brings the history up to the present day.

An abridged edition, Professor Saintsbury's "Historical Manual of English Prosody," will be published by Macmillan, for use in schools and colleges.

About five hundred unpublished letters of Madame de Deffand to Horace Walpole, besides eleven letters by Walpole to her, are being prepared for publication by Dr. Paget Toynbee. The volume will be issued by Methuen.

The first volume of F. W. H. Migeod's "The Languages of West Africa" is announced by Kegan Paul.

Prof. Alexander Bugge has edited the first instalment of the "Diplomatarium Norvegicum," or documents concerning the relations of England and Norway in the Middle Ages.

The Putnams have in the press "A Short History of Women's Rights," by Eugene H. Hecker.

The Baker & Taylor Company will publish "Playground Technique and Playcraft," edited by Arthur and Lorna H. Leland. It is described as a text book in playground architecture, construction, equipment, organization, and supervision for playground committees, park boards, and manual training teachers. The same house announces "The Growth of the Gospels," by Prof. Flinders Petrie, the Egyptologist.

The Sixteenth International Congress of Orientalists, which was to have been held at Athens in the spring of 1911, has been postponed to the spring of 1912, presumably on account of the present disturbed conditions in Greece. The committee of organization includes the rector of the National University, the Mayor of Athens, representatives of the English, German, American, French, Italian, and Austrian archæological institutes at Athens, and various professors of the Athens University. The secretary of the committee, on whom the chief labor of the work of organization will devolve, is Spyridion P. Lambros, the well-known professor of history at the National University (Rue Mavrocordato, 10), to whom scholars and others interested are asked to send their names as members of the proposed congress. The committee announces that in connection with the congress, which will consist of the usual number of sections, special excursions will be planned to historical and archæological sites of Greece and adjacent countries. A second bulletin, which is promised by the end of the year, will furnish further details regarding the precise date and duration of the congress.

A prospectus of "The History of Nations," edited by Henry Cabot Lodge, and published by John D. Morris & Company of Philadelphia, has just been received. Among other delightful bits of misinformation we find the following statement: "Volume 21, South America, by Philip P. Wells, Ph.D. . . . This able work is the only complete, up-to-date, reliable history of the South American nations ever published. . . . Dr. Wells delved deeply into hidden sources." Examination of the volume itself reveals the fact that it is almost entirely a translation of Deberle's "Histoire de L'Amérique du Sud," which has once before been appropriated, the first time by a Spaniard, whose work was translated into English by Adnah D. Jones. It seems to have a fatal attraction for literary pirates.

In the opinion of Francis McCullagh, expressed in an article on "Some Causes of the Portuguese Revolution," in the last number of the *Nineteenth Century*, the clerical question was largely artificial, however effective it may have been in overturning the monarchy:

> The Portuguese, a proud people with a great history, are keenly sensitive to the fact that now, in the twentieth century, they do not occupy the same relative position in Europe which they occupied in the fifteenth century. They have declined, and are in consequence irritable and despondent. Suddenly they are told that this decline is due to clericalism.

Repetition finally convinced them of the truth of the assertion. But Mr. McCullagh does not think that the departure of the monks will make much difference to Portugal.

Volumes XIX and XX of Scribner's Memorial Edition of Meredith bring "The Amazing Marriage" and "Celt and Saxon." The latter novel, first published in the summer in a separate edition, was reviewed in the *Nation*, August 25.

Those who are familiar with the department of *Harper's Magazine* known as the Easy Chair, will find old friends in the volume of essays which W. D. Howells has just published under the title of "Imaginary Interviews" (Harpers). The book scarcely prompts one to a review of Mr. Howells's ideas, which contain nothing that is in any way revolutionary. Written deliberately with the mannerisms of chit-chat, they touch upon a limited range of agreeable American life. A vein of irony, never profound but always whimsical, coupled with a tender fancy and mellow philosophizing, ensures a wide reading for the book by those who enjoy a harmless play-acting with life and ideas.

Hilaire Belloc was apparently put to it

to discover a name for his new volume of essays, after he had dubbed his last entertaining book "On Everything"; but he finds plenty of material for his pen in the two-score of papers or so now gathered under the title "On Anything" (Dutton). In the paper On a Poet written upon the occasion of Swinburne's death, he moralizes upon time's changes in a poet's or author's fame, and gives an estimate of Swinburne's poetry. "In all his work the mere nature of South England drives him. . . Whoever best knows that landscape and that sky best feels him." After speaking of Swinburne's feeling for rhythm and word, Mr. Belloc turns to his "paganism," and denies that quality to him in any true sense of the term. Swinburne belongs distinctly to the new world of yearning that came into being in the fourth century of our era. Among the other subjects treated in Mr. Belloc's customary vein are: Irony, People in Books. The Abstracted Man, The Method of History, Milton, Astarte, The Candor of Maturity, The Judgment of Robespierre.

In a well-printed, handy volume, uniform with his "Art of Naval Warfare,' Smith, Elder & Co. have reprinted, under the title of "Sea Power and Other Studies," twelve essays written by Admiral Sir Cyprian Bridge of the Royal Navy, at various times from 1898 to 1906. In these jingo days, it is refreshing to have the essential principles underlying the necessity and use of a fleet expounded by an author of such sound judgment, wide experience, and deep study. To these advantages are added a simple style and a happy knack of illustration which make the understanding of these articles as easy as their reading is agreeable. No one should venture to discuss naval history or naval strategy who is not thoroughly conversant with Sir Cyprian's contributions to these subjects.

As an appendix to the volume of collected "European and African Addresses" (Putnam), by Theodore Roosevelt, there are added the presentation speeches of the chancellor and Dr. Henry Goudy at the Oxford convocation, when the honorary degree of doctor of civil laws was conferred upon the ex-President. Lord Curzon of Kedleston thus hailed Mr. Roosevelt as he took his place for presentation:

Hic vir, hic est, quem promitti sæpius audis,
Cuius in adventum pavidi cessere cometæ
Et septemgemini turbant trepida ostia Nili!

And no less happy was he in admitting Mr. Roosevelt to the degree:

Strenuissime, insignissime, civium toto orbe terræ hodie agentium, summum ingentis reipublicæ magistratum bis incorrupte gestum, ter forsitan gesture, augustissimis regibus par, hominum domitor, beluarum ubique vastator, homo omnium humanissime, nihil a te alienum, ne nigerrimum quidem, putans, ego, auctoritate mea et totius Universitatis, admitto te ad gradum Doctoris in Iure Civili, honoris causa.

Was the chancellor, in the belief that Latin is not included in the ex-President's omniscience, indulging a sense of humor? There are in the present volume nine of Mr. Roosevelt's addresses. Several of his shorter extemporaneous speeches are omitted. Lawrence F. Abbott contributes in the preface a narrative of the trip, and an appreciation of Mr. Roosevelt.

Rarely are the letters written home by the enterprising traveller to his family of any value to others. Still more rarely are Chautauquan "Readings" of any value at all. To combine the laments and felicitations on coffee, dinners, beds, and trains dear to the one, with the sportive didacticism and ponderous colloquialisms supposed necessary to the other, and thence provide anything worth looking at twice, would be an amazing feat of literary artistry. Dr. John D. Fitz-Gerald, in his "Rambles in Spain" (Crowell) has had no such luck. His book contains all these impossible elements, and makes nothing of them but impossibility. But the illustrations, from photographs, are many and good. In combining them with Baedeker an ingenious reader could find much gain. Indeed, Dr. Fitz-Gerald confesses very fairly his own indebtedness: but who ever before called Baedeker's exactness "meticulous"?

"The World a Spiritual System" (Macmillan), by James H. Snowden, is an attempt to put into popular form the outlines of theistic idealism. The author does not claim to contribute anything new to the discussion of the ontological problems, but simply brings together, for the use of the non-technical reader, most of the views of contemporary philosophical theists. As one might expect, the resulting picture of God resembles a composite photograph of the Royccan Absolute and the old-fashioned Creator. Still, it must be said that on the whole the book presents a very readable account of a certain important metaphysical view.

"Maritime Law" (London: Effingham & Wilson), by Albert Saunders, is the second enlarged edition of a work originally published in 1901, and reprinted twice since that time. The original feature of the book is that it is in narrative form and illustrates the law on the subject by the history of a ship from and including the agreement to build her, until she becomes a total loss. It also treats of the rights and liabilities of the ship in war time and the rights and liabilities of neutrals. As a whole, the work is well done, although to an American lawyer its value is impaired by the fact that no reference is made to American cases.

The department of English and comparative literature of Columbia University has just issued a "Bibliographical Sketch of Anglo-Saxon Literature," which has been prepared by one of the department's professors. Designed to save labor in the classroom, it presents in an orderly arrangement the titles of works with which every student of the subject should be acquainted. The list does not pretend to be complete, but comprises the latest and most comprehensive references. It is divided topically, books of general bearing being followed by the special treatises on all the individual Anglo-Saxon works. Considering the enormous amount of useless articles which have been written on the literature of this early period, an authoritative guide like this will be welcomed by many a bewildered neophyte; for few professors of Anglo-Saxon take pains to give titles distinctly or to write them in more than the illegibly abbreviated form known to Germans.

A second volume completes Prof. John W. Cunliffe's edition of Gascoigne in the Cambridge English Classics (Putnam), and ends what must have been a laborious and tedious task for the editor. He has had the satisfaction of including several pamphlets which have hitherto been almost inaccessible, but none of these is of great importance. The text, as he states in the prefatory note, was set up in part from the original quartos in the Cambridge University Library, but mainly from photographs of printed pamphlets and manuscripts in the British Museum and the Bodleian. This method, taken with the tried accuracy of the Cambridge Press and of Professor Cunliffe, is assurance for a literal reproduction down to the last suspended *e* and *t*. As in all the volumes of this series, the long *s* is not used, and the confusion of *u* and *v* and of *i* and *j* is not followed. The reproductions from manuscript include "The Tale of Hemetes the Heremyte" from Royal MS. 18 A xlviii in the British Museum, and "The Grief of Joye" from Royal MS. 18 A lxi in the British Museum. "The Spoyle of Antwerpe," from the anonymous tract of 1576, is printed in an appendix. As this report to the Privy Council of the sack of Antwerp by the Spaniards is now known to be Gascoigne's, and is indeed one of the most interesting things he ever wrote, it might well have been printed in the body of the text in the larger type.

"The Political Theories of Martin Luther" (Putnam), by Luther Hess Waring, is the expansion of a thesis presented in candidacy for the degree of Doctor of Philosophy in the George Washington University. What parts of it constituted the original dissertation we are not informed. The method pursued appears to have been the fatal pigeon-hole process which has brought so much discredit upon the doctor fabrication of our universities from highest to lowest. There is throughout little evidence that the author has gained any such grasp upon his subject as would entitle him to express opinions about it. The merit of modesty cannot be denied him. A very large part of the book consists of quotations from other writers most impartially distributed. They range from Macaulay and Ranke to Col. Bryan as editor of the world's famous orations; and these quotations are thrown in at every turn as if they, and not the author's own studies, had been the starting-point of the book. If we may speak of a leading thesis at all, it is that Luther was the originator and inspirer of most of the ideas as to the nature, the functions, and the limits of the state which have shaped the politics of the modern world. That we hold to be an entirely indefensible thesis. There is hardly an idea in Luther's many utterances on the subject which may not be found in far more consistent and emphatic form in a long series of writers from Ockham, through Wycliffe and the leaders in the conciliar conflicts of the fifteenth century, down to Erasmus and Thomas More. Dr. Waring's defect is that of many others who have touched this subject, a lack of familiarity with the long movement of European affairs between the complete dominance of the mediæval system and its overturn in the Reformation. With no wish to dim the splendor of Luther's commanding personality or diminish ever so slightly his influence upon his time, the careful historian must warn against ascribing to him originality in ideas not really his own. Luther's enduring fame will rest upon his

skill and tact in focussing the obvious tendencies of his day upon one supreme object —the freeing of as large a part of Germany as possible from the overgrown pretensions of the Roman religious system. He was a humane theologian, a preacher of righteousness, and a pastor to his people, not a speculative political philosopher. His utterances on political questions were invariably called forth by the practical emergencies arising from his leadership in the process of transformation through which Germany was passing. They were not, like those of Calvin, for example, the expression of a carefully worked out scheme of human government.

The Prince Society (Boston) has issued the first volume of "Colonial Currency Reprints," which will include a re-issue of all the known tracts on currency appearing in Massachusetts from 1682 to 1751, fifty-eight in number. The interest and importance of this series in history and in economics can hardly be over-estimated, for the experience of the colony in paper issues gave rise to a fruitful discussion. The beginnings of "credit," the establishment of funds by which real property came to be represented by credits, and so passed into circulation and usually into abuse, is an early chapter in banking in which Massachusetts ran through many and thorough experiments. The real scarcity of a circulating medium furnished an excuse for resorting to expedients that, in the hands of oppressed debtors, only increased the evil conditions and imposed a heavy tax upon the creditor and the community.

The editor of this series, Andrew McF. Davis, has passed many years in the study of certain phases of this question, and has already published an elaborate history of currency and banking in Massachusetts. He now submits the sources from which he drew his material, and no one could be better equipped for the task. His introduction traces the history of the subject from the first fund of 1681, which was intended to benefit a small company of men constituting the "fundors," by a form of bills of exchange, to the final redemption and disappearance of provincial bills of credit, under which the credit of the colony had been so greatly affected. It is rather suggestive to find the first steps in this progress limited to a "credit with discreet men," but little time passed before the "bank of credit," pure and simple, with an undefined basis of substantial property or of discreet men behind it, was proposed; and from that to the use of individual or government credit without actual property behind it, and having a forced circulation, was a simple process, controlled, as it was, by the needs or interests of the borrower. It is all the more suggestive that such a scheme for a real paper currency, intended to take the place of coin, arose at a time when the charter of the colony had been annulled, and its political affairs were in confusion; also, that the first serious plan involved some of the leading names in official circles, as well as some business men, and that the expected high profits were to be shared among those who had the power to give or deny the recognition and endorsement of government. In fact, Blackwell's bank plan of 1686 savors much of modern methods in finance and in politics. That bank never went into operation, and mere discussion ended and practice began with the issue of bills of credit by the colony in 1690, to meet the cost of the expedition against Quebec. Having tasted of the ease in postponing payment of current charges, the government entered upon the practice of issuing bills for meeting its expenses, and of redeeming them out of the proceeds of taxes in future years. Silver disappeared from circulation, the bills depreciated, and from 1714 the discussion of causes and remedies was active. This volume, containing sixteen of the issues, carries the question to 1721. The elaborate bibliographical notes of the editor and his evident mastery of the subject promise to make this series of volumes unique in the history of early experiences in credit currency.

In "Beyond the Mexican Sierras" (McClurg), Dillon Wallace, the author of a recent book on Labrador, has given an account of a trip from San Francisco down the coast to Sinaloa and Tepic in 1907. Mr. Wallace has a pleasant journalistic style, and has acquired the usual newspaper man's conceptions about the great harm which the Spaniards did to the unfortunate aborigines. Students of Mexican affairs are already quite familiar with this type of traveller, but it may cause a smile that any one should still be found to assert that the Indians were forced under pain of death "to relinquish their old ideas of morality and religion and accept instead bigotry, sensualism, and superstition." As long as American writers persist in thus misjudging the work of Spanish civilization, just so long will American readers be unable to understand and appreciate the present conditions of Latin American society. The author also indulges in the usual panegyrics about Diaz: "The most remarkable man in the world." It is a pity that so few writers are able to adopt an unbiased, well-balanced view towards the great Mexican dictator. In general, Mr. Wallace spins the customary traveller's yarn, like any other garrulous wanderer making his first trip to the tropics. He is tremendously impressed with the moist heat, the poor food, the dirt, and the insects. He cannot speak the language, but he does not hesitate to treat everything with frank criticism. His work will naturally be referred to by those who are contemplating a journey down the west coast, either by steamer or over the newly completed extension of the Southern Pacific Railroad; but any one familiar with Mexico, outside of the big cities, will find little that is new and much that is commonplace. Abominable Spanish spelling and too much minute personal detail are faults which are only partly relieved by such pleasing discoveries as the following: "I arose, and looking to the north saw the Great Dipper and Polaris just above the horizon and knew that morning was near, for in that latitude Polaris is visible only in the morning." The illustrations are very attractive.

The monthly publication of statistics which summarize a city's activity in all branches of public service is a recently established Italian custom worthy of a greater following in America. The *Bollettino Statistico Mensile* of Padua, a commune of 66,000 inhabitants, is a well-printed, small folio pamphlet, usually of about twenty pages of statistical tables, without other explanatory text than that supplied by occasional foot-notes. In the month under consideration, the Weather Bureau reports "a slight shock of earthquake." The tables analyzing the vital statistics include two which indicate where death has left minors as public charges, and cases where minors are likely to become public charges, and where the law makes special provision for their guardianship. The tables on sanitation and hygiene indicate a well-developed system of care for the public health. There are interesting details of preventive and curative measures in regard to tuberculosis; and there are the statistics of pellagra, which, including the rural sections of the commune, show over a thousand persons in such a condition as to claim a free distribution of salt, so taxed by the state that its purchase is impossible by the very poor. At the same time, among the hills of more prosperous Tuscany, Florence reported a single death from pellagra, that of a non-resident. The prevalence of this disease involves a not inconsiderable expense for inspecting flour and grain, a commodity also so subject to taxation that purchasers are found even for what has been ruined by blight or storage. In spite of its rich soil, Italy has not yet learned how to raise enough grain to supply home consumption.

Padua shows itself to be a progressive city, possessing a Pasteur Institute, exercising a medical supervision over licensed wet-nurses, and over infants nursed artificially at the commune's expense. Its sanitary inspection extends to private as well as public schools, and cares for the health of children in the elementary schools, to whom it furnishes luncheons, "gratuitous, semi-gratuitous, and paid," in an interesting variety of forms. In the chemical and microscopical examination of foods, the analysis of water, its bacteriological laboratory, the supervision of public baths, of the municipal slaughter-houses, and of horses used in street cabs, it is abreast of the times. Padua possesses a communal library, a people's library, beside one in the suburb of Ponte di Brenta, and a teachers' library in its Department of Education. The number of readers of books and manuscripts reported by the Biblioteca Comunale in the month of July was 71, and the total for seven months of the year, not excluding repetitions, was 1,483, while in the Biblioteca Popolare Comunale di Città, the readers in July were 523, with a total of 4,271 for seven months. This difference in patronage is due to the fact that the communal libraries in Italy are generally old institutions, administered in the interests of the leisured classes, and are accessible, as a rule, only at hours and under conditions generally prohibitive for those employed during the ordinary working hours of the day. People's libraries are of recent growth, open on evenings and holidays, and consist of books specially chosen with regard to the supposed requirements of the working classes.

"Europe since 1815," by C. D. Hazen (Holt), is a valuable new college textbook on the history of the nineteenth century. It has over seven hundred pages of text, fourteen good maps, and excellent critical bibliographies. In arrangement of material the author has rather neatly

steered between the Scylla of a strictly chronological treatment, in which a dozen different countries are kept moving side by side to the bewilderment of the student, and the Charyhdis of a purely topical treatment which too often results in nothing but a dozen different historics of as many different countries. The author brings down together the histories of Austria, Prussia, France, and Italy; then he returns to the starting point, 1815, and traces the histories of England, Russia, Turkey, and the lesser states. The fact that the period prior to 1870 fills no more than half the volume shows that Professor Hazen is properly aware that the new generations ought to know what has been happening in the last forty years in the Far East, in Africa, and in the colonial world, as well as in western Europe since the unification of Italy and Germany. Professor Hazen's narrative is accurate, scholarly, and interesting. At times it even has a literary flavor. But many passages, especially in the first half of the volume, could with advantage have been made more brief, definite, and crisp, by a freer use of the blue pencil.

The treasures of the papyri that have been made accessible to the general student have up to now been restricted mainly to the literary fragments. We have had Timotheus and Bacchylides, and Professor Capps has just edited four plays of Menander. But of the many thousands of unliterary papyri we have had only general and unsatisfactory accounts. Dr. Milligan's "Selections from the Greek Papyri" (Putnams) is accordingly a timely volume. After a brief but comprehensive sketch of the history of the various discoveries, we have a selection of fifty-five papyri texts varying in length from a few lines to a couple of pages, extending from 310 B. C. to the fifth century A. D. The contents are equally varied. There are marriage contracts, a letter of Epicurus to a child, letters of introduction, private family letters, dreams, incantations, census notices, law suits, invitations to dinner, an impudent letter of a boy to his father, etc. In many cases the writers are very illiterate and the spelling is obviously phonetic. The vagaries of syntax are often most remarkable—features which make them extremely valuable for scientific study. Dr. Milligan is interested mainly in the light which such documents throw on the language of the New Testament, but the book is valuable for the ordinary teacher of Greek, in bringing home to his classes the human side of Greek life. A translation is appended to every fragment. These are not always accurate, but sometimes the text is obscure, and the peculiar syntax makes the meaning uncertain. The commentary is too brief and is filled mainly with quotations from the New Testament, to the number of nearly 500. Much more attention could well be given in the notes to linguistic matters, and in cases of great illiteracy the text might well he rewritten in normal Greek. The section on language in the introduction is inadequate, and the assistance of the translation still leaves many difficulties unexplained. But in spite of these defects the book fills a real need.

The death is announced, in his eighty-fifth year, of Canon William Ince, regius professor of divinity at Oxford since 1878. He wrote "Some Aspects of Christian Truth" and "Religion in the University of Oxford."

George Frederick Seward, financier and statesman, and nephew of William H. Seward, Lincoln's secretary of state, died last Monday at his home in New York city in his seventy-first year. At the age of twenty-one he entered public life, going as consul to Shanghai. In 1864, he was made consul-general of the United States for all China, and from 1876 to 1880 he was United States minister to China. For his service there he received the order of the Knights of Dannehrog from Denmark, and from France that of the Dragon of Annam. As an author he wrote on "Chinese Immigration in Its Social and Economical Aspects," "System of Taxation of New York," and other kindred topics.

Sweet Peas. By Horace J. Wright. New York: Frederick A. Stokes Co. 65 cts. net.

Pansies, Violas, and Violets. By William Cuthbertson. New York: Frederick A. Stokes Co. 65 cts. net.

About half a billion sweet pea seeds, weighing forty tons, are distributed every year by British growers alone! Twelve books on this flower have been printed in the English language, besides the Report of the Sweet Pea Bicentenary, and England also has had, since 1905, a Sweet Pea Annual. In view of such facts, one cannot but agree with Mr. Cuthbertson that the sweet pea is the first garden flower of the present day. It owes this popularity partly to its fragrance, partly to the wide range of color, and the recent amazing improvements in tints, details of form, length of stem, and size and number of flowers. Although first introduced into England from Sicily in the seventeenth century, it was not till forty years ago, when Henry Eckford began to devote his life to the improvement of this flower, that its possibilities in the way of varied beauty began to be recognized. He not only originated some seventy new varieties, but in the case of most of them he had the patience to fix them, so that there was no danger of reversion to the types which he had used in hybridizing. Hence, most of the Eckford varieties come true. Not so with the Countess Spencer varieties, which were first shown ten years ago. They created a sensation because both the standards and the wings of the flower were beautifully waved; but they were put on the market in too great haste, wherefore, to the present day, the purchaser of Spencer seeds cannot always feel sure of what they will grow up into. A third type, known as the Unwin, appeared in the same year as the Countess Spencer; its standard and wings are almost as much, and quite as gracefully, waved, but Mr. Unwin held back his creations for fixation, and the Spencer type thus won the race.

More than five hundred varieties of sweet peas are obtainable, and yet the public clamors for more. "The raiser of new varieties finds many swans; the grower who purchases them finds geese, and wretchedly poor ones at that," says Mr. Wright; yet he would by no means discourage the quest after further novelties; we have not yet got the true yellow or the true blue flower, and as long as we have not these delightful colors there is plenty of room for experimenting. The exquisite primrose tint of the Clara Curtis, of which there is a reproduction in color in Mr. Wright's book, fosters the hope that a deeper yellow may soon be found. There are seven other colored plates of particularly beautiful varieties, and in one of his chapters the author gives a list of fifty desirable kinds to cultivate. The bulk of his attractive and useful book is given up to directions concerning cultivating, manuring, thinning, mulching, spring and autumn seeding, raising flowers for exhibitions, etc.

No less ornamental and useful is Mr. Cuthbertson's book on pansies. The pansy, as we know it, is as modern as the improved sweet pea, and quite as many men have spent their lives in originating new varieties. Sixty years ago only one kind of pansy was grown in Great Britain; to-day their number is legion, and in popularity this flower is second only to the sweet pea. It was found that by giving the common Heart's-ease good cultivation and selecting seeds from the best kinds year after year, it could be greatly improved in size and color; later the hybridizer applied his subtle arts and a new world of floral beauty resulted. He is still busy, for there is plenty of room for new colors, markings, and details of form. One of the most interesting chapters is concerned with the difficulties the hybridizers have to contend with in preventing diverse insects from spoiling their well-laid plans. Mr. Cuthbertson traces the history and development of violas and violets as well as of pansies, besides giving cultural directions. There is a calendar for the pansy-grower, showing what should be done each month in the year, and there are eight colored plates of choice varieties.

"Food Inspection" (Van Nostrand), by Hugh A. Macewen, is a rather elementary book for general information, and to aid intending inspectors to obtain the knowledge required for the prescribed examinations. The text is pretty well adapted to these ends, and a number of excellent illustrations add to the beauty and usefulness of the book. The first part deals with meat, as seen in the abattoir, treating in

moderate detail of what it is necessary to know in order to carry out an inspection. The next section is devoted to the construction and management of slaughter-houses, with a rather brief account of two British establishments. Appendices summarize the method of inspection adopted in Germany, and also the conduct of slaughter-houses and packing houses in Chicago, where the conditions were found to be much better than the author expected them to be, although he thinks that there is still room for improvement, and considers the inspection efficient for the grosser forms of disease, but otherwise decidedly inadequate. The remaining sections treat of the inspection of other kinds of flesh foods, of vegetables and fruits, and also of the methods by which various foods are preserved and stored. All this is almost too concise. Brief, also, is the abstract of the laws relating to food inspection, and here, of course, British conditions are alone considered.

Octave Chanute, who has been called by some "the father of the aeroplane," died in Chicago on Wednesday of last week. When he began experiments with "horizontal kites," as they were ironically referred to, several years ago, he was considered eccentric. His persistence in trying out his ideas resulted, however, in the Chanute glider, which was the modern biplane without the engine. With it Mr. Chanute was able to glide several hundred yards in a strong wind by manipulation of its wings. He was born in Paris on February 18, 1832, and arrived in America with his parents in 1838. He was once chief engineer of the Erie Railroad, and had been an officer or honorary member of the British Institute of Civil Engineers, Canadian Society of Civil Engineers, American Society of Civil Engineers, and the Western Society of Engineers. His scientific researches into methods for improving railway service made him one of the distinguished engineers of his day, a plan to preserve railway ties by soaking them in creosote having been one of his latest contributions to his favorite field of engineering. He was the builder of the Kansas Pacific Railway, the Union Stock Yards of Chicago, and the Missouri River Bridge. In the field of aeronautics, his ideas were only recognized as sane after the Wrights had made their first flights, and had acknowledged that it was Chanute's book, "Progress in Flying Machines," published in 1894, which had turned their attention toward the heavier-than-air experiments. The Wrights gave him credit for working out the engineering problems involved in building successful aeroplanes, and in blazing the trail toward a practicable machine.

Drama.

Memories and Impressions of Helena Modjeska. New York: The Macmillan Co. $4 net.

This is an interesting and valuable book, interesting for its self-revelation of a fine and highly gifted personality and valuable for the light it throws upon the true secret of the writer's brilliant artistic success. It is a record of unwearied energy, indefatigable industry, dauntless courage, and high ambition tempered by modest self-distrust. From the egotism which is the distinguishing mark of most theatrical autobiographies it is almost entirely free. If it is occasionally somewhat over-exuberant or effusive, somewhat overladen with insignificant detail, it is in the main the work of a rarely clever, sane, and observant woman who had a singularly wide experience of the higher artistic, literary, and social life of two continents, and was capable of profiting by it.

It is not possible, of course, to discuss here the memories of more than fifty years, especially when they were so crowded as those of Helena Modjeska. That she was endowed naturally with histrionic genius of a high order no one who saw her act could ever doubt, but the troublous scenes of her adventurous childhood probably had much to do with her sanguine and imaginative temperament. She was reared amid surroundings of fierce political excitement, of national fury and despair, of revolution and bloodshed, of conflagration and ruin. With Hungarian and Polish blood in her veins, with an education half-religious and half-Bohemian, now running wild in romantic scenery, now subjected to strict domestic restraint, but always associating with young literary and artistic patriots on fire with the spirit of romance and liberty, it is not strange that even in early girlhood she should have dreamed of future triumphs on the stage. Her leisure hours were devoted to private theatricals, to recitations of Polish poetry, and to song. An occasional visit to the theatre added fire to her dramatic enthusiasm, which was encouraged by her half-brother, Felix Benda, already an actor of some note. And so, in spite of maternal opposition, she began, at the very bottom of the theatrical ladder, as an amateur. Then she passed through a brief period of barn-storming, and finally, attracting attention, obtained an engagement in the theatre at Cracow. There for three years she labored incessantly, playing every variety of character from pages up. While still in her teens she had won a provincial reputation as Ophelia, Doña Sol, and Adrienne Lecouvreur. From the moment of her first acquaintance with "Hamlet" she became a lifelong worshipper of Shakespeare, and one of her earliest triumphs was achieved in Juliet, to which she had devoted months of study. Her analysis of this character shows her conscientious methods of work.

Soon she was able to make a flying visit to Paris, where she saw many of the most famous actors of the Français and other theatres. Of their stage business, she says, she can report nothing, for she paid no attention to it. What she did admire was their capacity for identifying themselves with the characters of the play and the precision of their expression and delivery. Of the so-called Delsartean system she speaks with brief contempt; Delsarte, she remarks, never taught or left any. His methods were peculiar to himself, and would not suit anybody else. Her stellar career—which need not be followed—virtually began with her great triumph as Adrienne Lecouvreur in the subsidized Warsaw Theatre, of which she soon became the brightest ornament. The incidents in that career long ago became matters of dramatic history and cannot be related here. But her own account of them, of her associate players, of the intrigues before and behind the curtain, of the Russian censorship, and the whole system of management, is peculiarly fresh and interesting. Her intimacy with the director, M. Mouchanoff, and especially with his liberally minded wife, was of the greatest value to her, not only artistically—by granting her a wider scope than the strict law of the censorship would have allowed—but socially—by bringing her into contact with the inner circle of the aristocracy, great political and diplomatic personages, and leaders in the musical, literary, and artistic worlds. Her friendships, which in later years were to include many of the most distinguished men and women in England and in the United States, supply some of the most interesting pages of her book.

And to this cosmopolitan acquaintance, coupled with her constant study of German, French, and English literature, must be attributed, doubtless, much of the breadth of observation and soundness of judgment which she displays. Her criticisms of theatrical art and affairs are marked by fulness of knowledge and most kindly though judicious temper. She is liberal in praise, and emphatic, though moderate, in condemnation. Of the stock-company system she is an enthusiastic advocate. The experience of a lifetime convinced her that it is the only school in which the best acting can be found. The company at Warsaw—in which she was trained—was comparable, she declares, in all respects with that of the Français in the famous days of Bernhardt, Coquelin, Got, Delaunay, and the rest. Elsewhere she records her deliberate conviction that the Italians are the greatest actors in the world, and Tommaso Salvini the nonpareil of his time. To Ristori also she awards a lofty pedestal. In Duse she discerns genius and infinite fascination, while disagreeing with some of her ultra-realistic methods. Of Edwin Booth she speaks with affectionate admiration, as the greatest of American tragedians and a charming friend. She was vanquished, she intimates, by Irving's personality, rather than his art. The finish of Charles Coghlan's acting

appealed to her greatly, and she has discriminating praise for many other American actors living and dead. The whole modern syndicate system she regards as pernicious and abominable, fatal to all artistic growth.

It was a change in the directorship of the Warsaw Theatre that was the immediate cause of her migration to this country, and of the political persecution that afterward prevented her from acting in her native land. Her career in America is too well-known to need more than this passing allusion. But few of her admirers, perhaps, realize the trials and obstacles which this Polish actress had to overcome before she realized her youthful ambition of triumphing in Shakespeare on the English stage. They are all set down in this book, and constitute an engrossing and instructive story.

"Henry of Navarre," one of the most successful romantic plays produced in England for some years, was presented in the Knickerbocker Theatre here on Monday evening, by Fred Terry and his wife, Julia Neilson, and proved to be a fairly effective stage piece of little literary or dramatic quality. The general nature of it is fully accounted for by the fact that its author, William Devereux, is, or has been, an actor. All the paraphernalia and apparatus employed are to the last degree stagey. The story tells of the wooing, the estrangement and reconciliation of Henry and Marguerite de Valois, and the intrigues against the Huguenots, culminating in the massacre of St. Bartholomew, Catherine de' Medici operates in it by means of dagger, forgery, and poison, while her astrologer, Ruggieri, alternately abets and confounds her to suit his own purposes. In the end, of course, Henry, a prodigy of astuteness, courage, and gallantry, triumphs over all obstacles and enemies, though the groans of the slaughtered Huguenots supply his nuptial chorus. There is plenty of bustling movement and tense situation, but the extravagance or awkwardness of much of the play, and the manifest artificiality of all of it, prevent it from having much value as romance. Fred Terry, although his Henry is almost entirely fictitious, makes an attractive and plausible figure of him, by his vivacious, varied, virile, and consistent acting. Without him the representation would fall flat. Miss Neilson is a lovely, but self-conscious, and, therefore, unsympathetic Marguerite. Several of the subordinate characters are in very feeble hands, but, as a body, the company show a good appreciation of the needs of romantic drama and play with a coöperative vitality such as is seldom displayed upon the local stage.

All the younger American dramatists just now seem to be infected by the delusion that extravagance is synonymous with strength. The "Two Women" which Rupert Hughes has written for Mrs. Leslie Carter, and which was produced in the Lyric Theatre on Tuesday evening, is a drama of passion in which crude vulgarity, mock sentiment, and contempt for common sense are exhibited in nearly equal proportions. But it contains clever work here and there, and indicates a quick sense of theatrical effect. A poor artist marries a little sempstress who proves a paragon of purity and devotion, and dies pathetically of want and work at the moment when fortune is within his grasp. Rich, he encounters her double in a woman long sunk in the lowest depths of moral degradation and hires her to sit as a model for a painting of his departed saint. The sinner is converted by the subtle influence of the dead woman, learns to love her employer, and, after nursing him through a dangerous sickness, wins his heart. The drama ends with their union and the proclamation of the trite fallacy that character is only the child of opportunity. Mrs. Leslie Carter embodies both women, and is fairly successful as the lurid wanton, but fails in the angelic part owing to the artificiality of her style. In voluble, ranting passion she is as vigorous as ever. The play is incredible in incident and its sentiment is claptrap.

"Dickens and the Drama," a book by S. J. Adair Fitz-Gerald, explaining Dickens's connection with the stage, and commenting on his plays and the dramatization of his novels, is promised by Chapman & Hall.

Early in December Miss Lena Ashwell will leave London for New York, in order to appear in C. M. S. McLellan's drama, "Judith Zaraine." Her stay here is not likely to be long, as she has arranged for her reappearance at the London Kingsway fairly early in the coming year. She will there be seen in a new play by H. V. Esmond, called "The House of Ussher." It has only five characters, and all the action passes in the same scene. The main interest of the story is centred in a father and his daughter, the latter a young girl whose existence and character have been adversely affected by the sordid atmosphere in which she moves. Suddenly she begins to realize that "there is a soul of goodness in things evil," and thenceforward she devotes her energies to fostering what is best in those by whom she is surrounded.

The directors of a London hall have been negotiating with Sir Herbert Tree for the right of making cinematographic reproductions of scenes from "Henry VIII," as they are now presented in His Majesty's Theatre. Sir Herbert has given his assent on condition that the films shall first be approved by him. The scenes selected for treatment are Wolsey's entrance, the trial of Queen Katherine, and the coronation ceremony. This seems to open up a new phase of theatrical enterprise and advertisement.

Miss Gertrude Kingston announces that "Just to Get Married," produced at the Little Theatre in London recently, with considerable success, is by Miss Cicely Hamilton, the authoress of "Diana of Dobson's." The authoress of "The Merciful Soul," presented on the same evening, is Miss L. Alma-Tadema.

George Riddle, one of the most widely known public readers in this country, died suddenly in Boston on Saturday. In 1874 he acted in support of the Brutus of Edwin Booth, being the first alumnus of Harvard to adopt a stage career. Mr. Riddle first attracted the attention of the educated public in the early eighties by his revival of the "Œdipus Tyrannus" in the original Greek. A performance in Booth's Theatre was witnessed by one of the most notable audiences ever assembled in this city. For several years he taught elocution in Harvard University. Then he devoted himself to public reading in which he achieved considerable success.

Music.

Selected Piano Compositions by Johannes Brahms. Edited by Rafael Joseffy. Boston: Oliver Ditson Co. $1.50.

Songs from the Operas for Tenor. Edited by H. E. Krehbiel. Boston: Oliver Ditson Co. $1.50.

After Rafael Joseffy had won fame and popularity by playing Chopin, Liszt, and Schumann, he tried for several years to enchant the public with the pieces of Johannes Brahms, but found, it is needless to say, a less ready response to his new pianistic pleadings. *Post hoc*, and possibly *propter hoc*—for he loves Brahms dearly—he retired from the concert platform at a time when his powers of interpretation were at their best. All efforts to entice him back have failed, but, luckily, the Oliver Ditson Company has succeeded, at any rate, in persuading him to take other pianists into his confidence and let everybody know what he considers the best twenty of Brahms's scores for his instrument. The result is a volume which will undoubtedly appeal to all who like "the musical Browning"; and possibly it may make some converts. It includes the Scherzo, opus 4; the Sonata in F minor, opus 5; the four Ballades, opus 10; the Variations on a Hungarian Theme, op. 21; the 16 waltzes of op. 39; the 8 Capriccios and Intermezzos of opus 76; the two Rhapsodies, op. 79; and a Gluck Gavotte arranged by Brahms.

James Huneker, who is as ardent a Brahmsite as Mr. Joseffy, admits, in the preface contributed by him to this volume, that Brahms may sound chilly and formal, and that he resembles certain people that we meet and dislike at first sight; "but strip him of his harsh rind, taste the richness of the musical fruit, and your indifference will be transformed into admiration, perhaps love." Mr. Huneker admits that Brahms is not "a surpassingly original melodist," and he does not deny the accusation of "muddiness and heaviness of the doubled basses in his piano compositions." Liking them is, he says, a matter of taste. Taking that attitude, it is only another step for him to deny the charge that Brahms does not write in the true idiom of the pianoforte. But attempts to prove that this composer is sensuously attractive, or emotional, or romantic, must always fail; they fail even in the hands of so clever a dialectician as Mr. Huneker. From the technical and intel-

lectual points of view, on the other hand, too much cannot be said in favor of Brahms. He is, indeed, the greatest variationist since Bach and Beethoven; his complicated rhythms are a source of endless wonder and delight to serious students, and many love him for his harking back to old classical and even mediæval methods of composition. To thousands of music-lovers the intellectual side of music appeals more strongly than any other; to them chiefly this volume of piano pieces will make its appeal.

One of the peccadilloes of the lovers of intellectual music is a professed scorn for opera. "It is the still small voice discerned in a Brahms adagio," writes Mr. Huneker, "that abides by us and consoles when the music of the opera seems garish and superficial." Similar opinions are often uttered by Henry Edward Krehbiel, though he has written many books—very good and pleasant books, too—about operas and their makers, quite ignoring the concert hall. The latest product of his pen belongs, like the volume just spoken of, to the admirably edited and printed Musicians' Library. It includes twenty-nine songs from the operas of twenty-one composers. Gluck and Verdi are each represented by two operas, Gounod by three, Wagner by four; the other masters being Purcell, Galuppi, Sacchini, Cimarosa, Mozart, Méhul, Beethoven, Boieldieu, Weber, Meyerbeer, Rossini, Donizetti, Thomas, Ponchielli, Bizet, Massenet, Mascagni.

In making collections of this sort it is customary to select a given number of airs and transpose them for the different voices, often to their detriment. Instead of following this objectionable practice, Mr. Krehbiel has taken pains to search the operatic literature of three centuries for gems written specially for soprano, mezzo-soprano, alto, and tenor, to which, doubtless, a further volume of songs for bass will be added. The selections bear evidence to the editor's comprehensive knowledge and his catholicity of taste, and in the comments on the songs there is much historic and miscellaneous information calculated to stimulate interest in them. The expression *bête comme un ténor* is no longer generally applicable; a century ago it would probably have been foolish to issue a volume with an erudite preface for the edification of a species of singers concerning whom Hans von Bülow once said: "A tenor is not a voice but a disease."

The Chicago Opera Company gave during its first two weeks five performances to sold-out houses, and the other audiences were marked as good, so that there was a balance on the right side. This is gratifying in view of the fact that, to quote the *Musical Leader:*

So far as the actual musical public is concerned, it is estimated that the number which might be termed the "concert-going public" will not exceed 10,000, while the "opera-going public" is about 25,000. Those are figures as given by men who have made a study of conditions in and around Chicago, and who for years past have been connected with the business of concert and opera production.

The MacDowell Chorus of Peterboro, N. H., which was the nucleus of the historic pageant last summer, has been endowed and put on a permanent financial basis. E. G. Hood of Nashua has been engaged as its conductor.

The Committee of the Society of German Musicians have decreed that a festival shall be held next year to celebrate the centenary of the birth of Liszt. Further particulars have not been given out, save the statement that, owing to the absence of a suitable hall, the performance will not take place at Weimar, with which town Liszt was most prominently associated.

The Rev. Frederick H. Jacobs, often known as the singing evangelist, who for years conducted the Fulton Street Noonday Prayer Meeting, toured with Dwight L. Moody, and later carried on his work abroad, died on Thanksgiving Day, at the age of fifty-five.

Art.

POST-IMPRESSIONISM.

LONDON, November 19.

England has discovered the "Post-Impressionists," the name, it seems, by which the most prominent supporters of *Les Indépendants* and the *Salon d'Automne* in Paris are now to be known. London, had it chosen, could long ago have discovered them, several of the group having been already shown in the exhibitions of the International Society, where, for a while, in its best days, all that was most promising and individual in the art of the Continent had a place. But London, only beginning to draw breath after its startled discovery of the romanticists and impressionists, needed something more than a few pictures in one annual exhibition to realize that the art world in Paris does not stand still, whatever is the rule on this side of the Channel.

The "something more" takes the form of the representative exhibition just opened in the Grafton Gallery, in which the new movement, as it is called, can be studied from Manet, rather illogically included, to Matisse. The amusing part of it is that this really interesting collection is not the venture of a few sympathetic artists here or of enterprising French dealers, who have usually been responsible for such daring departures in the past, but is given with, I might say, official sanction: for its honorary and executive committees include the keepers of the National Gallery, the Wallace Collection, and the King's Pictures; the directors of the National Portrait Gallery and two or three provincial galleries; writers like Herbert Cook and Roger Fry, who hitherto have identified themselves with masters accredited by time; and the more or less distinguished people who lend their names to any approved scheme for the encouragement of art. The artists may be independent at home in France, but in England they appear under the most correct and conventional patronage. And though the British public, unabashed by this patronage, laughs in front of the pictures, the British critics, with one or two exceptions, are respectful, even enthusiastic: frankly afraid to be again caught napping. I have already pointed out in the *Nation* how this fear leads them to exalt into a master any one of the younger men in England who reveals the slightest personality in his work. And so, in the Grafton Gallery, they are ready at least to suspect genius everywhere. In the old days they laughed at the Pre-Raphaelites, and Millais and Holman Hunt to-day lie in St. Paul's: therefore it may be wise to take Van Gogh seriously. They ridiculed Whistler, and he now is ranked high with the elect: for which reason it would probably be safer, anyway, to honor Matisse without delay. Manet's Olympia was received with derision, and to-day hangs in the Louvre; who knows if that may not be the fate of Gaugain's nude—*L'Esprit Veille*—the brown woman of Tahiti stretched out upon her bed of white, with its barbaric ornament? The artists represented are said to be revolutionary. But revolution, if there is any, is rather on the part of the British authorities and critics who have actually dared to abandon their old safe policy of sitting tight in seasons of doubt.

As to the exhibition, it is, as I have said, interesting, but it would be no great novelty or innovation to anybody who has followed recent movements and developments among artists in France. The work of some of the exhibitors, Matisse, for instance, is, I fancy, far better known by this time in New York than in London. The interest really is in the work itself, though far more is made of the artists' theories and principles by their British critics and would-be admirers. The artists are praised for their wish to escape tradition and assert their own personality, which is, we are told, the creed of the Post-Impressionists. But no artist to-day can escape tradition, though he may defy it; to express his own individuality has been the aim of every artist since the world began. Certainly, there is no escape from tradition, no genuine attempt to escape in this series of pictures and drawings. They are the work of sound draughtsmen and well-trained technicians. It might almost be thought it was to emphasize the fact of the modern artist's subservience to tradition that Manet, who really has no business here, is included. There is a fair collection of

his pictures, shortly, I understand, to figure in the salesroom. They hang in the first gallery, together with several by Cézanne, and the most important are so well-known that it would be more than useless for me to describe them—Un Bar aux Folies-Bergères, Au Café, La Promenade—and they show, as all Manet's work does, that in whatever personal way he may have chosen to express himself, he brought to the expression a due reverence for the past, for the inheritance of knowledge and law (a very different thing from academic convention) which had come down to him through many and distinguished generations of artists. But, indeed, the men who were Manet's contemporaries were all careful to begin by studying the old masters as well as nature.

Fortunately, a number of Cézanne's pictures—landscapes, still-life, and portraits—are exhibited. Whether you like his work or not, you must recognize its seriousness; usually it interests and often impresses you. There is no mistaking its individuality, for the simple reason that he had an individuality to infuse into it, without the effort too obvious in the work of some of his followers. He strove for simplicity. He eliminated the unessential until, in his landscapes, a large stretch of country like his Paysage St. Cloud or his sombre and impressive Les Maisons is reduced to an arrangement of the lines of the composition rather than the planes which so preoccupy most modern landscape painters; until in his portraits, as in the Madame Cézanne, the figure and even the hangings of the background become sculpturesque; until in his still-life the fruit, the table linen, or whatever it may be, seems carved rather than painted. But in none of these is there any going back to the elemental, to the primitive attitude of the primitive artist; in none is there any endeavor to escape from all that has been learned and achieved since the first rough scratchings of the pre-historic draughtsman on the walls of his cave. It took all the centuries that have intervened to make just this work possible, centuries of rebels, if rebellion in art means the ambition of the artist to master tradition that he may carry it on still further.

It is the same when it comes to the men of a later generation. Here is Maurice Denis, with his Calypso and Orphée. They are not primitive, in the elementary sense, as enthusiasts would have us believe all the pictures of these modern Frenchmen are. Only a fine draughtsman and a fine technician, with generations of fine drawing and technique behind him, could have designed them. But they have been simplified until only the rhythmical lines of the composition remain, only the conventionalized distribution of the spaces of color—though convention is a term Denis and the others might scorn. It is the same with Matisse, in whose Femme aux Yeux Verts the modelling disappears and the figure, a half-length, and the bases behind it arrange themselves into a purely decorative composition. And so it is with many of the others. Indeed, in their presence the student who came unprepared, having heard nothing of their theories and principles, would never for a minute imagine they were striving to return to primitive conditions in art, but would conclude, rather, that their chief object is to perfect a new decorative formula based on Puvis de Chavannes, and all that Puvis derived by sympathetic study from the great decorations of the early Italians; though they bring to this work a self-consciousness that at times threatens to plunge them into deliberate eccentricity. Matisse's Lady with the Green Eyes does not belong by rights to a small panel shut in by a frame, nor do Denis's scenes from the Odyssey: they might be so many fragments of so many different schemes for mural decoration.

This is not quite so true of Van Gogh and Gaugain, to both of whom a great deal of space is devoted at the Grafton. Van Gogh, as seen here, is, if anything, more concerned with pictorial than decorative problems. His great bunches of Iris or of sun-flowers, his tall autumn-tinged trees against the green landscape, his reminiscences of Rembrandt and of Delacroix, his country near Arles, all keep their place within the frame, and none more so than his little canvas of Les Usines, with the line of wonderfully put-in red roofs between fields and sky. Others of his pictures now shown have the vigor less of primitiveness than of madness, and, in both the famous Berceuse and the portrait of Dr. Gachet, Van Gogh's devoted friend and patron, the force which cannot be denied is pushed beyond the limits of the sane in art, into morbidness and exaggeration. The few expressive lines with which the figure of the Berceuse is suggested and the flat space of green made by her apron are in strong contrast to the carefully worked-out, flower-strewn background; while the color scheme of the Dr. Gachet, in its full blues and whites, and the rendering of character in the face, seem to emphasize the violent directness of the technique and the touch of grotesqueness in the treatment of the head. The fame of Van Gogh has been, perhaps, unduly inflated of late years, some say for reasons which are not difficult to guess, but, thanks to much of the work he left, work done in his calmer moments, it will surely outlive the present vogue. To be honest, I must admit that Gaugain makes no appeal to me. It may be my loss, but I can see in his distorted figures, his muddy color, his composition, his technique, neither the charm nor the strength that gives me sometimes pleasure, and always claims my interest, in the work of Van Gogh and Cézanne, of Maurice Denis and Matisse.

Besides these artists, Seurat, Signac, and Cross are represented in pictures that push the technique of Claude Monet to its extreme in *pointillisme;* Picasso, in one picture—a nude holding a basket of red flowers, in profile against a blue background that has dignity and grace and is almost academic in comparison to his other and probably later work; and also Vallotton, whom I never find as successful in color as in black-and-white; Odilon Redon, but not too characteristically; and such less talked about men as Laprade, Vlaminck, Derain, Herbin. There are a few drawings, those by Matisse explaining what a masterly draughtsman he is. There are also a few bronzes by Matisse and Maillol, with a distinct character, but with a certain eccentricity in the forms, an undue emphasis in the modelling, that seem like deliberate exaggerations. The difficulty nowadays is that the most accomplished artist must doubt whether charm, refinement, and beauty, whether the exquisite surface and splendid serenity, that were the old roads to success and fame, can assure his triumph under modern conditions and in modern exhibitions. This doubt may have possibly as much to do with some of the later developments in art as the synthesis and primitiveness and expression of personal emotion which the preface to the catalogue of the present exhibition ascribes to the Post-Impressionists. If they were less artists, and less well-trained artists, all the theorizing in the world could not make them the interesting painters many of them are. N. N.

"One Hundred Masterpieces" is a book by the late John La Farge, which is shortly to be brought out by Doubleday, Page & Company.

The summer school of Harvard University announces a course on Turner and the landscape painting of his time, to be given in London next summer by Prof. Arthur Pope. This is an innovation in the teaching of the subject of fine arts in Harvard University, and means an opportunity to study original works directly, instead of by means of photographic reproductions. The course will begin July 5 and end August 15, and will be open to women as well as men.

"Stories of the Spanish Artists, by Sir William Stirling-Maxwell," selected and arranged by Luis Carreño (Duffield), is a handsomely made book containing eight color prints and twenty-four halftone cuts. It was a good idea to reduce the charming but bulky chronicle to more practicable compass, and the work of the shears and pastepot has been done with discretion. Edward Hutton contributes a stimulating introduction on Spanish painting in general, and there are lists, by no means complete and up to date, of the paintings of the fourteen artists treated in the text. Readers

should be warned not to trust these pages too credulously for facts. In the life of El Greco, for example, much that was doubtful or inferential in Sir Stirling Maxwell's time has become clear since Señor Cossío's standard biography. A little annotation on such material points would have increased the value of this welcome anthology.

Sir Francis Piggott's "Studies in the Decorative Art of Japan" (Yokohama: Kelly & Walsh) is unique in its field, being less cursory and fugitive in character and treatment than other attempts. The author, who is chief justice of Hongkong has given considerable time to a first-hand study of his subject, and has, besides, a no small degree of artistic insight. The seven chapters of the book deal with: The Art of Temples, The Decoration of Flat Surfaces, The Wave and Cloud Forms, Lattice Work, The Decoration of the Japanese, The Use of the Circular Form, The Pakwa Diapers and the Key Borders. There are many apt and enlightening illustrations, finely executed, some in color and some in sepia. The impression created by lack of repetition and use of blank space in Japanese decorative art is carefully noted. The last chapter, on Pakwa Diapers and the Key Border, opposes the commonly accepted theory that these designs are a gift from Græco-Buddhist art that came East by way of India at the time of Alexander's conquests. Sir Francis Piggott shows that these forms are an evolution from a recognized religious symbol of the Orient, and that probably Greece borrowed from China. The fylfot, or rebated cross, is held to have been derived from the Pakwa, and may be regarded as representing the wheel of life. The style of the volume is itself artistic, and the book is, on the whole, pleasant reading.

A discovery of first-rate importance has been made in the neighborhood of Pompeii. Last year excavations on a farm close to the Porta Ercolese disclosed the remains of a magnificent mansion of more than twenty rooms. The work was resumed this season, the volcanic débris being removed to a sufficient depth to reveal the interior walls. These were found to be decorated with beautiful fresco paintings, many of which represent sculptural works, such as two Bacchantes in light drapery, Bacchus and Silenus attended by Satyrs, a priestess, and a dancing faun. Of great interest is a series of about nine scenes, which may reproduce either a continuous relief composition, such as those which occur on the Ara Pacis, or be taken from separate groups by various artists. One of the scenes shows a family of father, mother, and son, and an attendant bringing a patera to a priestess. Several scenes represent initiations by flagellation of female hierophants into the Dionysiac mysteries; the most striking is one of a woman, nude to the waist, stooping down with her head in the lap of a friend, ready to receive the stripes. Her companion places her hand caressingly on the victim's head, and watches the descending blow with terror in her face. Of great beauty is also a woman dancing with castanets, turning her back to the spectator. Finally there is a scene of the initiated, seated on a tripod, and arranging her hair, with Cupid holding up a mirror for her.

During some recent archæological researches near Alexandria, in Egypt, an interesting discovery was made. In the neighborhood of Kom-el-Chougafara a catacomb of Græco-Roman period was brought to light. The tomb is divided into three floors, and runs deep into the rock. The approach is by a winding staircase, which leads to a gallery, used probably in ceremonies in connection with the cult of the dead. From this, one passes to a triclinium, with tables and seats sculptured out of the rock. Three steps lead to the funeral chamber, elaborately carved with figures of the ancient gods of Egypt. The roof of this chamber is supported by a number of square columns, with lotus capitals. In a niche is placed a sarcophagus, ornamented with the head of an ox, and two Medusa heads, with floral festoons. Though the decorations throughout are copied from the Pharaonic period, it is evident from their style that they are not earlier than the third or fourth century A. D.

Finance.

RAILWAY RATES AND RAILWAY ECONOMIES.

When the Interstate Commerce Commission, a week ago last Monday, resumed its hearing at Washington on the proposed advance in railway freight rates, the case for the shippers was formally presented. In the preceding hearings, the railway counsel and the railway witnesses had in general contended that larger net revenue was imperative for three reasons—the first, that increased wages to railway employees had cut heavily into the former surplus earnings; the second, that present rates of dividends must be maintained, in order to preserve the companies' credit in borrowing on their bonds; the third, that in order to maintain proper facilities of transportation service, railways must have such annual surplus earnings and such credit in the market as shall provide the fund for improvements and extensions.

Counsel for the shippers' associations, in opening last week the case against the proposed advance in rates, raised two contentions. One was that even if larger revenue must be procured through higher rates, the proposed "horizontal advance" of rates on all commodities is unprecedented and, in its necessary consequences, unjust. The other, as outlined in the brief of counsel, was that, "even if the railroads need additional net income, it should be secured through greater efficiency and economy of operation, instead of resorting to the dangerous expedient of raising freight rates." The nature of the economics referred to in the second contention was thus described in the same brief:

> Besides economies from the introduction of scientific management, there are, as we shall show you, other economies possible in railroad operation attainable under the present system of management by the introduction of new devices, like the substitution of machines for hand labor. For instance, for comparatively small capital expenditure, large economies are believed to be possible through the use of appropriate machinery in the handling of freight in loading and unloading, warehousing and accounting, thus not only reducing the terminal expense, but overcoming the congestion of the terminals, a condition constituting one of the most serious transportation problems.

Witnesses were then put upon the stand to testify to the great reduction in operating costs which has been achieved in manufacturing plants through this scientific management, and, with somewhat more of reserve, opinions were drawn out to the effect that the railways have not kept abreast of the times in that direction. The reception of this argument, by the railway men in attendance at the Washington hearing, was interesting. The disposition was to treat the "scientific management" argument first as a joke and then as an impertinence. This attitude, however, was modified considerably when it was seen how seriously the argument was regarded by the newspapers and by the business community at large. The cross-examination by the railway lawyers began in a spirit of flippancy and ended in rather awkward silence.

As most people are aware, the chief counsel for the shippers is the same individual as conducted, two or three months ago, the case against Secretary Ballinger before the Senate committee. The merits of the railway contention and of the Ballinger contention are undoubtedly very different; but there exists an odd resemblance in the situation which the opposing counsel has created in both instances. On each occasion it had been more or less confidently assumed, by the party whose official position was under review, that the other side of the case was going by default, and the result, in the one inquiry as in the other, was an abrupt turn in the testimony which shifted the attitude of that party from aggressive to defensive. This was achieved, on each occasion, by evidence to show how the work of the department or institution under review could be made more useful and efficient. It is never wholly easy to combat such evidence, even when it operates against the contentions which one has supported; for the only obvious retort is either to say that methods already in operation are not capable of improvement, or else that one is not willing to try experiments in improving them. The first reply will never convince a practical and inquisitive American public; the second will simply throw up the case.

It may turn out that the argument for higher rates retains its force, notwithstanding this week's new testimony. But the inquiry brings up something more than a season's alteration in the rate sheet. Every one knows that the railways have made great strides, during

the period since the insolvencies of the nineties, in cutting down cost of operation. No one, however, can feel sure in the bottom of his heart that all has been done that can be done. It must be frankly admitted that the public has not been favorably impressed, these past few years, by the public assertions of eminent railway men that much more remained to be accomplished to make the railways properly efficient servants of the public, but that no possible way existed for doing it. It was not, perhaps, said openly that this was a very un-American point of view, but a good many people thought so; and when, a few months later, on the announcement that a radical advance in rates would be obstructed pending inquiry, other railway officers burst into shrieks of anguish that the credit of their companies had been ruined, sensible people turned aside in deep disgust.

It has been said, and with perfect truth, that it is difficult to make American industry learn the lesson of rigid economy, except in the school of severe industrial depression. Prior to 1893, the country was proud enough of its steel-producing industry. It doubted if any plants more serviceable and efficient could be found on any other continent. When the prolonged depression of the nineties came, we made some very unpalatable discoveries, both as to existing methods of production and as to methods of financing. Some people in the industry hinted that government ought to help them. Some sat down and wrung their hands, announcing that the country was going to the dogs. There were, however, others of that sturdy American type which is keen for innovation, which believes that industrial obstacles were made to be surmounted by enterprise and invention, and which assailed the problem with a comprehensive vigor that let no consideration of the smallest sort escape it. The result we know. That was in 1894 and 1896, and by 1899 we were driving England and Germany from the neutral export fields, and European public men were warning the world against the American invasion.

The case of the railways is not in all respects identical; the nature of their industry brings some different aspects to the situation. But it cannot altogether be ignored, by observers with impartial minds, that the remedial measures which the shippers tentatively urge at Washington are precisely the measures, so far as concerns their general scope and character, which the iron and steel trade pressed relentlessly on that industry after 1893. As to whether all such processes of economy may not already have been adopted or applied by the railways, that is another question, regarding which the burden of proof will necessarily rest upon the railways. All one can say in passing is, that the decade which we are just completing has been a period which, in general, has encouraged not economy but waste, and that the occasional glimpses which the public has obtained of the inner workings of the machinery of some very great corporations, have certainly suggested the conclusion—just or unjust—that there were many methods and practices which would have to go, as soon as the railways felt the spur of real necessity.

"The noblest work of fiction of the 20th century."—*Edmund Gosse.*

Jean Christophe

Day—Morning—Youth—Revolt

By ROMAIN ROLLAND. Translated from the French. 1 vol. $1.50 net; by mail, $1.63.

"One of the most remarkable novels France has ever published" (*George Moore*) is, in the original, already a sensation in musical circles here. In France it is a sensation in all circles. Any attempt at synopsis would be dry bones. A book to read and talk about.

Natural Philosophy

By WILHELM OSTWALD

Translated by THOMAS SELTZER, with the author's special revision. $1.00 net; by mail, $1.10.

The first book giving a résumé of modern *natural* philosophy as opposed to the old *academic* philosophy, a philosophy based not upon metaphysics but upon the sciences. It gives a brief survey of all the sciences, aiming to provide a complete synthesis of the results of the specialization of the last half century.

The author was Professor of Physical Chemistry at the University of Leipzig (1887-1906) and is considered one of the founders of that science. He was exchange professor at Harvard in 1905 and was last year the winner of a Nobel prize.

FROM DUTTON'S HOLIDAY LIST

LION AND DRAGON IN NORTHERN CHINA

By R. F. JOHNSTON, M.A. (Oxon), F.R.G.S. $5.00 net.

The British lease of Weihaiwei involves civil jurisdiction over a territory of about 300 square miles, and the author, in his capacity of District Magistrate, had opportunities of studying Chinese life and customs at shorter range than most Europeans. His judicial work among the peasant farmers of Northern China, where modern ideas have not yet penetrated, has given him much interesting information from which he has made a very valuable and interesting book.

A SHEPHERD'S LIFE

By W. H. HUDSON. Illustrations by Bernard C. Gotch. $2.50 net.

A delightful book of Salisbury Plain, its flocks and the men and dogs who tend them. The natural history of the Downs, the intelligence of the sheep dog and the quaint characters of the people fill the book with interesting incident and description.

RELICS AND MEMORIALS OF LONDON TOWN

By JAMES S. OGILVY

With 52 colored plates by the Author.

$5.00 net.

"London Town," though far less rich in historic buildings than the more contracted area of London City, contains in its vastly larger area a great number of valuable architectural relics. While churches, institutions and other important buildings will be preserved indefinitely, the smaller structures of more intimate interest are doomed, and this volume, like the author's "London City," will become a memorial of places which have no longer a material existence, landmarks of that older London now so rapidly passing away.

RELICS AND MEMORIALS OF LONDON CITY

By JAMES S. OGILVY

With 64 colored plates by the Author.

$5.00 net.

With loving pen and still more loving brush Mr. Ogilvy has labored to preserve the rapidly vanishing fragments of that older London so rich in associations, historic, religious, literary and personal. Modern progress cannot afford to spare the stones and timbers which have heretofore made London "More than any other a city of Shrines, a place of memories," but this faithful and beautiful record will keep alive the recollection of many interesting buildings which have fallen before the house-breaker, or must soon do so.

THE AVON AND SHAKESPEARE'S COUNTRY

By A. G. BRADLEY. 30 Illustrations in color by A. R. Quinton. $3.50 net

While the Avon immediately around Stratford has been written about from every conceivable point of view, the lower Avon, no less rich in beauty and historic association, is less well known. The present admirable volume covers the lower and upper reaches of the river impartially and gives a felicitous glimpse of unspoiled rural England. The illustrations, beautifully reproduced, are by one of the most successful painters of English landscape.

VENICE AND ITS STORY

By T. OKEY. $4.00 net

Richly illustrated in full color, also in pen sketches and photographs of works of art.

At once a history and a handbook, this volume is equally valuable for the library or the traveling bag. It brings into a single easily handled book a wealth of information, presented in exceptionally attractive form.

JOAN OF ARC

By GRACE JAMES. With 12 half-tone Illustrations. $3.50 net.

The difficulties, historic and psychological, which surround the story of the Maid of Orleans have tempted many biographers, yet remained unsolved. The present study is at once modern and sympathetic, presenting in interesting form the facts of historic record and creating from them a Joan who without outraging the intelligence, is perfectly satisfying to the romantic imagination.

The Nation

VOL. XCI.—NO. 2371. THURSDAY, DECEMBER 8, 1910 Reg. U. S. Pat. Office. PRICE TEN CENTS.

Free Library 384 28 Dec 11

A GREAT WORK MADE PRACTICALLY NEW BY THOROUGH REVISION

Entirely reset with new chapters and extensive additions.

The American Commonwealth

By **JAMES BRYCE,** *British Ambassador to the United States.*

First Edition 1888
Second Edition 1889
Third Edition with four new chapters and thorough revision of the book bringing it to date.

The public is especially cautioned to beware of incomplete or garbled pirated editions which are, in essential particulars, twenty years out-of-date.

Cloth, 8vo, gilt tops, $4.00 net. Carriage extra

Mr. Bryce's well-known work has been appreciated from the time of its first publication as the best account of the government of the United States ever written, and in its new form will be found more interesting and vastly more valuable than ever before.

As British Ambassador, Mr. Bryce has enjoyed unusual opportunities for following the course of new legislation, the tendencies of recent experiments in municipal and State government, the history of political parties, the growth of great corporations, the spread of higher education, and other social developments in America.

After twenty years he has carefully considered his entire work, and has placed beside his earlier observations those modifications of opinion which the history of two decades has inevitably worked. Four chapters are entirely new and every other has been enriched by material alterations.

THE AMERICAN COMMONWEALTH

THE PUBLICATION BY MR. BRYCE OF THE RESULTS OF HIS CAREFULLY WEIGHED OBSERVATIONS OF OVER TWENTY YEARS IS A LITERARY EVENT THE IMPORTANCE OF WHICH CAN SCARCELY BE TOO HIGHLY RATED.

The only complete authorized edition with Mr. Bryce's revision of the current year is

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

One Hundred Universities and Colleges
ALREADY USE

ENGLISH POEMS

By Walter C. Bronson, Litt.D.

Professor of English Literature, Brown University.

This series gives, in four volumes, a convenient, scholarly, and inexpensive collection of representative English poetry.

Each book is a unit and can be used apart from the others.

The selections, so far as possible, are complete poems.

Each volume has nearly 100 pages of notes, including brief textual comment and numerous quotations illustrating the methods of each poet, his place in literature, his theory of poetry, his literary, relationships, his influence in his own generation.

Each volume has complete bibliographies, glossaries, and indices of authors, titles, and first lines.

Vol. I. Old English and Middle English Periods
Vol. II. The Elizabethan Age and the Puritan Period.
Vol. III. The Restoration and the Eighteenth Century
Vol. IV. The Nineteenth Century

Each volume, $1.15, postpaid.

A SELECTION FROM THE LIST OF

EDWARD STERN & CO., Inc.

140 NORTH SIXTH STREET, PHILADELPHIA

The juvenile books published by Edward Stern & Co., Inc., are not mere picture books, with no thought behind them other than the effort to produce Christmas gifts for children. In each case the text has been subjected to the most careful scrutiny and consideration; the illustrations are of the highest order and are the work of able and prominent artists, and the make-up and finish of the books are unexcelled.

The Men Who Found America

By FREDERICK WINTHROP HUTCHINSON

Illustrations in color by E. Roscoe Shrader and Herbert Moore. Decorations by Edwin J. Prittie. Eight full-page color plates, and a border decoration on every page.

"The stories themselves are intended as companion stories to the wonderful fairy tales of the nursery—'first cousins,' in fact, to those early delightful romances that hold so sacred a place in every child's heart. In the words of the writer, he presents his contribution to the literature of childhood 'in the hope that they (the children) may pass from the true tales of fairies to those other true tales without shock or rude awakening.' The author's style is delightful; he neither talks over the heads of his juvenile readers nor does he fall into the other common error of patronizing them."—*The Literary Digest.*

Bound in cloth, with a decorative cover stamped in gold. 158 pages. Size, 8¾ x 11¼ inches. Text printed in two colors. Postpaid, $1.50.

The Diary of a Birthday Doll

By ETHEL C. DOW

Six full-page color plates by Florence England Nosworthy. Twenty-seven pen-drawings by Louise Clark Smith.

One of the most interesting child's stories ever written. Each chapter tells of the happenings of one day, which gives the tale the character of a diary.

A beautiful piece of bookmaking, bound in cloth; an inlay picture in full color on the cover. Each book in a decorated box, sealed in a glass-tissue paper wrapper. With each book is sent a reply post card, which, if mailed to the publishers, will entitle the sender to a beautiful reproduction, in full color, of the picture on the cover of the book; size, 12 x 16 inches, without advertising. 88 pages. Postpaid $1.25.

Through the Little Green Door

By MARY DICKERSON DONAHEY

Author of "The Castle of Grumpy Grouch," "Down Spider Web Lane"

Three full-page color plates, and eight full-page line drawings by Gertrude A. Kay.

A new book by this popular writer, with a distinctly new idea. The land of little child-selves offers a field for the play of delicate fancy, whimsical humor and wonderful imagination; and the young reader is taken into a true fairyland which is inhabited, not by fairies, but by real boys and girls.

Bound in cloth, with a color inlay on cover. 178 pages. Size, 5⅜ x 7½ inches. Postpaid, $1.00.

Rhymes of the Golden Age

By GEORGE REITER BRILL

A charming book of verse, dealing with children and child-life, literally "The Golden Age." Twelve full-page color plates form a collection of pictures which ranks with the best ever made. Heavy antique paper, large, easily-read type, eighty pen drawings, each poem illustrated, inlay picture on the cover in full color. An ideal holiday gift book.

123 pages. Size, 6½ x 9¾ inches. Postpaid, $1.00.

Fairy Tales From Grimm

Edited and with a Critical Introduction

By HAMILTON W. MABIE

Six full-page color plates, six full-page pen-drawings and border decorations by Ethel Franklin Betts.

A purely American edition of the famous Grimm classics, in which Mr. Mabie has selected twelve tales as being characteristic of and representing the whole. His introduction is a new and valuable feature, bringing one, as it does, to an understanding of the conditions under which the stories originated, how they grew and spread all over the world, and, why they will be popular as long as there are children to read them.

Bound in cloth, with a cut-out color inlay on the cover. 132 pages. Size 8¾ x 11¼ inches. Text printed in two colors. Postpaid, $1.50.

Down Spider Web Lane

By MARY DICKERSON DONAHEY

Six full-page color plates, nine full-page pen-drawings, and over fifty illustrations and decorations by Gertrude A. Kay.

A charming story, in which the two good fairies, Sunshine and Fresh Air, bring health and strength to a little boy. Davy's adventures with the bug people will carry the child into a delightful land of imagination. Bound in cloth, with a color inlay on cover.

130 pages. Size 7¾ x 10¾ inches. Postpaid, $1.25.

The Proud Roxana

By ETHEL C. DOW

Six full-page color plates, twenty-nine pen-drawings and decorations by Eugenie Wireman.

A delightful story full of sparkling and delicate humor. The character of the Fairy School-teacher is a decided innovation, and the surprising happenings to the proud and wilful doll, Roxana, will absorb the young reader till the tale is ended.

Postpaid, $1.25.

Prince Domino and "Muffles"

By SEYMOUR EATON

Seven full-page color plates and twenty-five full-page pen-drawings by C. Twelvetrees.

In "Prince Domino," Mr. Eaton has conferred a favor on young folks, by introducing to them an entirely new character in the realm of juvenile literature. This young prince of mysterious parentage, accompanied by his faithful band of adherents, "Dinkey Dadd," "Dutchy" and "Jappy" as well as his wonderful Siamese cat, "Muffles," with his hypnotic blue eyes, travels all over the country smoothing out the many difficulties of the boys and girls he meets. They live as gypsies in the open air, under the bright skies and green trees and their adventures come thick and fast. The story is clean, wholesome, and interesting, and will appeal to every boy and girl who loves the freshness of out-of-doors.

146 pages, size 7 x 9 inches. Postpaid, $1.25.

T. Y. CROWELL & COMPANY'S

A NEW VOLUME IN THE AMERICAN HISTORY SERIES

When America Became a Nation. BY TUDOR JENKS

This work continues the account begun in "When America was New" and "When America won Liberty," being devoted to the period from 1790 to 1850. The War of 1812, the Mexican War, and the troubles with the various Indian tribes are given due space, but it has been the author's main purpose to describe the home life of the people, their progress in inventions, their explorations and settling of the West, etc. Drawings, portraits, and maps add to the value of the book. 12mo, *cloth*, $1.25.

NEW ILLUSTRATED BOOKS PUBLISHED BY

T. Y. CROWELL & COMPANY

426-428 West Broadway, New York

RAMBLES IN SPAIN

BY JOHN D. FITZ-GERALD

This attractive volume is designed to guide American travellers in Spain to an intelligent view of the country, and also to convey a full idea of the land and the people to those whose travels do not extend beyond their own shores. The author's story furnishes a realistic description of the principal provinces and a keen but sympathetic analysis of Spanish character.

Map and 136 *photographs.* 8*vo, cloth.* $3.00 *net; by mail,* $3.25.

SWITZERLAND

BY OSCAR KUHNS

In this work is given an entertaining and instructive account of the scenery, history, and literary associations of the wonderful land which has long been called the "Playground of Europe" and is now the annual resort of multitudes of Americans.

Map and 32 *full-page photographs.* 8*vo, cloth.* $2.00 *net; by mail,* $2.20.

GEORGE ELIOT

BY CHARLES S. OLCOTT

The scenes and people in the works of the great novelist are here described in an especially readable form. The best photographs and portraits to be obtained fully illustrate the text, making a book in which every devotee of George Eliot will take a deep interest.

Map and 24 *full-page photographs.* 8*vo, cloth.* $2.00 *net; by mail,* $2.20.

WALDEN

BY HENRY D. THOREAU

Mr. Clifton Johnson has written an introduction, and has illustrated by skilful use of his camera the haunts of the philosopher on the shores of Walden Pond, where were composed the essays on "Solitude," "Economy," "Brute Neighbors," etc. By no other means than a personal visit could as distinct an idea be gained of Thoreau and Walden as from this splendid edition.

33 *full-page photographs.* 8*vo, cloth.* $2.00 *net; by mail,* $2.20.

HERO MYTHS AND LEGENDS

BY M. I. EBBUTT

A collection of great stories which illustrate the national characteristics of the British race and illumine its history. It is a scholarly and authoritative as well as fascinatingly interesting work.

64 *illustrations.* 8*vo, cloth.* $2.00 *net; by mail,* $2.20.

OLD GREEK NATURE STORIES

BY F. A. FARRAR

A large selection of the myths of Greece grouped around the natural phenomena in which they originated. This book is of special importance to teachers of Nature Study.

32 *full-page illustrations.* 8*vo, cloth.* $1.50 *net; by mail,* $1.65.

THE MASTER'S FRIENDSHIPS

BY J. R. MILLER

A helpful and satisfactory book, which will meet with appreciation by all who have enjoyed the author's other works. In type and binding it is a fine specimen of the best book-making, and is eminently suitable for a gift-book. *Colored illustrations.* 12*mo, cloth.* 50 *cents net; by mail,* 55 *cents.*

THE RIME OF THE ANCIENT MARINER

BY S. T. COLERIDGE

Booklovers who take pleasure in the finest work will note that in the production of this exquisite volume no expense has been spared. The claim is justly put forth that it is the most superb book achieved by modern processes. The well-known Willy Pogany has furnished 20 full-page plates, reproductions of water-color paintings, and 184 pages of lithography in color.

4*to, cloth, gilt top,* $5.00 *net. Full leather,* $10.00 *net. Limited edition, on Japan vellum,* $15.00 *net. Postage,* 50 *cents.*

Full information about any book on our list furnished on request.

NEW AND STANDARD BOOKS FOR HOLIDAY GIVING

The Most Amazing Human Document of Recent Years

China Under the Empress Dowager

Being the History of the Life and Times of Tzu Hsi

Compiled from State Papers and the Private Diary of the Comptroller of Her Household

By J. O. P. BLAND and E. BACKHOUSE

For the first time this remarkable volume lifts the veil that diplomacy allowed to fall over the late Empress Dowager's share in the Boxer outbreak during the summer of 1910. It begins with an introductory history of the Yehonala family, and graphically covers the stirring incidents and happenings during Tzu Hsi's eventful reign from her first regency to her death. It also incorporates the diary of His Excellency Ching Shan, which is more illuminating than perhaps any document that has ever come out of China. In it is recorded what actually took place from day to day in the Forbidden City during the siege of the Legations, and what was the manner and cause of many strange incidents during that period of stress and storm.

With 30 Illustrations and a Map of Peking. Large 8vo. 540 pages. Handsome cloth, gilt top, $4.00 net.

"Indispensable to every student of Shakespeare."—*The Nation.*

DODD, MEAD & COMPANY, Publishers, NEW YORK

MOFFAT, YARD & COMPANY

BOOKS FOR CHRISTMAS GIVING

MOFFAT, YARD & COMPANY

LIFE AND LETTERS OF

EDMUND CLARENCE STEDMAN

By LAURA STEDMAN and GEORGE M. GOULD

Large 8vo. Two volumes. 16 illustrations. $7.50 net. By express, $8.00

"A posthumous autobiography," is what Colonel William C. Church calls this remarkable work, adding, "in this book Stedman speaks to his friends again."

Miss Stedman herself, who was her grandfather's literary assistant for years, calls the book "an autobiographic biography."

This work unquestionably is the finest piece of American biography in recent years.

SHAKESPEARE'S ENGLAND

By WILLIAM WINTER

New, Enlarged, Revised, Definitive Edition. Superbly illustrated

$3.00 *net. By mail,* $3.30

"These volumes about England," wrote Thomas Bailey Aldrich of the original edition, "are the loveliest things that have ever been done."

"Here is England in a drop of honey," wrote George William Curtis.

The new edition is in large part rewritten and brought absolutely to date.

BRITTANY AND THE BRETONS

By GEO. WHARTON EDWARDS

Superbly illustrated in color and halftone by the author 7¼x10½ inches. $6.00 net.

By express, $6.40

This distinguished travel book is designed to be a companion to the author's "Holland of To-day," last autumn's splendid success.

The text is full, authoritative, and absorbingly interesting, while Mr. Edwards' many drawings and paintings are distinguished and unique.

REASON AND BELIEF

By SIR OLIVER LODGE

Author of "Science and Immortality," etc., etc.

8vo, $1.25 *net. By mail,* $1.37.

The author's position is the result of a lifetime of scientific study, and its basis is one of fact.

COMMON SENSE IN POLITICS

By JOB E. HEDGES

12mo, $1.25 *net. By mail* $1.37

"The author has thought seriously, soberly and honestly about many of the aspects of political life in America. We commend the book to our fellow citizens."—*N. Y. Sun.*

J. C. SNAITH'S *NEW NOVEL* MRS. FITZ

"The most delectable novel since 'Araminta'"

12mo. $1.35 *net. By mail,* $1.47

This is the author's best novel—far and away his best novel.

This novel is filling the country with laughter and buzzing talk. It is worth while, and your friends will presently tell you so.

It is a novel of present day life in England, and is remarkable for its wonderful characterization and lively story.

THE STORY OF CHANTECLER

By PROF. M. F. LIBERMA

75 cents net. By mail, 82 cents

LEARNING AND OTHER ESSAYS

By JOHN JAY CHAPMAN

12mo. $1.25 *net. By mail, $1.35.*

DIARY OF A REFUGÉE

By FRANCES FEARN. *Illustrated,* $1.25 *net. By mail,* $1.37.

HOW TO KEEP FIT

By A. T. SCHOFIELD, M.D., M.R.C.S. *16mo.* 75 *cents net. By mail,* 82 *cents.*

For Children of All Ages

THE GREEN DOOR

By MARY E. WILKINS-FREEMAN

With Colored Illustrations and Decorated Borders. 75 cents net. By mail, 82 *cents.*

A story, for children of all ages, of the most delectable quality and of universal charm. It is the kind of child story that becomes celebrated. The little door leads into the vigorous life of the picturesque olden times in our own country. One of the finest child stories ever written.

THE CHURCH AND THE INDIVIDUAL

By FRANK ILSLEY PARADISE. *12mo* $1.50 *net. By mail,* $1.65.

SCIENTIFIC CHRISTIANITY

By GERALD LEIGHTON, M.D., F.R.S. *12mo,* $1.25 *net. By mail,* $1.35.

THE INFINITE PRESENCE

By GEORGE M. GOULD

12mo, $1.50 *net. By mail,* $1.65

THE PERSONAL EQUATION

By LAURENCE McTURNAN

Introduction by Dr. James L. Hughes. *12mo,* $1.25 *net. By mail,* $1.37.

MOFFAT, YARD & COMPANY - NEW YORK

SOME NEW IMPORTATIONS OF

D. APPLETON & COMPANY

29-35 West 32d Street, New York City

Two Great Rivals

By Lieut.-Col. C. P. HAGGARD, author of "The Real Louis XV," etc. Photogravure frontispiece and many other illustrations. 8vo, cloth, gilt top, $4.00 net.

In this work the author has taken up a comparison of the two great monarchs of the sixteenth century, François I of France and Charles V of Spain. In an interesting yet accurate way Mr. Haggard draws a comparison between these two men who were always rivals as long as they lived, considering the personality of each and the influences of the men and women about them, and showing how apparently small and to us insignificant influences guided the extraordinary career of both kings.

The Life of Marie Amélie

By C. C. DYSON, author of "Madame de Maintenon." With Photogravure Portrait Frontispiece and other rare portraits and illustrations. Demy 8vo, cloth, $3.50 net.

The life of this royal lady forms a connecting link between the Old World and modern Europe. In her time Marie Amélie encountered every vicissitude of fate. There were few people of note in Europe at the end of the 18th and beginning of the 19th century with whom she did not come in contact, and all, whether friends or foes of her husband's policy, united in admiration of her noble character.

Gambetta: Life and Letters

By P. B. GHEUSI. Translated by V. Montagu. With 8 illustrations in Collotype. Demy 8vo, cloth, $3.50 net.

M. Gheusi, by a judicious choice of the very voluminous correspondence left by Gambetta and treasured by his own circle, now rapidly growing smaller and smaller, enables us to follow the patriot's career from his entry into the humble seminary at Cahors, kept by priests, until his sudden death. In these letters we can watch month by month, almost week after week, the mental development of the greatest patriot of modern times. This work is destined to throw new light upon the character of a man who has hitherto been represented as a dictator and an ambitious demagogue.

The Basutos

By SIR GODFREY LAGDEN, K.C.M.G. 70 illustrations and nine maps. 2 vols. Demy 8vo, gilt top, cloth, $6.00 net.

Basutoland and its inhabitants have been a thorn in the side of the nations that have been attempting to colonize Africa. The author has lived among these people for a long time, and therefore the accuracy of his descriptions and characterizations of this remarkable race of blacks is beyond question. Furthermore, throughout the book, the reader gets an excellent history of most of the colonial governments in South Africa, and gathers a much more definite idea than is at present otherwise obtainable of the causes which led up to the Boer War.

Up Hill and Down Dale in Ancient Etruria

By FREDERICK SEYMOUR, author of "Saunterings in Spain," etc. With map and 12 illustrations. Demy 8vo, cloth, $3.00 net.

The limits of this volume upon ancient Etruria have primarily been defined by the desire of the author to acquaint himself with the remoter and more sequestered sites—Vetulonia, Populonia, Rusellæ, Cosa, and Vul, for instance—rather than with those still inhabited and oftener described. The greatest difficulty in the Etruscan enigma has been the commencement of Etruscan art in Italy. How was it that the Oscan stock became possessed of the art faculty? That, in the opinion of the writer, was brought about by the importation by the invaders from the East of the Mycenæan or Ægean civilization.

Ups and Downs of a Wandering Life

By WALTER SEYMOUR. Illustrated. Demy 8vo, cloth, $3.00 net.

The author bears a name famous in the naval annals of England. There are few ports of the world he has not visited, and his life at home has been a succession of changes and surprises. As abundant and varied as is his material, the fascination of the narrative owes as much, perhaps, to the fact that both at home and abroad it has been his fortune to rub shoulders with the most remarkable figures of the time; but it is impossible to convey in a few words an adequate idea of the book's extraordinary interest; it teems with witty sayings and witty stories.

On and Off Duty in Annam

By GABRIELLE M. VASSAL. Illustrated with numerous photographs taken by the author. Demy 8vo, cloth, $3.00 net.

This is an account of a residence in Annam by the wife of a French army doctor who was stationed there. She gives a very interesting account of her experiences, and the book is pleasantly and entertainingly written. The author travelled about the country considerably, participated in a tiger hunt, and had many interesting experiences. The book is illustrated by excellent photographs made by the author, and is undoubtedly as readable a book as any that has been written recently on this country.

Farthest West

By REGINALD ENOCK. With numerous illustrations from photographs, and a map. Demy 8vo, cloth, $4.00 net.

In this book Mr. Enock considers the history of our western country, the nature of the land and the climate, the original peoples and those who have come after, and what they have accomplished and are accomplishing. Finally, he draws conclusions which are of considerable interest and value as to the future of our western country. The book will be definitely of interest to Americans themselves—those who know the West and those who do not—to show them what a keen observer sees in them and their country.

A Royal Cavalier

THE ROMANCE OF RUPERT, PRINCE PALATINE. By MRS. STEUART ERSKINE. 3 photogravure portraits and 7 half-tone illustrations. 8vo, cloth, gilt top, $3.75 special net.

Prince Rupert was the remarkably active and romantic nephew of Charles I of England. At eighteen he was a colonel in command of cavalry in the Thirty Years War. In the Civil War in England he was the most dashing leader of the Royalists. At the Restoration he became Admiral of the Fleet, and later first governor of the Hudson Bay Company. He was a painter, engraver and chemist of distinction. The story of his life here presented is in reality a history of the times of Charles I and Charles II.

The Leading Books of the Year

HOUGHTON MIFFLIN COMPANY

John Brown: A Biography Fifty Years After **By Oswald Garrison Villard**

"One of the great biographies of our literature."—*John T. Morse, Jr., in Atlantic Monthly.*
"A contribution to American literature to take rank with the very best historical writing of our time or any time."—*Horace White.* Second Edition. *Fully illustrated. $5.00 net. Postage 26 cents*

Emerson's Journals **Edited by his Son and Grandson**

"A new and more personal acquaintance with Emerson for the modern generation of readers has been made possible by the publication of his journals."—*Springfield Republican.*
Vols. III and IV, each, illustrated, $1.75 net. Postage 13 cents

The Corsican **A Diary of Napoleon**

The story of Napoleon's life told by himself and covering his whole career from birth to death, now published for the first time. "It may be said without qualification that it is the most important contribution to Napoleonic literature that has yet appeared."—*New York Herald.*
$1.75 net. Postage 15 cents

Japanese Letters of Lafcadio Hearn **Edited by Elizabeth Bisland**

These letters, the most revealing and interesting Lafcadio Hearn ever wrote, give his frankest views of Japan, and are the final expression of his own temperament and views of life.
Illustrated $3.00 net. Postage 21 cents

The Digressions of V **By Elihu Vedder**

"A fluent and complete disclosure of personality, a disclosure nearly as complete in its way, and quite as interesting, as that of any classic diarist. . . . Whoever reads it will know a singularly versatile and attractive personality in all its moods, merry and sad."—*The Outlook.*
Fully illustrated by the author. $6.00 net. Postage 30 cents

Among Friends **By Samuel M. Crothers**

Sparkling essays by "the Oliver Wendell Holmes of our day." An admirable holiday book for discriminating readers. *$1.25 net. Postage 12 cents*

In the Footprints of Heine **By Henry James Forman**

"An exceptionally excellent travel book, full of literary flavor and abounding in delightful wayside reminiscences."—*Cleveland Plain Dealer.* *Illustrated. $2.00 net. Postage 13 cents*

Our House, and the People in It **By Elizabeth Robins Pennell**

"Whether we are fond of life in London, of London itself, or of life itself, we shall certainly in any contingency not fail to take the greatest enjoyment from the reading of 'Our House.' It is intensely and pervasively human."—*Boston Transcript.* *$1.25 net. Postage 12 cents*

The Essence of Religion **By Borden P. Bowne**

"The book is full of original, profound, and sane thinking, and the spirit is that of a man who lived in close communion with his God, and who had a great heart of sympathy for his fellow men. Preachers will find it a veritable storehouse of suggestion."—*Boston Transcript.* *$1.50 net. Postage 13 cents*

FOR CHILDREN

The Farm Book **Written and illustrated by E. BOYD SMITH**

"Comes nearer to satisfying our ideals of what a child's picture book should be than anything hitherto done by an American artist. . . . Told with the particularity of detail always fascinating to children, and with a cleverness of drawing and composition equally delighting the critic, the children see farm life on its joyous side, with almost the vividness of actual participation in its work and play."
—*The Outlook.* *$1.50 net. Postage 15 cents*

The Christmas Angel **By Abbie Farwell Brown**

"Not since Charles Dickens laid down his pen forever has there been a prettier Christmas story written, one more full of the real spirit of Christmas or conveying a more sensible lesson than 'The Christmas Angel.'"—*Living Age.* *Prettily illustrated. 60 cents net. Postage 7 cents*

Illustrated Holiday Bulletin FREE on request.

BOSTON **HOUGHTON MIFFLIN COMPANY** **NEW YORK**

The Nation.

NEW YORK, THURSDAY, DECEMBER 8, 1910.

The Week.

That the Democrats at the Capitol should be talking of Harmon and Wilson as the ticket for 1912 is merely a matter of course. While other material is available in the country, these two men are marked out plainly at the head of the list. It is a fortunate accident that their prominence in virtue of their record chimes in with those geographical and political considerations which usually figure as determining factors in the choice. Indeed, this latter is true in a quite exceptional degree; for not only does Wilson represent the East and Harmon the Middle West, but there are two other elements of very great pertinence. In the first place, Wilson, although he has made his career north of Mason and Dixon's line, is Southern by birth and breeding, and distinctively a Southerner in type. And secondly, both these men have carried by heavy majorities States which had long been regarded as hopelessly Republican. The really interesting question is whether it should be thought of as Harmon and Wilson or as Wilson and Harmon; and on that point the developments of the next eighteen months will have a great deal to say.

The meeting of the Governors at Frankfort, whatever merits it may have embodied, has been sadly disappointing to those who hope to see these annual conferences develop into an institution directly efficient in the conduct of government. Stimulating and beneficial to the participants it may have been, in the same way as are those annual gatherings of scientists and scholars which have become a part of the established order in the world of learning; but of a more immediate advancement of the large objects cherished by the originators and advocates of the idea there was little indication. The Governors themselves recognize this, as is shown in the suggestion that the next meeting should be held at some out-of-the-way place, where there would be no opportunity for social distractions. A body that has no definite task to the fulfilment of which it is committed needs every possible safeguard against the temptation to take the path of least resistance; and evidently the conference of Governors, in spite of the undeniably important possibilities of which it is capable, is no exception to this rule.

John R. McLean's announcement that he is a candidate for the Ohio Senatorship completes the list of men who should not be elected. If Sheehan were to be the most visible fruit of the Democratic victory in New York, James Smith in New Jersey, and McLean in Ohio, the betting on chances in 1912 would at once show odds in favor of the Republicans. Till now, the two men most prominently talked of in Ohio are Mr. Hanley, chairman of the Democratic State Committee, and Mr. Pomerene, just elected Lieutenant-Governor. To the former it is objected that, from his record and associations, he would be no improvement even on Senator Dick. As for Mr. Pomerene, no one pretends that he has shown statesmanship of high rank, but he is comparatively young, is an able debater, an earnest student of public affairs, and a man of views above machine politics. He would at least have brains to put against McLean's barrel; and if it comes down to a choice between the two, the Ohio Democrats ought not to hesitate.

No less than $344,000 spent by the racing interests to influence legislation in New York State within three years—$188,000 in 1908 alone—is the discovery of the Bruce Investigating Committee. One lobbyist, now resident in London, received $40,290 for his services at one session of the Legislature. Of course, this was for purely legitimate work, such as seeing legislators, influencing agricultural fair associations, farmers' clubs, etc. Then there was Maurice Minton, who received $5,000 from Mr. Belmont for his share in the influencing of public opinion; this is the same gentleman who last summer got up those mysterious Gaynor clubs that were so bent on elevating the Mayor to the Governorship, but which the Mayor disavowed. A writer for the press earned $7,000 and more in a remarkably short time. Now, if he believes these were all legitimate expenses, Mr. Belmont is easy prey for men who wish to get rich quick. If he really thinks that $188,000 could be properly spent to oppose legislation in one session, he has a more confiding nature than most people give him credit for.

Acting under the advice of the Attorney-General, Secretary Meyer will not permit work to be begun on the battleship New York without getting express authority from Congress to incur the additional expense, above the $6,000,000 authorized in the present appropriation, which he finds will be necessary. This additional expense, of about $1,300,000, the Secretary ascribes to the operation of the eight-hour law. The case is interesting, therefore, not only as involving sound business methods in respect of observing the limitations set by the Congressional appropriation, but also as sharply calling the attention of the country to the question of what the eight-hour law costs. Whether one approves that law or not, it is right that the public should know what it means from the standpoint of the public treasury. The attribution of the whole difference of nearly 25 per cent. to this law would seem, on its face, to be excessive; but that something like this amount of added expense is caused seems probable enough.

Constant and enormous increase of navy expenditures has become so familiar a phenomenon—the world over—that people are apt to regard it as a matter of course. It is, therefore, quite worth while to note that a glance at any table giving the expense of the British navy and extending back half a century discovers that this habit of continual increase is of quite recent origin. A table stating the cost of the British navy at ten-year intervals, beginning with 1857-8, shows it to have remained almost stationary for thirty years, whereas it has more than trebled in the past twenty-three years. The expenditure for the navy in 1857-8 was £10,590,000; in 1867-8, 1877-8, and 1887-8 it was £11,169,000, £10,785,000, and £12,225,000, respectively; but ten years later it had reached the figure of £20,850,000, and in another decade it

had come up to £31,141,000. This was in 1907-8; the following year yielded only a slight increase, but the figure for 1909-10 was £35,807,000, and in the present budget the estimate for the fiscal year ending March 31, 1911, is £40,604,000! In round numbers, then, the people of the United Kingdom are called upon to spend $200,000,000 for their navy, compared with $60,000,000 only twenty-three years ago; whereas for thirty years preceding that time the naval expenditures showed hardly any increase at all.

The annual report of the Adjutant-General of the army records an encouraging decrease in desertions during 1909-1910, the percentage being 3.66, as against 4.97 per cent. in 1908-1909, and the high-water mark of 7.43 per cent. in 1905-06. The heaviest desertions were from the field artillery, coast artillery, and the minor detachments, such as the recruiting forces and recruits en route to stations. Gen. Ainsworth believes that the decrease in desertions is "undoubtedly due to the continuance of systematic and vigorous efforts . . . to apprehend and punish deserters." But just when the army has felicitated itself upon this and the fact that thirty-five companies reported no desertions whatever, Gen. Ainsworth records the chilling news that 2,999 soldiers purchased their discharge within the year, as against 1,769 in the last preceding annual period, and only 1,123 in the fiscal year ending June 30, 1908. As the average enlisted strength of the army was about 69,500, or say 70,000, it is apparent that one soldier in every twenty-four was so dissatisfied with the conditions of service as to be willing to make heavy financial sacrifices to escape from it. Adding the deserters, 3,464, it thus appears that no less than 6,463 soldiers left the service in twelve months, with or without permission, prior to the expiration of their enlistment, or at the rate of 538, or about two-thirds of a regiment, a month. When those also are reckoned who died, were discharged for other causes than purchase, and left because of expiration of enlistment each year, we have a total loss of 23,688, or one-third of the entire army. No less than 11,911 soldiers declined to reënlist. Plainly, therefore, there is much yet to be done before the service can be declared to be as attractive to American citizens as the War Department would have it.

Alderman Cortlandt Nicoll deserves the thanks of the community for having seriously grappled with the cab problem in this city, and worked out a plan for radically improving existing conditions. Cheap and easily accessible cab service is one of the great requirements of comfort in a metropolis like New York, and yet we have been decades behind the cities of Europe in providing it. The present situation, to be sure, is incomparably better than what used to prevail years ago, but it is still far from what it ought to be. In former days, twenty or thirty years ago, the want of well-paved streets was an undeniable obstacle to the introduction of cab service on the large scale that prevails in European cities, and at prices somewhat like those there established; though, of course, this was far from sufficient excuse for the absurd system, or want of system, which placed the people of New York at the mercy of irresponsible cabmen for one of the primary conveniences of city life. Now, however, the condition of the streets and the universal observance of proper traffic regulations make it perfectly practicable for New York to be supplied with this convenience as satisfactorily as London or Berlin, and we trust Mr. Nicoll will keep at his undertaking with the determination that its importance warrants.

It is a long time since so interesting a phase of the question of woman's place in the world of intellect has come up as that presented by the proposition to elect Mme. Curie a member of the Académie des Sciences. Nothing really analogous to this case has yet arisen in the course of the advancement of women that has been so remarkable a part of the history of the past generation; there is something more dramatic about the situation presented when the most distinguished group of scientific men in the world debates the admission of a woman into its charmed circle than in the gradual extension of the field involved in the opening of the doors of university after university, in country after country, to women students. As for the merits of the case, and its probable outcome, we cannot help feeling that it is at most only a question of time when Mme. Curie's admission will be effected; assuming, as no doubt it may be assumed, that the opposition turns only on the question of sex. Incidentally, it may be remarked that to the logical mind there will be little to choose between her admission and her non-admission, as an argument against the views of those who maintain that experience has shown women's incapacity for the highest forms of scientific production. If she is admitted, there will be one woman, out of the handful that devote their lives to scientific research, distinguished by one of the highest of scientific honors; if she is kept out, it will be one more proof of the difference between the encouragement held out to women and that held out to men for sustained devotion to strenuous intellectual labors.

We learn from a contemporary, with deep regret, of a sad development among magazine editors. It seems that that first step which costs has been taken in the direction of a magazine Trust. A community of interest, the editors will doubtless call it when put upon their defence, and we must admit that it is not yet quite clear whether there is to be at first a geographical division of the country into separate spheres of influence, or whether it is the world of subjects that is to be parcelled out by these lords of magazine creation. But we warn all these earnest souls that coöperation leads readily to more sinister things, as their moving stories of industrial Trusts ought long since to have shown them. Meetings to prevent duplication of muck-raking effort and wasteful competition are all too likely to tend to questions of rate-making, to "gentlemen's agreements," and so to combinations in restraint of the author's trade, and the exclusion of others from the muck-raking field; that is, a limitation of output. With the situation thus in hand, we fear that these editors will then yield to the temptation to charge all that the traffic will bear, with scant attention to the crying needs of the public and a consequent rise in the cost of living. Such has been the history of all our benevolent Trusts: they all began at lunches presided over by a Lincoln Steffens of industry—yet see where they have ended. What if three magazines are now simultaneously muck-raking Mr. Morgan? Competition remains the life

of magazine trade as of all others, and any one who would stifle it ought himself to be muck-raked.

As a result of the resolve of the Indiana State Bill Posters' Association to encourage cleaner advertising, the Muncie branch of the organization has decided to refuse to handle lithographs not deemed proper by its censor. The advertising of burlesque theatrical performances is said to be the special object of attack, but whiskey advertisements also are to be discouraged. More significant is the promise to give up altogether the use of boards that are situated in such places as to make them objectionable. To fight against viciousness is comparatively easy, and, in this respect, the action of these bill posters seems belated. They must foresee a public sentiment that would render their voluntary action no longer possible. But that they should actually give heed to the mere consideration of beauty, or even of lack of aggressive ugliness, cannot fail to strike many of their profession, we fear, as absurdly overscrupulous. Is not the "objectionable" place inherently the best place for commercial display? But this apparently voluntary move by the Muncie bill posters almost makes us hope.

If Dr. Cook has not discovered the Pole, he has at least found a novel, and no doubt in many ways pleasant, method of making money. It is true that few persons would be willing to go even as near to the North Pole as Anoratok, and lie *perdu* in the ice-fields for eighteen months, more or less, for the sake of the money that might be made by the exploitation of a false claim to the discovery of the Pole; but when it comes to a disappearance in Europe, with the enjoyment of all the comforts of civilization, that is another matter. We can think of few more agreeable methods of earning a living. The next thing in order, we presume, is a disappearance in Paris or St. Petersburg, followed by the sale of a series of articles showing that he was insane when he wrote his confession, but perfectly sane when he came back from the Pole.

As the English pollings proceed, the hopes of the Conservatives dwindle. The chances of the Liberals have certainly been improved by the fact that the Labor party is not running so many candidates at this election, so that the number of three-cornered contests, which cost the Liberals several seats at the previous election, will not be so large as before. In general, the Liberal-Labor alliance seems to be in good working order. Taking everything into consideration, it appears probable that Mr. Asquith will come back with a coalition force practically undiminished. This could not be called a great Liberal victory, but it could be called a Conservative defeat. In so far as the latter follows shifty tactics on the part of Mr. Balfour and his party, and above all marks the failure of the ridiculous cry about "American dollars," it must be accepted with a good deal of satisfaction as showing that the British electors are not to be stampeded by insincere clamors.

No really taking phrase has been produced by Mr. Balfour in his electioneering, but he essayed a great stroke by coming out for a referendum before a protective tariff should be enacted. At first this was hailed as the cleverest strategy conceivable, but later a reaction set in so that Mr. Balfour himself began to hedge, when he found that what was to inspirit his party was really dividing and discouraging it. No less than Bonar Law, who had left a safe seat at Dulwich to contest one in Manchester for the Conservatives, and who is pronounced for protective duties, at once declared that he would not eat his words, no matter what Mr. Balfour said; and there was, besides, the awkward obstacle of the letter by Joseph Chamberlain asserting the tariff to be one of the "two issues" presented to the electors, and affirming that "now is our opportunity to reconsider our fiscal system"—that is, to abandon free trade.

The beginnings of party government in China are discerned by the *Celestial Empire* as coincident with the establishment of the National Assembly, even in its present limited form. Palace parties there have been and still are, but party government in any broad sense is of necessity a new development. The Assembly itself was not chosen on a popular basis, and the representatives of the people who are in it consist of those members who were appointed by the various provincial assemblies, which, in turn, are not, to any great extent, popularly elected. Nevertheless, these members have taken seriously their task of representing the people, and a line of division has appeared between the nominees of the various government boards and councils in Peking, and the members from the provinces. So marked was this divergence that Prince Pu Lun, the president of the Assembly, asked and obtained five days' leave of absence from the troubled scene. Interestingly enough, the line of demarcation between Government and Opposition in this newest of Parliaments is the same as that which, under such names as those of Court Party and Country Party, once separated the groups in the oldest Parliament of them all.

Further testimony, if any were needed, to the perversity of the Oriental mind is furnished by Bishop Brent's parting admission that the Filipinos not only do not like us, but are quite frank to say so. True, this unaccountable antipathy appears to be confined to the upper classes—the lower thus far have displayed a strange indifference to the mere nationality of their masters—but whatever its extent, its violence, which has steadily increased since the first days of the American occupation, shows no signs of abating. How sharper than a serpent's tooth! Yet we do not recall that Dr. Fell, in the epigram, felt obliged to give up his preceptorial duties simply because for some undefinable reason he was not liked. Bishop Brent, indeed, had the satisfaction of finding most with whom he talked during his six months' visit among us quite ready to agree with him that the withdrawal of the United States from the islands would work great harm to the Filipinos and probably to us. It is a pity that such real benefits as the United States has conferred upon them—and we count Bishop Brent himself as one—should go stubbornly unappreciated, along with benefits not so real, because of this childish self-assertiveness on the part of our wards. Their sophomoric vaporings about the "despot's heel," "independence," and other outworn phrases, however, should not cause us to grow weary in well doing. It is true that in the entrancing game of "white man's burden" it rather spoils the fun when the smallest boy gets tired and refuses any longer to play "burden."

THE MESSAGE.

It is a disappointing form which President Taft has given his annual message to Congress. In the first place, it is inordinately long. It can be neither generally read, nor even printed. But the second criticism which must be made of the message is more serious. It is not inspiring; it gives no positive lead. This will be the more depressing to the President's party, because in the hour of defeat and in a time of great confusion, it would have welcomed a vigorous initiative, would have hailed a new watch-word. But instead of issuing a call to action, Mr. Taft has written a tedious judicial review. There are excellent positions taken in it, and many sound principles are laid down; but it is not the production of a born leader, scanning the political field and seeing where broken ranks can be formed again and fresh heart put into discouraged men. Republicans were looking to the President to give them an inspiriting ode in time of hesitation. Instead, they get a large wet blanket.

Dissecting out from the mass of the President's recommendations and discussions the matters on which attention ought to be fixed, we note with pleasure that Mr. Taft persists in his efforts to bring about a thoroughly businesslike and economical administration of public affairs. What he has done and proposes to do to eliminate waste, cut off extravagance, and heighten efficiency deserves nothing but praise and support. We hope the President will keep hammering away at this, despite the inevitable obstacles he will encounter and the temporary setbacks he will meet. It has often been said that the Government should be a "model employer," meaning thereby a too good-natured and lavish employer. The time has come when Uncle Sam, who is calling upon the railways and other corporations to be saving and to cut down their cost of production, should make his deeds square with his words. The President naturally links with what he has to say about making the public service less extravagant and more energetic, recommendations to remove it further from politics. What he urges in the way of extending the classified service so as ultimately to free the post office and the consular service and other branches of government activity from political taint, will gratify civil-service reformers and confirm the belief that Mr. Taft sincerely desires to leave the national administration better than he found it.

There has been much curiosity about what the President would say of the tariff. The note he strikes is very different from that he sounded last year in his unlucky Winona speech. He remarks that the schedules of the Payne bill have "been subjected to a great deal of criticism." All will admit that. But Mr. Taft also admits that some of this criticism has been "just." Certain rates of duty, he virtually concedes, were left too high. But the only hope of lowering them which he holds out is through the investigations and recommendations of the Tariff Board, and it is not yet ready to make a report on a single schedule. By the opening of the next Congress—that is, a year from now—Mr. Taft expects to be able to present the argument for further revision of separate tariff schedules; but, meanwhile, he is ready to have the Tariff Board enlarged and made permanent and endowed with further powers, if Congress sees fit. We doubt very much, however, if the Democrats in Congress—especially when they begin the next session with their large majority—will be content to wait indefinitely for the Tariff Board to make up its mind. There are some changes which even Mr. Taft admits should be made in the tariff, and which are certainly not beyond the unaided "wisdom of Congress."

On the subject of conservation, the President reaffirms the views to which he gave utterance in his St. Paul speech last September. He is none too urgent in dwelling upon the need that Congress should speedily pass the new legislation necessary if the coal deposits and phosphate lands and waterpower rights are to be both safeguarded and made available. This is the one great subject demanding Congressional action at an early date, yet it is more than doubtful if the laws desired can be enacted in the crowded short session. As concerns anti-Trust legislation, or further amendments of the Interstate Commerce act, the President advises a pause. This does not mean that the enforcement of existing laws is to be suspended—in fact, the Department of Justice is putting them vigorously in force—but only that it would not be wise to press forward with fresh statutes until we have got from the Supreme Court a full and final interpretation of the meaning and scope of the statutes we now have. This position is only in line with what Mr. Taft has repeatedly said, and seems to us the only sensible one to take.

Regarding other recommendations of the President, he can hardly hope that this Congress will take action. He suavely urges some form of ship-subsidy bill, but such a measure is admitted by old Congressional hands to be wholly out of the question. He appeals for money to fortify the Panama Canal, but Congress shows a disposition to be very slow about that. So with the parcels post and the proposed rates on second-class mail, the chances are that there will be more talk than action this winter.

WILSON ON THE GOVERNORSHIP.

Woodrow Wilson's address before the Governors at Frankfort last week is both delightful and stimulating reading. It is long since we have had a public man able to clothe his thoughts in such an elevated and felicitous style. And Dr. Wilson also has the thoughts to clothe. His estimate of the aims and functions of this annual meeting of the Governors was happy and just. It is not, and is net to become, a new branch of government, but simply a place for counsel and stimulus and suggestion, a device for better expressing and directing the abounding life of the nation. It was, too, with a strong grasp on realities and a refusal to be misled by phrases that the speaker traced the broad outlines of necessary Federal power, while he opposed the needless "invention" of new powers. But the chief object of his speech was to point out the unused powers of the States, and to insist that the time had come for their fuller and more fruitful exercise. Abeve all did he sound a new note in connection with the great opportunities and appealing duties of the Governors of the States. What has been dimly in the minds of many he set forth with as much clearness as force; and marked out a programme which, if he is able as Governor of New Jersey even partially to carry out, will prove to be something like an epoch in the history of our government.

In magnifying the office of Governor, Mr. Wilson seized first upon the unquestioned fact that a democracy is

always looking for leadership. For some years past, indeed, the people in the States have been hungering and thirsting for leaders. The extraordinary way in which Gov. Hughes rose in the admiration and confidence of the citizens of New York was not only due to the qualities of the man, and the causes for which he fought, but was also a proof of the strong popular desire that a Governor should stand out before the people as their direct representative and champion. Now, it is this general attitude of Gov. Hughes that Woodrow Wilson proposes as a model, but with some differences and enlargements. He would have the Governor make himself the interpreter and organ of the popular will, both in the way of formulating policies and of continually discussing them, reporting on how they fare in the Legislature, and rallying public sentiment in their support. The passages of his address in which Dr. Wilson elaborated these ideas have a freshness of attack upon old problems and reveal an ingenuity of resource, combined with perfect frankness and a shrewd insight into human nature and the actual facts of our political life, which mark him out as an original force in public affairs.

We will only single out here the admirable directness and play of humor with which Woodrow Wilson goes straight to the essentials, brushing aside all merely formal objections, and showing exactly how the Governor as leader would go to work. It is not a question of usurpation of power that does not belong to him, but of the vigorous use of the power that is unquestionably his. The warrant for the suggested new activities of Governors is not to be sought in constitutions and statutes so much as in the individual qualities of the men themselves. Mr. Wilson leaves no doubt upon this point. He is not talking about a Governor who will get the things done that he wants by the use of patronage; that method is as wrong as it is stupid and futile. It is not any kind of official influence, as such, that he would have the Governor exert. The whole thing rests upon personal influence. As he conceives the case, it comes down to this: A man who has sufficient weight of character and ability so to impress the people of the State that they elect him Governor, ought not to sink his individual qualities the moment after he takes office. If he could lead before, he can lead afterwards. If he could go before the citizens and debate the most important public questions prior to his election, he can do so subsequently. And this leadership in free public discussion, in keeping the voters informed, and inducing them to be alert and zealous in the scrutiny of the acts of all their public servants, is the kind of leadership that Woodrow Wilson urges upon the Governor. He does this both as a political philosopher and as a keen man of business. We may be sure that when he undertakes to carry out in New Jersey his own prescriptions, he will do it with a kindly wit and a bonhomie that will disarm his opponents while compelling them and the people of the entire State to attend to his arguments. What chance would a machine politician, or a group of bosses, have against a Governor who goes out disclaiming anything like an attempt at coercion, renouncing legal power, and appealing only to sound reason and fair play in the open forum of public debate? There is absolutely nothing to be said against the way in which Dr. Wilson puts the case for the Governors:

> Their real power over a Legislature is their ability to convince the people. If they can carry an opinion through the constituencies, they can carry it through the Legislature. No Legislature need be jealous of that, unless it be jealous of putting public questions upon a footing of open and frank debate. The field is free—as free for those who oppose the Governor as for the Governor himself. The best arguments, the handsomest motives, the most valid and straightforward purpose, the most defensible programme wins. It is too late, moreover, to be jealous of that method of control. The people are ready for it, wait for it, demand it, expect all who hope to serve them to accept the ordeal. No real man who speaks his real convictions need be afraid.

It is this definition and crystallizing of what the people in the States have been vaguely groping after that make Woodrow Wilson's address so noteworthy. It will heighten his reputation as a man fit for leadership because he has ideas and the ability to expound and enforce them. As he soon enters upon executive duties, it is certain that not only his State but the nation will follow his career with the deepest interest. Whatever else he may be, we may be certain that he will not be that sort of "practical man" who, in Disraeli's phrase, is "one who practises the blunders of his predecessors."

THE PROTECTIONIST PANACEA.

The time was bound to come, and to come soon, when the latest formulation of the protectionist creed would be tackled fully and squarely on its merits; and it is a pleasure to find that at this formative stage in the situation that task has been performed in the most admirable manner by Professor Taussig in the December number of the *Atlantic*. The force of his exposition is enhanced by the circumstance that Professor Taussig, as writer and teacher, is eminently cautious in his statements and judicial in his expressions of opinion; so that when, near the beginning of his article, he says of the difference-in-cost-of-production that "as a 'solution' of the tariff question this much-paraded 'true principle' is worthless," many persons will take notice who might otherwise stop their ears. And that the principle, as a principle, is literally worthless, Professor Taussig has no difficulty in showing to the satisfaction of any intelligent and unbiassed reader.

Even from the high-protection standpoint, it would be difficult to find anybody willing to follow this principle out to its logical conclusions, and it will be utterly impossible to offer a tariff strictly based upon those conclusions with the faintest chance of acceptance. Applied unflinchingly, it means, as Professor Taussig says, that "the production of any and every thing is to be encouraged—not only encouraged, but enabled to hold its own. . . . If the article is tea in South Carolina, for example, ascertain how much more expensive it is to grow the trees and prepare the leaves than it is in Ceylon, and put on a duty high enough to offset." This principle, to be sure, is already acted upon in our existing tariff; for on this basis the duties on lemons and prunes were raised in the Payne-Aldrich act; but it is one thing to apply the principle irregularly by the use of pressure in particular cases, and quite another to establish it as decisive, and make it the ground of an indefeasible claim. The attempt actually to do that in good faith, so far from saving protectionism, would prove to be just that last straw which would break its back.

Nor does it lie in the mouths of the gentlemen who have been acclaiming this great principle as a tariff panacea to plead that the principle is to be applied only within reasonable limits. In

the first place, it has already, in the judgment of the vast majority of the American people, been applied far beyond reasonable limits. No better illustration of this can be given than the tariff on wool; recognized as an outrageous burden on the whole people of the United States, it is looked upon by the wool-growers as the simplest of rights. The naïve letter from "the owner of a flock of sheep" which appears in our columns to-day, is absolutely typical of the attitude which has been maintained by the wool-growing interest for half a century. The idea that any demand on the part of the mere consumer can be reasonable if his own support as a producer is not first provided by the Government, does not enter this honest gentleman's head. A second argument against it is furnished by such a declaration as that quoted by Professor Taussig from a speech by Senator Aldrich in the tariff debate of 1909:

> If it costs ten cents to produce a razor in Germany and twenty cents in the United States, it will require 100 per cent. duty to equalize the conditions in the two countries. . . . As far as I am concerned, I shall have no hesitancy in voting for a duty which will equalize conditions. . . . If it was necessary to equalize the conditions and to give the American producer a fair chance for competition, other things being equal of course, I would vote for 300 per cent. as cheerfully as I would for 50.

When the high priest declares the meaning of the creed, of what avail is the mere common worshipper's interpretation? But there is a third argument even more fatal: if the principle is subject to the limitation of reasonableness, all the fat is in the fire again, and we are just where we were before the great panacea had been discovered.

However, it need not be denied, and Professor Taussig does not deny, that much good may come from the investigations of the tariff commission into the differences in costs of production between the United States and foreign countries. On the contrary, these investigations may, in a large number of cases, show that existing duties go far beyond what the principle would call for, and thus be made an effective basis for needed reforms; and in general, the light that they will throw on conditions of production at home and abroad should be of very great value to those desiring to deal fairly and intelligently with the situation as it stands. Professor Taussig thinks the investigations will be of especial advantage in two directions, "as to undue gains in monopolistic or quasi-monopolistic industries, and as to the extent to which there are vested interests which must be respected in a future settlement of the tariff." In connection with the discussion of both these phases of the subject, and, indeed, throughout his article, Professor Taussig takes occasion to illuminate the tariff question in its fundamental aspects.

As for the attitude of the Democratic party on the subject, it strikes us that this happy thought of the Republicans might easily be turned into a weapon of offence against them. Designed as a protectionist solution of the tariff problem, it is demonstrably incapable of playing that part. But in the hands of tariff reformers, it may, with one essential modification, be made to do good work. As a demand of right, a duty equal to the difference in cost of production should be dismissed as absurd; as a maximum which shall in no instance be surpassed, that difference may well be appealed to as decisive. In cutting down the tariff in the interest of the whole people, all reasonable persons will pay regard to the claims that may legitimately be put forward by those already engaged in industries that have been built up under the stimulus of protection; just what those claims are must be judged in each case according to the circumstances of that case. But anything beyond the difference in cost of production—a difference, too, measured by American production in favorable, not unfavorable, circumstances—is extortion. The abolition of such palpable and undeniable extortion is not to be, as the new Republican dogma would have it, the measure of tariff reform; but as an irreducible minimum of such reform in every instance it may have its use.

MRS. EDDY'S CAREER.

No sensible man will deny that the life of Mary Baker Eddy, with the widespread cult identified with her name, challenges explanation. The rough-and-ready way of either dismissing the whole of Christian Science as imposture and knavery, or hailing it as divine, will no longer suffice. No more delicate task—yet none more imperative—can be laid upon men who seek to think dispassionately and accurately, than that of distilling out observingly the soul of goodness in things evil, detaching truth from its encompassing medium of falsehood, and passing judgment upon great movements like Christian Science in a way at once comprehensive, fair, and charitable, while not shrinking from the truth even if it be disagreeable and give offence. In the entire process we have to guard the right of private judgment and individual liberty—as Prof. William James did when he appeared before a committee of the Massachusetts Legislature to protest against a law forbidding all persons to consult "mind healers."

Few question to-day the physical benefits which some invalids have derived from the teachings and practices of Christian Science. Nervous conditions which set drugs at defiance may often be successfully outflanked, as it were, by approach from the side of the imagination and the will. Every open-minded physician admits this; and would often give a great deal if he could manage to impress certain patients with the sense of mysterious inner powers able to front and conquer disease. Indeed, the truth which lies in Christian Science healing has had wide recognition and application in schools of medicine entirely ignorant of Mrs. Eddy. The ways of attacking and removing persistent hallucinations and obsessions and deep nervous impressions, now common with advanced psychiatrists, have their roots in the same soil as "Science and Health," even though these practitioners may never have read Mrs. Eddy's "last revised edition" of that work.

Admitting, then, that there has been something in the doctrines of Mrs. Eddy and her followers which attaches itself to forces and possibilities "deep-seated in our mystic frame," and not denying that thousands of good people have found their religious natures stirred by the services of Christian Science churches, what are we to say of the rest of it? What is to be our judgment of the philosophy of the matter, put forward by Mrs. Eddy and her expounders—a philosophy at once crude and fantastic? How are we to account for the fact that not merely the doctrines, but the commonplaces and banalities, of "Science and Health" should have been accepted by thousands of excellent people as not only divinely inspired but clothed in language worthy of divine inspiration?

To begin with, it has to be borne in mind that the raw material for the rise of such cults as Christian Science has always been abundant in the United States. It is not simply that we have a great many credulous people. The very nature and flux of our population, the constitution of our political society, with its emphasis upon individualism, have always made it easy to "found" sects in this country. There was an enormous number of them in the early days of the settlement of Ohio, most of which, including the group worshipping the "Leatherwood God," have disappeared. But Americans of the middle and lower classes still lead the world, we believe, in a readiness to run after religious novelties, and to take up with some high-sounding new faith. Sunday's news informed us, incidentally, of the existence of a religious body in the United States known as "The Pillar of Fire." That light has not blazed high enough to attract general notice, and probably will be quenched ere long; but it typifies the fertility of Americans in that sort of queer religious belief and organization. Mrs. Eddy was merely more successful than other founders in utilizing the ample material ready to her hand.

Her greatest conquests were made among those who were already, at least nominally, Christians. The reason for this is pretty obvious. The Christian churches have the Bible, which they declare to be the Word of God, and most of them believe, or profess to believe, that it is verbally inspired. In practice, of course, they ignore or depart from any given literal meaning which is inconvenient; but Mrs. Eddy came forward with those passages of the Bible in her hand which seem to teach the miraculous healing of diseases, and insisted that they should be taken as implicitly as the passages teaching virtue and sanctity. In other words, she had a great initial advantage in the argument. You say you accept this book as the supernaturally-given guide. Very well, then, why do you not let it guide you to perfect health without the use of medicines and doctors? This was a powerful appeal, *ex concessis*, and it is no wonder that so many simple-minded members of Christian churches were unable to resist it. And when they had, in addition, the evidence of their senses that real cures were wrought by Christian Science, and suffering men and women wonderfully were buoyed up by the reinforcement of their wills, it is not strange that the new cult made rapid headway, and that Christian Science "temples" are now to be found in so many cities.

It might seem out of place to dwell at present upon the harm which has been done by Mrs. Eddy's doctrines. This we will only say has been, in our opinion, very great, and has involved both needless physical suffering and mental and moral injury. But institutions grow and thrive by their good qualities, not their bad. Christianity itself was called an *exitiabilis superstitio* at first; and it would be almost as great a mistake to call Christian Science nothing but a superstition. Its ultimate fate, however, now that its founder is gone, is problematic. A part of its membership will doubtless be re-absorbed into the Christian churches, which are themselves now doing something to win over those who believe in mental healing. Other Christian Scientists will fall away, for one reason or another, and the impetus of the cult, which there is some reason to believe has already been checked, will probably drop off with the years. Yet whatever may become of this singular association, its founding by a woman like Mrs. Eddy, and its long and seemingly inexplicable dominance by her, will remain a problem to try the wits of students of religious vagaries.

THE WAY OF WORDS.

Those who habitually cannot find words to express their feelings will be chagrined to learn from latest statistics that there are above 400,000 at their disposal, exclusive of foreign languages. While the returns of the census during the past months have been causing various excitements, it has escaped general notice that the little denizens of the dictionary have been multiplying, too. Mr. P. W. Long of Cambridge has collected figures that tell a startling tale. The first English dictionary in any real sense was not published until 1604. It contained 3,000 "hard usual English words . . . gathered for the benefit and help of ladies, gentle women, or any other unskilful persons." Then came, to mention only significant works, the Bailey dictionary, which was as popular in the eighteenth century as was Webster's in the nineteenth; and a little later that by Dr. Johnson, which in Todd's famous edition of 1818 had only 58,000 words. Webster, in 1828, printed 70,000; Worcester, in 1846, 85,000. Webster's International, issued this year, has more than 400,000, and what will be the total of the Oxford Dictionary when completed one can only giddily infer from the recent statement by Sir James Murray that he has 5,000,000 illustrative quotations stored in an iron room in his garden.

Like the great influx into the cities from the country, the new words that have rushed into the dictionary start an impulsive cheer, but in a thoughtful mind also the lagging doubt that they may have deserted a more desirable abode. Back three centuries Shakespeare carried about in his head five times as many words as the dictionary then contained; to-day the dictionary has a hundred words for every one that a good writer will use. Clearly, there's a moral here, even though not quite so obvious as it has been made to seem. The great gains in the number of words recorded within the last fifty years have, of course, come from a minute raking over of all accessible English documents and from special branches of human labor, particularly the sciences in which changing conditions have made necessary a host of new terms. In arranging, explaining, and labelling all these the lexicographers have achieved splendidly, and it behooves no one lightly to blame them. And yet for the nonce we could cry out with the late Professor Shaler, "Avaunt with your grubbing! There's too much knowledge in the world already." The dictionary men might well drill us in the words that we have before giving us any more.

For it is plain that, for some reason or other, the attitude of the educated public toward words, along with its attitude toward knowledge, has been changing with the years. Dr. Johnson, a learned man but not a trained scholar, attempted almost single-handed "to fix our language, and put a stop to those alterations which time and chance have been suffered to make in it." This proprietary right in the native tongue was shared in less degree by intelligent people generally; and even to argue an etymology was no proof of the pedant or specialist. Errors of detail sometimes went easily by, but with all their blundering men had a sure sense for words

which gave to the mere manipulation of them an agreeable excitement. To this the state of the language lent itself also. With structures still visible in more instances than to-day, words kept attention alert to their central thrusts while showing at the same time their seasoning. Especially true was this in the earlier day of Shakespeare, who took for granted even in the pit some glimpse into verbal destinies; otherwise he could never have ventured upon the amazing jugglery of Touchstone's humor.

Now, in reality, we do not urge this as a faint-hearted regret for an age that is no more, but merely as recognition of a serious problem which confronts us. The fact is that words, the most important medium of exchange, are passing into the hands of the favored few. It is the same problem as that presented to-day by wealth and by knowledge. With every chance, apparently, to reach them, the number of words is so great and their science has become so minute and complicated that only your genius dares to grapple with them in any large way. Presumably, the chief of a dictionary still sees wondrous vistas up and down the paths that words have trod; for most of us this is not the case, and it is not needful, of course, that it should be. But between the specialist in words and the insensitive babbler is a point of vantage which must in some way be won back by any one who has ideas worthy of fit expression. It is a question which our educators might well consider. Nor ought it to be too difficult to solve. If not swamped by the half-million words or thereabouts that exist, everybody can easily be interested in this subject, from the jingle-loving child up. The history of words and their combat with ideas can be made absorbing. It is not a return to the quixotic methods of Max Müller that is desirable. Lincoln acquired the instinct for words more simply by studying the Bible and a few other great books. Once let one get the sense of words in typical operation, as so often happens there, with their economy of effort in catching and crystallizing elusive meanings, and one will not willingly lose it. It is not for us here to suggest a more practicable means than Lincoln's; and yet we hope, too, that when the Oxford Dictionary is completed Sir James Murray, or some one with his enthusiasm, will, either by book or by lectures, place the results of that great work rather more vitally before the popular imagination than can its mere totality.

GREEK AT OXFORD.

Oxford, November 23.

That no conservatism is so strong as in a democracy is well illustrated by Oxford and Cambridge, the two oldest democracies in Europe, which to-day, as in the Middle Ages, are in control of the Masters of Arts, whose voice decides everything from the election of a Chancellor to the disposal of a five-pound note. In Oxford the resident M.A.'s and professors, with the heads of the colleges, form a body called Congregation, and these, with all M.A.'s, resident and non-resident, on the books of the colleges, form Convocation. The former has 526 members, the latter about 7,000. Every Tuesday in term at 2 P. M. these bodies meet to transact university business, prepared by a smaller body called the Hebdomadal Council. As a rule, the attendance is small—a handful of men—but when an important question is before the university several hundreds may be in Congregation, while the outside M.A.'s from all over the country may swarm to Oxford (even in special trains!) to *placet* or *non placet* a contentious measure.

In theory it is a magnificent thing, this democracy of learning, this Athenian demos, 7,000 strong, every one with his vote, but it is a cumbrous machinery with which to manage a university—though a grand sight in session! No finer academic function is to be seen than the Sheldonian Theatre, packed to the roof to hear Congregation or Convocation debate some burning question of university reform. Except the upper gallery reserved for undergraduates (only a handful of whom were lured from sport of another and more pleasing kind), Wren's splendid building was well filled yesterday with Grecians and Trojans, repeating sixteenth-century history, fighting again a battle over Greek. Then it was a struggle to restrain the introduction of the new learning, believed to be tinctured with heresy; now the battle is over the retention of this same old learning, *i. e.*, Greek, as a compulsory subject for the entrance examination. The Trojans carried their case in the Hebdomadal Council, and a statute was framed, the preamble of which reads:

> Whereas, it is expedient to amend the statute relating to the examination in stated subjects in Responsions (entranee examination) so as to provide (1) that Greek shall no longer be a compulsory subject, (2) that every candidate must, in order to pass Responsions, satisfy the Masters of the Schools in Latin and in Elementary Mathematics, and also either in (a) Greek or in (b) two other subjects, one of which must be a Modern Language, etc.

After the passing of a few decrees, the registrar read out the preamble and the battle began. It was, as I said, a fine sight—virtually the whole teaching body of the university, professors, tutors, nearly all the heads, many ancient Dons, not often seen in the house, and youthful M.A.'s. And it was not a "black brigade," not a gathering made up of the country clergy, who have been known to pack Convocation. These questions have to come first before Congregation, composed of the local M.A.'s and doctors, who reside within a mile of Carfax, the centre of the city. The vice-chancellor, newly elected, Dr. Heberden, the principal of Brasenose (great-grandson of the famous William Heberden, the English Celsus, whose "Commentaries" is still a famous book), presided with grace and dignity. The semi-circle below him was gay with the scarlet of the Convocation habits worn by the doctors of the various Faculties. In the matter of words the Englishman has a wonderful self-restraint, and the gift of taciturnity is nowhere better seen than in these Oxford discussions. *Opera non verba* is the motto, and in an hour or two questions are settled which would take Frenchmen or Americans days to discuss. They come to vote, not to talk, knowing that sensible people make up their minds on a question, and are not much influenced by eleventh-hour speeches. The battle is really fought in the pamphlets and statements circulated a week or ten days before the meeting.

Mr. Percy Matheson of New College, a leading Trojan, who had brought up the question eight years ago, introduced the preamble in a strong speech, in which he urged that in our modern conditions Greek should no longer be required as a necessary subject for a degree in Arts. He pointed out that it would not apply to the famous honor school of *Literæ Humaniores*, or the School of Theology, and it was stated that particular Schools could reserve their rights. A general education without Greek was better for some boys than a general education with Greek, for which the modern languages offered a proper substitute. The president of St. John's College, Dr. James, who has just come from Rugby School, opposed the measure as a weak concession to popular demands, and a sop to the scientists. If Greek were discarded to-day Latin would follow to-morrow. The greatest rulers of England—Canning, Peel, Gladstone, Salisbury, Milner, and Asquith—were products of the classical teaching of Oxford. Sir William Anson, the warden of All Souls, thought the preamble of the statute too uncompromising, as it made Greek optional for everybody. The Regius Professor of Greek, Gilbert Murray, while in favor of differentiation in the Faculties, could not support the statute as it favored universal exemption from Greek. After four other

members of the University had spoken a division was taken with the following results: *non placets*, 188; *placets* 152; majority 36.

This is the first "knock out" for the reformers, who are trying to rearrange the constitution of the university and its studies, in accordance with the suggestions made by the Chancellor, Lord Curzon. Two weeks ago the preamble of the statute reconstituting the Faculties was passed, and the reformers were pretty confident of success on this old question of compulsory Greek, which was decided adversely eight years ago. Had the statute been differently worded, making a differentiation in the Faculties, I believe it would have carried.

While in favor of relaxing the present regulations, I should like to see Greek retained in the older universities as a qualification for graduation in theology, medicine, and law. Under present conditions in England it is no hardship to ask a young man who is seeking a medical degree in Oxford or Cambridge to have a knowledge of Greek. Taught as it is to-day it may not be of much use, but, if for no other reasons, reverence for the memory of Hippocrates and honor of the labors of Galen demand that we should have some men in the profession with a knowledge of the language of our origins. Could the student be taught the dead languages "without the perplexities of rules talked into him" (Locke), could we but cease from "forcing the empty wits of children to compose themes, verses, and orations" (Milton), could we but adopt the rational method by which Montaigne learned Latin and Greek as he learned his native tongue, these languages might become working instruments, keys to great literatures and to the minds of great masters; and the student would read his Celsus and Hippocrates as freely as his Watson or Trousseau.

This winter will decide whether Oxford is able to reform herself in accordance with the elaborate plan submitted by the Hebdomadal Council. Many feel that only by a Parliamentary commission can the necessary changes be enforced. The conservative element in the democracy may be—as to-day—too strong. The problem is how to unite in due proportion the monarchical element of an American university with the principle that gives a share in the government to the graduates. It is like the two mother forms of states of which Plato speaks, the one monarchy, the other democracy. "Now if you are to have liberty and the combination of friendship with wisdom, you must have both these forms of government in a measure"; and this holds good for a university as well as for a city.

WILLIAM OSLER.

Correspondence.

AN UNUSUAL SILVER WEDDING.

TO THE EDITOR OF THE NATION:

SIR: Since Louis XIV founded the Comédie Française in 1680, and Napoleon remodelled it in his historic decree, dated from Moscow, this most famous theatre in Europe has seen many interesting events and curious fêtes within its classic walls, perhaps none more characteristic or more moving than the modest silver wedding ceremonies which took place the other day to celebrate the twenty-fifth year of M. Jules Claretie's connection with the Maison de Molière—a union fraught with much good for both the high contracting parties.

Few of the Americans who, within the last twenty-five years, have passed delightful evenings at the Théâtre Français realize how much of their pleasure they owe to M. Jules Claretie, the most brilliant administrator who has ever guided the fortunes of that playhouse. For a quarter of a century now he has held this most difficult post by the pure force of wisdom, patience, courtesy, and tact, a combination which has enabled him to furnish happy endings to many situations, so complicated they seemed without a solution. The most dramatic scenes are not always those we see played upon the stage; the greenroom and the director's office witness tragedies far more intense. But no one better than M. Claretie has understood that delicate art of calming the troubled spirits of actors and encouraging drooping and discouraged authors on the eve of a *première*.

My own personal acquaintance with M. Claretie began under singularly agreeable conditions. M. Coquelin had kindly included us in the little group of friends he had asked to the inauguration of his home for destitute comedians at the Château of Pont-aux-Dames. By an unexpected shuffle at the last moment, I found myself alone with M. Claretie in the automobile of my friend J. H. H. During the forty-mile run down and the return journey across the smiling French country in the June twilight, he who in the morning had been a stranger to me, became before the day was over almost a friend. Whether in his apartment on the Boulevard Haussmann, crowded by his personal souvenirs, or the historic greenroom of the Français, where the great works of art of two centuries smile at one from the panelled walls, M. Claretie has always remained the same gracious, cordial gentleman whose kindness has added so many charming hours to my Parisian visits.

His is an astonishing, many-sided personality, by turns historian, *chroniqueur*, novelist, administrator, and a writer of short stories almost without equal, even in France, where that delicate art has been carried to such perfection. His brain reminds one of those magic bottles (dear to the prestidigitators of our youth) which poured out sherry, lemonade, or champagne on demand.

Like all men in high places, he has had to fight bitter battles, suffer furious attacks, and, perhaps harder than either for a man of his temperament, has been forced to bear cruel ingratitude. In 1885 he received from his predecessor, M. Perrin, a theatre singularly abandoned by the public, and a troop of actors composed chiefly of nullities, brightened by one or two burnt-out stars, and from this discouraging beginning was able to build up an ensemble that has remained for almost a generation without its equal in Europe.

If among the numberless plays he has produced during his long career (a record in the annals of the stage) we can count but few masterpieces, the fault must be laid at the door of the modern playwrights, rather than at M. Claretie's, for, from the moment that he took possession of the directorate of the first French theatre, he opened its doors wide to the youth of that day. Lavedan, Brieux, Rostand, Rivoire, Paillerón, owe their start to his timely and enlightened aid.

The little fête referred to above was held last month at his playhouse. Invitations of this kind count among those one takes good care not to decline; the appointed hour found us mounting the monumental double staircase of the Rue de Richelieu, gayly decorated for this occasion by rare flowers and—pretty women.

After a few minutes of general chat, the guests, some hundred and fifty in all, moved to the stage, where, on a green covered table (together with the classic glass of water, prepared for M. Claretie) stood a Jeanne d'Arc of Frémiet's, a gift from the employees of the theatre, a bronze reproduction of Barye's Gladiator, sent by the *pensionnaires*, and a superb first edition of Corneille, bearing on its title page the signatures of the *Sociétaires*. A gold medal sent by the Association des Artistes Dramatiques must not be forgotten. As soon as his guests were seated, Silvain (Mounet-Sully was unavoidably absent) got on his sea legs and delivered a charming little congratulatory address, which had a decided maritime flavor, for he compared the Comédie Française to the ship which the city of Paris bears upon its shield, "storm-beaten but never wrecked," and showed us M. Claretie at the wheel. When he had finished, Mme. Bartet, that most gracious and beautiful of *doyennes*, recited an original sonnet, which is given below. When she had finished, M. Delaunay, son of the immortal *jeune premier* of our youth, spoke a few well-turned sentences. Then M. Claretie rose, and, for some twenty minutes, held us all under the spell of his incomparable and very personal charm; in concluding, he said:

You are right to love me, for I hold you all very close to my heart. If I have been able to accomplish anything during my twenty-five years in your service, it is because you have so valiantly aided, encouraged, and sustained me.

The moment was singularly intense, for, seated in the circle about him, were actors who, in the past, had conspired bitterly against him, and had circulated cruel calumnies touching his administration. One felt as he spoke that little by little he was winning their sympathy, and, as he sat down, there were those among his audience who had tears very near their eyes. Perhaps of all the successes won by M. Claretie during a quarter-century of struggle, this moment was the proudest of his life, and this conquest of these enemies his greatest victory.

A round of cordial handshaking concluded the simple ceremony; we drank a little champagne to M. Claretie's good health and

good luck, we nibbled a sandwich or two, and talked of the successes to come. As seven o'clock was striking, and the stage hands waited impatiently to set the scene for the evening performance, we slipped quietly out, leaving this veteran director to his thoughts and his laurels.

Son œuvre a la clarté d'une vive fontaine;
S'il a la plume aux doigts, il a la barre au poing,
Et lorsque la nuit tombe et lorsque le jour point,
Sa lunette en éveil suit la brume lointaine.

Voilà vingt ans et plus sur l'onde incertaine,
Debout au banc de quart, il guette et fait le point,
Et que, roseau d'acier qui plie et ne rompt point,
Il est quand vient l'orage un rude capitaine.

Et gardien souriant d'un trésor surhumain,
Louvoyant, esquivant des écueils du chemin,
Versant par les hublots sa verve journalière,

Il conduit sûrement sur le flot azuré,
Toutes voiles dehors, la Maison de Molière,
Nef qui flotte toujours et n'a jamais sombré!

INDUSTRIAL SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: In reference to the correspondence on industrial education (*Nation*, November 10), may I relate the following little story. I have just been passing some time in the Pennsylvania coal region. One day a man came up to me and we talked. I asked him how he got on in a county where so few people now can speak American—he was an American—in a county where even official signs are printed in three languages, not one of which I am able to read.

"Oh," said the man. "Why, I know any old lot er jaw rattle."

"What?" said I. "German, Italian, Yiddish, I suppose?"

"Naw, ain't got no use for them dagos. I talk Lithuanian, Slovac, Greek, Rumanian, Polish. Yer has ter talk 'em; American's no good. But say, boss, I want ter get outen, or up in, der dam breaker. Where kin I learn mine engineerin'?"

"Why, haven't you got technical education, trade schools, here?"

"No—ain't no school, only fur kids and 'ritbmertic round bere. Only der Correspondence College, where fer fifty dollars they learns yer everything and gets yer a job, too; only I ain't got no fifty dollars."

And on returning to my native city I learned tbat in the coal regions there are no State technical schools—a delightful comment on the real position of the first and most important industrial State in the Union. It helps me to understand why a baseball pitcber is said to have been elected Governor, and wby the biggest crowd I have seen in Philadelphia and in the University precincts was fighting to buy tickets for a football match.

We in Pennsylvania have no use for industrial education. Yet the Pennsylvania Scbool of Industrial Art is tbe best, I am told, in tbe country.

Philadelphia, November 21.

HOPES FOR SENATOR LODGE.

TO THE EDITOR OF THE NATION:

SIR: Among the contributions which it is to be boped will be made to tho rubbish heap of the recent elections, none will be regarded with more satisfaction by educated men than the sweeping up of Henry Cabot Lodge. That such a man could so long represent Massachusetts in the Senate was to make men say, with Lowell, "Massachusetts, God forgive her." When it is remembered that in 1894 this graduato of Harvard made a speech in the Senate advising that discriminating duties be levied on British goods in order to force England to change her standard of value, we get some idea of the moral and mental calibre of the man. Some politicians we can excuse with the apology that they know no better, but not so in the case of Lodge.

DAMAGES FOR LYNCHING.

TO THE EDITOR OF THE NATION:

SIR: In your issue of December 1 you refer to the action brought by the legal representative of the unfortunate person who was lynched at Newark, O., against the County of Licking for damages on account of such lynching, and state that the result of this case will be watched with interest, especially as to the constitutional feature.

In Ohio the constitutionality of such an action has already been upheld. In 1896 the State Legislature passed an act providing that the legal representative of any person suffering death by lynching at the hands of a mob, in any county of the State, should be entitled to recover of the county in which such lynching occurred the sum of $5,000 damages. Shortly thereafter the administrator of Charles W. Mitchell, who was lynched at Urbana, brought an action against the commissioners of Champaign County to recover $5,000 damages, and the Supreme Court of Ohio, in the case of the Commissioners of Cbampaign County vs. Church, reported in 62 Ohio State, page 318, upheld the constitutionality of such legislation.

At a subsequent session of the Legislature, the law was so amended that hereafter the legal representative may recover a sum not to exceed $5,000 damages. Under the present legislation, tbe jury will assess the amount of damages, but the constitutionality of the proceeding is settled.

A CHRISTIAN SCIENCE PROTEST.

TO THE EDITOR OF THE NATION:

SIR: An editorial in the *Nation* of October 27 contains the following gratuitous statement:

> For his [Dr. Adler's] teachings have spread through the country, not with the amazing speed and rapid accumulation of wealtb that marked the development of Mary Baker Eddy's private religious enterprise, but with that soberer, surer growth inevitable when the appeal is to reason, rather than to emotion or passion.

While writing something nice regarding ethical culture, do you not think it would have been wise to bave left it in shape to please the Christian Scientists, as well as others? Was it necessary in this connection to fling an insult in the face of Christian Scientists, who include a great many ot the most intelligent people of your city and of all cities? Besides, your insinuation gives a very wrong impression. The wealth of tbe Christian Science movement is due to tbe voluntary contributions of the beneficiaries of Christian Science. It is true that this religious movement was started by Mrs. Eddy, as every religious movement was started by some one individual. The Christian Science church to-day is world-wide, and all tbe benefits that it affords are open to the general public, notwithstanding the untiring energy of Mrs. Eddy in its behalf.

ALFRED FARLOW.

Boston, November 29.

TWO PARALLELS TO "LYCIDAS."

TO THE EDITOR OF THE NATION:

SIR: One who is familiar with the notable elegies of our language is inevitably impressed with the similarity of their framework and the conventionality of many details in them. The November Eclogue of Spenser's "Sbepherd's Calendar" is suggested in "Lycidas," and "Lycidas" has a number of details that are repeated in "Adonais." "In Memoriam" itself resembles here and there the more artificial elegies. But even one who knows tbis fact is struck by the extent of the conventionality in "Lycidas," as the evidence is presented by Mr. J. H. Hanford in his articie on "Tae Pastoral Elegy and Milton's 'Lycidas'" in the September number of *Modern Language Publications*. Mr. Hanford shows that most of the details of "Lycidas" and many individual passages follow traditions of the pastoral elegy. While his discussion of Milton's poem is fresh in the minds of those interested, I should like to call attention to a slight kinship between "Lycidas" and two non-pastoral English works.

The fanciful poetic machinery of flowers, beasts, nymphs, and goddesses mourning for a dead shepherd, which is frequent in classic elegies, does not, like Milton's use of Camus and St. Peter, symbolize the pursuits and virtues of the dead shepherd, nor does it give occasion for such seriousness and sublimity as Milton's. Typical of Milton's symbolism and seriousness is Greene's "A Maiden's Dream" (1591), an elegy on the death of Sir Christopher Hatton. Here, indeed, pure abstractions, rather than symbolic figures like Camus, form a line of mourners—a device which finds a notable use in "Adonais"—but Greene's poem shows a purposefulness and a weigbtiness in its symbolism which prepare for "Lycidas," and which doubtless betray the influence of Renaissance standards and conventions. The imparting of an abstract moral significance to their work, whether tbrough tbe use of type figures or of suggested allegory, was dear to the hearts of Renaissance classicists like Spenser, Jonson, and Milton, however diverse their methods. There are also some parallels between "A Maiden's Dream" and "Lycidas" in phraseology, in the treatment of the virtues of the dead, in the handling of tbe mourners, in the consolation, and in other details; but these are probably due to a common use of accepted elegiac conventions.

Again, some details of what is assuredly the most notable passage in "Lycidas," the speech of St. Peter with its ominous satire on the abuses of the clergy, may be traced to Skelton's "Colin Clout." Mr. Hanford points out the fact that satire on the ec-

clesiastics was common in the later pastoral, and that parallels to the speech of St. Peter may be found in the May Eclogue of "The Shepherd's Calendar" (lines 38 ff.). Spenser, I think, was influenced by Skelton, and Milton by both, but more clearly by Skelton in this passage. Many lines of "Colin Clout" are suggestive of the passage in Milton, especially at the first reading, before an attempt is made to compare the two in detail; and certain lines of Skelton's arraignment of prelates will bear a closer comparison with the passage from "Lycidas." For example, Skelton says:

Laye men say indede
How they take no hede
Theyr sely shepe to fede,
But plucke away and pull
The fleces of theyr wull,
Vnethes they leue a locke
Of wull amonges theyr flocke (ll. 75-81).

. . . . .

And assay to crepe
Within the noble walles
Of the kynges halles,
To fat theyr bodyes full,
Theyr soules lene and dull,
And haue full lytell care
How euyll theyr shepe fare (ll. 125-131).

In "Lycidas" St. Peter rebukes

such as, for their bellies' sake,
Creep, and intrude, and climb into the fold!
Of other care they little reck'ning make
Than how to scramble at the shearers' feast,
And shove away the worthy bidden guest;

. . . . . .

What recks it them? What need they? They are sped;
And when they list, their lean and flashy songs
Grate on their scrannel pipes of wretched straw;
The hungry sheep look up, and are not fed,
But, swoln with wind and the rank mist they draw,
Rot inwardly, and foul contagion spread.

C. R. BASKERVILL.

University of Texas, November 28.

"MY VOICE AND I."

TO THE EDITOR OF THE NATION:

SIR: Permit me to correct a wrong impression conveyed by your reviewer in his remark (*Nation*, November 24):

In his "Psychology of Singing," David C. Taylor developed the same idea; and it is surprising that Mrs. Rogers does not refer to his book.

In justice to Mr. Taylor and to myself it seems proper for me to explain that "My Voice and I" was already completed in 1900, at which time the manuscript was, according to my contract, submitted to Harper & Bros., who published my "Philosophy of Singing" in 1893. It was not accepted by them, on the plea that the sale of such a work would be limited. Further reflection led me to believe that the time was not ripe for a psychological treatment of singing, so I laid away my manuscript in its portfolio, where it remained for nearly ten years.

It follows, therefore, that ideas developed by me in 1900 could not have been influenced by David C. Taylor's admirable work, "The Psychology of Singing," published in 1908, nor could I refer to a book which did not then exist. I may therefore say in all humility, my book is "a poor thing, but mine own!" It only remains for me to express my gratification that a man of such high intelligence as Mr. Taylor has reached on so many important issues the same conclusions as myself. CLARA KATHLEEN ROGERS.

Boston, December 2.

A WOOL-GROWER'S FEARS.

TO THE EDITOR OF THE NATION:

SIR: Senator Gore remarks that the wool schedule is the first point of assault. The Democratic party will no doubt illustrate the effect on the horse of putting a beggar on horseback. We shall have a collection of bills containing all sorts of foolish ideas of the ill-informed, and the voters will discover that they have sown dragons' teeth.

Being the owner of a flock of sheep, I think I know something of the subject—though, of course, this makes it difficult, if not impossible, to get the public ear. The wool was sold for 28 cents a pound this year. It takes a large, well-bred, and well-fed sheep to shear seven pounds. If a large amount of grease is in it, buyers will deduct from the price. The average is not above six pounds. Feed is high and labor also, and the price of wool is now so low that in Washington County, Pa., formerly one of the large wool-growing counties of the United States, the number of sheep has decreased fully one-half in the last fifteen years.

If the tariff on wool is so unreasonable I am unable to understand why wool is not higher, and I am also unable to discover what, in the minds of the low-tariff crowd, would be a reasonable price to the consumer. The mere mention of the wool schedule as the first point of attack shows that the fool-killer is not up and doing.

The Republican party may be characterized as a combination of shrewdness and rascality—that is, it has capacity. The Democratic party is well-meaning, perhaps, but without capacity. Such they will prove again to be, and the people will have to decide whether they prefer an engineer who is a rascal but understands the engine, or a good-intentioned one who doesn't understand and whose experiments may result in an explosion and wreck. W.

Pittsburgh, Pa., November 25.

Literature.

HOLIDAY BOOKS.

Frank C. Papé's colored illustrations for "The Pilgrim's Progress" vary a good deal in excellence. The picture, for instance, of Christian Warning Sloth, Simple, and Presumption, is full of character and is pleasant to the eye; whereas The Destruction of Doubting Castle is in a tint to make the eye wince. On the whole, the illustrations will aid in a proper manner the imagination of the young reader. Both pilgrimages are given in the text, which is printed, as it should be, in modern spelling and punctuation. (Dutton, $2.40.)

"Mr. Pickwick," a considerably abridged text of "The Pickwick Papers," has been furnished by Frank Reynolds with twenty-five full-page colored illustrations for holiday dress. The pictures are not in the vein of caricature with which Phiz has associated the doings of the immortal travellers in our memory, although they do not lack humor when humor is necessary. Mr. Pickwick himself presents the round face and spectacles as we know him in the original publication. Sam Weller is changed, and looks to us like anybody but the great "Samivel"; he is not in character. The elder Weller, on the other hand, is excellent. On the whole, the sentimental and picturesque aspects of the story are rather emphasized than the farcical. (Doran, $5 net.)

Whether for copyright reasons or from critical choice, the quarto volume of "Poems by Christina Rossetti" does not contain all the verse published by her brother in the last complete edition. This is altogether an advantage, for Christina wrote too much and too fluently, and a considerable part of her posthumous verse ought never to have been printed. Mrs. Meynell, than whom no one is better qualified for this particular task, contributes an introduction to the present edition. There is, for instance, real insight in these few sentences:

Her poetry is, in a word, true poetry as gold leaf is gold; and sometimes her poems are, as it were, a mere film of poetry. This is true of the least admirable. In the best the unmistakable genius is not only present but important, even great. The poet of "The Convent Threshold" and "Up-Hill," for example, possesses her art in bulk and in condensation. These are brief poems, not little ones. . . . In "The Convent Threshold" there is, I think, more passion than in any other poem written by a woman. In this respect Christina Rossetti surpasses Elizabeth Barrett Browning, abundant as was the earlier poet, and few and reluctant as are here the words of the later.

Of the illustrations, many of them in color, furnished by Florence Harrison, some of them—those, for instance, for the "Goblin Market"—fit the theme very well. But such a picture as that for "Eve" would have shocked the poet and mars the pleasure of the reader. There is too much of Aubrey Beardsley here and there to harmonize with the spirit of Christina Rossetti. (Dana Estes, $6 net.)

To those looking for a religious gift-book, we may recommend Hugh Black's "Comfort," which is printed in ornamental borders, tastefully and without offence to the text. The style of the author's writing is too well known to need special comment. The theme of the present volume is conveyed in the dedication: "To W. B. Macleod, who has learned to comfort others by the comfort wherewith he himself has been comforted of God." (Revell, $1.50 net.)

"Colonial Holidays: Being a collection of contemporary accounts of holiday celebrations in Colonial times," compiled, illustrated, and illuminated by Walter Tittle, is a book sufficiently characterized by its name. Bits of old diaries, letters, and proclamations (notably Washington's) go to make up the record. But why is Pepys included among the Colonials? (Doubleday, Page, $2.50 net.)

The most important thing to be said of the "Sonnets From the Portuguese," edited by Arthur Guiterman, is that the paper and type are beautiful. Mr. Guiterman has also conceived the happy plan of interspersing among the sonnets four of Mrs. Browning's lyrics, inspired by similar themes, and of adding Robert Browning's "One Word More" and "Prospice" in an appendix. A few notes and a brief, appropriate preface complete the volume. (Paul Elder, $1.75.)

A dozen inset illustrations in color have been prepared for Sterne's "Sentimental Journey," by Everard Hopkins. In some of the pictures the figures have the stiff

pose of photographs, but many lovers of Sterne will be glad to see this philandering hero brought thus visibly before the eye. The press work is excellent. (Putnam, $3 net.)

"One Hundred Masterpieces of Painting," with an introduction by R. C. Witt, suggests nothing more serious at first sight than the drawing-room table, but anthology making is a task worthy of the best talent, and the selecter here has taken his function seriously. The selection begins with Simone Memmi's Annunciation, and ends with the late Charles Furse's Diana of the Uplands. There is courage in our author's choices. Surprises are the still-life painter, Kalf, Baldovinetti (the Madonna of the Louvre), Matthew Maris (in a landscape); and generally these audacities are inspired. We hardly reconcile ourselves to the absence of Giotto. Millais, with Sir Isumbras, seems an uncertain tenant in a house of fame that is too small for Delacroix and Goya. Mantegna possibly puts his worst foot forward in the altar-piece of S. Zeno at Verona. Joseph Israels looks a little like an intruder in this distinguished company. If early Titian abounds, why is early Bellini lacking? Enough of such cavils. To study the prints of this collection is to come to terms with underlying principles of value. (Lane, $4 net.)

"Hamlet," dressed point-devise for the holidays, is added to the sumptuous editions of four other Shakespearean plays. The story is told, superfluously enough, by Sir Arthur Quiller-Couch, as a preface, but the feature of the edition is W. G. Simmonds's thirty excellently well done pictures in color, met at frequent intervals from frontispiece to final scene, where four scarlet-robed captains bear the Prince, like a soldier, to the stage. (Doran, $4.50.)

Goldsmith's plays, "She Stoops to Conquer" and "The Good-Natured Man," are issued in well-made volumes, with large type, with illustrations in color from original drawings by Frederick Simpson Coburn. One can only regret that the author could not have seen his comedies in such handsome form. (Putnam, $2.50 net each.)

"Stories of the Menehunes" is a selection of four legends from Thomas G. Thrum's "Hawaiian Folk Tales." The illustrations are of Hawaiian scenes. (McClurg, 50 cents net.)

James Whitcomb Riley's "A Hoosier Romance" is adorned with eight full-page pictures in three printings, and thirty illustrations in black and white, from drawings by John Wolcott Adams. In addition the background of each page is a delicate pearl-gray, outlining a Hoosier farm-scene. The whole setting is distinctly suited to the poem. (Century, $1.50 net.)

"The Girl I Left Behind Me" is a story by Weymer Jay Mills, with pictures and decorations by John Rae. Of the former there are eleven, full-page, in color, while hearts and Cupids figure in most of the latter. The time of the story gives the illustrations the special interest of representations of the New York of Washington Irving's day. (Dodd, $2.)

No better choice for a holiday edition could have been made than "The Poems of Oliver Goldsmith," which, for simple sweetness and the charm of humble reflection, have always appealed, like the Christmas spirit, straight to the heart. The attractiveness of the poems is increased in the present issue by photogravures from original designs by Frederick Simpson Coburn, of which it would be futile to single out any for particular notice; there is a homely grace in them all, down even to "the noisy geese that gabbled o'er the pool." The long introduction by Horatio Sheafe Krans furnishes a biography showing sympathy and understanding. (Putnam, $1.50.)

"Passages from the Philosophy of Herbert Spencer" is another of the carefully made Mosher books. The selections, which have been chosen by Clara Sherwood Stevens, are taken from the "First Principles," the "Principles of Biology," of "Psychology," of "Sociology," and of "Ethics," and from miscellaneous works, in this order. A most commendable feature of the book is the addition to each selection of the number of volume and page where it may be found in the complete edition of Spencer's works. (Thomas B. Mosher, $1.50 net.)

"'Our Village,' by Mary Russell Mitford, with an introduction by Anne Thackeray Ritchie; one hundred illustrations by Hugh Thomson, and sixteen colored plates from drawings by Alfred Rawlings," is every whit as lovely as the elaborate title-page would signify. The drawings catch with success the faint, droll humor of the author, and set forth most of the moments and types of the village which readers will remember. Although highly colored, the plates are not overdone; there are the fields and hedgerows and red roofs, the low background of blue hills; the witchery of hyacinths and foxgloves and iris, with which Miss Mitford tempted the erring doctor back to Swallowfield; and other charms of sky and woodland. Those who have half-forgot the author's buoyant struggle with her purse, and her fame, will find the introduction most informing (Macmillan, $3.50 net.)

The peculiar feature of the "Oxford and Cambridge," delineated by Hanslip Fletcher, is, as the name implies, the inclusion of both universities within the same covers, thus affording interesting points of comparison. Mr. Fletcher's pictures in black and white vary singularly in manner and quality. In some, *e. g.*, the Porch of St. Mary the Virgin, Oxford, which forms the frontispiece, he has reproduced the mellow effect of age that is characteristic of the Oxford architecture; others, *e. g.*, the Tower of Magdalen College from the Bridge, are hard and lacking in atmosphere. As a whole, the result is successful. The text consists of an Introduction by J. Willis Clark, registrary of the University of Cambridge, and of chapters on the different colleges by various hands. Mr. Clark deals with the older period of the universities, and writes in no perfunctory vein. Thus (page 23) he corrects a common misunderstanding which supposes that the students originally lived like monks. The chapters are historical and descriptive, and together give a fairly complete survey of the universities. (Wessels & Bissell, $6 net.)

The "Green Willow, and other Japanese Tales," for the most part translated by the collector, Grace James, are not for children, but for readers who have learned to savor the peculiar pathos, not of tears, but as it were of a sorrow long ago, that runs through so many of the legends and stories of Japan. The translator has not the unique power of Lafcadio Hearn, who could retain all the delicacy of touch of the original, yet freight it with deeper, haunting meanings; but her English is good, and the little tales have an exquisite simplicity. Warwick Goble has furnished forty full-page illustrations in color that must rank with the best of the season. They are half Oriental and half Western in effect, without incongruity. The colors are clear, and in some cases have the tone of painting on ivory. We have not seen a more charming book this year. (Macmillan, $5 net.)

"The Way to Peace," a new story by Margaret Deland, is put forth in an edition specially illustrated by Alice Barber Stephens for the holiday season. Besides several full-page pictures, there are faint marginal designs and a cover gay within the limits of a certain intentional bleakness. The story itself is little more than an unembodied theme which might have been applied to any of a dozen settings. A restless young woman, finding that her married life does not give ample outlet to her feelings, leaves it for a while with her husband's grudging permission, to discover later that the experiment has lost her his love, which she now dearly craves. In the present instance, Athalia Hall joins herself for two years to the life of single devotion of a Shaker settlement, while her husband, Lewis, a country squire, camps in a nearby cottage. When Athalia, with a regenerate view of marriage, feverishly moves out of the settlement, Lewis, to her surprise and undoing, calmly moves in—a convert. (Harper, $1.50.)

The "Collected Verse" of Rudyard Kipling has appeared in an edition handsomely illustrated by W. Heath Robinson. Kipling's imagination is of the sort which visualizes even when concerned with the strange, the lurid, the other-worldly, so that an artist could not go far wrong; and yet Mr. Robinson shows an accurate attention to details which implies a careful and sympathetic study of the text. One of the best of the pictures catches perfectly the piquant despair of these lines in "The Last Chantey":

> Loud sang the souls of the jolly, jolly mariners,
> Plucking at their harps, and they plucked unhandily:
> "Our thumbs are rough and tarred,
> And the tune is something hard—
> May we lift a deep-sea chantey such as seamen use at sea?"

"The Three Decker" and "Tomlinson" are also subjects which no ambitious illustrator would pass by; they are both well done. (Doubleday, Page, $3.50 net.)

Bret Harte's romance of "Salomy Jane" now appears for the first time in a separate edition, with illustrations in color and otherwise by Harrison Fisher and Arthur I. Keller (Salomy's liberating kiss being in both categories), with marginal decorations, and with a binding in blue and gold. To say that the faultless daintiness of the volume scarcely accords with the rough-diamond quality of the story would be meticulous. (Houghton Mifflin Co., $1.)

Joseph Bédier's interesting experiment—in which he attempted to revive the Tristram legend for the man of to-day in its most ancient form by translating the extant fragment of Béroul, or the middle of Béroul's narrative, and by reconstructing

the rest from the numerous outlying versions—has been turned into English by Florence Simmonds, and issued in a handsome edition. There are a score of illustrations by Maurice Lalau wherein are designated with varying success the courtly shimmer and opulence, the airily-by-the-wayness, the mystery which form the elements in any modern retrospect to those mediæval days. (Lippincott, $3.75 net.)

One of the most elaborate of the gift-book editions is that containing the "Rime of the Ancient Mariner" on pages provided with marginal designs and artistically wrought commentaries; the type, specially constructed, trails in grapevine figures. The book is illustrated in color by Willy Pogány, who is best known for his illustrations of "The Rubáiyát," and although in visualizing the supernatural, as in this epic of a sea having laws unto itself, there could never be agreement on the part of many, Coleridge's descriptive hints have been followed faithfully. All of the artist's work has a very decided interest. (Crowell, $5 net.)

A. M. Broadley's sumptuously illustrated two volumes on "Napoleon in Caricature" may be mentioned here among the holiday publications, although it will at a later date be reviewed at length. J. Holland Rose contributes an introductory essay on "Pictorial Satire as a Factor in Napoleonic History." (Lane, $12.50 net.)

RAILWAY PROBLEMS.

American Railway Problems in the Light of European Experience: or, Government Regulation vs. Government Operation of Railways. By Carl S. Vrooman. New York: Henry Frowde. $2 net.

Government Ownership of Railways, Considered as the Next Great Step in American Progress. By Anthony Van Wagenen. New York: G. P. Putnam's Sons. $1.25 net.

Railroad Administration. By Ray Morris. New York: D. Appleton & Co. $2 net.

Whatever one may think of the views expressed by Mr. Vrooman, one is likely, having taken up his book, to read it to the end. For it is a dispassionate and painstaking account of the experience of various countries with the problems of government regulation or ownership, and withal so entertaining that the views expressed appear not merely plausible, but well-nigh convincing. To be sure, it exploits a thesis. The author is a firm believer in the ultimate nationalization of the railways of the United States. Rather than have this policy come upon us suddenly and find us unprepared to grapple with it, as was the case with Italy, we should anticipate the future by devising as efficient a system of regulation as possible. If such a system of control should prove entirely successful, we should have accomplished what no other nation has yet done; if it should fail, the next step would be government ownership. And fail it must, in the author's opinion, for after a certain point is reached any increase in regulation becomes inelastic, cumbersome, and burdensome to the public and the carriers. Regulation can be nothing but a phase in the education of the nation. "The railways of the country to-day are being operated under a suspended sentence of nationalization."

With this underlying conviction, Mr. Vrooman aims to demonstrate that government ownership, if brought about in a conservative manner, is not so dangerous as most of us believe. His method of treatment is to take up one problem after another, and show how it has been met in various countries under the differing conditions of government and corporate management. Although he properly rejects as unscientific any attempt to decide the question by a detailed comparison of European and American railways, yet the method he adopts, which compares government-owned with private railways in the same country, is likewise inconclusive. For in any country in which the policy of government ownership predominates, private railways are at such a disadvantage, and have so little incentive to efficiency, that they can hardly be accepted as fair examples of the results of private initiative. One comparison he does make which appears to have real validity—that between the French Northern, a private road, and the Belgium system; but here he is under some difficulty to sustain his thesis that the government-owned road is, all things considered, the more beneficial to the public.

Mr. Vrooman very properly selects our accident record as one of the weak spots in American railway management, yet a study of English statistics makes it evident that reform may be brought about without nationalization. His discussion of the spoils system in relation to government ownership is hardly convincing to an American, for he confines himself to a description of the civil service in Belgium, Switzerland, and Prussia. Such illustrations can hardly reconcile one to the thought of injecting a million railway employees into the civil service of the United States. Nor does he dispose satisfactorily of the most potent argument against the European system—its lack of elasticity in meeting the requirements of the shipping community.

In spite of occasional lapses into unwarranted denunciation, and in spite of the use at times of statistical data in such manner as to create a false impression, Mr. Vrooman's presentation of the case is a fair one from his point of view. But his final conclusion puts the whole question beyond the reach of argument, for he insists that, cost what it may in time or money, nationalization is a luxury that no nation can afford to be without—which is, of course, a matter of opinion.

Mr. Van Wagenen's book is of quite a different stamp. He would have government ownership at once. Four-fifths of the nations of the world have adopted it, and cowardice alone prevents us from following in their footsteps. His book contains much more generalization than information, and much more denunciation than argument. He is reckless in the use of statistics, and frequently inconsistent in statement. One or two examples will suffice. To demonstrate the growth in railway casualities, he uses the year 1907, in which 610 passengers were killed. Yet that year was an unusual one, in which the number killed was fourteen per cent. higher than the next highest year for which statistics are available, and 75 per cent. above the average for the ten years which he is considering. His statement that in round numbers, the railways kill annually 12,000 persons is quite erroneous, for, although the number killed, including trespassers and all, was 11,839 in the unusual year 1907, this figure has never been equalled before or since, and the average number killed between 1888 and 1909 was a little less than 8,000. The case is bad enough without exaggeration. When arguing for a reduction in rates, the author calls attention to the fact that rebates have to a great extent been abolished, but in another connection he contends that railways are undertaking to collect from consumers generally millions which they pay in rebates. Dividends are paid on "billions of watered stock" by railways whose crude methods are the "sorry misfit of the times," and this utterly demoralized system of railways is contrasted with the superb management by the Government of our postal system and rural free delivery! The reason that we entered upon government regulation, rather than ownership a quarter of a century ago was because the "men who look after the railway interests in the Congress of the United States" procured the passage of the Interstate Commerce act, and turned public attention away from government ownership.

Among those who like this form of attack, the book may receive a welcome, but among thinking men, it will find few sympathetic readers and no converts. Mr. Van Wagenen declares in his preface that he approached the publication of his book with much hesitation, and that he offered his contribution only because no one else had presented this side of the question. After reading it, one wonders whether his excuse was altogether sufficient. Both Mr. Vrooman and Mr. Van Wagenen err in implying that government ownership is a question of principle. The history of the movement demonstrates indisputably that it is merely a question of expediency, and, for the present at least, the people of the United States do not

regard railway nationalization as expedient.

Mr. Morris's book on "Railroad Administration" has little to do with problems of regulation, but is rather a consideration of the railway as a working machine. Yet mention of it in this connection is not out of place, for in many ways its clear analysis of railway methods is an answer to the charges so carelessly made by Mr. Van Wagenen. When one follows in detail the extraordinary organization which has been built up to do the work of transportation, the efforts now making to improve the physical conditions of the properties, and the various methods of cost-keeping and of statistical comparison that have been devised to promote efficiency of operation, and then compares the conduct of this industry with that of a government bureau or investigating commission, with its wasteful use of public funds—a condition familiar to all who have come into contact with governmental methods in this country—one is amazed to find a writer like Van Wagenen advocating government ownership because of our "crude, disorganized, unscientific system of railways." A careful reading of Mr. Morris's chapter on Control through Statistics, one of the best in the book, should effectually dispose of that indictment.

The book is evidently intended as a manual for those who are engaged in railway service or who desire to enter it. It is a weakness of present day railway organization that the rank and file know only the work of their own department, and are almost entirely ignorant of the industry as a whole. This volume should give them the point of view from which they will be able to correlate their duties with those of their fellows in the organization of which they are a part. Largely of a descriptive character, the treatise opens with a chapter on the physical and financial beginnings of a railway, and continues with discussions of railway organization on large and small roads, on British railways, and on the government-owned roads of Germany, Italy, and India. In another chapter, that on financial organization, attention is given to the various kinds of securities issued. The author does not believe in the control of capitalization, and maintains that capitalization and rates have no relation to one another. Commissions, he thinks, are not likely to accomplish any permanent useful effects, and the result of endowing them with rate-making power will be to keep rates at a higher level than they would be if unregulated. The only beneficial effect of such bodies is in their function as safety-valves for popular indignation. While we may not agree with this somewhat extreme position, we can endorse the author's contention that the recent popular uprising against the railways was largely due to railway blundering, and that a more consistent effort to conciliate, rather than antagonize, would do much to remove the source of popular discontent. The volume is supplied with many charts, illustrating various forms of railway organization.

CURRENT FICTION.

John Winterbourne's Family. By Alice Brown. Boston: Houghton Mifflin Co.

Miss Brown's world is inexhaustibly peopled with original characters which defy classification under any ordinary rules. From simple to subtle they range, but perhaps her forte is the exposition of the subtle in the seeming simple. No person is too insignificant outwardly to take a part in her drama, and the part is always a complex one because every human being is a complicated being. The sweeping of a hearth, the polishing of a table, the caprice of a child, the mood of a woman, are affairs of portent. Events are seldom exciting, yet one reads with almost gasping interest, breathing an air thick with the weight of small but immensely significant affairs. Her characters often are not in the least like any whom one has met, but they move with an authority no more to be disputed than that of the creatures of mythology. There is, indeed, not a little of the mythological in Miss Brown's New Englander.

John Winterbourne seeking to evade the "Tyranny of Things," and to sit by his fireside reading Theocritus, is at once a simple, single-hearted man, and a great, striving, resisting, natural force. Mrs. Ramsay, leaving her children daily while she lectures on causes, is no mere Mrs. Jellyby, but a faulty humanitarian on a large scale. Bess, daughter of earth, sweeping, cooking, ministering, is a domesticated Valkyr. Little happens throughout the story that is not homely, but the way in which it happens gives it profound and universal meaning. No need to sketch the plot. It deals with nothing more thrilling outwardly than domestic incompatibilities and the patenting of an ear-trumpet. But to the inner man it makes fervent appeal with its insight into human relations and its silent plea for right living and for strict attention to one's "job," however little time it leaves one for reading Theocritus. It is a noteworthy book, homelier but higher than "Rose MacLeod."

Pan's Mountain. By Amélie Rives. New York: Harper & Bros.

This tale owes its unusual and very palpable atmosphere to the strangely endowed heroine at its centre. Dione, although of modern birth, is a pagan. The mingling of Servian and Italian blood in her veins inclines her to regard, and, more, to feel, the old deities of whom her father told her, as real, and she pours midnight libations to the god, except for her unworshipped, whose haunt she fancies to be on the lake-guarded height, which she has rechristened Pan's Mountain. This intellectual unconventionality reappears in her unqualified frankness. But, however strange, she is never unreal. Exalted happiness and unfathomable bitterness find expression in words and actions that are consonant with her direct, elemental nature. As a creation of fiction, especially of recent fiction, Dione is refreshingly individual. Her few fellow-actors on the narrow stage are not dimly drawn, but none of them can vie with her in compelling the interest of their auditors. Adverse criticism must content itself with pointing out faults of style, and here it cannot be gainsaid that the author is decidedly overfond of the simile, which produces a slight effect of monotony. An odd error is the use of a form of "lay" for one of "lie," which occurs twice.

The Caravaners. By the author of "Elizabeth and Her German Garden." New York: Doubleday, Page & Co.

This author's specialties, as her readers well know, are Man, Prussia, and above all, Prussian Man. She has approached or rather attacked them from many points, and now she surpasses herself in ingenuity by choosing as the sally-port for her onslaught the mouth of Prussian Man himself. Baron von Ottringel, major of a Prussian artillery regiment, conceives the idea of celebrating by a journey the twenty-fifth anniversary of his marriage. True, his silver-wedding wife has been dead for some years, but the institution has persisted with a negligible twelve months' forced interruption. Surely the Major was right in his reply to the later wife who questioned its being "their" silver-wedding. He tells the tale himself:

> "Dear wife," I retorted, surprised, "you know very well that it is mine, and what is mine is also by law yours, and that, therefore, without the least admissible logical doubt, it *is* yours."

The trip leads the Baron and his wife with a few friends to "caravaning" in England. For a moment, one expects a cheerful gypsying story with adventures and scenery and the international picnic touch. Instead of this, it is a protracted, unconscious confession of unbroken caddishness from one properly characterized by a fellow camper as "a very grievous bounder." He is insufferable in every direction; conspicuously so in all that concerns the differences between his own country and England; most of all in the relation of any Prussian husband to any wife. What with bad weather, bad roads, insufficient food, and an occasionally in-

subordinate wife, the warlike Major had a sorry trip. And truth to tell, although the self-revelation is at points amusing, particularly in those moments when the Baron is in the act of violently not taking a joke, four hundred pages of ill-natured caricature must needs pall.

The Court of Lucifer. By Nathan Gallizier. Boston: L. C. Page & Co.

Mr. Gallizler's picture of the Rome of the Borgias is huge, confused, and hideous. All the notorious crimes of Cesare Borgia, all the licentious excesses and voluptuous festivities of the papal court, all the turbulent political and military activities of sixteenth-century Italy, though resolutely pressed down and shaken together, still amount to rather more than a fair bookful. The author finds his pretext for this exhibition of horrors in vindicating the character of the maligned Lucrezia, enlarging and wresting to this purpose an authentically recorded incident. In negotiating the fifth marriage of his fair daughter, Pope Alexander VI met with considerable resistance on the part of the prospective bridegroom, Alfonso of Este, whose aversion had been aroused by Lucrezia's evil reputation and the fate of her former husbands. Only when she reached Castle Bentivoglio, the last stage of her nuptial progress from Rome to Ferrara, did he visit her—in disguise—then seeing her for the first time. By this tardy interview his reluctance seems to have been immediately and permanently dispelled, and his subsequently justified faith in the lady's innocence established.

In the present version Alfonso is represented as coming to Rome in the guise of a Knight Hospitaller (there is also a tournament reminiscent of Ivanhoe) to investigate for himself the foundation of Lucrezia's ill-fame. Through an incredible profusion of nocturnal adventure in grotto, grove, subterranean passage, dungeon, banquet hall, catacombs, deserted convent, and lady's bower, he arrives at an impassioned conviction of Lucrezia's spotless innocence, and a complete insight into the monstrous machinations of her fell brother, Cesare.

The Scourge. By Warrington Dawson. New York: Small, Maynard & Co.

A powerfully written story of the South during the Reconstruction period. The hero, the adopted son of the only rich man in the community, is a street waif who saves his employer's life by quick wit, and is literally picked from the slums. The elder man, also risen from the ranks, tries to raise the boy, to fill his place, but the hero refuses all refining influences, until he falls in love with a Southern girl of the oldest family in the town, and imbued with all the prejudices that would imply. Even then he does not try to change except by giving up the fortune his father has left, conditional on his not marrying. With all his lack of breeding he manages to leave a powerful impression, while the slim, well-bred heroine fades into misty lines. The book is well written, with the exception of occasional dialogues between the heroine and the mother, but these are not frequent.

The Prodigal Pro Tem. By Frederick Orin Bartlett. Boston: Small, Maynard & Co.

Mr. Bartlett has written a diverting and somewhat original tale, with a fair measure of bright dialogue. The scene is laid in the Catskills and concerns a woman and two men, one of whom is an artist, the other a musician. To save a blind man's life and reason the artist plays the rôle of the prodigal son who has refused to return home, and the complications that ensue are numerous and humorously related. The author's characters act like human beings, and, in spite of her sharp tongue, one cannot help liking Aunt Philomela and understanding how Eleanor, with her charming manner, proved to be an inspiration both to the artist who longed to paint her, and to the musician who felt that only with her could he write his best songs and symphonies. It is a book one finishes with regret, for it contains nothing disagreeable and much to amuse.

A GREAT PUBLISHER.

Life and Letters of Alexander Macmillan. By Charles L. Graves. New York: The Macmillan Co. $3.50 net.

Mr. Graves had a plain tale to tell and he has told it somewhat drily. Nevertheless his book is profoundly interesting. The success achieved by the Macmillans was far from the ordinary rise of the canny Scot. It could not have been achieved without commercial ability, but still less could it have been achieved by commercial ability alone. Its history involves a good deal of the history of English ideas in the nineteenth century, and Daniel and Alexander Macmillan have a clear title to a place among the honorable company of great publishers. They had, of course, being Scots, a remarkable mother. "My mother," wrote Alexander to Guizot, "was a woman of very devout nature and habits, whose daily life was, as I believe, lived as in the conscious presence of God. She had a very noble, sweet nature, and a certain serenity and sweetness of mind that I have hardly ever met with in any other human being." Amid the drudgery of bringing up a numerous family with scanty means, she found time to read. There is a tradition that a visitor calling on her in her old age found her in bed with her black mutch on her head, reading Cary's Dante. The excellent father, as is also common in remarkable Scotch families, occupied the humble subsidiary position of St. Joseph. "From her," wrote Daniel, "we take any mental superiority we may have."

Alexander's meagre schooling ceased when he was fifteen. From that time, he earned his own living, such as it was, and, in 1843, when he was twenty-five years old, he formed a partnership with his brother Daniel, and opened the retail book-shop in Cambridge at No. 1 Trinity Street, which presently became famous as a kind of literary centre for the university. Dr. Sebastian Evans, who was an undergraduate of Emmanuel College in the early fifties, gives a picture of Alexander Macmillan's relations with the students:

> During my undergraduateship at Emmanuel not a single one of my supposed instructors, from first to last, ever betrayed the faintest indication of any interest in me personally. . . . The men of light and leading in the college were few, and, so far as the ordinary undergraduates were concerned, they neither lighted nor led. . . . Most of the students socially belonging to the middle class went up to college as a necessary preliminary to entering holy orders. It was among these candidates for future ordination that I regard Alec's influence as having been at once most powerfully and most beneficially exercised. Here was a born teacher and preacher about a dozen years older than themselves, a man of striking and varied gifts, of shrewd insight and large experience, always sympathetically interested in young men at the outset of life who came to him for intellectual guidance and help. . . . For many a year after I had left Cambridge, in listening to a preacher unknown to me, his use of some tell-tale catch-word or turn of thought would identify him to me as having at some time or other come under Macmillan's influence, and more than once or twice I was afterwards able to verify my inference. . . . The gap left open between teachers and taught at Cambridge was filled only by a Scot, not in holy orders and in no way connected with the educational arrangements of the university.

The purchase of the Cambridge shop was made possible by a loan of £500 from Archdeacon Hare, made at Hare's own instance. Daniel Macmillan had read Hare's "Guesses at Truth," in 1840, and had written to the author to express his interest. Hare was impressed by his admirer's intelligence and not only helped to set him up in business, but introduced him to Maurice. When the brothers ventured into publishing a few years later, Maurice became one of their earliest and most valuable authors, valuable not only for the influence of his own books and the reputation they brought the firm, but for his friendly service in introducing other authors, of whom Kingsley was probably the chief. In 1862, J. R. Green wrote to a friend, "Pray introduce me to Macmillan, if such a thing be possi-

ble. Among the Kingsley and Stanley set, Macmillan is the pet publisher of the day." From this time on, the Macmillan lists and Alexander's letters reflect more and more the history of Victorian ideas from 1860 to 1890. Among the books of these years bearing the firm's imprint may be cited Huxley's "Man's Place in Nature," Freeman's "History of Federal Government," Bryce's "Holy Roman Empire," Matthew Arnold's "Essays in Criticism," Sir William Thompson's "Constitution of Matter," "Ecce Homo," "John Inglesant," "Alice in Wonderland," and the two series, "English Men of Letters," and "The Golden Treasury." As a Scot, Macmillan was a theologian. The movement that brought about the Abolition of Religious Tests in 1871 was largely conducted by his friends, and it interested him keenly in all its aspects. The publication of "Essays and Reviews" and the adventures of Bishop Colenso inspire some of his most animated letters. But if theology was his favorite pastime, he had also a profound and active religion, exerting itself in constant acts of kindliness and public spirit.

The professional correspondence and decisions of Alexander Macmillan give evidence of a high view of the publisher's responsibility. His conscience went into his work. He refused certain books, for which there was a fair prospect of profit, because he did not believe them to be honestly written books. This did not mean that he was unwilling to associate his imprint with books with which he did not agree. He held to his opinions, it is true, with Scotch tenacity, but he was ready to publish a book that traversed them, if he believed it honestly written and of a kind to bring any real contribution to the subject. He gave personal attention to a large part of the examination of manuscripts, and his letters in regard to these are full, discriminating, and sympathetic Highly interesting is a letter written in 1868 to decline the first novel of Thomas Hardy, entitled "The Poor Man and the Lady." Macmillan's very careful and elaborate criticism was apparently regarded by Hardy as final. Although his relations with his authors were for the most part friendly in the extreme, he could express himself with point when the literary temperament tried him too far. The sorrows of the publisher are a department of human suffering that have never been sufficiently laid before the public. They speak eloquently in a letter of Macmillan to a correspondent who had charged him with unfairness and prejudice:

> My private tastes are my own; but if I allowed them to interfere with an obligation to do justice to a client, I am guilty of breach of trust, morally if not legally; I can safely say, because it is capable of proof, that your books have given me more labor, letter-writing, expense, and anxiety than the most successful I ever published. . . . I am not going to recriminate, but the time of a publisher is as valuable as that of a lawyer. I gave hours of consultation with you in Cambridge, when you were pleased to honor me by consulting my private tastes. Since then at least 100 letters have been written by me from a nervous anxiety to do my duty by you. I do not and never would have complained that any profit that I get from your work does not pay my errand boy. I take things as they come, seeking to do my best for all whose work I undertake. But I do complain that when doing this at great inconvenience in the midst of profitable, appreciated, and successful work, entailing not a tithe of the proportionate labor yours has done, I am accused of the baseness of allowing personal likes or dislikes to interfere with my plain duty.

Alexander Macmillan died in 1896, having survived his brother Daniel by thirty-nine years. It appears that of the brothers, Daniel had the larger imagination and the larger ambition; while he lived he was the leader. But the achievements of the house after his death until 1896 are due to Alexander alone. It is probable that the history of publishing gives no parallel instance of so extended and important a development of a publishing house in the same space of time. It is interesting to note, in view of Macmillan's great financial success, that his tendency seems always to have been towards books likely to prove of permanent interest, rather than to "books of the season."

English Literature During the Lifetime of Shakespeare. By Felix E. Schelling, New York: Henry Holt & Co. $2.50 net.

After Professor Schelling's two-volume work on "Elizabethan Drama," one knows what to expect of him in literary history. By way of equipment: a style frequently overcharged with facts, but never languid, digestion of the results of recent scholarship, fresh and wide contact with the original material, enthusiasm for his subject, and an enlightened orthodoxy in his judgments. By way of method: a rearrangement of the facts of literary history, so as to emphasize the existence of schools, the character of literary movements, and the development of specific literary kinds.

In a brief preface Professor Schelling speaks a word in behalf of his method. "Until the history of literature cuts loose," he says, "from the tyranny of biography, as history at large has long since cut loose, little progress can be made toward the realization of the higher aims of literary study." He enters, too, a timely protest against the trivial and frivolous search for sources as ends in themselves. And he suggests with rare common-sense certain limits to the value of the study of foreign influences. To insist as he does by precept and example that the "discoveries" of our solemn investigators are insignificant till they have been related by some mind with a talent for synthesis to the larger issues of literary study, is to let light into a very dark place.

Chief among the larger issues, Professor Schelling places the recognition of those forces "by which even the greatest man becomes the product of his age." This arouses expectation. We look about for the "formula" that explains the Age of Shakespeare—indication of the forces of which Spenser and Jonson and Webster are the perplexingly divergent resultants. But Professor Schelling is not much enticed by the dangerous and difficult task of a fundamental unification. It is not the homogeneity, but the extreme diversity of Elizabethan literature that impresses him. He sees the movment of the times, not in the form of a great wave, but as a succession of little waves, broken up by cross-winds and currents. And the primary effect of his book is not to simplify, but to multiply our conceptions of the period.

The striking merit of his treatment is his ability—if we may borrow a phrase from dramatic criticism—to handle elaborate characterization within a highly complex plot. Though he constantly subordinates the individual to the type and its tendencies, he does not blur the outlines of the great personalities. He makes Shakespeare dominate the book, and yet exhibits him as the product and the producer of the romantic tradition. He portrays Jonson with equal distinctness at the centre of the classical reaction. He differentiates the vernacular from the new cultivated prose fathered by Lyly, and that, in turn, from the reformed prose of Sidney. He traces the Petrarchian stream of poetry to the point where it is traversed by the subtle imagination of Donne. Everywhere he attempts to see to it that his accumulated masses of detail shall not remain inert, but perform their function in the characterization of their species.

We may not entirely agree with Professor Schelling as to the "higher aims" of literary study. We may incline to believe with Sidney that the ultimate fruit of study is to come to some conclusion as to what is permanently great, valuable, and beautiful—"the divine consideration of what may be, and should be." In these sterner offices of criticism, he is occasionally somewhat reluctant and indecisive. He does not, for example, pronounce judgment on the central issue between Jonson and Shakespeare, between Elizabethan romanticism and neo-classicism. Indeed, such an utterance as this leads one to suspect that he has not clearly defined the issue: "Not less eager

in the pursuit of beauty than the Spenserian, the manner of Jonson seeks to realize her perfections by means of constructive excellence, not by entranced passion." As a matter of fact, it was not merely another means of realizing beauty that Jonson adopted; it was another beauty that he sought. Again, Professor Schelling speaks of those laborious failures, "Sejanus" and "Catiline," as "splendid examples of Jonson's power practically to apply his just and reasonable classical theories about tragedy and literary art to current English conditions." It would make the matter plainer to call these two plays striking evidence that Jonson was a modern man, that he had turned his back upon the ideal beauty and terror of Elizabethan romanticism, that he alone, therefore, among dramatists of his rank in the period, was unable to write anything worthy the name of tragedy. The obscurer form of speech, however, is natural enough to one who approaches literature from the scientific-historical point of view.

And when all is said, the praise to which Professor Schelling aspires he indubitably deserves. He has written the literary history of a great age with open and disinterested mind. He has cut loose from the "tyranny of biography," and has related his facts to what is at least one of the higher aims of literary study. It is not too much to say that no other book of similar compass presents so fully and organically the complex literary activities of Englishmen from the birth to the death of Shakespeare.

The Lady: Studies of Certain Significant Phases of Her History. By Emily James Putnam. New York: Sturgis & Walton Co. $2.50 net.

Mr. Garrod, in his brilliant little book, "The Religion of All Good Men," sought, not long since, to prove, with much plausibility, that the gentleman was a wholly modern institution, that his sole effective religion—that of honor—was neither Christian, Greek, Roman, nor Hebraic, but Teutonic, in its origin, and that, as a corollary, there is no example of the gentleman in history until he was developed by the social system and ideals of the Middle Ages. In the same way, it may be argued that the lady was likewise an exclusively mediæval product, the result of a special sentiment for womanhood that finds no counterpart in ancient societies. Certainly the word "lady" has definite, if somewhat indefinable associations that render insufficient and unsatisfactory Mrs. Putnam's practical and provisional description of her as merely "the female of the favored social class."

The conception and status of the lady have, obviously, shifted and changed from generation to generation, but the traditions of chivalry have never failed to color both, and to make of her something wholly different from any precedent feminine type. Mrs. Putnam herself offers an excellent example of this in her admirable chapter on The Lady of the Slave States, where she compares the woman of the South, in her domestic employments and lack of personal freedom, with the Greek woman of the age of Pericles. The parallel is very close, but the author herself notes the point of departure when she says of the latter:

> No sentiment had arisen in her day to mask the issue. If she was constrained to an exacting profession, no one obscured the fact by calling her a queen, or with a much stronger connotation of leisure, an angel. In the case of the lady of the plantation we are misled by her husband's vocabulary, which is that of the twelfth century. It is hard to realize that he could combine the manner and phrases of the minnesinger with the practice of the ancient Athenian.

But one may be grateful for the latitude which permits the inclusion of two such alien types as the Greek housewife and the Roman matron, for the sake of the delightful chapters in which Mrs. Putnam portrays their physiognomy, though these are in no wise superior to the subsequent chapters which treat of The Lady Abbess, The Lady of the Castle, The Lady of the Renaissance, The Lady of the Salon, The Lady of the Blue Stockings, and The Lady of the Slave States. In one place, Mrs. Putnam speaks of the lady's "usually light equipment of learning" as "a positive advantage to her in conversation," and remarks that "the intellectual irresponsibility which she enjoys by consent, enables her to be paradoxical without losing credit and flippant without giving pain." Her own play of paradox, epigram, and delicate raillery shows how much these qualities can please and stimulate from the pen of a woman, when learning and intellectual responsibility to facts are patent at every point. She has the imaginative gift of seeing things in their remote relations, whether these are actual or analogical. She can detect the social significance of the staircase that Madame de Rambouillet built at the corner of her house, instead of at the centre according to the custom of her contemporaries, and find in it the seed whence sprang the salon of the eighteenth century. She perceives that the insurgent Germanic lady of the dark ages found her freedom in a cloister, and thus decides that "the lady abbess is in some sort the descendant of the Amazon." She divines, even if she cannot plumb, the law of dress which associates far distant ages of civilization, as in the case of the "farthingale." Thus, "ladies so different in temperament as Madame de Maintenon and Queen Victoria witnessed its vigorous revival. If we can determine from its career thus far the law that governs its appearance, we must say that it coincides with times that we call great. Antecedently improbable, it is nevertheless true that the ugliest, most meaningless, and most fantastic dress ever donned by woman in Europe has prevailed in the great Minoan period of the Mediterranean civilization, in the Renaissance, in the Elizabethan period, in the France that prepared the Revolution, in the England of the mid-Victorian giants and in the United States of the War for the Union."

Frequently this wit takes a deeper turn and helps to illuminate some obscure phrase of racial or social psychology. Speaking of the fear in which the Southern gentleman lived, and which made isolation from the intellectual currents of the age his sole safeguard, she says:

> The planter was forced to build his moral house for defence, as the baron of the twelfth century was forced to build his physical house. Light and air were necessarily sacrificed to the requirements of fortification. The history of the Middle Ages is largely a history of the growth of walls induced by the improvements in the machinery of assault. So is the history of the slaveholding South. As the castellan developed his means of defence from the simple wall and tower to the mathematical complexity of the twelfth-century fortress, so the planter developed his moral position as the attack became more systematic; and every addition to his defences meant increased isolation.

But one could quote thus from nearly every page of this book, where there is always some unexpected turn of phrase or of thought to surprise the reader and to induce reflection. The only quality which one misses is, on the whole, sentiment. The modern woman, eager for the enfranchisement of her sex from a man-made and a man-governed world, is apt to show impatience to-day with the ideal of the lady which so clearly reflects masculine influences and aspirations, and to dismiss her as a parasite. A sense of her economic uselessness interferes with Mrs. Putnam's æsthetic appreciation of her subject, as it would not with that of a man writing on the same theme; and a thoroughly feminine realism dispels much of the romance that, for the male mind, would prolong its enchantments, even in the face of such bare facts as she adduces to prove that the life of the Lady of the Castle was hard and monotonous, and that the refinements of the Renaissance concealed the decay of cleanliness. But so natural and unavoidable a limitation of sympathy scarcely diminishes the fascination of the work, or prevents its being a most charming and graceful contribution to American literary scholarship.

Studies in Spiritism. By Amy E. Tanner. New York: D. Appleton & Co. $2.50 net.

The aim of this book is to analyze thoroughly the evidence for spirit communication and telepathy, test it rigorously and scientifically, and see whether the really substantiated facts are best accounted for on a spiritistic or a naturalistic hypothesis. The book is the outcome of a long and systematic investigation carried on by Dr. G. Stanley Hall and his special assistant, Dr. Amy E. Tanner. Though the body of the work is written by Miss Tanner, the influence of Dr. Hall is evident, and he concurs in the conclusions arrived at. The Introduction, moreover, and one of the chapters are written by him. It is probably advantageous for the influence of the book that Dr. Hall did not write the whole of it, for his Introduction is colored by a sarcastic tone and an evident animus which would have detracted considerably from the scientific value of the result. In fact, he says of himself: "Indeed, it is an utter psychological impossibility for me to treat this subject seriously." Fortunately, Miss Tanner is capable of treating her subject seriously.

The outcome of Dr. Tanner's investigation is completely to discredit the oft-repeated claim that psychical research has demonstrated the survival of bodily death. She makes thorough work of it. Spirit communication, "physical phenomena," telepathy, and Professor Hyslop are all weighed in the balance and found wanting. Most of the discussion centres, of course, on Mrs. Piper; her psychical make-up and the character of her "controls" are analyzed, and the messages which have come through her are systematically sifted. The results of her earlier sittings are first of all examined for their evidential value. All messages whose content was already known to the sitter Dr. Tanner throws out of consideration, because of the possibility (much greater than one might at first suppose) that the sitter unconsciously aided the medium. A long and careful chapter is devoted to the "test cases" (in which the content of the message was unknown to the sitter), and the conclusion reached is as follows:

> Approximately 110 facts in twenty years have been given which the sitter did not know and which were true. But many of these facts are easily explicable as inferences or guesses, or are so vague as to have little or no value, while the few striking coincidences are so few that it does not seem to be stretching tolerance if we frankly leave them unexplained or refer them to inferences or references in the sittings which were not considered important enough to record.

The subject of "cross-correspondencies" is then studied at greater length, and each of the more important cases considered by itself and explained as due to natural causes or to possible unrecorded influences. It must here be admitted that Dr. Tanner leans pretty heavily on the possibility of a faulty record; and also that, while she evidently tries always to be fair, her presentation of some of the cases makes them appear less striking than they really are. This is particularly true of the famous αὐτὸς οὐρανὸς ἀκύμων cross-correspondence. A comparison of Dr. Tanner's account with the original as given by Mr. Piddington (P. S. P. R., Vol. XXII, pp. 107-172) shows that, through lack of space, some rather suggestive details have been omitted; and, moreover, the naturalistic explanation proposed is at best unconvincing.

Dr. Hall and Dr. Tanner had six sittings of their own with Mrs. Piper, and these are reported at length. The chief value of this report is the light it throws on the psychical relationship between Mrs. Piper and her controls, and the demonstration it gives of their extreme suggestibility and the way they "fish" for cues and act on any hint given by the sitter. Dr. Hall invented several mythical characters, whereupon "Hodgson" swallowed the whole bait, recognized every one suggested whether real or purely fictitious, and reported them all as present in the spirit world. It was largely by this first-hand experience with Mrs. Piper that the investigators were enabled to work out in detail their explanation of the phenomena of mediumship; which is, in brief, that the controls are secondary personalities of the medium, bearing much the same relationship to her normal self that "Sally" in Dr. Prince's case bore to the real Miss Beauchamp. The fact that Mrs. Piper's secondary personalities impersonate departed spirits is to be accounted for by the suggestions tending in that direction given them by the sitters. "The controls themselves have thus been given a spiritistic education for over twenty years in all, so that whatever they were in the beginning, they are now thoroughly dyed-in-the-wool Spiritists." "The control, like all impressionable and untrained consciousnesses, tends to believe that any vivid idea is true, does not clearly distinguish between ideas and reality, and so confuses them in his assertions about them." And, in conclusion, Dr. Tanner says:

> The entire content of the Piper messages can be referred (1) to the ordinary laws of the mind as seen in apperception, inference, etc.; (2) to a greatly heightened suggestibility; (3) to a modicum necessarily unexplained because of imperfect records.

After finishing spirit communication, Dr. Tanner proceeds to sift the evidence for telepathy. And here it must be said her work is less convincing. She proves, indeed, conclusively how weak is much of the so-called evidence for thought-transference; and her keen analysis of even the best reported cases shows, as a rule, that the conditions were indecisive or the facts themselves uncertain. But a residuum of the evidence much too large to be put down as mere coincidence remains, *if we trust the records;* so that recourse must be had again to the possibility of mistakes in the reports as we have them—the author's ultimate resource in all cases of uncertainty. There is, no doubt, considerable justification for this course, but it can be over-done. It is rather too easy, and Miss Tanner's repeated appeal to it when in difficulty constitutes, perhaps, the weakest part of her book and does more than anything else to invalidate her rather sweeping conclusions.

For certainly the possibility of telepathy and even of spirit communication has not been *disproved* by this book. Both are still possible hypotheses, and subjects of such enormous human interest should certainly continue to be investigated—in spite of Dr. Tanner's critique and Dr. Hall's sarcasm. Still it must be said that this book has shown very plainly that if the spiritistic hypothesis is possible, there is as yet very little reason for thinking it true. And with the highly colored presentations of the results of psychical research which are read with such avidity in our popular magazines, it is high time that some one should do what Dr. Tanner has done so admirably. No one, in fact, who is interested in this question can afford not to read Miss Tanner's work. And while, perhaps, there is still hope for the spirit hypothesis, our author has succeeded so well in battering down its supposed demonstration which has taken so many laborious years to build up, that the unlucky spiritualists—on both sides of the Great Divide—are in the pathetic predicament of having pretty much all their work to do over again.

JUVENILE BOOKS.

I.

The many books that are sent to the editorial room for review make it almost impossible to do more than group them for the benefit of the buyer. If it were the problem of selecting the very best, the list would be largely confined to reissues which in every way are worthy of the publishers' skill. But the average taste and the moderate pocketbook have to be considered.

As its name implies, "The Louisa Alcott Story Book" (Little, Brown), edited by Fanny E. Coe, is a compilation made with the direct object of emphasizing lessons in morals or manners. Let us grant that one of the chief charms about the famous "Little Women" and "Little Men" is the genial spirit in them, but it is distressing for any real admirer of Miss Alcott to see her reduced to such purposes. Mr. Percival Chubb had a much more legitimate reason for compiling "Travels at Home, by Mark Twain" (Harper) from "Roughing It" and "Life on the Mississippi." His chief aim appears to be to introduce into the elementary schools a type of American

supplementary reader which will familliarlze children with literature of distinctive character. The human qualities of Mark Twain, "the characteristically American humor," make this author an educational necessity. The book is judiciously edited.

There is an historical basis for Charles Welsh's "Fairy Tales Children Love" (Dodge). In this volume is garnered a treasury of imaginative lore, made additionally famous because of the men and women who first gave the tales literary shape. A preface explains the growth of these stories, and their significance in an age which produced La Fontaine and Perrault. The stories of the latter, which are thought to have been written by his young son, have been retold by Sir Artbur Quiller-Couch in a rich volume called "The Sleeping Beauty, and Other Fairy Tales" (Doran). They are taken from the old French, with modifications where it was thought best. An introduction explains the "Cabinet des Fées," as well as the career of Perrault. It also defends Edmund Dulac's adherence, in his exquisite pictures painted for this edition, to the spirit of an age that fostered the fairy tale in the court as well as in the privato salon. The work shows taste throughout, though in its physical proportions it is beyond the grasp of tho average buyer. Mrs. E. Lucas has translated Hans Andersen's "Fairy Tales" (Dutton), which are accompanied by striking color-plates from illustrations by Maxwell Armfield. In these days of miscellaneous folk-lore, it is an excellent omen to find such permanent form as this given to the real classics. Andrew Lang's "Lilac Fairy Book" (Longmans) follows the usual plan of previous volumes, but, in addition to the stories from many lands, culled from so many obscure sources, the editor humorously explains the manner in which he and his wife collaborate in their rainbow series. This introduction is well worth reading, and, as usual, the book itself is printed in elaborate and pleasing fashion. In this respect it is better than "The Fairy Ring" (Doubleday), under the editorial supervision of Kate Douglas Wiggin and Nora Archibald Smith, though this particular collection appears to be equally inclusive in its territorial range, embracing "Tom Thumb," "Jack the Giant-Killer," "Riquet with the Tuft," as well as others quite as famous, and perhaps new to the present generations. To offset this, we are glad to mention Miss Sowerby's book of "Grimm" (Duffield), which is agreeably illustrated by her sister. "Folk Tales Every Child Should Know" (Doubleday) belongs to a series which is very uneven in its quality, and quite haphazard in its choice. This particular volume is edited by Hamilton Wright Mabie, who tells children in a condescending manner the exact value of stories which are made by the people and perpetuated from camp-fire to camp-fire. The sources are only occasionally given. Antiquarians would be more interested in some of this primitive material than young readers would be. "The Scottish Fairy Book" (Stokes), by Elizabeth W. Grierson, is a fit companion for the "Welsh Fairy Book," published last year. The stories retain the flavor of the country, some of them being dark and gloomy, others delicate in grace and beauty. The cover design might be better, and the red splashed upon every page is dazzling and confusing. An *édition de luxe* of Hawthorne's "Wonder Book and Tanglewood Tales" (Duffield) will bring satisfaction to young and old, for it is enriched with impressive illustrations by Maxfield Parrish, royal in color and noble in conception. It is a gift book which confers credit upon the firm publishing it, and should, by the very force of its cover design, attract the eye. Another issue of the same book has been imported by Dutton. Granville Fell's color work in this volume cannot in any way compare with Parrish's. The pictures are conventional and glaring in tone.

No season passes without a new volume of Kingsley's "The Water-Babies" and Charles and Mary Lamb's "Tales from Shakespeare" (Baker & Taylor). This year's editions are adequate both in type and illustration. The black and white sketches are more successful than the color-pages, because the latter have been detracted from by ridiculous borders which have no bearing and are not necessary. Every one should welcome Cooper's "The Last of the Mohicans" (Holt), in an excellent new form, the type being agreeable and the drawings for the chapter headings of striking quality. The illustrative work is by E. Boyd Smith, an artist who believes in using faint color to produce atmospheric effect. It is to be hoped that the publishers will follow this book with others of the same kind. The Appletons are issuing an abridgment of stories by Scott. This method is not a safe one and is always open to justifiable criticism. Again we repeat what has been said before in these columns: What is needed is an edition of Scott published in a form similar to the Henty books, with no omissions, but with all prefaces thrown into appendices. The stories should be copiously illustrated, much in the way in which the Holts have published their first volume of Cooper. There is no doubt in the minds of many specialists on children's literature that Wyss's "The Swiss Family Robinson" (Dutton) is more popular than Defoe's "Robinson Crusoe" (Houghton); the generous large editions, with clean type, are very desirable, but most of us have read these adventures in thick books with fine type and with line borders around the page. The Dutton volume of "The Swiss Family Robinson" has nowhere mentioned the author's name. The artist figures on the cover: Charles Folkard—the design for which is at the same time delicate and grotesque. The reprints show thought and feeling on the part of the publishers. Dainty in outward form, and assuredly worthy in content, are two old favorites by Juliana Horatia Ewing, "We and the World" (Bell) and "The Brownies and Other Tales" (Bell). The illustrations are spirited, imaginative, and often old-fashioned in touch. This is preferable, we feel, to the literalness and smoothness of the color work by Maria L. Kirk for Lippincott's estimable holiday editions of juvenile classics. Not that Miss Kirk is devoid of ability, but it is inspiration too well governed and mannered. She has illustrated Jean Ingelow's well-known and ever-popular "Mopsa the Fairy" and Louise de la Ramée's "Bimbi: Stories for Children." Both of these volumes have long ago been endorsed by their young public, and in their present format they are satisfactorily printed, between wide and pleasant margins. This is a rare excellence not often indulged in. Another distinguished reprint is Mark Twain's "The Adventures of Tom Sawyer" (Harper), accompanied by illustrations from the brush of Worth Brehm. We know this artist's studies, and, while we like his present examples, we can imagine him dissatisfied with the manner of reproduction; the pages are so dark that all feeling is lost in shadow, a mistake we know that was not perpetrated in the originals.

II.

Most of the large books for children are of the same character as last year; in fact, they are a continuation. We expect to find "Chatterbox" (Dana Estes); indeed, Christmas would not be Christmas without it. "Caldwell's Boys and Girls at Home" (Caldwell), consists of a collection of stories and verses from various pens, copiously pictured in lines and over brilliant color. The type is large, but the quality of the text is not to be commended. We like the humor of E. Boyd Smith's "Chicken World" (Putnam), even as we enjoyed the Guinea-Hen's reception in "Chantecler." Perhaps Mr. Smith wished the Rostand craze to enter the juvenile realm. But his new portfolios will amuse young and old alike. The conceptions are humorous and human, and there is a poetic touch to the side panels which is decorative and effective. This same artist has issued "The Farm Book" (Houghton), wherein two children see the activity that goes on in such a place. Here are twelve illustrations, and twenty-four text pictures.

Distinctive drawings would include Jessie Willcox Smith's "Five Senses" (Moffat, Yard), with accompanying text. Miss Smith has likewise turned anthologist in a sumptuous volume, entitled "A Child's Book of Old Verses" (Duffield). Not only are the illustrations quaint and poetically childlike, but the selections, largely old-fashioned, are chosen with discrimination—something which cannot be said of most recent compilations of this character. Three other volumes of verse worthy of mention have been edited for Little, Brown, by Mary Wilder Tileston: "Sugar and Spice and All that's Nice," "The Child's Harvest of Verse," and "The Children's Book of Ballads."

A handsome issue of Winston Stokes's "The Story of Hiawatha" (Stokes) attracts our attention; Miss Kirk's color-pages are ambitious and full of feeling, while the author's retelling is adequately done. But in comparison with the original poem, which forms the appendix to this prose text, such a method becomes almost useless, although Mr. Stokes had in mind, when he first conceived the idea, to bring readers close to the mystery of the forest through an interpretative medium. We are of the opinion that in the main, Longfellow himself was fairly successful. The familiar faces of Palmer Cox's "Brownies" (Century) peer forth from the covers of an eighth volume. The characters are virtually the same as have graced the pages of *St. Nicholas* for many years. But these gnomes are never behind the times; they always undertake the latest social work, this year being very ambitious in their civic activity.

De Witt Clinton Falls did not mistake child interest when he conceived and executed with pen and brush "The Journey Book" (Century), which will afford occupation "on the road" for quick eyes. The book is a jumble in some respects, but there is fun in it. There is coarse humor also in Peter Newell's "Slant Book" (Harper), which is ridiculous in its disaster, and strikingly original in its format. But it cannot escape the criticism one usually launches against the comic supplement of the Sunday newspaper. The "Why" book (Dodd, Mead), by John Rae, asks questions on one page and answers them backwards on the opposite page which has to be held before a glass to be read aright. This glass is ingeniously inserted as part of the cover design, forming a question mark.

To those on the lookout for music, H. C. Bunner's operetta, "The Seven Old Ladies of Lavender Town" (Harper), with music by Oscar Weil, is to be recommended.

Other books for children will be noticed in the *Nation* of next week.

Notes.

The next volume promised in D. Appleton & Company's business series is "The Principles of Industrial Managements," by Prof. John Duncan of the University of Illinois. The next book to be included in their railway series is "Railroad Traffic and Rates," by Emory R. Johnson and Grover G. Huebner, both of the University of Pennsylvania.

Cassell & Co. have in the press "Kearton's Nature Pictures," by Richard and Cherry Kearton.

Henry Frowde is adding immediately to the Oxford Poets and the series of Oxford standard authors a new anthology entitled "A Book of Light Verse," edited by R. M. Leonard, the compiler of "The Pageant of English Poetry."

We are asked to announce that an authentic biography of Thomas Love Peacock is now in preparation by his granddaughter, Mrs. Charles Clarke, who would regard it a favor if any persons possessing unpublished letters by Peacock would communicate with her at No. 63 Kensington Mansions, Earl's Court, London, W.

The Irish judge, McDonnell Bodkin, has ready for publication with Little, Brown & Co., in 1911, "The Capture of Paul Beck."

W. J. Griffith is publishing with Dent, in the series of Temple Cyclopædie Primers, "A Short Analysis of Welsh History."

Certain Welsh documents not before published are to be edited and issued by graduates of the University of Wales. The first to appear will be a fifteenth-century manuscript of laws and pleadings, edited by Timothy Lewis; it will be followed by three collections of Welsh poetry, including the historical poems of Lewys Glyn Cothi, drawn from a manuscript of the fifteenth century.

We could wish that Scribners had not chosen the hard, heavy paper that has gone into their complete edition of the "Poems of Eugene Field," but we are glad to get the book in any form. A good deal of Field's wit was of a distinctly journalistic type; but even in his most ephemeral productions the background of Horace and other good reading will break through now and then, and at his best he was mellow to the core and full of ancient-new wisdom. It seems unaccountable that his poems have never before been collected.

"A Thackeray Dictionary," prepared by Isadore Gilbert Mudge and M. Earl Sears, and "A Dictionary of the Waverley Novels," prepared by M. F. A. Husband, are two books useful to the student, and to the lover of Thackeray and Scott. Brief summaries of the novels are given, followed by an alphabetical catalogue of all the author's characters with an account of their doings. Some men can get inspiration from the pages of an ordinary dictionary; what an intoxication they might imbibe from the suggestiveness of these lists! The books are published by E. P. Dutton & Co.

"Nicholas Nickleby," in two volumes, and "A Child's History of England," in one, are added to Scribner's Centenary edition of Dickens. In the former work the original illustrations of Phiz are reproduced clearly, and in the "History" those of Marcus Stone and J. Mahony. The whole make-up of this edition is, as we have observed before, unusually good for the low price, one dollar the volume.

In our note of November 17, on the "Century Readings in English Literature," we made some comparison of this book with an earlier anthology of similar character edited by Professor Manly and published by the University of Chicago Press. For the sake of completeness, we might have mentioned also the "Twelve Centuries of English Poetry and Prose," edited by Newcomer and Andrews and published by Scott, Foresman & Co.

The life of "Lewis Carroll, in Wonderland and at Home," by Belle Moses (Appleton), here receives loving treatment. Although directed to a young audience, the book will give an agreeable occasion to many a grown-up as well, to review his earlier impressions of a singular author. Methodically, never brilliantly, Miss Moses follows this sensitive boy to Rugby and to Oxford, and prepares the reader for that rare combination of qualities which kept Dodgson a child, and at the same time scarcely less a man. Except in the simplest cases, she wisely avoids trying to explain the reasons for the great appeal which "Alice" has always made, being content to dwell appreciatively upon special episodes. Yet, this mere collocation of the facts of the life and scenes from the book helps one the better to see into Dodgson's quality. His mathematics, his acrostics, his formal illogic, belong to a perfectly logical series; the something besides—his understanding of little-girl nature—is another matter.

The series of descriptive papers which Winthrop Packard has gathered together from his correspondence originally contributed to the Boston *Evening Transcript* under the title "Florida Trails" (Small, Maynard) makes a readable volume of travel. Mr. Packard writes as a keen and appreciative observer of nature, and in the narrative of his journeys manages to cover the State pretty thoroughly, from Jacksonville to Key West. Without being too erudite, the book gives to its readers a considerable store of information in regard to all animal and vegetable life among the pines, marshes, palmettos, and swamps. A quiet touch of humor adds not a little to its agreeable qualities. To those who are going South, or wish to know something of the natural beauties of this semi-tropical State, Mr. Packard's book is to be commended.

A cheerful philosopher's musings while running down the Missouri River for 2,000 miles in motor boat and skiff are recorded in John G. Neihardt's "The River and I" (Putnam). The author sees his world through rose-colored glasses; a balky engine, boiling rapids, sand-banks, mud-bars, head winds, hunger, cheerless days and nights, serve only to spur his enthusiasm, and to add a lustier zest to his song in praise of life in the open. "The Missouri," he confesses, "is more than a sentiment—even more than an epic. It is the symbol of my own soul, which is, I surmise, not unlike other souls. In it I see flung before me all the stern world-old struggle become materialized. Here is the concrete representation of the earnest desire, the momentarily frustrate purpose, the beating at the bars, the breathless fighting of the half-whipped but never-to-be-conquered spirit, the sobbing of the wind-broken runner, the anger, the madness, the laughter. And in it all the unwearying urge of a purpose, the unswerving belief in the peace of a far-away ocean." The river was the path of the American fur traders in years gone by, and one may reasonably wish that Mr. Neihardt had told us more about that breed of men who followed its zigzag course into the wilderness, fighting their way mile by mile against savage tribes and the natural obstacles of an inhospitable country. The book is generously illustrated.

Those who are acquainted with the writings of Henry Demarest Lloyd will not be surprised by the virus of socialism in his posthumous book, "Mazzini and Other Essays" (Putnam). Mr. Lloyd had faith in mere numbers:

> Every one knows more than any one. Art, like government, to be at its best, must be art of all the people, by all the people, for all the people. Art is nature creating itself; labor is nature creating itself. True art and true labor are, therefore, one.

Such catch-phrases, which lead everywhere and nowhere, are typical of the author's method. In chanting the burden of collective man, his nine essays, most of them first delivered as addresses, point scholars the road to public duty, derive suggestions for the present from the former achievements of the Dutch, and transform the possibilities of Chicago into a vision. Throughout the book are an earnestness and an insistence upon intelligence which, despite the author's own fragmentary processes, make for dignity.

"Attitudes and Avowals, with Some Retrospective Reveries" (Lane), by Richard Le Gallienne, has the uneven character of such ingatherings of past journalism. To the present writer, the best of the essays is that on Grant Allen. An appreciation of Sidney Lanier, too, is sympathetic and discriminating. We like less the casual essays which betray the unrepentant quester

of the Golden Girl. Some of the subjects in this lighter list are Books as Doctors, On the Loveableness of Lords, Concerning Fairy Tales, and, coming nearer home, The Human Need of Coney Island. There are several papers on George Meredith, one of which contains the following keen and just observation:

As one grows older . . . one comes better to understand the academic distaste for writers of the Carlyle-Browning-Meredith school, and grows more to insist that writing shall be *writing*——not talking, however brilliant, not fantastic flashlighting of one's theme, no merely pyrotechnic hints of one's meaning, or musical adumbrations, or the presentation of a verbal palette, however chromatic and bizarre, for a picture. We crave "The little word big with eternity," the one inevitable metaphor, the word worthy of eternal marble, the image as immediate and universal as lightning or the cry of a child; not the innumerable tentative word, however vivid and strange, nor the play of clustering imagery, however Protean or merely harlequinesque. And the more we demand this expressive finality and universality of literature, the more we realize that these three writers I have classed together are inspired prophetic journalists, moulders of the spiritual aspiration of their time, rather than enduring voices of the eternal meanings.

In view of such opinions, it may seem fitting that the *toga virilis* be conferred upon Mr. Le Gallienne.

In "The Second Post" (Macmillan) E. V. Lucas has produced an appropriate "supplement and companion" to his earlier anthology, "The Gentlest Art." The first section of the book is a collection of letters "From Age to Youth," the opening selection being from Sydney Smith to "Dear Little Gee." Carlisle is one of the few—his wife is another—favored with an individual section. Among the "Whimsicalities" appears the famous reply of the Chinese editor who was under the painful necessity of refusing a contribution:

Knowing literature as I do, and that it would be impossible in ten thousand years to equal what you have done, I send your writing back. Ten thousand times I crave your pardon. Behold, my head is at your feet. Do what you will—Your servant's servant.

"Sketches from the Karen Hills" (Revell), by Alonzo Bunker, gives the experiences of an American Baptist missionary among the hill tribes of lower Burma during a period of forty years. They are not descriptive of permanent station work, but accounts of pioneer journeys over lofty mountains and through regions rarely if ever before visited by a white man, for the purpose of preaching and establishing schools and churches. In them we are brought into close touch with much that is beautiful and sublime in nature, and especially with the wonderful flora of the Karen Hills. Interwoven with the narrative are some interesting adventures with wild beasts and serpents. On the whole, it is one of the sunniest descriptions of missionary life that we remember to have read. Our only criticism is that it fails to give any impression of the natives, their manner of life, morality, or religious beliefs. As we encounter them in these pages they are merely human beings without distinctive characteristics, except, of course, the native Christians. This lack is the more to be regretted as the primitive native whom the missionary met is fast becoming a thing of the past now that civilization has reached him. The book is attractively made up with seventeen illustrations, mainly of the natives, but with neither map nor index.

Prof. Samuel Macauley Jackson is the author of a painstaking monograph on the manuscripts and editions of Bernard of Cluny's "De Contemptu Mundi," which he modestly entitles "The Source of 'Jerusalem the Golden,' together with other pieces attributed to Bernard of Cluny. In English translation by Henry Preble" (University of Chicago Press). He gives himself credit only for the introduction, notes, and annotated bibliography, although these are the more original and valuable portions of the volume. Bernard's poem is commonly known only from the familiar hymns, "Jerusalem the Golden" and "For thee, O dear, dear country," which hymnologists have adapted from the Rev. John Mason Neale's translation of some two hundred lines of the original. The general understanding is that Neale's poem produces a mediæval work in its entirety and with fidelity to its spirit. As a matter of fact, however, the English stanzas represent but a small fraction of the original, Mr. Preble's prose translation filling seventy octavo pages; nor is the theme of Bernard the delights of heaven, but the wickedness of human society as he observed it. As Professor Jackson remarks, "it is as far as possible from being what John Mason Neale may have led you to expect." The vices of nobles, the soddenness of the masses, the bestiality of women, the venality of Rome, and the low morals of priests, are described with terrible realism. The poem is a document in the history of morals, not a rhapsody on the joys of heaven. Professor Jackson's bibliography is the result of study which led him to a large number of libraries in France, Germany, and England. He brings to light several errors in Archbishop Trench's "Sacred Latin Poetry," in the notes of Neale's "Mediæval Hymns and Sequences," and in Julian's "Dictionary of Hymnology." The translation of Mr. Preble is the first production of the entire poem in any language except the original Latin, as is likewise the case with Bernard's "Golden Booklet," "Hymn to the Virgin," and "Sermon on the Parable of the Unjust Steward," which are also included in this volume.

Two years have elapsed since the publication of the first volume of "The New Schaff-Herzog Encyclopædia of Religious Knowledge," edited by Prof. Samuel Macauley Jackson, and the appearance of Volume VIII (Morality—Petersen) indicates that the twelve volumes will be completed within three years, as promised by the publishers (Funk & Wagnalls). It may be hoped that the final volume will contain a complete index of all subjects treated in the work, like the *Register* of the twenty-second and final volume of the German original. The tolerance of the editors of the American edition is shown in the article on Mormons, the first part of which is an official statement by Joseph F. Smith, jr., assistant historian of the Mormon Church, which is followed by sections by Prof. J. R. Van Pelt, Dr. Henry King Carroll, and the Rev. Duncan J. McMillan. Among the original articles for the American edition is an excellent sketch of the New England Theology by Prof. Frank Hugh Foster and a history of Peace Movements by Benjamin F. Trueblood. On critical questions the endeavor is made to state both conservative and critical views, as when Prof. Henry S. Nash contributes a sketch of the Pauline literature, following the translation from the German of Prof. Theodore Zahn's article on Paul.

Christian Tearle has invented a new way of writing a literary guide-book of England, designed to attract the notice of the class most likely to buy it ("Rambles with an American," Duffield). Mr. James C. Fairfield of Chicago is a composite American, kindly endowed with all the qualities that his flattered compatriots would be glad to recognize as national. He is a sort of erudite Colonel Newcome, with the Colonel's trick of calling his interlocutor "sir," and the Colonel's enthusiasm for the great names of English letters. But Mr. Fairfield knows more than the names. In his learned and humorous company his friend the Englishman investigates many of the places most attractive to sentimental Americans, and jots down very agreeably the discoveries they make and their reflections on them. The Stratford chapters are specially entertaining, and should be read in connection with Henry James's story of "The Birthplace." But Henry James, that accomplished bilinguist, would never have allowed an American hero, even under the excitement of identifying in the midst of the Chatham and South-Eastern terminus the site of a house once dwelt in by Goldsmith, to speak with the same breath of "this depot" and "the permanent way."

A modest preface, in which the author disclaims any ability either to write a book or to describe Japan, rather disarms the critic of Herbert G. Ponting's text ("In Lotus-Land Japan"; Macmillan). But the matter might be much worse. As a medium for the publication of his pictures the volume which contains them is decidedly readable, though it does not add greatly to our knowledge of the country. An account of the artist-craftsmen in Kioto, with whom he had some personal acquaintance, is informing as well as appreciative; so, too, are the chapters on three great Japanese volcanoes, Aso, Asama, and Fuji. Indeed, the author writes so admirably about the business he is engaged in that we should be glad to have him more professional in other parts of his book. His trips upon these mountains, with eighty or a hundred pounds of photographic apparatus, must have involved considerable risk and required careful management. In one crater he made the interesting discovery that isochromatic plates, when exposed to sulphur fumes, develop a positive instead of a negative—a result rather curious than satisfactory to the author, whose pictures were thereby ruined. But the chief merit of this volume lies in its extraordinarily beautiful photographs, which it would be hard to overpraise. Of these the eight color-prints impress us less favorably than the monochromes. They are technically admirable, but Japanese gardens adorned with *musmé* look rather meretricious on the printed page. Fifteen of the other illustrations are devoted to Fuji, all of them worthy of her matchless charm, and two—Fuji at sunrise and a sunset from the summit—as admirable as photographs can well be. Mr. Ponting has a note to make on the Kamakura Daibutsu that is worth quoting as the observation of a careful student:

The Japanese measurements . . . are much exaggerated. The distance from knee

to knee is quoted as thirty-five feet eight inches—which is correct. The height is given as forty-nine feet seven inches, but it is really almost exactly the same as the length from knee to knee. The length of the face is given as eight feet five inches, which is about right. This is approximately a sixth of the stated height, whereas, as the photograph shows, the face is almost one-fourth of the total height of the figure, not including the stone pedestal. The width of the face from ear to ear is said to be seventeen feet nine inches, more than double the length; but the length and width of face are very nearly identical. I have often estimated the height of the figure, when inspecting it, as about thirty-six feet, and an examination of the photograph confirms these figures.

Mr. Ponting is now on his way to the South Pole with Capt. Scott's Antarctic company as official photographer of the expedition. A greater master of his art could hardly have been chosen.

"Romantic Days in Old Boston" (Little, Brown), by Mary Caroline Crawford, is an appreciative sketch of life in the Hub and some of its noted citizens during the middle of the last century. It begins with an account of that experiment in communism, Brook Farm, to which is added a chapter on a frequent visitor to it, Margaret Fuller. Then follows the story, told at much length, of the struggle of William Lloyd Garrison and Wendell Phillips. The only other person to whom special attention is directed is Theodore Parker, and to many readers this chapter will prove a revelation of a most interesting personality. He evidently had a keen sense of humor, for his fee for lecturing was usually stated, "F. A. M. E., *i. e.* Fifty And My Expenses." The remainder of the book is devoted to facts, many of them quite trivial, in regard to the old theatres, actors, and musicians, hotels, and stages, as well as to sketches of the social queens and some of the famous visitors to the city and the way they were entertained. Much is added to the attractiveness of the book by its 120 illustrations, 62 of which are portraits.

Clifton Johnson has the knack of putting in very readable and attractive shape his impressions of the historic waterways of North America. He has journeyed up and down the St. Lawrence, and its principal tributaries, with an observant and discriminating eye, and has brought together in a compact guide-book the sort of material that is likely to appeal to the intelligent tourist ("The Picturesque St. Lawrence"; Macmillan). It is perhaps not to be wondered at that in so wide a field his history is not always to be relied on. It is only just to say, however, that where he errs it is only on minor points. For instance, as the Dominion Parliament was not created until 1867, it is scarcely accurate to say (p. 120) that that Parliament voted money, in 1848, to pay damages to those who had property destroyed in the Rebellion of 1837. Similarly as Colonel By built the Rideau Canal, it is, perhaps, a little vague to describe him as "one of the government representatives interested in the canal." Mr. Johnson is more happy in his descriptions of the scenery of the St. Lawrence than in his comments on Canadian life and manners. There is neither truth nor good taste in the following (p. 58): "To smoke and spit in public places, to swear and swagger and guzzle seems to be the ambition of a very large proportion of the Canadian youths. Their elders set the pace. . . . Drinking is the habit of the country, and is not confined to any particular class"; nor in the following (p. 149): "They are inveterate tobacco users—these Canadians—and the boys, with sham smartness, start to puff at pipes and cigarettes pitiably young." Mr. Johnson must have been unfortunate in his acquaintance with individual Canadians, to have been led to such sweeping generalizations.

In "The Holy Land" (Century Company) Robert Hichens has given a precisely parallel volume to his "Egypt and Its Monuments." It is a series of brilliant impressions, surcharged, if anything, with feeling and distinguished from most travel books by happiness of phrase. The descriptions of the open country are much more successful than those of towns or buildings, because they have afforded wider scope for scraps of fanciful, sometimes fantastic, symbolism. There is throughout almost a strain to interpret, and the interpretations are individual to the point of registering moments and emotions. Yet there lies in many of them a deep reality, too. They render well the glory and marvel of Baalbee in blossoms and sun and snow-barred mountains; the shock of unoriental Nazareth; the friendly calm of the Galilean Lake; the pale gray country around Jerusalem; the hashish in the warm air of Jericho under the savage cliffs of Quarantania, and faced by the magic mountain range of Moab, lined across the sky. After these scenes there is effort in the labored picture of Damascus, where Mr. Hichens was only a tourist with an eye for flowing water and striped sofas. To read its secret there is need of knowledge, and not simply a sensitiveness to impressions, and a power of rendering these in words. The final long description of Easter at Jerusalem in the Church of the Holy Sepulchre, "a barbaric castle of magic," is effective, but similarly labored; faithful without question, but just missing the ease of perfection. Jules Guérin's eighteen illustrations are lurid impossibilities of color. They would have been much better in black and white, as the one so reproduced in the advertisement of the volume shows. The forty half-tones from selected photographs are excellent. Yet any photographs must contrast oddly with Mr. Hichens's impressionism.

In "The Country Boy" (Dillingham) Homer Davenport gives a sketch of his own early years, the life of "just an ordinary boy, brought up, however, among people and conditions that were not ordinary." The spirit of the cartoonist, with its natural tendency to overdraw the ridiculous, is about as evident in the text itself as in the sixty-two illustrations from his original drawings. As a sample, he and his little sister go to hear Clara Morris in "Camille," at the Portland theatre, and weep till they have colds for a month, by getting their feet wet from their own tears. If this seems a little incredible at first sight one accepts it readily by comparison after reading of the girl who coughed up a feather upon which she had strangled "and broke one of the biggest window panes in town, so great was the velocity with which she let go of it." There is a strong purpose in the volume to immortalize Silverton, Oregon, his home town, as it existed before the latter day improvements inaugurated by "a newer element with higher collars and smaller hats" had destroyed its individuality. We are not sure, however, that he has not himself defeated that purpose by excessive exaggeration. Among the drawings, some five or six which are colored by serious affection are admirably done, such as that of his grandmother, on page 30, and a few in which his father is represented.

The Putnams add to their handsome collection of books relating to the waters of America—its rivers bays, and lakes, "The Mississippi River and its Wonderful Valley," by Julius Chambers. The volume equals its predecessors in beauty and interest. A well-based historical résumé gives the story of its connection with man, its economic importance is correctly estimated, and the efforts to subdue its lawless flood to human service intelligently described. Its picturesque side receives full illustration in the text, in the eighty photographs. It has hardly come home to us, but it is the fact that mystery hung over the true source of the Mississippi as long as it did over the source of the Nile. Mr. Chambers himself, so late as 1872, had a hand in clearing up the doubt; and the narrative of his explorations, with the voyage that followed from the ultimate spring to the mouth of the Southwest Pass, for more than half the distance in a canoe, is interesting reading.

John Eyton Bickersteth Mayor, D.D., for nearly forty years professor of Latin at Cambridge, England, died a week ago today in his eighty-sixth year. He was born in Ceylon and was educated at Shrewsbury and St. John's College, Cambridge, of which he was soon elected a fellow. For many years he was editor of the *Journal of Classical and Sacred Philology*, and for some time he directed the *Journal of Philology* and the *Classical Review*. Since 1883 he had been president of the Vegetarian Society. He edited "Nineteen Satires of Juvenal," Roger Ascham's "Schoolmaster," and various other text-books and religious and historical works.

The Rev. Matthew Henry Buckham, since 1871 president of the University of Vermont, died a week ago, aged seventy-eight.

The Rev. Sylvester Tithian Scovel, president of the American branch of the International Peace Society and former president of Wooster University, at Wooster, O., died last week. He was seventy-four years of age.

Count Adolf von Goetzen, who in behalf of Germany observed the operations of our forces in the war with Cuba, and whose book "Through Africa from East to West" won him advancement at home, died last week at the age of forty-four.

Science.

The Book of the Animal Kingdom. Mammals. By W. Percival Westell, F.L.S. 14 colored and 260 plain plates, chiefly from photographs of the living animals, by W. S. Berridge, F.Z.S. New York: E. P. Dutton & Co. 8vo. Pp. 379. $4.

This is virtually little more than a kind of extended guide-book of the quad-

rupeds that chanced to be living in the London Zoölogical Gardens at the time the author's descriptions of them were written and strung together. As "a survey of the animal kingdom," Mr. Westell's book is a joke. What else can be said of a volume, so described by the author, which entirely fails to mention the ibexes of the world, save six lines devoted to the Persian ibex; that ignores the existence of the most important group of living bears (the big brown bears of Alaska); and, except for a reference to the wapiti, also ignores the existence of all the members of the deer family in the Western Hemisphere? The mountain sheep of the world had a narrow escape from non-representation. Inasmuch as the London Zoo happened to contain the little urial, Barbary sheep, and Burrhel, those species were mentioned and figured; but all the other members of that fine group were left out, bodily. The dormouse, however, obtained three pages.

As if his "survey" of the living animal kingdom offered too narrow a field, Mr. Westell includes a chapter on the Animals of Long Ago, another on Domestic Animals, and another on Animal Pets. In chapter xx the Rev. Charles A. Hall has manfully attempted to condense the matter suitable for a large volume into the narrow confines of thirty-three pages, on extinct mammals, and he has very creditably performed a difficult task. There is one other chapter in this astounding book that is creditable to its author. Charles Barrett's thirty-nine pages on the Mammals of Australia is an excellent piece of work. It shows on every page the hand of a real naturalist, who knows something about his subjects, and who has been quite uninfluenced by the easy-going methods of his fellow-author. Mr. Barrett is of Melbourne, Australia, where he is one of the editors of the *Emu*.

As a chronicler of his own observations, and of others derived from the keepers in the London Zoo, Mr. Westell is often interesting. On page 161 he relates in all seriousness that the python and crocodile are the deadly enemies of the orang-utan; but, "both these enemies are, it appears, more often than not overcome. The huge snake is pounced upon, held securely by the powerful hands, and bitten to death, whilst the crocodile is beaten both with the hands and feet, the flesh is torn from the body, and the animal killed, or, as sometimes happens, the jaws and throat are torn asunder, which, of course, means instant death." All this will be interesting news to the score or more of collecting naturalists who have lived and worked in the jungles of Borneo.

Except for the drawings of extinct animals, and the fourteen red-and-purple colored plates by W. S. Berridge, all the illustrations seem to be from photographs made in the London Zoo, and poorly reproduced. Mr. Westell intimates a purpose, subject to "sufficient encouragement," to follow up this unique volume with another devoted to birds.

The Bibliotheca Sacra Co. of Oberlin, O., is to issue early in January the fifth edition of Prof. G. F. Wright's "Ice Age in North America" (formerly published by D. Appleton & Co.), revised and enlarged.

The problem of garden-lovers whose homes are near the sea is a triple one—to find plants which do not suffer in a salty atmosphere, or which do not need shelter from wind, or which themselves will provide shelter. The problem has been considered in "Gardens Near the Sea" (Stokes), by Alice Lounsberry, with an unusual degree of success. The writer is a seasoned garden expert, she has not been too closely limited in space, and she writes without gush, but with due appreciation of her subject. No flower book short of encyclopædic size can fully treat each plant mentioned, but the advice of a sensible manual is often the guide to choice. This book is to be recommended, not exclusively for seashore gardeners, nor for those also whose homes lie in exposed situations; its words of taste and warning may be taken to heart by others than these. The volume has good illustrations, several in color, chiefly of sueeessful seaside gardens.

The suburbanite whose enthusiasm for poultry is as yet untempered by experience, will do well to include A. T. Johnson's "Chickens and How to Raise Them" (Penn Publishing Company) in his initial outlay. While the practical poultryman will find the book too elementary to be of any great value to him, the beginner may forestall some expensive lessons of experience by paying heed to the many sensible hints as to the rearing of chickens by natural and artificial means, feeding, and hygiene. A chapter on poultry ailments will be of use to the amateur, but the more hardened poultryman would substitute the axe for the treatment recommended for many diseases. Concise common sense marks the treatment of the relative merits of the different "systems" of artificial brooding of chicks.

Emile Dumais, once war correspondent in India and South Africa for the London *Times*, and always a man of scientific interests, died last week in Washington. He was the founder of the Manitoba Agricultural College, and the purpose of his visit to this country was to study the methods of the Department of Agriculture. He was a graduate of the University of Toronto.

Dr. Samuel Alexander, whose death occurred last week in his fifty-third year, was a graduate of Princeton and the Bellevue Medical College; he studied also in London, Leipzig, and Vienna. Since his return to America he had always been connected with Bellevue in some capacity. He was a member of the Academy of Medicine, the New York Surgical Society, the International Surgical Society, and the Society of American Genito-Urinary Surgeons, and honorary member of the Society of Clinical Surgery.

Dr. Christian Archibald Herter, pathologist, died last Monday in his forty-sixth year. After occupying professorships in the Bellevue Medical College and in the College of Physicians and Surgeons, he was appointed in 1908 physician to the hospital of the Rockefeller Institute. With his wife, he founded two $25,000 lectureships, one at Bellevue, the other at Johns Hopkins. In addition to numerous special articles, he wrote "Diagnosis of Nervous Diseases" and "Lectures on Chemical Pathology."

Mary Baker Eddy died at her home in Chestnut Hill, Boston, on Saturday, aged eighty-nine years. She was born at Bow, N. H., July 16, 1821, the youngest child of Mark and Abigail Ambrose Baker. Her illness as a child prevented regular attendance at school, and beyond the elementary village education which she received, she was self-taught. At the age of twenty-two she married George Washington Glover, who, after six months, died of yellow fever; a few months later a son was born. In 1853 she married again, a travelling dentist, Daniel Patterson, from whom in 1873 she obtained a divorce on the ground of desertion. Her third marriage was with Asa Gilbert Eddy of Lynn, Mass., in 1877. In the year 1866, she discovered, she says in her writings, the science of metaphysical healing, and named it Christian Science. How many were the suggestions which she received from Dr. Quimby of Portland, Me., who seems to have treated her as early as 1861, in much the manner which Mrs. Eddy later recommended, is still a matter of dispute. At any rate, by 1875, the year in which "Science and Health with Key to the Scriptures" first appeared, her teachings had won her many followers. She organized, in Boston in 1879, the First Church of Christ, Scientist.

She founded the *Christian Science Journal* in 1883, of which for several years she was editor; and in 1898 the *Christian Science Sentinel*. She was awarded a grand prize and a diploma by the French government. Among her writings, in addition to the one already mentioned, are: "Christian Healing," "People's Idea of God," "Unity of Good," "Rudimental Divine Science," and "No and Yes."

Dr. John Cummings Munro, a prominent surgeon of Boston, and since 1903 surgeon-in-chief at Carney Hospital, died on Tuesday at the age of fifty-two. He graduated from Harvard, and was a member of the principal medical and surgical societies.

Dr. Horace Babcock, a well-known physician of Western New York, who served as a surgeon in the Army of the Potomac, died this week at his home in Gowanda, at the advanced age of eighty-six.

Drama.

Molière. By Brander Matthews. New York: Charles Scribner's Sons. $3 net.

Professor Matthews states his purposes in a prefatory note: "In this biography I have striven specially for three things: first, to set forth the facts of Molière's life, stripped of all the legends that compass it about; second, to trace

his development as a dramatist, making it plain how cautiously he advanced in his art and how slowly he reached the full expansion of his power; and, thirdly, to show his intimate relation to the time in which he lived." The execution of the first purpose has been a little scant, or, rather, the purpose itself has been unduly narrowed; the execution of the second, the author's standpoint considered, has been adequate; that of the third may be called without reserve satisfactory.

The story of Molière's life is told with the author's habitual clearness, with "resolute" caution, and with a condensation to which his distrust of the uncertain and his aversion to the unsavory have equally contributed. His abstinence in this regard impresses us as honorable, but over-strained. In the dearth of facts, legend or even calumny may, in a vague way, define a man in terms of the reaction he produced upon his contemporaries, and may fix the actuality of a being to whom they can add no trait. Again we may sympathize with the delicacy which ignores the worst scandals with respect to Armande Béjart's parentage, and yet think that delicacy unduly magnifies its office when it attenuates into a "love affair" the relation between Molière and Madeleine Béjart on which a nearly universal belief has set a more questionable but more significant construction. The resulting picture is inferior in warmth and freshness to that in Mr. Chatfield-Taylor's readable and credible biography of Molière (1906), a work which combines wariness in its judgments with liberality in its reports. The Molière of Mr. Matthews is a highly respectable person who pays the normal price of respectability in a little dulness.

Mr. Matthews can hardly be blamed for failing to solve some of the deeper problems in Molière's life—the question, for instance, of that rare tenacity of the laborious, orderly, and self-respecting—one might almost say, the dapper and clerkly—Parisian bourgeois, on whose mind, to judge from his works, twelve years of the provinces stamped scarcely a place-name, twelve years of the high-road scarcely an image from nature, and twelve years of Bohemian vicissitude and temptation hardly a visible mark. Again, the union of independence and compliance, of humor and melancholy, is clearly recognized; but the articles of this union, the *modus vivendi* of these opposites, are left unexplained. On his own ground, however, Mr. Matthews is usually trustworthy; yet we note two or three minor errors. "Toulon" on page 32 seems clearly an error for "Toulouse"; on page 45 the Italian nights at the Petit-Bourbon are given as Sunday, Wednesday, and Friday, whereas Tuesday, not Wednesday, is meant, as another context shows; the date, October 14, assigned on page 129 to the production of the "Impromptu de Versailles" in 1663 has been disproved by Paul Mesnard ("Notice Biographique," page 283). The author's hatred of legend has found means to adjust itself to some personal excursions into the field of conjecture, but he never forgets that the exercise is merely recreative. In matters of fact he has rarely or never been able to extend or to reverse the data collected by Paul Mesnard in his ample and impartial "Notice Biographique" (Œuvres de Molière, Vol. X, Paris, 1889).

In what may be called the heraldry of literature, in noting the family and tracing the pedigree of plays and parts of plays, Mr. Matthews is assiduous and competent. In the earlier and thinner works, the labelling and invoicing which these questions of genus and genesis involve sometimes draw author and reader together in the sympathy of a common fortitude; the criticism brightens in the treatment of the later masterpieces in which a larger enthusiasm has come to the support of an equal fidelity. Molière is for the author "the chief figure in all French literature"; the summary and condensation of the French mind; the inventor of "high comedy," a type to which all literature has furnished but a handful of examples and Molière himself only two, one of them rather doubtful; the associate, if not quite the equal, of Shakespeare (the comparisons with Shakespeare are extended and valuable), and the father of a literary progeny which recalls the Biblical prophecies of the seed of Abraham.

The admiration for Molière is the most candid of all admirations, because it is the most fearless. Mr. Matthews points out errors freely, apparently quite unconscious that the excellence of the aggregate or the average can be affected by the infirmities of the particulars. Molière is the master of dramaturgy, but, to confine ourselves to the best and best-known plays, the "Misanthrope" is "a little too empty and too episodic," the "Bourgeois Gentilhomme" is "a curious nondescript," "Don Juan" is "rather fragmentary," the "Avare" has "a fragmentary method," the "Ecole des Femmes" has a "more or less mechanical" intrigue, even "Tartuffe," the "superb," the "masterly," has a dubious ending. It is evident that the voice we hear in Mr. Matthews is the voice of the tradition, happy in the possession of a new mouthpiece. What was really needed was a frank and fearless revision of Molière's claims in the light of the clearer sense and the stronger feeling both for technique and for truth that have come to us in the last fifty years. A double proficiency, in these standards and in Molière himself, might have seemed to point out the professor of dramatic literature in Columbia University as the ideal man for the execution of this task; but a liegemanship, in itself rather beautiful, has disqualified him for adding this final service to the other claims of his book on the grateful attention of scholars. It lacks that preliminary skepticism which gives value to ultimate faith; the verdict has been restated, but we do not feel that the case has been retried.

The third of the author's designs, the delineation of the period in relation to Molière, has been successfully carried out; the pictures are clear, relevant, and duly subordinated.

We are told that this work is the fulfilment of a hope of nearly forty years. The example of Hamlet might show that a long-cherished and long-delayed intention may owe its fulfilment to the spur of impulse; and the English of this book suggests a precipitation unknown to its author's earlier work. Time and the lack of time are the disintegrators of style, but Mr. Matthews in this book has exceeded the bounds of reasonable indulgence. He has not only at times treated simple ideas with a repetition and elaboration which indicate that years have not confirmed his early faith in the intelligence of his countrymen, he not only gives us bulging and congested sentences; but he warps and perverts the English idiom, uses those novelties of combination which cloak negligence under the guise of originality, and indulges in some rather tinsel ornament, of which the jingling cleverness of "ingenuous ingenuity" may be cited as example. Those who remember the excellence of Mr. Matthews's style at its best will be the slowest to forgive its deterioration.

An elaborate, conscientious, and, on the whole, intelligent revival of "Macbeth" is a welcome incident in these degenerate days, and it is pleasant to think that this enterprise of E. H. Sothern and Julia Marlowe, which has just been accomplished in the Broadway Theatre, is likely to meet with ample public support. At all events, the capacious house has been packed to the doors at the initial performances. The interpretation of the tragedy is not especially brilliant in any respect, but maintains a high level of excellence throughout, and exhibits healthy purpose and vigor. Both stars are entitled to hearty credit. Mr. Sothern is not a subtle or inspired actor, but he has ambition and perseverance, and is still making steady progress in the development of his natural resources, which, in the beginning, did not especially qualify him for tragic parts. But he is no longer deficient in physical power, and is acquiring new facilities of expression. His monotony of utterance is still his chief artistic weakness, and is, perhaps, the greatest obstacle to his advance in the higher poetic drama. His action is often much more eloquent than his speech. Being a student, rather than an interpreter, his Macbeth runs along traditional lines, exhibiting little originality except in minor and unimportant details of stage business. In externals it is, as a rule, correct, but the spiritual side of it is vague, and it is

not always consistent. Its alternations—manifestly for stage effect—between abject weakness and criminal audacity are too abrupt and violent. After the murder, for instance, he is unable to walk or stand without his wife's assistance, but a moment later, when the alarm is given, he is in full possession of his faculties. In the cauldron scene, again, he rolls in hopeless collapse upon the ground. Macbeth was made of sterner stuff than that. He illustrates the terrors of the body, rather than the anguish of the soul. But he gives a thoroughly meritorious performance. Miss Marlowe's Lady Macbeth, if lacking in sustained tragic intensity and power, has some fine moments, and is an exceedingly clever attempt at a compromise between the old traditions and a more human conception of the character. Remorseless in her first promptings of her husband to murder, and in her scornful rallying of him after the deed, she strongly and pathetically emphasizes the subsequent tortures of her own conscience and her yearning tenderness for her suffering partner. Her sympathy for him is denoted by secret caresses and other tokens of wifely encouragement and caution, and her own anguish—to culminate in the sleep-walking episode—is most skilfully and effectively indicated. It would be easy to argue against the legitimacy of this ideal, but it is full of interesting suggestions.

When Mme. Bernhardt, as the young Duke of Reichstadt in Rostand's "L'Aiglon," made her first appearance Monday night at the back of the stage, there was such vigorous applause as the Globe Theatre has rarely heard. Mme. Bernhardt does not need flattery, and it would be untrue to say that in repose she looked the part of the boy prince, or that her voice, although still of the same bell-like tone in the calmer recitation, did not show signs of fatigue in the more impassioned parts. But her impersonation, which has long been admired in this city, is still a wonderful performance, more wonderful now, perhaps, in some respects than it was in bygone years.

Such differences as are to be noted between her present performance and that of ten years ago are those brought about by lapse of time. So finished an actress does not make radical changes in a conception that has once been carefully worked out in its minutest details. No more now than before can she disguise completely the truth of her sex, but her mimicry of masculine characters—the erect carriage, the free stride, and the decisive gesture—is as adroit as ever. She succeeds also in conveying a sense of personal distinction which is exceedingly effective. The Duke of Reichstadt, as she portrays him, is a positive entity which but rarely suggests the woman in masquerade. The depression of the captive and the fret of a gallant but downcast spirit are expressed in the manner of her first entry.

The New Theatre management doubtless exhibited enterprise in securing the first performance, upon any stage, of Maeterlinck's "Mary Magdalene," but would have been wiser, perhaps, in evading apparent responsibility, or semi-responsibility, for a representation which they could neither control nor direct. This work has been reviewed already in the *Nation* (October 20). The opinion was then expressed that it is fitted rather for the closet than the stage, and this impression is confirmed by the actual performance. There are several dramatic situations in it, but, on the whole, it is deficient in connected action and is episodical rather than truly dramatic. But in the present case it can scarcely be said to have had a fair trial. The production, though elaborate, costly, and spectacular, was not enlightened. Perhaps the most nearly satisfactory acting was contributed by the supernumeraries, who were many and well drilled. The delivery of the Sermon on the Mount, by the unseen Galilean, upon which Maeterlinck lays so much stress, was rendered almost wholly ineffective by the theatrical method of the reciter. Another striking scene, the summons of the Magdalene to the Master by the newly risen Lazarus, was made almost grotesque by the unintelligent effort to impart a sepulchral ghastliness to the messenger. But the play suffered most from the weakness of the principal performers. Miss Nethersole's impersonation of the Magdalene was especially disappointing, for the artificiality of the opening scenes—which might possibly be regarded as in some sense appropriate to the character—was maintained in the great final act, and was unrelieved by any of those fine outbursts of passion of which the actress is known to be capable. Her moderation would have been more of a virtue if her posing had been less suggestive of affectation. Silanus, that clever study of an old Pagan philosopher, was totally spoiled by the self-conscious airs of Arthur Forrest. Edward Mackay's manly performance of Verus was marred by slovenly speech. Charles B. Hanford imparted some vivid touches to Appius' story of the raising of Lazarus. But the general performance, even when capable, was altogether uninspired. Competent producers are almost as rare as great dramatists, and the latter, unfortunately, are almost wholly at the mercy of the stage manager.

The name of Charlotte Porter alone appears on the three latest volumes of the First Folio Shakespeare (Crowell), viz., "The Life and Death of Richard the Second," "The Tragedy of Richard the Third," and "The Life and Death of King John"; but the style of editing remains quite the same as in the earlier issues. The many excellences of this edition we have pointed out more than once. As the set nears completion, the unusual value of the publication becomes even more apparent.

"We Can't Be as Bad as all That!" is the title of Henry Arthur Jones's new comedy. It is a play of social life in the English upper classes, and is to be put in rehearsal at once by the Authors' Producing Company, under the personal supervision of Mr. Jones.

"Henry VIII" is expected to run through the winter at His Majesty's Theatre in London. It will be followed by "Macbeth," which Sir Herbert Tree has been promising for some years. Undoubtedly, he will make the fullest use of the pictorial opportunities which it will offer to him. He himself will play the guilty Thane, and the part is likely to suit him a great deal better than Hamlet and some others. Arthur Bourchier will be his Maeduff, and Irene Vanbrugh his Lady Macbeth, a character which she has played already to her husband's Macbeth. It is said that Gordon Craig will design a good deal of the scenery.

Seymour Hicks is preparing a version of Schiller's "Joan of Arc" for the use of Ellaline Terriss, who will appear as the maid, soon after Christmas. The production is to be on a lavish spectacular scale.

H. B. Irving has just selected the evening of Wednesday, December 14, for his reappearance at the London Queen's, after his successful provincial tour. He will then present, under the title of "The Princess Clementina," the new four-act play which A. E. W. Mason and George Pleydell have adapted from the former's novel, "Clementina." For the part of the heroine Mr. Irving has specially engaged Stella Patrick Campbell.

Music.

AMERICAN FOLKSONGS.

More than ever before, the public seems to be interested in the folksongs of various countries, and this interest is shared by the composers, who are as assiduous as their predecessors in weaving them into their scores. At the same time, singers, players, and lecturers find audiences eager to welcome them whenever folk-music is their theme. Last week daily opportunity was provided to hear the Imperial Balalaika Orchestra play the delightfully melancholy airs as well as the gay dance tunes of the Russian peasantry on their own instruments, and on Tuesday Marcella Sembrich gave a recital devoted entirely to those musical wild flowers known as folksongs—a recital which will stand as one of the most enjoyable events of the musical season.

As Mme. Sembrich sets the fashion in song recitals, she will have many imitators, but it is to be hoped that in one important respect her programme will not be accepted as a model by others. While every European country was represented, there was not one of those genuine American folksongs that are dear to many millions of people throughout this country. Not only were they ignored, but in the announcement sent to the newspapers there was a certain defiant air which cannot be allowed to go unchallenged: "Mme. Sembrich, having set a scientific as well as an artistic standard, has chosen to pass over the popular minstrel songs of America, but to let such indubitable folksongs as 'Gai lon la' and 'Musieu Bainjo' stand for the form in America."

The standard which excludes the popular songs of our Stephen Foster from the list of real folksongs cannot be accepted as "scientific." Dr. Hugo Riemann, the leading German theorist and lexicographer, defines the word "Volkslied" as "either a song which originated among the people (*i. e.*, the poet and composer of which are no longer

known), or one which has been adopted by the people; or, finally, one which is 'volksmässig,' *i. e.*, simple and easily comprehended in melody and harmony." Now, Foster's melodies are included under both the second and the third of these definitions as true folksongs: they have been adopted by the whole American people, and they are always simple in melody and harmony. To exclude them for the reason that their composer happens to be known, is an argument that can be reduced *ad absurdum* by a question: Suppose some antiquarian discovered that certain folksongs dear to the Germans for generations were composed by such and such an individual; would a single person in the whole Empire cease to regard them as folksongs? And if by some miracle the names of all the originators of these melodies were ascertained, would folksong cease to exist?

From every rational point of view Foster's popular melodies are genuine folksongs. In this species of music, as Wagner once wrote, "the word-poem and the tone-poem are one and the same thing; . . . separation of the two is inconceivable to those who sing them; they seem to belong together, like husband and wife." This is true of Foster's. He wrote his own poems as well as his melodies, and the words and music of such songs as "Way Down Upon the Suwanee River," "Massa's in the Cold, Cold Ground," "My Old Kentucky Home," are as closely allied as are the text and the music in Wagner's "Tristan and Isolde." Yet--and here is another point of identity with the originators of true folksongs—he was not a professional musician. Far from it. To save his life he could not have composed a symphony or a sonata, or even a short piece for pianoforte, or art songs with complex harmonies like MacDowell's or Chadwick's. His harmonies seldom go beyond the three most elementary chords—tonic, dominant, and subdominant; and his melodies are so rich and satisfying in themselves that they give pleasure even without harmonies—which brings them under the definition of folksong given by Berlioz. Of musical form Foster took no more thought than a canary. His songs "give voice to the joys, sorrows, hopes, and aspirations of a people rather than an individual"; they are songs created by the people—the folk—for he was one of them. If they are not folksongs, what are they? Some have called them by the German name "volksthümlich," which means conscious imitations of folksongs, like Schulz's "Lieder im Volkston"; but Foster did not consciously imitate the songs of his or any other country; he wrote what he did because his genius was of that kind.

Not only are his songs—there are above a hundred and fifty of them—genuine folksongs; they are genuinely American, too. On this phase of the subject, also, erroneous notions are still widely current. Thousands who sing his songs do not know who wrote them, or care; many other thousands think they are negro plantation songs. Now, Foster did visit the plantations and campmeetings of the black men to catch their idiom; he had to make his living by writing for the "negro-minstrels," who at that time had virtually a monopoly of the concert business; yet even those of his poems which he wrote in the negro dialect voice the general feelings of mankind rather than the feelings of a particular race; and as for his melodies, they are as unlike true negro music as an Hungarian rhapsody is unlike a Bellini operatic aria. In every bar they betray his own individual genius, and that this individual genius was thoroughly American is indicated by the way in which the American people have taken them to heart—infinitely more than they have any imported folksongs. Apart from a national anthem, nothing arouses such intense enthusiasm in an American audience as the singing of one of these American folksongs. Indeed, there is nothing quite like it in any foreign country.

We have become accustomed to foreign artists slighting the music of our country; but the omission of Foster from Mme. Sembrich's programme was the unkindest cut of all. No doubt it is owing to a misunderstanding; yet none the less it is regrettable. However, no great harm will result. Foster's songs will survive this episode, and the American public may continue to believe that we not only have folksongs, judged by the strictest scientific standard, but that we have an abundance of them equalling the most precious of Europe's treasures. Had Foster lived before printing was invented, his songs would have been carried from mouth to mouth. As Dr. Martin Darkow has truly said: "The composer would have been forgotten, and the modern historians would have had occasion to place the American people themselves on the pedestal of the unknown poet-composer." Let us be thankful that the printer's art has made it possible for us to honor Foster individually—as the Germans honor Silcher for composing the "Lorelei," universally accepted as a folksong—while at the same time recognizing in his utterances the voice of the American people.

Dancing is the lowliest of the fine arts, yet when it is done with the grace and technical perfection exhibited by the Russian dancers last year in our opera houses, it is worthy of serious attention. For this winter Russia has provided us with another demonstration of what can be done with crude material. Twenty-two years ago W. W. Andreeff came to the conclusion that the peasant instrument called balalaika—a sort of mandolin with a triangular body under a long fingerboard—was capable of being elevated into the sphere of orchestral music. He perfected this instrument, as well as its cousin, the domra, trained a number of players on them, added primitive pipes and an instrument which he calls "dulcimer," but which is a sort of zither on piano legs, with a keyboard on the right side, and, behold, he had a new sort of combination, as different from an orchestra as an orchestra is from a brass band. The number of novel tone-colors obtained is surprising, and the precision and delicacy of shading secured by Mr. Andreeff from his twenty-five players are simply amazing. As a matter of course, the programmes are made up chiefly of Russian folksongs, which have no superiors—Rubinstein thought no equals—in the world; but performances of pieces by the great masters are also thoroughly enjoyable. The Balalaika Orchestra will play throughout the country, and it is to be hoped that the members of our numerous college mandolin and banjo clubs, in particular, will not lose the opportunity to hear what wonders can be achieved with this kind of playing.

An interesting document relating to Richard Wagner's first engagement at an opera house, has recently been unearthed in Germany. In 1833, when he was twenty years old, the Stadttheater in Würzburg, where his brother Albert was employed as régisseur, actor, and singer, engaged Richard to serve, particularly as chorus master. But, the document continues:

He must also, in case of need, help along in spoken or mute rôles in plays, and participate in the tableaux of ballets when called upon to do so. In case of disobedience or insubordination, the director has the right to punish him in accordance with the rules of the theatre. In case the earnings of said Richard Wagner should not cover the fines imposed on him, his bondsmen pledge themselves to pay them. Richard Wagner has to place all his energies and time, so far as required, at the disposal of the director of the Stadttheater, in return for which he will receive every month ten florins as compensation.

Mr. Converse, composer of "The Pipe of Desire," which was sung at the Metropolitan Opera House last season, is now superintending the rehearsals of his new work, "The Sacrifice," at the Boston Opera House. The principal singers in it will be Constantino, Baklanoff, and Alice Nielson. Wallace Goodrich will conduct. The subject-matter of "The Sacrifice" is more distinctly American than that of the former opera. The scene is laid on the Mexican border in the stirring times of 1846, when the United States was engaged in hostilities with the sister republic to the southward. Mr. Converse, in this instance, has written his own libretto, except that the lyrics are by "Jack" Macy, one of the younger literary men of New England.

London is to hear "Salome," with modifications, so saith the Lord Chamberlain.

Art.

French Portrait Engraving of the XVIIth and XVIIIth Centuries. By T. H. Thomas. New York: The Macmillan Co.

The eighteenth century in France has called forth a considerable literature,

even in the field of prints alone. Portalis and Beraldi have given us a dictionary of the engravers of that time; the Goncourts, Lady Dilke, and Ralph Nevil have written on the general subject; Bourcard and Delteil have recorded prices brought by engravings, and there are numerous monographs on individual artists of this and of the preceding century, for which latter there is also the catalogue of Robert-Dumesnil. But it remained for the author of the present work to make a special study of the portrait engraving of these two centuries, hitherto treated only incidentally, excepting in the work of Duplessis, published in French in 1879, and in Charles Sumner's article, "The Best Portraits in Engraving," published in 1872. For English-reading people, especially, the author had almost a free field, for Sumner's article was cursory and uncritical. The present careful work traces the development of engraving from the somewhat austere effect, but keen characterization, of Claude Mellan at his best, through the mastery of Nanteuil and the rich versatility of the Drevets (with whom technique and the rendering of textures were still subordinated to the end in view), to the rather soulless devotion to method of Wille, which marked the beginning of decay, and to the change to greater simplicity in design and technique in the period of Louis XVI and Cochin. These changes in technique were naturally to a great extent a response to the changing point of view that dominated portrait painting. The imposing distinction of the decorative Rigaud, for instance, is reflected in the brilliantly executed engravings of the Drevets, admirable examples of adequate adaptation of an art to its purpose.

The engraved figure-pieces of this period have a more obvious and vivid appeal through their subjects, as they mirror the life of the time in its elegance and light-hearted gayety. Yet the portraits also have a decided interest. Mr. Thomas does not bow unhesitatingly to previously accepted standards. Of the four famous plates long regarded as the finest portraits engraved, the Bossuet of Pierre Imbert Drevet and the Champaigne of Edelinck pass muster with him, while Masson's Brisacier and Nanteuil's Pompone de Bellièvre do not. "Engravers," he reflects, "are generally best known by works which are striking or sensational or peculiar," and the reader here may recall the case of Mellan's Head of Christ executed in one spiral line.

The sanity, the soundness of view, makes the book a stimulating guide, and the well-chosen illustrations are helpful because produced by a photo-mechanical process which does not cut up the lines by a mechanical network as in the case of the half-tone. Naturally, no one will expect them to bear too close a scrutiny, particularly as many are much reduced in size from the originals. The student will use this book in connection with such excellent facsimile reproductions as those in the volumes of "Engravings and Woodcuts by Old Masters" (prepared under the direction of the late Friedrich Lippmann), or those issued by the British Museum. Or he will get access to the originals if near a print room—as in Washington, Boston, or New York.

There is an appendix, giving a useful alphabetical list of engravers, with summary characterizations. But the proof-reading on the index has been careless. References one page out of the way, transposed names, omissions (*e. g.*, Woeriot, Fouquet, Duvet), and names spelled differently in text and index (Quénédey, Quénéday, Lombart, Lombard), are too common.

Houghton Mifflin Co. announces for publication in the early spring a memoir of the late John La Farge, with a study of his work by Royal Cortissoy, critic of art and literature of the New York *Tribune*.

According to report, two new Rembrandts have been discovered in Frankfort, Germany.

There are numbers of books dealing with Egyptian art, but they are forbidden to the busy man on account of their length and the exhaustiveness of their detail. A shorter book is welcome, such an one as has been furnished by Prof. W. M. Flinders Petrie in his "Arts and Crafts of Ancient Egypt" (McClurg). The range of subjects treated is great and multitudes of details are introduced, but they are pertinent and do not weary the reader. The volume contains one hundred and forty illustrations which are chosen with skill and out of a full knowledge. For the most part the text is made up of discussions based upon the things that are under the reader's eye. After a couple of chapters on the character of Egyptian art and its periods and schools, the author takes up in succession the following subjects: Statuary, reliefs, painting and drawing, architecture, stone-working, jewelry, metal work, glazed ware and glass, pottery, ivory working, woodwork, plaster and stucco, and clothing. It is evident that the work is not exhaustive when it is seen that the entire exposition runs to only one hundred and fifty duodecimo pages. The author has been able to bring forth many new points from his store of knowledge gained by many years spent in excavating sites in the valley of the Nile. Professor Petrie has not changed his view of the date of the first dynasty, but clings to his published date of 4777 B. C., instead of 3400 B. C., the date advocated by Professor Breasted and most German scholars. On some accounts it would have been better to group the illustrations at the end of the volume; scattered through the book they are less convenient for reference.

Emile Michel's "Great Masters of Landscape Painting" (Lippincott) is what its title implies, a series of individual appreciations rather than a history. It is a ripe work, but must be reckoned one of the author's minor achievements. He brings to the task a mature judgment, and often draws on personal reminiscences of the recent masters. Perhaps the agreeable tone of the criticism is more prominent than anything in the way of novel or pungent opinion. The volume is a small folio and contains more than two hundred illustrations, of which forty are photogravure plates. Sketches as well as finished pictures are fully represented. In the Italian field the treatment is scrappy and inadequate. Masaccio, who did a glorious mountain landscape in the Tribute Money, is not even mentioned; no attention is paid to two admirable pen panoramas by Leonardo da Vinci, while Perugino's distinguished position as a landscapist receives no recognition. In explaining Giorgione's fantastic picture in the Giovanelli Palace (p. 16), M. Michel (or is it the modesty of the translator?) provides that artist with an otherwise unknown "wife." Generally speaking, the author holds by the realists, and when he reaches his favorite Dutchmen and the masters of yesterday the work gains immensely in quality. Living artists are omitted, and this limits the treatment of the Giverny school to bare and disapproving mention. Constable is one of the excellent chapters; Turner is taken with many reservations. Of Ruskin's campaign against Claude is written: "Ruskin speaks of Claude with the most vulgar and unintelligent presumption." Change "vulgar" to "fanatical" and this harsh saying becomes wholly true. The sparseness of the index indicates perhaps that this is a book to be read rather than consulted, and indeed the appeal is chiefly to the general reader. From the skilful collection of so much pictorial material, much of it quite unhackneyed, the scholar too may profit.

We have received the forty-first volume of the *International Studio*, including the numbers from July to October last. Certain friends of this useful magazine would be glad to see it assume greater critical authority. As it is, it does useful service in gathering in current art intelligence from many sources. No single journal covers the field in so truly international a spirit. Essays on the art of Cecilia Beaux, Edward W. Redfield, and Daniel Chester French are attractive titles in the present volumes. A somewhat extended review of Modern Landscape Paintings in Japan, and Montgomery Schuyler's critique of the new Pennsylvania Station in New York are articles of more than passing interest.

"The Golden Age of Engraving," by Frederick Keppel (Baker & Taylor), is an ingathering of lectures, magazine articles, and brief essays, some of which have done duty in the booklets issued by Mr. Keppel's firm. First and last nearly all the periods and masters of etching, engraving, and mezzotinting are touched on by one who knows the subject intimately. There is naturally some repetition, but no more probably than is salutary for the unskilled reader. There are 262 illustrations, making a kind of compendium of the art. Among really great figures we miss only Hollar and Blake. An autobiographical introduction tells how casually Mr. Keppel was led into the calling which he has illustrated for more than a generation. The chance of buying a lot of old prints cheap, and of finding a collector honest enough to pay a right profit, turned Mr. Keppel from

bookselling to the allied trade. His first customer, James L. Claghorn of Philadelphia, was also his mentor. Of his adventures in the print shops and auctions of Europe Mr. Keppel tells vivaciously. Excellent is the story of Mrs. Noseda of London, who having lent some historical portraits to her landlord, Lord Salisbury, was rewarded by a personal visit and presentation of a life membership to the Army and Navy Stores. This she refused with the words:

Thank you, my lord, but I cawn't go against my own class. "Why, Mrs. Noseda," said he, "you will save 10 or 15 per cent. in the purchasing of all your household supplies." "Let the shopkeepers make their profit out of me," she shouted (by this time she was angry). "My lord," she went on, "you and the other great property owners are starving your own tenants, and if this goes on you will have whole rows of shops standing empty and idle. I won't accept your card?"

"The Lure of the Antique" (Century Co.), by Walter A. Dyer, will be of considerable value to amateur collectors of old furniture, china, mirrors, candlesticks, pewter, glassware, copper utensils, clocks, and some other household furnishings of the American colonial period and the early days of the republic. The book would be regarded by a museum expert as suggestive rather than authoritative. In style, text, and illustrations, it is journalistic, a compilation, for the most part, of special articles contributed to *Country Life in America*. It is not on that account less well designed to further the ransacking of garrets and enrichment of antique dealers. The author's enthusiasm, however, is tempered with good sense; his counsel usually cuts true, as in this: "When you buy an old chair, determine if it be really old, genuine, and fairly priced. But examine it also for good workmanship and intrinsic beauty, and try to see if it be comfortable. Chairs to be seen and not sat upon are intolerable encumbrances." Of antique pewter Mr. Dyer says: "Its beauty is rather that of some quaint, sweet-faced, gray-haired old lady in a lace cap than of a blooming ball-room belle. Some people don't care for old ladies—some do. And there is the whole story in a nutshell, applying to nearly all forms of antiques." The illustrations, many of them from Miss Mary H. Northend's collection of photographs, give glimpses of colonial homes on the Massachusetts North Shore and elsewhere. Not many of the objects in public museums or houses preserved by historical societies are included—a defect, certainly, if the work undertook to be a manual of its subject. And even accepting the book's limitations, one questions whether the general reader ought not to be informed where he may see good examples of American antiques, the list to include not only the art museums which exhibit colonial and later arts and crafts, but such collections as those, say, of the Oliver Ellsworth house, at Windsor, the Paul Revere house, Boston, the Spalding house, Lowell, and the Longfellow House, Portland. The textile arts Mr. Dyer does not include among antiques, and there are other omissions, doubtless justified by the impossibility of writing about all old things. The space given to spurious and "glorified" antiques is certainly not inordinate, for as the author says: "There's a vast deal of faking in the business, and it's a dangerous venture for the uninitiated."

The death is reported from Karlsruhe of Karl Hoilig, the painter and illustrator, aged forty-seven.

J. Exner, the Danish painter, died the middle of last month at the age of eighty-five.

The death is announced from Paris of the landscape and portrait painter, Etienne Prosper Berne-Bellecour, in his seventy-third year. His reputation was first made by pictures of episodes in the Franco-Prussian war.

Finance.

MR. HILL'S PROPHECY.

From start to finish, last week on the Stock Exchange was a week of demoralization and of declining prices. Losses in active stocks ranged from 5 to 10 points; selling by speculators for the decline was intermingled with realizing sales for the account of those unlucky people who had been conducting a belated "after-election boom." There were doubtless many causes for this severe reaction—among them the fact that prices for many shares, despite the abrupt decline of the day or two after November 8, were still, at last week's opening, ten points above October's initial figures, whereas the general financial situation could not be said to have improved. But the market itself assigned as the real cause, both for the break in prices and for the wave of pessimism which swept over the financial community, the interview given out in St. Paul by James J. Hill, a week ago last Monday, on the industrial outlook.

The Stock Exchange has a superstitious respect for a statement, made in print by an eminent financier, about the financial situation. Private expression of his views is not sufficient, even though all Wall Street knows what he said. Knowledge of the facts in the case by the whole community, before any oracle has spoken, is not enough. To create exactly the psychological situation requisite for the Stock Exchange's purposes, the thing must be down in black and white.

Last week provided an interesting illustration of the principle. Notwithstanding the Stock Exchange's unanimous opinion that the shove which toppled the market over was Mr. Hill's interview of last week, there was little or nothing, in the statements ascribed to Mr. Hill, which the common-sense part of Wall Street and of the business community had not itself been saying, ever since early autumn. That there was bound to be a distinct slowing-down in trade activity next year; that plans for industrial expansion would be curtailed, as a consequence of our recent over-production of goods and over-use of credit, and that employment of labor could not be so active as in the premature "boom year" 1909—all these conclusions had been reached, many weeks before, by men in touch with the facts of the present situation. Wall Street went further, after the published interview had been repudiated (in a very qualified way), and declared that Mr. Hill himself had expressed the same views long before they found lodgment in the newspapers. Nevertheless, the fact that the predictions were in print remained the central fact in their bearing on the market. The logical inference, from the Stock Exchange point of view, was that if only these prevalent opinions had been exchanged in whispers, and no one had uttered them in a really loud tone of voice, everybody might have been a pessimist without the innocent stock market ever suspecting it.

The truth of the matter is that interviews and statements of the sort are primary influences only when a responsible financier predicts something wholly at variance with what the market had previously expected, or when he forcibly sets forth misgivings which had been haunting only vaguely and indistinctly the mind of the community at large, or when, while merely confirming preconceived ideas, the prediction is uttered at one of those interesting moments when stocks are ready for a sudden rise or fall, and are waiting for something tangible to start the ball rolling. Clearly enough, it is in the third of these classifications that last week's interview belongs.

Perhaps the most noteworthy fact about the incident lies in the very frank and public concurrence of other financiers in the general views of Mr. Hill. President Mellen of the New Haven Railroad agreed in admitting that he saw "every indication of a reaction in business," remarking also, "How severe it will become, or how long it will last, I find myself unable to predict." President Underwood of the Erie, and with him other railway presidents, endorsed more cautiously Mr. Hill's general prediction. Some of them emphasized the brighter side, though even they did not question the main prediction. Thus Mr. Yoakum of the "Frisco" declared that business will continue to move ahead on a better basis than "boom-time methods," and Charles M. Schwab, while admitting that we may have "a little depression," added that "it cannot stop our healthy, happy, inevitable progress and prosperity."

In other words, the prophecy seemed to be concurred in, where one might possibly have looked for denial. But so far from being a matter of grave discouragement, that is in a way a reassuring sign. When predictions of trade reaction are made on manifestly correct grounds, but are angrily denounced (as

they were in 1902 and 1906) by all other men with financial and industrial connections, the inference cannot be escaped that the financial leaders have been caught off their guard, and that finance and industry themselves are unprepared for the readjustment process. When, for example, in midsummer of 1907, with the storm-clouds gathering rapidly on the financial horizon, and signs of grave economic disturbance coming plainly into view, William Rockefeller declared that he could "see no signs of a general reaction in business," and H. H. Rogers protested that "the prospects are very bright" and that "there is not the slightest reason why business should not show improvement," it was easy to infer that some great financial interests were unprepared. It was not a very bold further deduction that the banks and corporations governed by such large capitalists were in danger of being overtaken by the financial hurricane with all sails spread.

No such position of affairs exists today, and that is one essential reason why Mr. Hill and all the other prophets of slowing-up in trade agree in dismissing any notion of a crisis. Indeed, one evidence of the entirely sane and intelligent view held by the business community in the matter is its prompt rejection of all extremely pessimistic ideas. The St. Paul newspaper, in which Mr. Hill's interview first appeared, started it with the headlines, "Hill Sees Tie-up of All Business." But nobody took this caption seriously, and every one knows that nothing of the sort is on the calendar.

The industrial movement in this country, since the greatly overdone "Sunshine crusade" of 1908 and the visible over-expansion of 1909, has followed exactly the course marked out by the precedent of financial history. Historical precedent shows with equal clearness what the next chapter ought to be. What it points to is the return of American industry, through an orderly process of retrenchment, economy, and sobriety, to the sound position which it sacrificed in 1906 and 1907, and which it failed to regain in 1908 and 1909. When our foot is again on solid ground—and there are visible weather signs which will tell us of that achievement—people familiar with the story of other decades will know that the time is ripe for another great forward movement in American prosperity, on such a genuine basis as the country has not witnessed in many a year.

THREE BOOKS OF WIDE INTEREST

A NOTABLE CONTRIBUTION TO NEW ENGLAND HISTORY

Beginnings of the American Revolution

By ELLEN CHASE

3 vols., 8vo, 1500 pages, 75 full-page illustrations, net $7.50, *carriage extra. Edition de Luxe, full boards, paper label, net* $15.00, *carriage extra..*

THE MOST COMPLETE ACCOUNT YET MADE OF THE CAUSES, CIRCUMSTANCES AND PERSONS PRODUCING THE AMERICAN REVOLUTION.

Miss Chase has had access to special sources in State and City archives, the contemporary newspaper files at the British Museum, as well as family tradition, and she has used her opportunities so as to present a treatment of the beginnings of the Revolution not hitherto available anywhere and to make a significant contribution to American History.

Especial effort has been made to place on record the part played by the small towns; and allusions to individuals have been freely made in the belief that members of the various patriotic societies would appreciate a detailed relation of those stirring times.

More space than is commonly allotted has been given to the English side of the points at issue, and many diaries of English civilians and officers are quoted as well as those of our own Tories and patriots in order to present sympathetically their opposing views, letting each in turn tell some part of the story.

The illustration is notable and ample, the seventy-five full-page pictures including portraits of most of the chief actors in the historic drama here described. Several American portraits, including an excellent example of Gilbert Stuart's art, appear by permission for the first time.

The books are the best product of American manufacture, and in printing, paper and binding, as well as illustration, are worthy of their subject.

THE ART BOOK OF THE YEAR

First Edition Exhausted Before Publication.

The Golden Age of Engraving

By FREDERICK KEPPEL

8vo, 550 pages, 263 illustrations, cloth, $3.50 *net, postage 26 cents. Edition de Luxe, full boards, paper label,* $7.00 *net.*

This volume brings together the results of Mr. Keppel's life-long study of engraving and etching. It ranges over the whole field from Dürer's work to Pennell's and offers a wealth of comment, counsel, and suggestion. The illustration is no less rich and varied, consisting of examples of the work of nearly every great engraver and etcher from Dürer down, showing the peculiar style of the artist.

A BOOK FOR EVERY CHRISTMAS LIST

THE

Christmas Treasury of Song and Verse

THE BAKER & TAYLOR COMPANY

33 EAST SEVENTEENTH STREET, NEW YORK

SIGNIFICANT BOOKS

MY BROTHER'S KEEPER
By CHARLES TENNEY JACKSON
Author of The Day of Souls
Illustrated by A. W. Brown
$1.50 postpaid

Rand, the central character, is perhaps the greatest egoist ever painted. There's a genius in the book. —*Chicago Inter Ocean.*

Mr. Jackson's novel is the best we have read for many a day—an impressive, earnest study of an important Americean problem.—*Indianapolis News.*

The Unlived Life of Little MARY ELLEN
By RUTH McENERY STUART
Author of Sonny, etc., etc.
Illustrated by Ruth S. Clements
$1.00 postpaid

A most tender little story, in which the author, with the delicate strokes of her accustomed art, has mingled humor and pathos with telling effect. The heart that can withstand her moving power is hard indeed. With a quaint and winsome simplicity, she has caught the issues of marriage and birth in a touching tragi-comedy of mother-love.

BY INHERITANCE
By OCTAVE THANET
Author of The Man of the Hour
Illustrated by Thomas Fogarty
$1.50 postpaid

By Inheritance is a very remarkable novel, the next book in its kind to *Uncle Tom's Cabin;* far superior to *Dred* in a rivalry often vainly attempted by others. Octave Thanet has placed herself near the head of American writers of fiction. —*Thomas Wentworth Higginson.*

THE GOLD BRICK
By BRAND WHITLOCK
Author of The Turn of the Balance
$1.50 postpaid

Mr. William Dean Howells recently said that Brand Whitlock's *13th District* is our best political novel. He also called attention to the fine literary skill, right literary method and true literary ideal of his political short stories now collected under the striking title, *The Gold Brick.*

The NATIVE BORN
OR THE RAJAH'S PEOPLE
By I. A. R. WYLIE
Illustrated by John Newton Howitt
$1.50 postpaid

The Native Born is the book of the hour in England. It has made a profound impression. *The London Globe* says: It is a real pleasure to be able to say of a new novelist that with his first novel he has achieved, if not greatness, the next best thing—the right to be reckoned among the best of his contemporaries.

THE MAN HIGHER UP
By HENRY RUSSELL MILLER
Illustrated by M. Leone Bracker
$1.50 postpaid

We enthusiastically commend this work of fiction dealing with the strenuous yet ascending political life of the present. It is essentially big and vital. Terse, effectively humanized, replete with rapid action, this is a tale which men especially will admire and enjoy.—*Chicago Record-Herald.*

IN AFRICA
By
JOHN T. McCUTCHEON

Mr. McCutcheon's book on hunting big game in Africa is at once uniquely valuable and uniquely interesting. It is a significant narrative, packed with information of a novel and exciting expedition. The author sees with an artist's eye for color and a reporter's eye for human interest, and *In Africa* is a notable contribution both to our knowledge of human nature and to our knowledge of natural history. Details are given for the guidance of any who may intend a similar hunting trip.

Superbly Illustrated with many Remarkable Photographs and Drawings by the Author. Size 6½x9. Cloth, $3.00 net, or postpaid, $3.20.

THE QUAKER BOY

By ROBERT BARCLAY DILLINGHAM

"An account, natural in its simplicity, of a Quaker boyhood in New York City, the scenes and faces from this come forth in Mr. Dillingham's declining years, from the mists of memory—recollections that, clinging about an old brick house, built by day's work instead of by contract like most of the neighboring dwellings, and hence pretending to some dignity and relative importance, though now long engulfed in the obscurity of the tenement district, stand out in mental setting. To pass on to the absorbingly interesting military phase of the autobiography one may here but remark that, like the entire narration preceding, it lays diverting but modest emphasis on the writer's personal experience. And the upshot of a pretty romance is meanwhile traced."—Cincinnati *Enquirer* (Aug. 29th).

To one who is fond of a book like "Cranford"; who can find pleasure in the humorous description of a quaint society; who would study the homely ways of the Quakers and the influence of their teachings in the making of character, this novel will be full of interest.

The present story narrates the transformation of a Quaker boy into a soldier of the Civil War. It is evidently written by one "to the manner born." There is in it little sternness or harsh repression of individual convictions, but, if anything, too much liberty.

This small boy, however, soon had wonderful dreams of world empire with a seat of dominion in the Azores as an impartial place for the domination of both hemispheres; later he had an ambition to write an epic more sublime than "Paradise Lost" but met an unsurmountable difficulty in finding any characters for it greater than God or worse than the devil. He tried to obey the Quaker injunction to "mind the light" and sought inspiration from the Bible on "the opening of the book"; but when the first passage that greeted him was "Obed begat Jehu and Jehu begat Azariah"—there was a weakening of his faith. The descriptions of the household, the servants, the dog whose variegated ancestry justified his title, "E Pluribus Unum," are given with a fidelity which must have come from actual experience.

During his college days the boy developed into something of a scamp, and the pranks, the blanket tossings and initiations are described with a gusto impossible for any one who had not been a participant in such frolics.

Then, the threads of a love story become intertwined with his escapades, and we have a picture of the dazzling merriment and mischievous satire of a girl who lured the young scapegrace to flit around her charms as a moth around a candle.

But the great war began for the preservation of the Union and the Quaker Boy responded to the call of patriotic duty. The scenes of army life, the first battle, and the culmination of the war in the fateful struggle of Gettysburg are next described. There is a full account of the part taken by the hero in that great battle and the climax of the story—well—that ought not to be told to those who propose to read the book.

The Revision and Amendment of State Constitutions

By WALTER FAIRLEIGH DODD, Sometime Henry E. Johnston Scholar in the Johns Hopkins University. 368 pages, 8vo, cloth. Price, $2.00.

This important study in American Constitutional Law gives a statement, descriptive and critical, of the methods adopted in this country for the amendment and revision of State Constitutions, and discusses with a thoroughness not elsewhere to be found the legal powers of conventions and of legislatures with reference to constitutional revision and amendment. The historical aspects of the subject, especially with respect to the Constitutional Convention, also receive careful consideration.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

The Ice Age in North America, and Its Bearing Upon the Antiquity of Man

By G. FREDERICK WRIGHT, D.D., LL.D., F.G.S.A. New, Thoroughly Revised, and Greatly Enlarged (Fifth) Edition. *Two hundred illustrations, 750 pages, 8vo, cloth. $5.00. Ready in January.*

Such is the demand for this standard work, that the Bibliotheca Sacra Company has thought it worth while to secure the plates and copyright from the former publishers, D. Appleton and Company, and to spend a large sum in bringing it fully up to date, and in reissuing it in the best style of printing, paper, and binding, thus to meet the requirements of the large and growing interest in this absorbing subject.

"His 'Ice Age in North America' I regard as one of the treasures of my book shelves."—Sir ROBERT BALL.

To those who order in advance it will be furnished at $4.00, postpaid, payable on receipt of the book immediately after publication.

The Coup de Grace to the Wellhausen Critics of the Pentateuch: Essays in Pentateuchal Criticism

By HAROLD M. WIENER, M.A., LL.B., of Lincoln's Inn, Barrister-at-Law, author of "Studies in Biblical Law." *255 pages, 8vo, cloth. $1.50, postpaid.*

"The book is a most important contribution to the criticism of the Pentateuch, and a straight challenge to the School of Wellhausen."—*The Tablet* (London).

The Origin of the Pentateuch

BY THE SAME AUTHOR.

A Comprehensive Answer to the Wellhausen Critics. *150 pages, 8vo, paper. 40 cents, postpaid.*

In this compact pamphlet the learned author gives in concise and popular form the results attained through his elaborate discussions in the *Bibliotheca Sacra*, the *Churchman*, the *Princeton Theological Review*, and other publications.

Scientific Confirmations of Old Testament History

By G. FREDERICK WRIGHT. *40 Illustrations, 450 pages, 12mo, cloth. $2.17, postpaid.*

"For a long time to come every one who has to write upon the Deluge, or touch that wider subject of the attitude of the Old Testament to the phenomena of nature, will require to know what is written in this book."—*The Expository Times*, October, 1910.

Miracle and Science

Bible Miracles Examined by the Methods, Rules, and Tests of the Science of Jurisprudence as Administered To-day in Courts of Justice. By FRANCIS J. LAMB, Attorney and Counsellor-at-Law. *350 pages, 12mo, cloth. $1.62, postpaid.*

"It is long since the reviewer read so strong and satisfying a book."—Prof. WILLIAM BRENTON GREENE, Jr., *Princeton Theological Review.*

SECOND EDITION READY NEXT WEEK

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to This Remarkable Historical Work

HORACE WHITE:

"In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn Eagle:

"A biography replete with facts and marked by courage and candor, learning, and justice."

W. E. CONNELLEY in the Topeka Capital:

"The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Washington (D. C.) Star:

"Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fairmindedness."

THOMAS WENTWORTH HIGGINSON:

"I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in Atlantic Monthly:

"Perhaps in thus dramatically fashioning his volume Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HENRY WATTERSON in the Louisville Courier-Journal:

"No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

$5.00 net. Postage 26 cents.

A selection of twenty choice volumes covering the fields of history, biography, economics, science, travel and education. These books are all handsomely printed and bound, and will be found especially appropriate for Christmas gifts by those who desire to give books of permanent value.

A Book of the Christ Child

By ELEANOR H. BROADUS. *Illustrated with copies in tints of famous paintings. Square 8vo, decorated cloth cover with inlay in colors, $1.75 net.*

A group of legends of the Christ Child written so as to make interesting reading for children.

"The thing has been exquisitely done, and the tales go from Jerusalem to Assisi to Cologne, from the birth of the Christian era to the middle centuries. It is pervaded with the delicate, intimate, unquestioning love for 'dearest Jesus, holy child,' which Martin Luther and Robert Herrick and Coventry Patmore knew and uttered."—*Chicago Tribune.*

Reminiscences of Rosa Bonheur

By THEODORE STANTON. *Illustrated with reproductions from paintings; also sketches. 8vo, cloth, $3.00 net.*

The most comprehensive volume ever written about the world-famous woman painter. An excellent gift book. Daintily printed.

The Basutos

By SIR GODFREY LAGDEN, K.C.M.G. *Il., 2 vols., demy 8vo, gilt top, cloth, $6.00 net.*

Extensive, authentic, and final volumes upon perhaps the most interesting of African native races.

The Life of Marie Amélie

Late Queen of the French, 1782-1866

By C. C. DYSON. *Il., demy 8vo, cloth, $3.50 net.*

With some account of the principal personages of the courts of Naples and France in her time, and of the careers of her sons and daughters.

Farthest West

By REGINALD ENOCK. *Illustrated by photographs and a map. Demy 8vo, cloth, $4.00 net.*

A book definitely of interest to Americans to show them what a keen observer sees in them and their country.

Ups and Downs of a Wandering Life

By WALTER SEYMOUR. *Illustrated, 8vo, cloth, $3.00 net.*

The book is extraordinarily rich in material, and teems with witty sayings and witty stories.

Studies in Spiritism

By DR. AMY E. TANNER. *Introduction by Dr. G. Stanley Hall. Large 12mo, cloth, $2.50 net.*

A record of sittings with many famous mediums written by the coadjutor of Dr. G. Stanley Hall.

Railroad Administration

By RAY MORRIS. *13 charts, 11 folders, large 12mo, cloth, $2.00 net.*

The idea in this book is to tie together the study of the various branches of railroad operation as the General Manager of a road has to tie them together.

American Corporations

By J. J. SULLIVAN, A.M., LL.B. *Large 12mo, cloth. $2.00 net.*

The legal rules governing corporate organizations and management, with forms and illustrations.

The Big Game of Africa

By RICHARD TJADER. *Il., with photographs by the author. 8vo, decorated cloth cover, $3.00 net.*

Not a sporting book, but a book that dwells on the scientific side of hunting for the big game in Africa.

Two Great Rivals

FRANCOIS I AND CHARLES V, AND THE WOMEN WHO INFLUENCED THEM.

By LIEUT.-COL. C. P. HAGGARD. *Photogravure frontispiece. Il., 8vo, cloth, $4.00 net.*

The comparison of the lives of the two great monarchs of the 16th century, who were rivals as long as they lived.

Gambetta: Life and Letters

By P. B. GHEUSI, translated by V. Montagu. *Illustrations in Collotype. Demy, 8vo, cloth, $3.50 net.*

A work that will throw new light upon the character of a man who has hitherto been represented as a dictator and an ambitious demagogue.

Up Hill and Down Dale in Ancient Etruria

By FREDERICK SEYMOUR. *Il., also Maps. Demy 8vo, cloth, $3.00 net.*

As charming as the author's "Saunterings in Spain" and "Sienna and her Artists."

The Place of History in Education

By J. W. ALLEN, Prof. of Hist., Univ. of London. *12mo, cloth, $1.50 net.*

The author shows that the study of history possesses other values than the mere cataloguing of past events; and that it is worthy of a prominent place in any educational system.

The Story of Sugar

By PROF. G. T. SURFACE. *Small 12mo, cloth, illustrated, $1.00 net.*

"All the phases of one of the greatest industries are adequately described in 'The Story of Sugar,' a thoroughly satisfactory volume."—*Boston Globe.*

Race Distinctions in American Law

By GILBERT T. STEPHENSON, A.M., LL.B. *12mo, cloth, $1.50 net.*

This book should appeal to those interested in the study of the law, social ethics, and economics.

Problems of the Elementary School

By ARTHUR C. PERRY, JR., Ph.D. *12mo, cloth, $1.25 net.*

This book is divided into two parts; the first part dealing with the organization of the school and the relation of the curriculum thereto. The second part treats of specific problems, presented to the practical schoolman, and offers solutions to these problems out of the author's personal experience.

Corporation Finance

By EDWARD S. MEADE, *12mo, cloth, $2.00 net.*

A book that can be read with profit by any person interested in corporation matters. Designed also as a textbook for use in colleges and high schools.

Descriptive Meteorology

By WILLIS L. MOORE, Chief U. S. Weather Bureau. *8vo, cloth, $3.00 net.*

A book that brings the essentials of meteorology up to date in an available form; containing a chapter on forecasting; and a chapter especially of interest to those engaged in the navigation of the air.

D. APPLETON AND COMPANY : Publishers : NEW YORK

The best Books are the best gifts

Macmillan's New Holiday List

DESCRIPTIVE ILLUSTRATED BOOKS

Dr. Edwin E. Slosson's
Great American Universities
If you are choosing a college for your son you will find this book most helpful; if you wish to go to college give it to your father. *Illus. $2.50 net, by mail, $2.69.*

I. A. Wright's Cuba
A capital book for an intending traveller repelled by the thought of too distant, overcrowded, artificial European highways. *Illus. $2.50 net by mail, $2.68.*

Helen S. Wright's
The Great White North
Here each of the great Arctic explorers writes of his share in adventurous expeditions into the frozen north, in search of the Pole. *Illus. $2.50 net, by mail, $2.68.*

Clifton Johnson's Highways and Byways of the Rocky Mountains
One of the best of his books of informal American travel with his own illustrations. *Illus. $2.00 net, by mail, $2.17.*

Mr. Israel Zangwill's
Italian Fantasies
Max Nordau declares that this book is "more fervent, more true, more eloquent than anything that has given fame to Ruskin." *With frontispiece, $2.00 net, by mail, $2.14.*

NEW BOOKS ON PUBLIC AFFAIRS

Mr. James Bryce's *revision of*
The American Commonwealth
So thoroughly corrected as to be practically a new work of exceptional value. With additional chapters. *Two volumes, $4.00 net, carriage extra.*

Charles Richard Van Hise *on*
The Conservation of Natural Resources in the United States
To anyone who is interested in the topic of conservation the book is invaluable as a compact, impartial statement of the facts. *Illus. $2.00 net, by mail, $2.14.*

Wm. Stearns Davis's The Influence of Wealth in Imperial Rome
Amazingly timely is this account of the political corruption, public extravagance, and private luxury by reason of which the world's strongest nation failed to hold its own. *Illus. $2.00 net, by mail, $2.17.*

FOR BOYS AND GIRLS

Mr. E. V. Lucas's The Slowcoach
Young folks will enjoy this tale of gypsying children immensely, and their elders will enjoy these children almost more. *Illus. $1.50 net, by mail, $1.62.*

Mr. Jacob A. Riis's
Hero Tales of the Far North
Not legends, but histories of real men who are the pride of his own birth land. *Illus. $1.35 net, by mail, $1.48.*

Joseph A. Altsheler's
The Horsemen of the Plains
An adventurous story of trapping, hunting, and Indian fighting in the Cheyenne war. *Illus. in color, $1.50.*

EXCEPTIONAL BIOGRAPHIES

Miss Jane Addams's *autobiography*
Twenty Years at Hull-House
"Genuinely direct and sincere, spiced with humor, tenderly patient with human incompleteness, stimulating to the pursuit of truth." *Illus. $2.50 net, by mail, $2.70.*

Reminiscences By Goldwin Smith
Edited by ARNOLD HAULTAIN.
Few men have had so distinguished a career, or so wide acquaintance with men of social and political importance; fewer still could so brilliantly review it. *With portraits $3.00 net, by mail, $3.20.*

The Life of Benjamin Disraeli
By W. F. Monypenny
The long-demanded life prepared from official papers and a carefully digested mass of contemporary material. *Vol. I. ready. $3.00 net, by mail, $3.20.*

Gladstone's Religious Correspondence
Selected by D. C. LATHBURY.
It so illuminates the great man's deepest interests and most influential motives that, as *The Outlook* declares, it reveals more of his inmost character than do all his biographers. *In two volumes, $5.00 net, carriage extra.*

Memories and Impressions of Helena Modjeska
Vivacious in style and of absorbing interest is her account of early struggles, of final success, and of her friends in two continents. *With many portraits $4.00 net, by mail, $4.20.*

ESPECIALLY SUITABLE FOR GIFTS

The Green Willow and other Japanese Fairy Tales
By GRACE JAMES. With illustrations in color by Warwick Goble. A sumptuous book for a child, a delight to any art lover. Subtle, delicate, yet absolutely human and tender. *40 plates in color, $5.00 net, carriage extra.*

Walter McClintock's
Along the Old North Trail
An account of his many seasons among the Blackfeet Indians, and of their legends and religion. Eight plates in colors. *Many illus. $4.00 net, by mail, $4.23.*

NEW NOVELS

James Lane Allen's
The Doctor's Christmas Eve
In an atmosphere of Christmas in blue-grass Kentucky, such as only its author can create, is set a poignant love story of the finest art. *Cloth, $1.50.*

Jack London's *vigorous story*
Burning Daylight
"By all odds the most interesting as well as the most wholesome long story Mr. London has written."—*N. Y. Evening Post.* *Illus. decorated cover, $1.50.*

Richard Washburn Child's
Jim Hands
Notable for its shrewd insight into the depths of human nature, a deal of kindly humor and truth to life. *Cloth, $1.50.*

Miss Clara E. Laughlin's
"Just Folks"
A book one smiles over and reads with an increasing feeling of warm friendliness for all one's neighbors. *Cloth, $1.50.*

ON EVERY CHRISTMAS LIST YOU SHOULD PUT AT LEAST ONE OF THESE

The Book of Christmas
Carols, legends, etc., altogether surprisingly redolent of the season's atmosphere. *Friendly Library Uniform Editions, Cloth, $1.25 net, leather, $1.75 net.*

The Book of Friendship
The best book for an absent comrade, full of the spirit of true friendship. *Holiday Edition decorated borders. Cloth, $2.00 net, leather, $2.50 net.*

Published at 64-66 5th Av., N.Y., by THE MACMILLAN COMPANY For sale by all booksellers

The Nation.

NEW YORK, THURSDAY, DECEMBER 15, 1910.

The Week.

In finally deciding to appoint Judge White as Chief Justice of the Supreme Court, the President has apparently been swayed by the argument that, if a promotion was to be made within the Court itself, the youngest associate justice ought not to be put over the heads of judges of longer service. And there will undeniably be a feeling that a Republican President has at least shown a spirit of fairness in naming a Democrat as Chief Justice. Judge White is highly thought of by both bench and bar as a good lawyer of judicial habit of mind, who has, moreover, a vigorous and incisive intellect, and is master of a clear and forcible style. He has, in general, been reputed one of the "conservative" members of the Court. Of the other judges named to fill vacancies, Mr. Lamar of Georgia seems to have the needed qualifications, while the elevation of Judge Van Devanter from the United States Circuit Court would be unobjectionable were it not for one consideration, but that is serious. Judge Van Devanter sat in the important Standard Oil case which has now gone to the Supreme Court on appeal from the decision in which he joined. Propriety and judicial etiquette would dictate that he should not sit in an appeal from his own decision. If he does not, the great Standard case will be argued before eight judges, who may divide four to four. That would be unfortunate—though, of course, the decree of the lower court would prevail unless set aside.

There is at least one recommendation in the President's message in carrying out which there ought to be no difficulty during the short session of Congress. The reasons in favor of increasing the salaries of United States judges are so strong, the expense involved so utterly insignificant in comparison with the importance of the object to be attained, that the passage of the bill—already pending—should be attainable with very little expenditure of the time of Congress. Anything that raises the average of qualifications in the Federal judiciary is of immeasurable value to the nation. The proposed new scale of salaries—from $9,000 for district judges to $17,500 for the Chief Justice of the Supreme Court—is, of course, far below the income that lawyers of high-class get in their private practice; but either from public spirit, from a taste for judicial work, or from a sense of the honor of the post, many lawyers willingly make a sacrifice of income to accept judicial office.

The Library Committee of the House of Representatives is now reported as intending to recommend a reduction in the size of the House chamber—a sensible project. There will be much more chance of getting a bill passed which provides a method of effecting the change by means of a temporary architectural device than there would be for one which committed the House permanently to the new condition of things. It may be observed, by the way, that the objection which members have entertained in the past to removal of their desk facilities is reduced to comparative insignificance now that each one has a commodious private room in the House Office Building, and also the services of a private secretary. With these adjuncts to the convenient and systematic dispatch of business, the members of our present and future Congresses ought to be able to dispense with the practice of reading at their desks, writing, sorting documents, and clapping their hands for pages to run on their errands.

It has long been known that the Ballinger investigating committee had divided on strictly party lines—even to the point of Mr. Madison, the insurgent Republican, siding with the Democrats but not going to their extreme. Little importance therefore will be attached to the fact that the majority members have completely exonerated the Secretary in their report, of which a summary has just been issued. And the summary itself is too brief to throw any new light on the subject—if, indeed, it is possible to do so in a report, however long. The majority report pronounces Mr. Ballinger "a competent and honorable gentleman, honestly and faithfully performing the duties of his high office with an eye single to the public interest." We have repeatedly stated our own conclusion on this subject, and our reasons for it, and it is needless on the present occasion to say more than that this verdict of the majority members is, in our judgment, inconsistent with a number of facts brought out in the inquiry. The evidence failed to sustain any accusation of corrupt purpose, and indeed the intention to charge such purpose was distinctly disavowed by counsel and by the leading witnesses against Mr. Ballinger; but between this and a certificate of single-minded fidelity to the peculiar trust resting upon the Secretary of the Interior there is a wide gap. To our mind it is quite clear that Mr. Ballinger started out in a spirit of hostility not merely to the special views of men like Pinchot and Garfield, but to the carrying out of a policy for the protection of the public interests to which the Government was distinctly pledged; and in more than one instance he sought, in devious ways, to throw the responsibility of acts inimical to that policy upon other persons—this, however remote from his mind may have been any dishonest purpose.

Philadelphia is making another attempt to lock the empty stable. At the instance of a group of citizens, including Dr. S. Weir Mitchell, suit has been brought against the Mayor, the Comptroller, the Director of Public Works, the Chief of the Bureau of Highways, the Chief of the Division of Street Cleaning, and Edwin H. Vare, alleging conspiracy and fraud in the drafting, awarding, and enforcing of the Vare street-cleaning contract. The annulment of the contract, involving over a million dollars yearly, is asked, and the plea is made that the city be enjoined from making payments to Vare, and that he be required "to account for the sums of money illegally received by him under color of the contract." The contract provides that, upon failure to conform fully to its specifications, large sums may be deducted from the payments, at the absolute discretion of the Director of Public Works. The plaintiffs expect to prove that the contractor has performed less than half of the work required by the

contract, and that he has made false reports with the connivance of the city officers.

San Francisco successfully tested the working of a municipal referendum in a special election on November 15. Thirty-eight proposed amendments to the city charter, of varying degrees of importance, were submitted to a popular vote. Some forty-five thousand voters, or about 50 per cent. of the electorate, participated, in spite of the fact that there were no offices at stake. Every voter had to discriminate and act separately on each of the thirty-eight proposals. There were no party emblems to help him. Yet there is nothing in the result to indicate that the decision was not arrived at as carefully as it would have been had the amendments been submitted to a representative assembly. Eighteen of the proposals were carried and twenty were rejected. Virtually all the so-called reform proposals were accepted. Among these were the adoption of an effective system of initiative, referendum, and recall, direct nominations for municipal offices, the elimination of all party designations from the ballot, the publication of candidates' statements on the sample ballots, and a step in the direction of the "short ballot" by increasing the length of terms of office to four years and providing that half shall be elected every two years. The franchise rights of the city were safeguarded by the passage of amendments forbidding a monopoly of subways and tunnels and permitting the city to recall a franchise whenever it decided to buy the property of the traction company. Virtually every proposal that would have had the effect of raising salaries was defeated, as was that increasing the powers of the supervisors, and the one which sought to place the library patronage in the hands of the Mayor. Business interests opposed the proposal for the initiative and the recall, and a hard campaign was made against the franchise amendments, but both were carried, although by closer votes than those on most of the other proposals.

The decision of the United States Supreme Court in the Sugar Trust conspiracy case is of very high interest, both theoretically and practically, although it should be stated at once that it does not dispose of the possibility that the indicted directors may still escape under cover of the statute of limitations. What the Supreme Court does decide, in the plainest and most emphatic language, is that a conspiracy continues in being so long as the operations that it sets in motion continue to be performed; that, therefore, the statute of limitations cannot be pleaded on the ground that three years had passed since the conspiracy was entered into, but only on the ground that three years had passed since the acts contemplated or set on foot by the conspiracy had ceased to be done. All this will strike the layman as good common sense; and in the opinion handed down the view is enforced in an interesting way by reference to the analogous case of partnerships:

> The contract [of partnership] is instantaneous. The partnership may endure as one and the same partnership for years. A conspiracy is a partnership in criminal purposes. That as such it may have continuation in time is shown by the rule that an overt act of one partner may be the act of all without any agreement especially directed to that act.

Hearty acknowledgment is due to the spirit in which the objections to the bill to create the Rockefeller Foundation have been met in the bill introduced by Senator Gallinger. That the original project was conceived in a spirit of the broadest benevolence and helpfulness there was never any reason to doubt; none the less was it the duty of Congress to guard against the possibilities of objectionable developments of the scheme in the future. This appears to have been, at least in a great measure, accomplished in the new provisions contained in the bill introduced on Monday. While the corporation is to be a self-perpetuating body, the name of any member selected to fill a vacancy must be submitted to the President of the United States, the Chief Justice of the Supreme Court, the President of the Senate, the Speaker of the House, and the presidents of Harvard, Yale, Columbia, Johns Hopkins, and the University of Chicago; approval by a majority of these is necessary to validate the choice. Congress may at any time impose limitations on the objects to be served by the Foundation; its holdings are not to exceed $100,000,000; and the whole concern may be wound up at the end of a hundred years. Not all munificent givers are willing to accept criticism in a fair and generous spirit, and when such an attitude is shown, it is deserving of high praise.

The undergraduate hallucination which assumes an "entire absence of any connection between examination grades and post-collegiate success," receives another blow in the results of a recent investigation at Harvard upon new lines. The criterion of success hitherto employed, namely, the appearance of a name in "Who's Who in America," has been widely objected to, and, accordingly, a new standard has been taken for the latest comparison. As related in a recent number of *Science*, the class of 1894 at Harvard was selected for analysis. Three men, one of whom was Dean Briggs, were asked to select from this class the names of those men who, during their fifteen years since graduation, had achieved distinct success, each judge determining for himself his definition of that term. Twenty-three members of the class were agreed upon as deserving of this recognition by at least two of the three judges. The college records of these men were then compared with those of twenty-three of their classmates chosen at random, and it was found that there were between three and four times as many "A's" among the former as among the latter, the exact figures being 196 and 56.

During the first seven decades of our history—from 1790 to 1860—the population of the United States received an accession of a trifle more than one-third per decade. Then came a fall; but in a sense the rate may be said to have again remained virtually stationary for the three decades from 1860 to 1890. Taking these three decades as a whole, the rate of increase was almost exactly one-fourth per decade, as against the one-third in the previous period; and, if allowance be made for the natural repression of increase caused by the great war, and for the stimulation of increase in the process of recovery from its effects, 25 per cent. per decade may be said to have been the normal rate throughout these thirty years, the actual figures being 22.6 per cent. from 1860 to 1870, 30.1 per cent. from 1870 to 1880, 24.9 per cent. from 1880 to 1890. A still further reason for postulating this approach to uniformity is

furnished by the well-known defects of the census of 1870. From that rate of one-fourth per decade we passed, in the decade 1890-1900, to a rate of a little more than one-fifth; and the census just completed shows slight change from the one preceding. As against 20.7 in 1890-1900, we have a growth of 21.0 per cent. in 1900-1910. All this relates to "Continental United States"—a term which seems to be coming into use for the continuous region we usually think of as the United States, exclusive of Alaska, although Alaska is part of the American Continent.

Secretary Knox's final decision to grant the request of Italy for the extradition of Porter Charlton, the American who has confessed to the murder of his wife at Lake Como, will give general satisfaction. The public would have been aghast at the spectacle of a detected and avowed murderer walking out of court a free man simply because of a punctilio in diplomatic intercourse, or a petty scruple about the proper interpretation of a treaty. Since it was clear that the United States could not take jurisdiction of the crime, there was nothing for it but to send the man back to the authorities that have the power to inflict due punishment. We can well afford to leave the general status of our extradition treaties with Italy for future negotiation and adjustment; the immediate and pressing duty was obviously to make sure that an acknowledged criminal should not escape justice.

Mr. J. J. Hill's strong words on the question of reciprocal trade between the United States and Canada will attract exceptional attention. Both the international situation from the diplomatic point of view, and the economic situation in virtue of the pressure of high prices, point to progress toward free trade between the two countries. Mr. Hill, if correctly reported, declares entire free trade with Canada to be the logical consequence of the position of Mr. Taft and the Republican leaders; we confess that we are unable to follow the logical thread to that conclusion. But when we get outside the domain of pure logic, the forces making for a sweeping reduction of tariff rates between our country and its northern neighbor are obvious enough.

Secretary Dickinson spent six weeks in the Philippines, and during that time found out, as he states in his report, that the "public expression is very general" in favor of Filipino independence. Mr. Dickinson writes sympathetically of this admitted aspiration of the Filipino people, and evidently hopes that it may be realized in time, but again interposes the official dictum that the thing cannot be done "within the present generation." It will be noted, however, that he gives this opinion with the significant qualification, "if the present policy of control of the Islands by the American people shall continue." That is just the point. If your policy is against independence, and even against encouraging hopes for it and plans for it, and if you are stubborn enough to persist in that policy after it has been shown to be a mistake, you must expect the natural consequences to follow—namely, friction, dislike, and failure. But a change of policy would lead to quite other results.

A British general election is known as "an appeal to the nation," and party leaders always profess great eagerness to find out what the country desires; but at present the tendency seems to be, rather, not to ask the voters what they mean, but to inform them what they must have meant. The numerical result of the election will almost certainly be to leave the strength of parties very nearly what it was before the dissolution. That being so, Mr. Balfour declares for the Conservatives that the popular oracles have given no decisive voice, and that all must go on pretty much as before, until another conference is had or another election. On the other hand, the Liberals assert that they went to the country on the precise issue of the Lords' veto, and have now got a distinct mandate to abolish or at least modify it. They argue that, if the Lords were compelled after last January's election to accept the Budget, on which an appeal was taken to the country, even though the Liberal majority was greatly reduced, they must now swallow the bill limiting their veto, inasmuch as on that issue the country has returned a Liberal or coalition Government to power. The two cases are not, however, precisely alike in form. This time there was no definite rejection of a definite bill by the Lords, on which the judgment of the electors might be taken. It was less a legislative deadlock than a general Constitutional principle which was, as it were, put to popular vote. But on the latter, it is difficult to get a clear and perfectly unmistakable voice from a general election. It is, indeed, fair to argue that the people have spoken in favor of a reform of the House of Lords, and of so limiting its veto power as to give Liberal legislation at least a "fair chance," as the Conservative Mr. F. E. Smith has expressed it; but between that and some root-and-branch method which the Liberal leaders may have in mind there is a wide difference. While, then, the general election will soon be over, it is clear that England's political and parliamentary troubles will not.

Full details of the interpellation in the Reichstag, on the subject of the Emperor's recent divine-right speeches, bear out the interpretation put upon it by the Paris *Temps*, that it was virtually a case of "Revanche Impériale." It certainly looks so, when we turn back to the declarations made to the Reichstag by Chancellor von Bülow in 1908. The promise was then given that the Emperor would, in future, display "that reserve, even in private conversations, which is equally indispensable in the interest of a uniform policy and for the authority of the Crown." Yet on November 26, when the present Chancellor was asked what he proposed to do about the violation of this pledge by the Emperor in his speeches at Königsberg and elsewhere, the carefully prepared official reply was made that it was not the Emperor, but the King of Prussia addressing his subjects in a Prussian province, who was brought under inquiry. Herr Bethmann-Hollweg contended that an absolutist deliverance by King William had nothing to do with the Constitutional law which, he admitted, must govern the Emperor William. This nice division of his Majesty into two persons only angered the Social Democrats, whose spokesman made the tactical mistake of declaring that his party really believed in a republic. The Chancellor made great play with this language of revolution, as he called it; and the net result was to bring the Emperor off triumphantly, and to restore to him that liberty of public utterance which he had apparently renounced two years ago.

PARTY VITALITY.

Last month's impressive triumph of a political party which was laid out for burial in 1896, buried in 1900, and solemnly commemorated in 1904 and 1908, was a little upsetting to those who had put their trust in the professional skill of undertakers and pall-bearers. The fact that during the fourteen years after the supposed demise no heir appeared to claim the inheritance, or take the place of the departed, might have suggested the possibility of a mistake somewhere. At all events, the entombed Democratic party emerged, and in one day put to flight its enemies. Undaunted by the failure of prophecy in this instance, an English newspaper correspondent thought it worth cable tolls to announce to his American readers the formation of a new British party. He is prudent enough to admit that "this is looking somewhat far ahead," but believes that "many Liberals will be found eager to join the ranks of this new Whig or Centre party."

A look backward over English and American politics shows a pronounced disinclination to create new parties. In England, except for Lord Randolph Churchill's "Fourth Party"—composed of four—and the recently arisen Labor Party, new parties have sprung from Constitutional crises. The Liberal Unionists and the Irish Nationalists were born, however late, of the still-vexed Union; while the persistent Conservatives and Liberals are only the old Tories and Whigs, fitted out with modern ideas and ancient prejudices. On this side of the water, the Populists are the only new organization of national scope which has figured in the political arena since the wedge of slavery cleaved its way through the parties of its time. Here, too, was a Constitutional crisis. The record of Presidential and Congressional campaigns is steadily a record of the Democratic and the Republican parties. Whether the course of the Socialists will more resemble that of the defeated but perennial Prohibitionists, or that of the victorious but vanished Populists, we do not predict. That it will follow a new line, leading to anything approaching even a balance of power, is extremely improbable. And what has been true since 1856, was true before it. Federalists and Republicans became Whigs and Democrats. The American and the Anti-Masonic parties were as lacking in nationality of scope as in attainment of power or in permanence.

There seems to be in the Anglo-Saxon political nature a fine instinct for economy of effort. When old forms become outworn, they are still made to do service as patterns for new ones. Men go on in their old organizations, suffering from their defects and increasing maladjustments, but reluctant to displace them by new ones, until at length the perils of the untried seem lighter than the faults of the familiar. This vitality, not to say stability, of political parties would be impossible if parties were not representative, however unconsciously, of some fundamental distinctions in human nature. To be able to take fairly consistent positions with reference to successive and frequently unrelated questions, with the continuing approval of the great bulk of their members, would be a rare display of skill if it were not rather a result of instinct. Leaders may be governed and may partly govern by intelligence, but most of their followers will act from motives not deeply reasoned. The further fact that parties in Anglo-Saxon politics are virtually limited to two, simplifies the analysis of their relation to the deeper springs of human conduct. Perhaps the old division into the party of order and the party of progress is as valid as any.

Even with this instinctive response of outward organization to inner impulse, one thing is necessary to the securing of stability. That is sufficient elasticity to permit of internal reform, amounting at times to revolution, which shall make a new party unnecessary. It is in this element of party nature that our own recent times have been richest. Look at it as you will, the campaign of 1896 was unique, and was so because the prestige of a great party name was made to serve the purposes of a host of voters who, without it, would have been forced to the enormous undertaking of forming a new party. This may not have been immediately beneficial to the party so roughly made over, but it did two things that parties in enlightened communities will forget again at their peril. It loosened party ties, and it revealed the possibility of swift and radical interior change. From both of these lessons, both parties, and the people they exist to serve, have since profited. Parties are hard to kill, even by their own mistakes. Important new parties arise only as last resorts, and voters will long put up with Hobson's choice. Nevertheless, party vitality, in the long run, is conditioned upon party adaptability. Like any other organism, a party is subject to the blight that besets the unfit. But so long as it is reasonably responsive to public opinion, it will continue, under whatever changes of name and management, to serve successive generations—now as Government, and now as Opposition.

CONCERNING "LAME DUCKS."

The Washington correspondents have had a good deal of fun over "Lame Duck Alley." This is the name they have given to a screened-off corridor in the White House offices, where statesmen who went down in the recent electoral combat may meet to display their wounds and compare notes about their chances for the future. All of them, of course, hope ultimately to reach the President, in order to lay before him their tale of woe, and to extract from him practical sympathy in the shape of a promise that "something will be done" for them after their term of office expires. In this expectation, obviously, lies the significance of the name jocularly given to them. They are "Lame Ducks" in the sense that they have been winged, but hope to preen their plumage again, if not to flap their pinions, in some other office. If the voters won't elect them, perhaps the Executive will appoint them.

The spectacle is not novel. For many years lame ducks have hobbled back to Washington after losing elections. Their numbers are greater after a general *débâcle*, like that of 1890 or 1910, but there are always some to be found. They belong to the political class that "must be taken care of." No system of outdoor relief being available for them, they seize upon the system of appointment to office. They eagerly go over the list of possible vacancies. They scan the roster of commissionerships and judgeships and marshalships, of collectorships and postmasters, feeling themselves fit for any office which they know they badly want. Their sufficient qualification is that they need the job. They are men with "claims"; they regard themselves as too important to be overlooked. Like the financial cripples in Wall Street who have been such great figures that they have to be "help-

ed," lest their hopeless crash should carry down others, the political lame ducks picture themselves as persons of such consequence that, if they are permanently left out of office, the whole party will be injured and the wheels of government come near stopping altogether. To Senator A, thoughtlessly voted down in his State, it appears incredible that he should ever become a mere private citizen; while Representative B, overwhelmed by an adverse majority, will inevitably entertain gloomy fears for the republic if he has to go to work to earn his living.

We do not say that all the lame ducks who, in past years, have been kindly picked up by compassionate Presidents and put in places in the public service, have been failures. Many of them, however, have been unquestionably. Mentioning no names, we will merely say that some of the ex-Senators who got berths on the Panama Commission were very slightly ornamental and not at all useful. Indeed, in the nature of the case, a lame duck is not, as a rule, fitted to be a valuable public servant. He is thinking more of his hurts, and how to heal them, than of his work. The office which is flung to him, like cold victuals to a tramp, he regards less as a recognition of merit, or even a balm to wounded dignity, than as a mere stop-gap. It is all well enough as a base of campaign, all too small though its supply of the sinews of war may be, but is to be abandoned as soon as he is ready to march for another assault upon a seat in Congress. If appointing officers, therefore, are thinking more of efficiency than of charity, they will, in general, do well to pass the lame ducks by.

It might be fairly argued that filling Federal offices with ex-Congressmen is against at least the spirit of the Constitution. Its framers guarded so far as they well could against the practice of preparing soft berths for injured statesmen to fall into. They made it unlawful, for example, to appoint any member of Congress to any office which had been created or the emoluments of which had been increased during his term of office. That sort of anchor to the windward was forbidden to any Senator or Representative looking forward apprehensively to a popular storm. Against the other thing there is no law and could not well be; but against it there often is a feeling of propriety. It ought not to be supposed that there is any class of men whose disappearance from public life is unthinkable; that there is any rule once an officeholder, always an officeholder. We leave ex-Presidents to shift for themselves, and so we fairly may ex-Congressmen. If it is distinction that the latter crave, they might get it in being pointed to as "extinct volcanoes," to use Disraeli's phrase about discredited men.

We do not deny that there is something pathetic about the lame ducks at Washington. The fondness for office has been said to be "an acquired taste" for most men, but it may be easily cultivated and soon becomes an imperious appetite. It is this, we suppose, and not merely salaries, which drives the sorrowing procession of unappreciated statesmen to the White House to ask for places within the President's gift. They long for official dignity of some sort or other; they still want a handle to their names. But they ought to be warned that, if they do not cease displaying their broken wings to the public, and squawking piteously for aid, they will, indeed, get a public title, but it will be that of membership in the Ancient but Dishonorable Order of Lame Ducks.

SPEAKING OUT ABOUT THE SENATORSHIP.

Woodrow Wilson promised the New Jersey voters that, if elected, he would go upon the plan of "pitiless publicity," in all that related to the interests of the State, and he is living up to his word in the matter of the United States Senatorship. His public statement last Friday opposing ex-Senator Smith can be thought of as an astonishing procedure only in the sense that it is astonishing to find a public man doing after election exactly what before it he said he would do. Gov.-elect Wilson's case stands by itself, but it is perfectly clear. His attitude is not "sprung" upon the people. This very issue was openly debated during his campaign, and both by speech and letter Dr. Wilson took a position which was entirely explicit. He frankly declared that a vote for him meant a vote for party leader; and in his answers to the questions put to him by Mr. Record, he stated in the most positive way that there could be under him no domination by the Smith machine, and that he should feel "forever disgraced" if he submitted to any kind of boss dictation. These assurances undoubtedly won him thousands of votes; and he now stands forth simply as a man living up to his side of the contract. Even if he swore to his own hurt, he changeth not.

In his clear-cut announcement of his position, Dr. Wilson makes it plain that in coming out against Smith he is not speaking as Governor. He is, he admits, going outside of his "legal duties." But, as he grimly remarks, "there are other duties." A question of good faith with the people has arisen, and of "genuine representation" in the Senate, and he, as a citizen, and as a man who has taken upon himself special obligations and responsibilities from which he cannot shrink, does not propose to hold his peace. He has not spoken until it was necessary. Mr. Smith was given every opportunity to take himself out of the Senatorial contest. But since he has refused to do so, Dr. Wilson calls upon the party to compel him to that course. There can be no doubt of the result. James Smith cannot stand up against Woodrow Wilson. Whether knowingly or unwittingly, the Democratic party of New Jersey has elected a real man Governor, and is bound to follow where he leads. A breach with Smith does not matter, even an angry quarrel within the party is of no consequence, compared with the overmastering duty of keeping faith with the people.

It is important to notice precisely what it is that Woodrow Wilson is attacking. In a word, it is an attempt secretly to circumvent the will of the people. Smith has made no open canvass. His own newspaper, the Newark *Star*, has kept as silent as the grave about his candidacy. There has, in fact, been no public advocacy of his election, worth speaking of. Such expressions of opinion as have been made are nearly all against him. But that did not prevent his machine from being put quietly into operation. Every kind of subterranean influence has been exerted, every hidden wire pulled, midnight conferences held, furtive appeals made to this local boss and the other political dealer. The whole Smith campaign has, in fact, been under a blanket; and what Woodrow Wilson has done is to tear the blanket off. The thing can no longer be done in a corner. There must

now be open discussion, and the Senatorship will be settled in the full light of day. This is the old fashion, and it is the only democratic fashion. As the Prime Minister of France said the other day, in his address at the unveiling of the monument to Jules Ferry, "power in a republic rests, not upon silence, but upon debate."

New Yorkers, as they look across the North River and see the policy of covert scheming for a United States Senatorship shattered by the bold act of Dr. Wilson, cannot avoid a feeling at once of envy and of mortification. For New York is threatened with a Senator by arrangement, not by free and public canvassing of the merits of the different candidates. All the talk of the political quidnuncs in New York is of some one to be "seen," of some interest to be privately conciliated, some secret shuffling of the cards in order to get a winning hand. The friends of certain candidates are, it is true, pressing their claims in public by every fair argument and honorable effort, but it is impossible to be blind to the general expectation that, in the end, everything will be settled by two or three men. They, meanwhile, are pursuing the same plan as James Smith—saying nothing, discussing nothing, proposing no one, but plotting in the dark and assuming the right to impose their will upon the Legislature.

This cannot go on. The people in New York are no more ready than those in New Jersey to see a United States Senator drawn out of a boss's hat. Sooner or later, they simply must get back to the American way of government in the open, a free field and fair play, election of Senators on the principle of the survival of the fittest, not the machine elevation of the unfit.

RAILWAY RATES AND RAILWAY ECONOMIES.

In the current *Outlook*, Mr. Walker D. Hines sets forth temperately and clearly the grounds on which the railways believe themselves justified in asking for higher rates. His fundamental thesis agrees with that of numerous witnesses in the recent inquiry; it is, that a railway must have the opportunity to earn enough to pay interest on its debt and satisfactory dividends on its stock, and, in addition, a surplus large enough to keep the property up to date. Mr. Hines argues that, under present conditions, these purposes cannot be achieved except through a substantial increase in the company's net revenues.

On his own railway, Mr. Hines points out, expenditure for new equipment and betterment, during the fourteen years since the Atchison's reorganization, has averaged $9,000,000 per annum, but in the past five years it has averaged $16,000,000, and the rate of expenditure, he thinks, "will increase continually and progressively." This money can be raised in four ways only—by taking it out of profits, by selling new stock, by issuing bonds with a mortgage on the property, or by borrowing on promissory notes or bonds without a lien on the property. The Atchison's property, Mr. Hines shows, is already mortgaged up. In order to pay for improvements from the surplus, the surplus must be earned, and in order to sell stock or unsecured bonds and notes, such new securities must be offered by a going enterprise, paying "a sufficient dividend on the common stock to make that stock attractive as an investment." This, he believes, necessitates higher railway rates.

The *Outlook* article did not discuss the phase of the question on which Mr. Brandeis insisted in the recent Washington hearing—reduction in working costs through scientific management. This consideration Mr. Hines takes up in a letter to the *Nation* which we print on another page. He does not dispute the reasoning of Mr. Brandeis, but he raises two points which, he believes, would militate against that plan as a complete solution of the financial problem of the railways. One is the fact that, in his judgment, introduction of such a system, in so extended an industry, would be "a matter of years or decades," whereas "the protection of railway credit is of vital, immediate interest." The other is the attitude of organized labor regarding piece-work and the bonus system.

Each of these counter-arguments has force, and calls for careful consideration. The one regarding the position of labor is to some extent borne out by Mr. John Mitchell's interview of last Sunday, declaring that "organized labor is against the premium or bonus system of payment to the workman, because that is designed to speed up the workman beyond the safety line." We doubt, however, if Mr. Mitchell has clearly understood the purpose of the system which he was criticising; which, in reality, is based, not on straining physical capacity to the limit, but on economizing to the uttermost the workman's expenditure of energy. Mr. Ray Morris, in his practical work on "Railroad Administration," explains the feeling of railway labor by "the unfortunate fact" that, in experiments on the basis of individual effort, managers have sometimes tried "to make the exceptional record of one season the minimum standard of the next, so that the only result of brilliant work was to make it progressively harder for the average worker to earn his living." But nothing could possibly be further away than this from intelligent scientific management.

Mr. Hines's argument that the railways cannot safely wait for the complete introduction of a new system of labor supervision has more weight, though, naturally, its conclusiveness depends on the argument from necessity. It must frankly be said that an argument which begins by assuming that a given enterprise must pay a satisfactory dividend on its stock, leads to some logical difficulties. Some companies have been large borrowers on both notes and bonds, when they were paying no dividends at all. Such borrowers, doubtless, have to bid a higher price for money, either through actual rate of interest paid or through discount on the selling price of their new securities; but that is the lot of other business enterprises. Union Pacific was able to raise money enough to buy the Southern Pacific and half of the Northern Pacific's stock, when it was paying only 4 per cent. dividends on its own; yet there are numerous railway men who declare 6 per cent. to be imperative.

We are not arguing for lower dividends, but we do not see how Mr. Hines's full assumption can be accepted unless we recognize a quasi-responsibility on somebody's part to guarantee railway dividends. But, if so, then what is to be the outcome with inefficiently managed or unfavorably located railways? And how are we to escape the paradox of an advance in rates when general business is at its worst—on the ground that the reduced volume of traffic will, at the previous rates, no longer suffice to pay last year's dividend on the company's stock?

Whatever the conclusion at which the Interstate Commerce Commission arrives in the immediate question of next season's railway rates, it will not do to drop the matter of scientific management. There was great force in this remark by Mr. Henry R. Towne, in his testimony last month at the rate inquiry:

> I am not here to oppose the proposed increase of freight rates. I do not know whether the railroads should have it or not. If they are entitled to it, they ought to have it. But I see this fact, as a manufacturer; that, whereas, in other industries, when we are confronted by too close an approximation of our income to our expenditure, competitive conditions rarely, if ever, permit us to open the interval to the point which will cover a fair profit by putting our prices up. Our competitors will not permit of our doing that. We have to meet the competition, and, therefore, we are compelled to look within for the remedy—not to pass the burden on to others, but to face it ourselves, and find some way of relief. We have done it again and again, successfully, on a great scale in hundreds of thousands of cases; and it is one of the many illustrations of what is commonly understood as a blessing in disguise.

MAKING LAWS FOR AIRSHIPS.

The International Conference on Aerial Navigation has again been in session in Paris after an adjournment on June 28, taken at the request of the British Government, which desired plenty of time to examine the draft of an international convention upon which the Conference had nearly agreed. A summary of that convention, which has just appeared in the London *Times*, bears on its face such evidence of its great importance as to make it plain that other nations besides England will need ample time to consider before giving their adhesion to its provisions. As an instance of international law-making in a new sphere of human activity, it is particularly interesting and will doubtless afford fresh inspiration to those enthusiastic members of the new World-Federation League, whose objective is a Supreme Court of International Justice. It may well be asked if the nations can so readily be got together to discuss questions of aerial navigation, why they cannot be induced to legislate in regard to the excessive armament that is steadily bringing on the financial ruin of Europe.

As bearing on this point, it is of interest that all the participating nations agreed that the aerial transport of explosives, firearms, ammunition, and carrier-birds must be forbidden. An airship of one nation arriving in another's territory will be exempt from duty, passengers' luggage to have the same treatment as if it had arrived by sea or land. If there are, however, any photographic films or negatives on board that have evidently been used on the flight, the visited state has the right to insist on their being developed—this, we presume, with a view to preventing the photographing of fortifications. "Merchandise," says the convention, "can only be carried under special conventions, or in virtue of internal legislation," and wireless is to be used for no other purpose than to secure the airship's safety. Unfortunately, the Belgian Government's proposal that there should be everywhere free trade in airships in order to advance aerial navigation was not accepted.

As to liberty to navigate the air, the following rule was accepted:

> Each of the contracting states shall permit the navigation of the airships of the other contracting states within and above its territory, under reserve of the restrictions necessary to guarantee its own safety and that of the persons and property of its inhabitants.

The restrictions referred to relate chiefly to the question of certain zones, over which, if they are properly indicated in advance, no airship may fly unless compelled by necessity. If an aeroplane is carried by accident or by adverse air conditions over an interdicted zone, it must descend at once and indicate its disability. It must also descend if signalled to from the earth; but just how the airship, which may be 6,000 feet high, can be signalled from earth, and how it can always be made to descend if disabled, are technical points that are not touched upon. Will an airship flying 3,000 feet high be able to make a distress signal as required, which can be seen from the earth? Practice alone can tell; but this question shows clearly that, while it is easy to theorize, the effectiveness of the new rules will after all have to be tested in actual practice a few years hence when the dirigible and the passenger-carrying aeroplanes have reached a greater development than at present. Meanwhile, all captains of airships must be provided with certificates of their government, or of some recognized aeronautical association. Moreover, "a very detailed log must be kept, giving not only the names, nationality, and domicile of all persons on board, but the course, altitude, and all events which may occur during the voyage. Log-books must be preserved for at least two years from the date of the last entry, and must be produced on demand of the authorities."

The question of the nationality of an airship brought up some interesting points. It was decided that it should be determined by the nationality of the owner or by his domicile. It was also voted that:

> A state may require its subject to be at the same time domiciled on its territory, or it may admit domiciled foreigners as well as its subjects. Airships belonging to companies must take the nationality of the state in which their head office is situated. In the case of an airship belonging to several owners, at least two-thirds must be owned by subjects of, or foreigners domiciled in, the state conferring nationality.

The Swiss delegates protested that this article would permit the establishment of many foreign airships in one nation without the supervision of their own, and then drew attention to a suggestion already made by them that no nationality be attributed to airships, but that each airship be compelled to acknowledge a "certain port of register or domicile." This system, the Swiss believe, "offers from the point of view of the safety of states, very superior guarantees to those secured by the system of owner's nationality." But the Swiss proposal was rejected.

Each state is required to furnish in the month of January to every other signatory to the convention a list of all the aircraft to which it has granted nationality in the preceding year. These airships must have distinguishing marks and otherwise conform to the *Règlement de la Circulation Aérienne* which is to be annexed to the convention as finally passed, and will, doubtless, help to elucidate many doubtful points. A distinction is made in the convention between public airships—those employed for civil reasons by states—and military airships. The latter are naturally exempt from certain of the regulations, if manned by men in uniform; but the departure or landing of military airships of one nation in the territory of another is strictly prohibited without the authorization of the visited state. Each state may forbid the passage of any or all military airships over its lands. Finally, the convention in no wise interferes with the liberty of action of belligerents or with the rights and duties

of neutrals. Non-signatory states may adhere to it by notifying their intention in writing to the French Government. A contracting state may denounce it in the same manner.

FASHIONS IN HOLIDAY BOOKS.

This is the bookmaker's hour. Now, if ever, he expects the public to give him heed. After months of preparation his shop is thrown open. And in many ways, no doubt, well it may be. Outdoing Mohammed, he has made the mountain, and the whole world besides, come to him. Through him East and West, North Pole and Southern Seas, are any reader's for the asking. So are the painters, authors, prophets, martyrs. The completeness of the output is, indeed, a little appalling. There is scarcely a branch of knowledge which is not presented comprehensively, in attractive form and manner. What though at Christmas the oracles are dumb, the publishers are not.

We may mention at the outset some of the features which are more particularly associated with the season. Especially agreeable is the thought which has been given to children's books. The best of the fairy-tales, tales of heroes like Odysseus, Roland, and Samson, and a quantity of other historical matter told pleasantly but without gush, besides photographs of the masterpieces of painting and sculpture, place the elements of culture where a child will not avoid them, and make a valuable foundation for later thought and reading. Under such tutelage, who shall say that the child, become man, will not win back the pleasurable art of allusion, or that he will not cultivate the habit of historical perspective in forming judgments of present needs? A word likewise for the illustrations, both for juveniles and adults—at least, for those illustrations which stand out from the many that are garish and tawdry. Artistic skill in this line has been progressing steadily; so have the processes of mechanical reproduction, and between the two some beautiful creations have resulted. Books of travel, in particular, have come off well, with their lovely bits of the old world; and, in a few instances, we have observed simple photogravures of city scenes almost as artistic as etchings. As to the so-called "handsome editions" with which Christmas is loaded, opinions will differ widely. To us they are, for the most part, overdone, and contrast unfavorably with those true rulings and simple pages of other days. Here, much more than in the less elaborate editions, the designs and color-schemes are of the impressionistic, unstable sort.

In general, the publishers have shown rare ingenuity in trying to meet a great variety of tastes. Part of their zeal, however, seems to us questionable, if not pernicious. "Reading," under ideal conditions, "maketh a full man," but to-day it becomes a weariness to the flesh, even for him who reads but the titles. Publisher vies with publisher. Not only are the old favorites re-issued, but new favorites are created on the spur of the moment. The publishers, no doubt, will tell you that they are carried along by a force stronger than themselves. Like the etiquette which prevents disarmament, for which each nation shouts in turn, suspicion of the other fellow keeps the publisher from his avowed wish to limit himself to a few books each year. Meanwhile, to stand the bombardment, the reading public may well pray for *aes triplex*. True, he who runs may read, and still the running reader is no match to-day for the active publisher.

The latter, in point of fact, recognizes this, and agrees to do your reading for you by furnishing a predigested variety. There never was a time when books of reference were so plentiful. There are even summaries of fiction, the best hundred pages of Plato, of Herbert Spencer. Keeping pace, too, with the specialist, publishers now get out hosts of "series" in which knowledge, cut perpendicularly, athwart, or to order, is easily accessible. If it is true that "he is wise who knows the way to the book-shelves," then wisdom will soon be omniscience. And in this respect—putting conveniently upon record the doings of man, his every thought and feeling, however trivial—the publishers of the present time have wrought heroically. Yet there comes the distressing feeling that this policy is partly mistaken. Does the reader read more the more his reading is done for him? That may be an Irish question, but it fairly presents the situation. The chances are, we believe, that the modern way is weakening to the public's mental fabric. When men had to go distances to borrow books and had to make their own summaries, they remembered what they read, if only in self-defence. The tendency nowadays is to get knowledge literally at hand, and to get it permanently any farther is thought unnecessary. In the hour of need, we append the words of Francis Bacon on these very matters:

> Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider.

RECENT GERMAN POETRY.

Compiling and editing poetical anthologies is a task to which German men of letters devote themselves with enthusiastic industry. Even the younger generation has given us a number of lyrical collections of merit, and has roused interest in the poetry of other countries. Karl Henckell, one of the leaders of those militant secessionists who made their début in the "Moderne Dichter-Charaktere" twenty-five years ago, gave us a loose-leaf collection of the world's lyrics some years later, and now his name appears on the cover of a book called "Weltlyrik" (München: Die Lese), which contains some of the choicest specimens of lyric verse written outside of Germany and which, with the exception of one of Shakespeare's sonnets, is limited to the last century. The beautiful little volume bears the subtitle "Ein Lebenskreis in Nachdichtungen," defining the scope and character of the work. There are selections from Shakespeare, Rossetti, Swinburne, Poe, Whitman, Holger Drachmann, Pushkin, Mjereshkowski, Maria Konopnicka, Ada Negri, and others, among them fifteen Frenchmen, beginning with de Musset and ending with the singer of Bruges, the mysterious George Rodenbach. The keynote of the work is struck in the editor's prologue, a hymn to life, and for epilogue he has appropriately chosen the hymn to the sun from "Chantecler."

The translations are really "Nachdichtungen," namely, poetical reproductions, and as such have great merit. Among the best are the lines on love from Whitman's "Mystic Trumpeter," Poe's "Eldorado," Emilio Praga's "Night Prayer," Asnyk's "Futile Plaint," and Maupassant's poem on the wild geese. Almost all of Henckell's versions of Verlaine are distinguished by a rare spontaneity, but in rendering Sully Prudhomme's "Broken Vase," he has been less successful. As a whole, the book is a remarkable achievement. It reflects sometimes the more sordid phases of human existence, but the only selection which might have been omitted is that from Aristide Bruant, though as a translation, it is a veritable *tour de force*.

When Ernst Freiherr von Wolzogen, who is now lecturing in America on the

German drama and the past thirty years of German letters, abandoned the enterprise to which he had devoted a number of years, the *Überbrettl*, he little dreamed that the idea of transplanting upon German soil the gripping pathos and audacious humor of the French *chansons du cabaret* would survive longer in books than on the stage. Maximilian Bern, the compiler and editor of poetical anthologies for the Reclam edition, collected specimens of German poetry approaching that *genre* in spirit and form, and called his book "Die zehnte Muse" (imported by G. E. Stechert & Co.). A second and enlarged edition of that work has just appeared, showing that there is a demand for *Überbrettl* poetry wherever German is sung and recited. The book differs from most poetical anthologies in the absence of the hackneyed sentimental and sweetly inane. Among the groups into which it is divided, satire covers the largest space, next comes erotic poetry, and next forty pages of poems more or less directly implying criticism of the present social order. There are also fables, parables, tramp tunes, and romances of reality, and the lines of demarcation are remarkably well observed. The selections cover three centuries of German poetry and revive the memory of long forgotten poets, introducing to the readers a number of obscure singers whose work deserves recognition. For purposes of recitation, this book is likely to be without a peer in the German book market.

Carl Hauptmann has published an enlarged edition of the quaint volume of prose and verse entitled "Aus meinem Tagebuch" (München: Georg D. W. Callwey), which illustrates the elusive originality of the author. It is a book to be taken up at quiet moments, if one is to sense its spiritual unity. Hauptmann's interests embrace the universe. He has sympathy with the exalted aspirations and pity for the criminal cravings of mankind. He looks upon the turmoil of the workaday world with eyes that seek to fathom its meaning. He listens to Bach and Beethoven and illumines what was vague or obscure. There are lyrics in the book insinuatingly tuneful; there are philosophical reflections, simply worded, but full of suggestions; there are passing glances at men of letters—Schiller, Turgenev, Zola, Liliencron, surprising for their insight; there are interpretations of artists, Böcklin, Meunier, Segantini. The book is appropriately dedicated to Anna Teichmüller, a woman composer of Germany, who has made a number of his lyrics into songs, with rare ability.

Among the poets that now and then spring from the plain people of Germany, Johanna Ambrosius has perhaps risen to undue prominence, while Christian Wagner has been comparatively neglected. For this son of the same Suavian soil that brought forth the much-beloved Schiller is a personality of greater artistic distinction and spiritual import than that facile poetess of the obvious and the commonplace. Christian Wagner does not avoid the homely topics of everyday life; he does not seek his subjects in remote realms of thought; yet his songs strike a new note. For he has the gift of extracting the essence of poetry from the life about him and of coining images and moulding phrases of individual beauty. The ten volumes that contain his work are the fascinating record of a spiritual and artistic development. With the exception of a few readers of *Poet-Lore* who may have seen translations of his poems by Miss Thomas, Christian Wagner is unknown to American students of German poetry. Yet there are few poets of contemporary Germany capable of making a wider appeal than the peasant-poet of Warmbrunn.

The slim volume which has lately come from the pen of this septuagenarian is entitled "Späte Garben" (München: Georg Müller), and its contents and quality are typical of his work. A series of charming flower-songs introduce the collection. From his intimate knowledge of the flora of his home, Wagner weaves fanciful myths about the daphne, the nettle, the water-iris, the evening-primrose, and even about the quitch grass growing among the wheat. He sings of planting, hoeing, and digging potatoes, of the simple beliefs and customs of his people. He does not echo the well-worn rhymes of an unlimited procession of poetical ancestors, but writes from direct and personal impression. There are a score of poems reminiscent of an Italian journey which he was able to make through the generosity of a literary society.

Otto Sattler is a German-American of whose poetical gifts the little volume entitled "Stille und Sturm" (Lemcke & Buechner) gives fair promise. He treats a variety of motives and skilfully adapts his manner to the matter before him. He sings of the joy of life and love and of the Wanderlust which has taken him, like so many of his people, around the world; he writes of the daily drudgery in factory and workshop, among the whirr and the roar of machinery. He pictures the sordidness of poverty and strikes notes of stirring fervor in uttering his faith in a better future for all mankind. Of the longer poems in prose the one called "New York" commands attention. Among the specimens of a Whitmanesque style that have appeared in Germany within the last two decades, this poem compares well with those of Johannes Schlaf and Alfons Paquet. The meaning which the image of the city holds for the author and the hopeful inference which he draws from it are expressed with a strength and a dignity that reconcile us for some pages of a rather trite sentimentalism.

The posthumous volume of "Poetische Auslese," by Hugo Andriessen (Beaver, Pa.), awakens memories of a time when a wave of radicalism swept over the German element of the United States and found organs to lend it voice in Karl Heinzen's *Pionier*, published in Boston; the *Arme Teufel*, edited by Robert Reitzel of Detroit, and the *Freidenker*, which alone has survived and is still sent out from Milwaukee. For in those weeklies could always be found poems by the latest author, voicing the gospel of free thought, taking up the cause of some political movement and spreading the message of evolution and a monistic philosophy. This book contains many specimens of that didacticism, but the editors of the volume have wisely included poems unburdened by any message and a number of clever translations from Swinburne, Adelaide Proctor, Longfellow, Charles Wolfe, William Bedford, Lyall, and Villon.

Another little book by a German-American, Dr. W. L. Rosenberg, is pompously entitled "An der Weltenwende" (Cleveland: Windsor Publishing Co.). He significantly uses as dedication a translation of "The Under-Dog," by "Barker," presumably Elsa Barker. The poems evoke dramatic scenes of a Ghetto pogrom, of miners' strikes, and of sweatshop slavery. Some hark back to the abolitionist movement, and one brings the book singularly up to date; it is the poem entitled "Roosevelt," of which every stanza begins with the line "Nimm dich in Acht"—Take care. But the feature that relieves the monotony of the *Tendenz* note struck too insistently and incessantly is the translations from William Morris, John Hay, and Victor Hugo.

A. von Ende.

Correspondence.

THE SHAPE OF THE SHAKESPEAREAN STAGE.

To the Editor of The Nation:

Sir: Students of the Elizabethan drama owe a considerable debt to V. E. Albright's monograph on "The Shakespearean Stage" (Columbia University Studies in English, 1909). It will hardly be thought derogatory of his admirable work to mention a detail in which his sketches of the "typical Shakespearean stage" seem likely to convey misapprehension.

Mr. Albright's plates represent a stage not square, but converging to a relatively sharp point in front. The only authority for this conception is found in a rough sketch of a stage of some kind, printed on the title page of "The Tragedy of Messallina," in 1640. It is by no means clear that this can be relied upon as a faithful picture of conditions in the public theatres of that day. It is certainly vague and not improbably fanciful. Moreover, it bears a very strong resemblance to the stage portrayed on the title-page of the Latin play

of "Roxana" (1632), which was acted in the hall of Trinity College, Cambridge, and by reason of its language and general academic character cannot ever have been produced in the London popular theatres. "Messallina" itself, acted by the company of the King's Revels, is not precisely a popular play; and it is possible that the stage portrayed in both dramas is meant to be that of the academic hall rather than of the public theatre. The employment of the word "Theator," quoted by Mr. Albright on pp. 44, 45, does not contradict such an assumption.

In any case, however, a comparison of the "Roxana" and "Messallina" sketches (reproduced in Prof. Baker's "Development of Shakespeare as a Dramatist," p. 270), with Mr. Albright's ideal drawing, will show that the side lines of the stage converge relatively very little in the two former. It seems to me even doubtful whether any convergence at all was intended. The shortening of the front line may be merely the device of an awkward draughtsman, whereby he is enabled to represent, from a direct front view, the two side lines of the stage, which naturally would be invisible if allowed to remain entirely parallel to each other and to the line of vision.

Even if we admit, however, that the "Messallina" picture proves at least one English public stage in 1640 to have been somewhat narrower in front than at the back, no such assumption concerning the Shakespearean stage of a half century earlier seems allowable. The well-known De Witt drawing of the Swan Theatre, dated 1596, shows a perfectly square stage; and De Witt's picture, untrustworthy though it may be in details, is certainly better authority for sixteenth-century practice in regard to so fundamental a matter than the equally vague and much later frontispiece to "Messallina."

Fortunately, it is not necessary to depend altogether for one's decision upon the balancing of these rough and contradictory sketches. The question seems to be settled, as far as the procedure of 1600 is concerned, by the details given in Henslowe's contract for the building of the Fortune Theatre, January 8, 1599, 1600. Many of the features in the construction of this building, it should be remembered, were avowedly copied from Shakespeare's Globe; and here a rectangular stage, virtually square, is certainly described. In length it is to be forty-three feet; in breadth, it is to extend to the middle of the "yarde," or pit; *i. e.*, forty feet, since the entire width of the house is named as eighty.

In one place, indeed, Mr. Albright admits incidentally that the "outer stage may have been square in its earlier history, and converging in its later" (p. 78). Since we have good evidence that it was square in Shakespeare's time, and only the most dubious reason to believe that it may have been converging forty years later, is it not a mistake to represent "the typical Shakespearean stage" as converging to such a degree that it is almost triangular?

The matter seems one of decided importance, because several features of Elizabethan dramatic presentation can hardly be explained in connection with the stage which Mr. Albright depicts. A ruling principle in the construction of Elizabethan theatres was always, apparently, the provision of generous stage room. The Fortune of Henslowe and Alleyn, previously mentioned, allotted more than one-fourth of the entire ground area to stage and tiring-house. Performers on Mr. Albright's stage would, however, be excessively cramped, and there would be no place at all tenable by the spectators, who, as we know, frequently occupied stools on the stage. The narrow front portion would be quite useless for real action, and all the exciting scenes would have to be presented toward the extreme rear of the outer platform or on the inner stage under the balcony—a very obvious disadvantage for the audience. Moreover, a glance at Mr. Albright's sketch will show how entirely unsuited this useless forward point would be for the seating of auditors. Half a dozen gallants and citizens, stationed as the stage directions in the prologue to "The Knight of the Burning Pestle" indicate, would hide the entire stage from all the spectators in the pit. On the other hand, auditors placed farther back on Mr. Albright's stage must be put either between the inner and outer stages—an impossible position—or else directly in the way of the doors by which actors entered and left the outer stage.

It seems clear, therefore, that the Shakespearean stage must have been square, or even more probably, as in the case of the Fortune, rectangular, with the longer side abutting upon the pit. Only under such conditions could a large number of actors and a group of spectators have been accommodated simultaneously without occasioning the unendurable discomfort of the rest of the audience.

"SCIENTIFIC MANAGEMENT" FOR RAILWAYS.

To the Editor of The Nation:

Sir: Many railroad officers have attempted to show that the public interest requires a marked improvement in railroad credit, and that to accomplish such improvement there must be substantial increases in net revenue. However, some who concede these propositions assert that such increases of net revenue ought not to be accomplished through increases in rates, but through increased efficiency of operation in accordance with the theories recently advanced by witnesses before the Interstate Commerce Commission. The support of this view rests largely upon the claims of Mr. Harrington Emerson, one of the witnesses before the commission.

Mr. Emerson made it plain that his criticism of inefficiency related not merely to the railroads, but, generally speaking, to all industrial activity, much of which he declared was "disgracefully" inefficient. When asked about the difference between railroads and other industries, Mr. Emerson stated that the railroads "are fully up to, if not ahead of, the average ability, and probably ahead of what they were some years ago." I believe that any impartial investigation will show a higher average efficiency on the part of railroads as a whole than on the part of other industries as a whole.

Bearing in mind that the improvement of railroad credit is a matter of vital interest to the public, it would seem contrary to the public's own interest for the government to prevent increases in rates and thereby obstruct the protection of railroad credit, merely because the railroads have not yet realized an ideal standard of efficiency far beyond that realized by well-managed industries in general.

Moreover, the supporters of the theories urged upon the commission made it very clear that those theories would revolutionize existing industrial methods. It is apparent that such a revolution would be a matter of time even in a single shop, and probably would be a matter of years or decades with respect to any extended industry. But the protection of railroad credit is of vital, immediate interest to the public and cannot be postponed indefinitely to await the success of an industrial revolution; it is a question which demands favorable attention now according to the general conditions and standards which prevail.

The theories of these experts involve the plan of securing greater efficiency from the individual laborer by means of a bonus system, and this is a system to which union labor is understood to be very much opposed. For example, one railroad company attempted to apply this bonus system to the operation of its locomotives, but the Brotherhood of Locomotive Engineers, one of the most intelligent labor unions in the country, protested with such effect that the attempt was given up. Apparently trade unionism must be revolutionized before its coöperation can be secured in putting any such theories into general effect.

The fullest discussion of the question of industrial efficiency is to be welcomed and will tend to improve efficiency in all enterprises, both railroad and non-railroad, and perhaps will promote coöperation on the part of union labor. But the present situation cannot properly await the future working out of these problems. There is an imperative public necessity that the railroads should have adequate credit, and this credit is on the point of being seriously impaired unless additional net revenue can be had without delay. Under such conditions the protection of the public's interests ought not to be postponed for an indefinite period to await the revolutionizing of industrial methods or trade-union principles either as to the railroads or as to enterprises generally

LIFE AT THE SORBONNE.

To the Editor of The Nation:

Sir: The student from an American college entering the Sorbonne discovers immediately a difference in methods, even in the formalities of registration, which indicates that the notions of education held in Paris are not those of Harvard or Princeton. Having in mind the infinite precautions taken by the American college to insure his doing a little work from time to time, he is surprised to find that the French authorities take it for granted that he will work of his own accord, and that, in fact, he has come to the Sorbonne for that express purpose. He can follow twenty courses, if he likes; or—amusing as it sounds—none at all. Absolutely nothing is officially required of him beyond the production of a diploma of secondary, or, if he prefers, of higher, instruction. Entrance examinations do not exist. If he wishes to take a de-

gree, he may present himself for final examinations after a period of years which varies according to the degree. On the other hand, after receiving his card of admission, he may cast one glance at the stately court and dome of the Sorbonne, and then depart forever. He will not be pursued by summonses from the dean, nor will his parents be notified of his "undue absence from university exercises."

Hearing of such a situation, a certain number of American undergraduates will inevitably exclaim "What a cinch!" and immediately begin to think seriously of transferring the seat of their education to Paris. But they would find the institution less agreeable than they had expected. For there exists at the Sorbonne no trace of the varied social activity which is the real attraction at American colleges. There being no dormitories or commons, the students live where they please, or where they can. The university is not concerned with them outside the lecture rooms. There is a total lack of the patriarchal spirit which manifests itself, at times so painfully for the undergraduate, through the American "committee on discipline." And what makes this attitude possible is precisely the complete absence of the clubs, fraternities, "proms," and football games which crowd the American student's days. In France they would never believe that we pay athletic coaches higher salaries than full professors, nor that the coaches sometimes lodge complaints when "university work" is allowed to encroach on time consecrated to football practice.

Whatever may be the motives which send an American boy to college, the chances are against their being connected with the inside of books. Custom, fashion, desire for amusement, a hundred various ambitions, petty but absorbing, all may have something to do with it. But in France the situation is much simpler; there is no use in going to a university for anything but study, because study is the only thing to be had there. Of course, there are numbers of young men from the provinces who come to the University of Paris, and especially to the faculties of law and medicine, solely for the sake of a few years in the metropolis. But just because of the extreme liberty allowed them, they do not trouble the professors by attending any of the courses, and consequently have as little influence on the schools as any of the other thousands of sightseers in Paris who never heard of Robert Sorbon.

It may be objected that the social side of American universities has its importance, and that a boy brought up in a sort of scholastic monastery would be a difficult type to live with. But the French are a proof of the fact that the social element may be neglected in universities without its being affected outside. They have both kinds of education, social and intellectual. They simply do not attempt to impose both of them on the university. That institution they consider as intended solely for intellectual training. The rest comes naturally, in the course of everyday life. And it is just this singleness of purpose, together with the higher regard accorded to things of the mind by the people in general, which gives the French university its air of seriousness, of efficiency, of accomplishment. This air is bound to strike the American as one of violent contrast with the institutions of his own land, where study slips apologetically and all but unnoticed through the roaring years of college life.

HERBERT JONES.

Paris, November 16.

PORTSMOUTH NAVY YARD.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of November 24 appears in an editorial on "Navy Yard Reform" the following statement concerning the Portsmouth Navy Yard: "The waterway to the yard is so bad that no battleship is docked there, and even a gunboat approaches it with great caution." As a reader of the *Nation* who puts great faith in its statements of fact, I beg leave to correct this extraordinary misstatement. Such battleships as the Maine, Wisconsin, and New Hampshire have repeatedly come up to the Portsmouth Yard under their own steam. The Maine and Wisconsin are lying at the yard piers at the present time. The armored cruisers Tennessee and Montana (502 feet long) were at the yard a few weeks ago, and the North Carolina, of the same class, was docked last Monday. One of the officers of the North Carolina told me that she came up to the yard at a speed of ten knots under her own steam and without the yard pilot. It would be possible to give further facts showing how the Portsmouth Navy Yard is now entirely and easily accessible to the largest men-of-war.

ALFRED GOODING.

Portsmouth, N. H., December 6.

[Our information was taken from an apparently uncontradicted statement made in Congress by a member of the House Naval Committee in an appeal to Congress to vote no more money for the Portsmouth and other yards.—ED. THE NATION.]

Literature.

HOLIDAY BOOKS.—II.

A pretty story, "A Christmas Mystery," by William J. Locke, has been illustrated for the season by Blendon Campbell and printed as a slender gift book. (Lane, 75 cents net.) Another short story pleasantly decked out for the season is "The Green Door," by Mrs. Wilkins-Freeman, with illustrations by Mary R. Bassett. (Moffat, Yard, 75 cents net.) Of older vintage is a translation of "Aucassin and Nicolette," by Eugene Mason, for which Maxwell Armfield has prepared several colored illustrations in antique style. (Dutton, 80 cents net.)

Gordon Home's sixteen full-page illustrations in color, together with a few line-drawings in the text, do, as he desires, give "The Romance of London." The color-plates are, with one or two exceptions, clearer and cleaner than common, and thus please the eye without detracting from the desired effect. The text deals with the history of the buildings whose exteriors and interiors are portrayed. (Macmillan, $1 net.)

As a companion volume to his "London City," James S. Ogilvy has taken a wider sweep in his "Relics and Memorials of London Town." The colors of the fifty plates by the author are not, to our taste, as agreeable as in the slighter volume by Gordon Home, but the scope is much larger. The text also is much more inclusive and is interspersed with quotations and anecdotes. (Dutton, $5 net.)

As in almost all the illustrated volumes published by Adam & Charles Black, the printing of the colored plates in "St. Petersburg" is clear and attractive. The pictures are from paintings by F. de Haenen, and cover pretty well the buildings of the city and the types of life in it. The text is written by G. Dobson. (Macmillan, $2.50 net.)

Unusual in form, with its leather covers and clasps, and rich in contents, is the new volume of the Mediæval Library, in which Miss Edith Rickert has gathered together a host of "Ancient English Christmas Carols," ranging from the thirteenth to the seventeenth century, with a few modern songs in an appendix. A translation of obsolete words at the bottom of the pages, with a glossary at the end of the volume, makes the reading of the old texts easy; and, to a degree that will not affect the quaint manner of the original, the language has been modernized here and there in the texts themselves. The spelling, where the rhythm is not altered thereby, and the punctuation are regularly modernized, and this, we hold, is the only sensible way of dealing with such material for readers as distinguished from students. A number of photogravures from old illuminated missals are of real charm. Altogether, the book is one of the most attractive of an originally conceived and well executed series. (Duffield, $3.25 net.)

Edward Sandford Martin's "Luxury of Children" has been put out with illustrations by Sarah S. Stilwell. (Harper, $1.50.)

A unique memorial of a city is Louis J. Stillmann's "The Vanished Ruin Era," which consists of a series of photographs of San Francisco as it appeared after the earthquake, together with descriptive poems corresponding to the pictures. (Paul Elder, $2.50.)

"A Book of Hospitalities and a Record of Guests" is novel in design and happy in execution. After a "foreword" (this, for preface, is the only blot on the book) on Old House Mottoes, by Arthur Guiterman, we pass to a series of original epigrams by the same writer, some of which might serve for actual inscriptions, while others, such as those on the Master and on the Dog, might be a trifle awkward to inscribe, but are apt as mottoes. Many of these couplets and quatrains have a pretty touch, as may be seen in these three on the Gate, the Books, and the Andirons, respectively:

Now lift my Latch, and readily I swing
To bid thee come where Courtesy is King.
My Hinges creak,—for that I cannot teach
Their tongues to welcome thee in plainer Speech.

Thy Host loves well, when Nights are wild or cold,
To pore upon our Pages manifold.
We Books are Friends of his,—so, prithee, make
His Friends thy Friends, for Friendship's Sake.

Let Love endure. Thy Heart should feel no Shame
Like us to show the Marks of ancient Flame.

There are blank pages to be filled by the record of guests. (Paul Elder, $1.50.)

A. L. Coburn has taken a score of photographs of scenes in New York, and these have been printed in photogravure under his personal supervision at the Ballantyne Press. They form a romantic, and, in part, even beautiful record of the streets and bridges and wharves of the city. H. G. Wells contributes an introductory note, full of admiration for the vigor of New York

life, and for the marvels of her architecture:

I will confess an unqualified admiration for the sky-scraper—given the New York air to reveal it clearly to its summit against the sky. The Flat-Iron I visited again and again during my brief stay in New York, that I might see it at every phase in the bright round of the New York day and night. Mr. Coburn has given it between wintry trees, and in its graver mood, but I liked it best in the pellucid evening time, when the warm reflections of the sundown mingle with the onset of the livid lights within. To suggest that, the most exquisite of all New York's daily cycle of effects, Mr. Coburn has given a picture of the Singer tower at twilight, in which I verily believe his plate has caught something of the exhilaration of the air.

Mr. Wells thinks that these photographs will still be admired a hundred years from now; we are content to recommend them for the present. (Brentano's, $6.)

There was a time when few travellers penetrated the remote places of the peninsula of Brittany. Aliens were chiefly English residents on the fringe of coast, attracted by the moderate cost of living. Increasing facilities of travel, and, for the motorist, the lure of good roads have opened the land to invasion—a land picturesque, with an atmosphere of sombre romance, where the cult of Celtic saints still persists, where much of mediæval and even Druidical days still lingers. Scientists explain in vain the stones of Carnac. Every Breton peasant, whose church still tolerates a reverence for stones and springs, knows that it is St. Corneille who saved Carnac from destruction by turning the pagan army into stone; and the fisherman on the wind-swept headland knows as well that the blast at his hut door is the knock of a Druid soul pleading for Christian burial. It is into this world of witchery and romance that George Wharton Edwards invites us in "Brittany and the Bretons"—into the world of Merlin, of stout Du Guesclin, and sturdy Anne of Brittany, of gray villages of one tone, of plain, uninteresting churches, peopled by a patriotic race, faithful to religion and law. The volume is a companion to the author's "Holland of To-day," and is illustrated by somewhat sombre pictures which, however, accord well with his subject—a land of sinister beauty, a people whose life is bound up with the tragedies of the sea. The illustrations are handsomely reproduced in color. (Moffat, Yard, $6 net.)

Harrison Fisher has for a gift-book this year "A Garden of Girls," the title of which, together with Mr. Fisher's well-known manner, sufficiently explains the nature of the drawings reproduced. (Dodd, Mead, $3.50 net.) Another volume by Mr. Fisher is "Pictures in Color." (Scribner, $3.50 net.)

Among the special illustrated books from Boston may be mentioned Trowbridge's "Darius Green and His Flying Machine," with pictures by Wallace Goldsmith, and Mrs. Wiggin's "Rebecca," with a frontispiece in color by F. C. Yohn and reproductions of photographs taken from the play. (Houghton, 50 cents net and $1.50.)

Howard Chandler Christy offers his instalment of sentiment in something above a hundred illustrations for "The Lady of the Lake." (Bobbs-Merrill, $3.)

A "Christmas Treasury of Song and Verse" has been compiled by Temple Scott from sources ancient and modern. The book is neatly printed. (Baker & Taylor, $1.25 net.)

ENGLISH DRAMA.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Vols. V and VI. The Drama to 1642. New York: G. P. Putnam's Sons. $2.50 each.

The volumes before us, which, together, form a history of the English drama from its beginnings down to the closing of the theatres by the Puritan Parliament, are decidedly the most notable that have yet appeared in this series. The contributors are nearly all authorities of the first rank—English, German, and American—in the field of the drama, and the result is a more exhaustive record of present knowledge of the subject than is to be found in any other work. One observes, moreover, a progressive improvement in the supervision of the general editors. There is no serious conflict of statement from chapter to chapter, and cross-references are here given for the first time to any considerable extent. Dr. Ward has himself contributed two valuable chapters on subjects which his past researches have fitted him peculiarly to deal with—namely, The Origins of English Drama and Some Political and Social Aspects of the Later Elizabethan and Earlier Stewart Period.

Among the chapters which are devoted to the different branches of the drama as distinguished from individual authors we note in Prof. W. Creizenach's treatment of the miracle-plays and moralities a masterly survey, in brief compass, of the early religious drama. He remarks of the original purpose of the miracle-plays—viz., to constitute a sort of living picture-book of sacred history at a time when so few could read the Bible itself—that it explains why nothing was left in them to be done behind the scenes or told by messengers; and this observation is significant not only for the mediæval drama, but for its descendant, the modern drama, generally. He also lays due stress on the degree to which the interests of the priesthood color the miracle-plays, as in the case of Cain, whose unwillingness to pay his religious dues seemed to these ecclesiastical authors a much more heinous offence than the killing of his brother. We observe that in the "Elckerlijc-Everyman" controversy Professor Creizenach accepts the English play rather than the Dutch as the original—a position which is hardly tenable since the recent thorough examination of the problem by Professors Manly and Wood. Prof. J. W. Cunliffe's discussion of early English tragedy, which follows immediately after, is noteworthy, especially for new material on the sources and mutual relations of the plays of this group, the debt of which to Seneca he has done much to set in its true light. The weightiest contribution, however, to the study of a particular branch of the drama is unquestionably that which F. S. Boas has devoted to the university plays. We have here a full and careful account of university activity in the drama, including plays in both Latin and English, for the whole period down to 1642. Mr. Boas's history of these academic efforts, which, notwithstanding their obvious limitations, were not without influence on the popular stage, fills a real want in the literature of the English drama, and, besides, contains much material with which even specialists are not familiar. We would call attention particularly to the summary which is here given of Griffin Higgs's "True and faithfull relation of the risinge and fall of Thomas Tucker, Prince of Alba Fortunata, etc.," the manuscript of which is preserved in the library of St. John's College at Oxford. This manuscript, which has hitherto been printed only in part, lets us more completely behind the scenes of the collegiate theatre, as Mr. Boas remarks, than any other document in existence. The "Relation" is an account of a series of festivities which lasted from All Saints' Eve, 1607, to the first Sunday in the following Lent. It is curious to observe how strong a hold even at this late date the allegory of the old moralities had on the academic playwright.

In his chapter on the Masque and Pastoral, the Rev. Ronald Bayne is treading in less obscure paths. Possessing, however, a distinct charm of style, he has known how to convey to his own pages something of the picturesqueness of his material, as the authors of certain standard treatises on these species of drama have failed to do. The sympathy with which he has entered into his subject has led him to exaggerate, perhaps, the literary value of Jonson's masques. In any event, the different estimate which is put on these productions by Professor Thorndike and himself marks a stronger discord than anything else that we have observed in the present volumes.

Of the chapters which deal with the individual dramatists, the best are those on Marlowe and Kyd by G. Gregory Smith, Middleton and Rowley by Arthur Symons, and Massinger by Emil Koeppel. Indeed, the pages devoted to Marlowe and Middleton offer the most penetrating criticism that is to be found in the two volumes. Especially to be commended is Professor Smith's insistence in regard to Marlowe's influence on the Elizabethan drama as one of poetic quality rather than of dramatic workmanship, and his view that the "history play" does not in any essential respect stand apart from the accepted dramatic categories. On the other hand, Professor Koeppel's treatment of Massinger is marked by lucid exposition and an easy mastery. But we

may say, in general, that, with one conspicuous exception, the various dramatists are discussed in a satisfactory manner. Unfortunately this exception, Shakespeare, is the most important of all, and one cannot but feel a keen disappointment that the principal figure not only in the Elizabethan drama, but in the whole range of our literature, should have found such inadequate treatment in a work of this authority. The discussion of the poems is not open to serious objection, but in the chapter on Shakespeare's Life and Plays, we have Professor Saintsbury at his worst. He exhibits the familiar disparagement of the results of modern research at the outset and the consequent attitude of barren negation, which is sufficiently typified in the sentence, "We do not know whether he ever went to school." Only by his reluctance to accept the results and methods of recent research can we explain the author's rejection of the customary chronological method in the discussion of Shakespeare's plays in favor of the confused scheme which he actually adopts and which he would have no trouble in copyrighting as his own—that is to say, first, the plays mentioned by Meres in the "Palladis Tamia" (with separation of the history plays from the rest), next, "Pericles," and, then, the remaining plays according to "the usual folio order, with one single exception, that of 'The Tempest.'" As a matter of fact, even as regards the main categories—comedies, histories and tragedies—this is not the only instance in which the folio order is departed from, and within these categories that order is not observed at all, the plays on classical themes being discussed first and then the great tragedies. We may note, in passing, that Professor Saintsbury is inclined to take "Timon of Athens" as entirely Shakespearean, and "Julius Cæsar" as written "about the same time" as the other Roman plays. In view of the attitude of mind which we have described, no one will be surprised to learn that in the Tabular Conspectus, which is supposed to give the "facts" of Shakespeare's life, no use whatever is made of Prof. C. W. Wallace's discoveries or that this same Conspectus ascribes the first quarto of "Titus Andronicus" to 1595 (instead of 1594), and dates the old play, "King Leir," 1605, simply because it was printed in that year. One could, of course, forgive these deficiencies of Professor Saintsbury's, if they were offset by merits of literary criticism or the verve of style which lends interest to his recent address on "The Grand Style in Shakespeare," but we fail to discern these qualities in his present contribution.

With regard to the Rev. Ernest Walder's chapter on the Text of Shakespeare, we have only space to remark that it is, in the main, an acceptable piece of work, although not entirely up to date. For example, the writer repeats the common opinion as to the surreptitious origin of the quartos, without mentioning the grave doubts as regards a number of them which have been raised by A. W. Pollard's admirable treatise, "Shakespeare Folios and Quartos." This book, to be sure, is included in the bibliography, but no use is made of it in the text. Nor do we find here any allusion to the theory of Greg and Pollard concerning the printing in 1619 of certain of the quartos which bear earlier dates—a theory which has received convincing confirmation from the investigations of W. J. Neidig, published in the current number of *Modern Philology*.

The bibliographies which accompany the volumes are full and valuable. We hope, however, that the brief estimates of individual books which they contain here and there will be more numerous in future volumes. Indeed, this ought to be made a regular feature of the work.

CURRENT FICTION.

The Guillotine Club, and Other Stories. By S. Weir Mitchell. New York: The Century Co.

Admirers of Dr. Mitchell's fiction will not find these tales less effective than their predecessors. Among other accomplishments he has caught the knack of the short story, so far as it need be caught in order to win a considerable audience. He has, in fact, an eye for the picturesque scene, and the stageable, if not dramatic, episode. And he is always intelligible. No doubt this latter quality, the fact that he is in the habit of leaving nothing to the ingenuity of his readers, has had something to do with his popular success. Magazine readers do not want to be bothered with subtleties of plot or style. Dr. Mitchell writes always like a promising beginner. His wires are visible, his puppets move to the prompter's lips. The persons, for example, in the story of "The Guillotine Club" have little or no objective reality. They are called into action by the necessity of the plot which the author has invented, and which remains his master. There is no illusion; the whole thing is artificial, entertaining only as an idea. But Dr. Mitchell's acceptability seems to be independent even of novelty in idea. The outworn superstition about thirteen at table figures in two of these four stories; their freshness consists merely in a minor ingenuity of application. But we suppose the secret of Dr. Mitchell's undoubted hold upon a public of his own is an open one. It lies a little, no doubt, in the glamour that surrounds the writer who is eminent outside of literature, but chiefly in the very genuine and human interest in life and character which shines through work that might otherwise be judged artificial.

Westover of Wanalah. By George Cary Eggleston. Boston: Lothrop, Lee & Shepard Co.

This is a story of old Virginia before the war, a Virginia whose hospitality and life Mr. Eggleston is well qualified to describe. His hero, a young plantation owner of good family, through a case of mistaken identity, is arrested and convicted of the crime of breaking into a girls' school, but happily, just as he is about to go to prison, the real culprit is discovered. The incident, however, has the effect of breaking up Westover's love affair and sending him to the mountains, where Judy Peters, a feminine political boss of the district—a character, by the way, that the author has used before—helps to restore his self-respect. The author gives a satisfying picture of the chivalrous respect of the Southern gentleman for his womankind, but the people of "Westover of Wanalah" are a little bit untrue—they are almost too perfect, all save Judy Peters, kindly, shrewd, rugged, and strong, influencing all with whom she comes in contact.

Romance of Imperial Rome. By Elizabeth W. Champney. With 60 photogravures and other illustrations. New York: G. P. Putnam's Sons.

Upon a broad and solid foundation of familiarity with the literature, art, and history of ancient Rome, the author of "Romance of French Abbeys," "Romance of Italian Villas," etc., has reared another of her charming fabrics—not so light and airy as to incur the charge of flimsiness, and not so heavy as to be burdened by its own weight. In this collection of stories, the tender and tragically ending love-tale of Sulpicia is enough of a story easily to stand alone as fiction, and has the added attraction for cultivated people of introducing the flesh-and-blood characters of Albius Tibullus and his Delia, Horace, Virgil, Mæcenas, Glycera, and a villain or two. "The Song of the Sirens," another pleasing attempt to make Imperial Romans live, calls up the names of Augustus and Livia, Agrippa and Vipsania, Tiberius and the Princess Julia, and other members of the court circle, among them Ovid, and invokes the sympathy of the reader for the notorious daughter of the Emperor. "The Villa of Unhappy Love" is a story of the Flavian reign; "A Dog of Britain" treats of Druids and Dryads and Love. "The Nameless Pedestal" tells of the punishment of a Vestal, and "The Necklace of Vesta" brings back the times of Alaric and Attila. "The Flight of Apollo" and "The Loves of Horace" are more in the vein of the essay, and are not so convincing, especially the latter. The photogravures are excellent, all of the illustra-

tions are appropriate and few of them hackneyed, the book is well printed, and the scenic background is one that brings delight to the heart of those who have seen the west coast of Italy. In a word, "Romance of Imperial Rome" is an uncommonly successful attempt to convey instruction and entertainment in history, literature, and art, under the guise of fiction.

The Unlived Life of Little Mary Ellen. By Ruth McEnery Stuart. Indianapolis: The Bobbs-Merrill Co.

The scene of this drama is Simpkinsville. Its central figure is Mary Ellen Williams, tragic heroine of "the terrible, terrible weddin' thet never came off," but that left her "a pore little half-demented woman," who believed herself to be Mrs. Bradley. Dr. Jenkins, Dr. Alexander, and the Rev. Mr. Binncy form a conspicuous group of strongly individualized men, as level-headed as they are soft-hearted. Dr. Jenkins has written up the case, as far as it has gone at the time of the opening of the present account, and called it "A Psychological Impossibility." As he observes, "a heap of impossible things have turned out to be facts—facts that had to be argued backward from." Then there are old 'Pollo and Milly, the negro servants of Mary Ellen, and, more dimly drawn, the sisters of the women's prayer-meeting. But all these are nothing to the deserted woman in comparison with the great wax doll which, intended for her namesake niece, reaches her, and, regarded by her as alive, is at once her sole interest in life. Only the most tactful handling could save such a plot from fantastic unreality, but the straightforward way in which the characters concerned face what they cannot attempt to solve, as being "one o' the mysteries that it's hard to unravel," holds a spectator to a serious attitude.

Ashton-Kirk, Investigator. By John T. McIntyre. Philadelphia: The Penn Publishing Co.

This detective story is in the main well worked out, and is worth reading. At the instance of a friend, Ashton-Kirk begins first to seek the secret of the fear that is haunting Allan Morris, the betrothed of Edyth Vale. Scarcely is he engaged upon this, when Hume, a curio dealer, at No. 478 Chrystie Place, is murdered. All evidence points either to an Italian musician, or more directly to Allan Morris; and Miss Vale, too, it is found, had been at Hume's shop at the time of the murder. The dead man, as Ashton-Kirk has established, had been the cause of Morris's strange actions toward Miss Vale. She now tries to balk the investigator, and so, as she thinks, to protect Morris, who has disappeared. Ashton-Kirk goes beyond the apparently patent clues and fixes the crime upon the real murderer.

The book is patterned a bit too obviously after the manner of Sir Conan Doyle, and the ending, both in the melodramatic death of the criminal and in the dénouement of the love story, is rather trite. The detective's part, however, is a well-knit piece of reasoning, and furnishes an engaging problem for the reader.

The Smiling Road. By Hanna Rion. New York: Edward J. Clode.

This novel can scarcely be said to have a plot, the thread of story barely serving to hold together the short episodical sketches called chapters. This want of unity is a serious defect in a volume which has some merit otherwise; for with all the multiplicity of characters, the author draws in her pictures of rural life with a reasonably truthful touch. "Lady" Trevelyan's smiling cheerfulness lightens up the sordidness of "the road," just as Mrs. Wiggs's philosophy did for the Cabbage Patch.

GENERAL WOLFE.

The Life and Letters of James Wolfe. By Beckles Willson. New York: Dodd, Mead & Co. $4 net.

A new life of James Wolfe, promising materials never before published, should certainly arouse interest. We are disappointed, however, at finding that Mr. Willson throws little additional light on Wolfe's career or character. The collection of letters, for the most part to his parents, were known to, and cited largely by, Wolfe's earlier biographer, Wright, from whom Parkman later culled out the passages which are most significant. Of documents of any other kind, Mr. Willson seems to have made no discovery, and strangely enough he makes no mention of Parkman. We take it that he has embodied in his book more thoroughly than has been done before the correspondence of Wolfe, though we are left in doubt as to whether or not the publication is complete. But though we have here not many fresh facts of importance, we are glad to have the book as it is. Wright's life has been long out of print, and says little of Wolfe, except while he appears as an American figure. Mr. Willson arranges the letters so that Wolfe tells his own story, for the most part to his much-loved mother, from his boyhood to the moment when he stepped out upon the Plains of Abraham—the unstudied record of thoughts, feelings, and events set down for those with whom he stood closely bound through sympathy and affection. Mr. Willson has lived in the house which Wolfe knew as a boy, and has faithfully followed his footsteps through camp and field. His notes and narrative connecting the letters are vivid and give all needful illustration. The portraits and views are numerous and full of value.

Hanoverian England was, no doubt, a bad place for men, but there was no place better—certainly not France under Louis Quinze; nor Germany distracted, corrupt, and enslaved; nor decadent Spain. In England, at least, lay the hope for better things, and it is fortunate that the enthusiasm of a hero so potent was enlisted to make her great. His service began early; as a boy of fifteen he carried the colors. He was in the thick of it at Dettingen and Culloden. Though close at hand, it was his fortune to escape Fontenoy; but at Laffeldt he was again at the front, receiving a ball in his body. He was plainly a type of the young soldiers who, in our time, could apply a torpedo to the side of an "Albemarle," or "carry a message to Garcia." He was put at the head of a regiment, when barely out of his teens, but, quiet now prevailing, he was set to garrison duty, for the most part in Scotland. To a temper so energetic this seemed a misfortune, but it gave opportunity for finer qualities than the alertness and rude courage for which he had become noted. In the disordered Highlands, which had fought for the Pretender, his task was now to subject and reconcile. He accomplished both, compelling recognition of the new and better order, and at the same time winning affection. He was probably the first to perceive the military value of the Highland spirit, as he was soon after the first to marshal Highlanders for English conquests. He made his regiment, through rigid discipline, the best in the army, but the men loved him. Meantime the lieutenant-general, his father, a worthy veteran of the Marlborough epoch, and his invalid mother, in London or in their country-house on Blackheath, received at short intervals the dutiful, manly letters which it is our high privilege still to possess. We see in them a young man amiable, industrious, high-purposed. He has no tendencies to vice. He employs his leisure under the best masters he can find in studying mathematics, Latin, and military science. He reads the Greek historians in French translations. He becomes perfect in fencing and horsemanship. Fearing, as he writes his brother, that his life in camp and guard-house may make a ruffian of him, he learns dancing, that he may be fit for the society of the other sex. He is far from being insensible to the charm of literature. At Blackheath his father was next neighbor to the Earl of Chesterfield, and Chesterfield's son, to whom the famous Letters were written, was Wolfe's acquaintance. There is no touch in Wolfe of worldly-wise philosophy or loose morals, but passages occur in the letters marked by a high sensibility and a grace of style which, had conditions

been different, might have placed him among wits and poets.

His promotion had been rapid, but his impatient spirit felt that he was held back, and he thought it hard that he should be bound to a garrison when the field lay open, or at least he might perfect himself by study and travel on the Continent. His superiors, however, perhaps with the connivance of his parents, kept him in the island. His service was needed there, and, besides, the risk was great that a spirited young officer, unemployed on the Continent, might be allured to foreign colors. He could procure a respite for only a few months, which he spent in Paris, diligently studying and observing, though he found time for society, was presented at court, and chatted in her boudoir with the Marquise de Pompadour.

He had matured into a tall, spare man, red-haired, with face not unattractive though hardly denoting the power that was in him. He had still to go through a period of drudgery, now general in England, during which his letters give proof of good-hearted sensitiveness as to the bad conditions. He is horrified at the state of Portsmouth, the great rendezvous of the fleet and army, which was indeed a sink of evil; and when sent with troops to put down riots of the Gloucestershire weavers, lets his mother know how his heart bleeds over the wrongs and sufferings of the poor men whose disorder he is set to repress. He hears at last of the outbreak of the Seven Years' War with a joy which to those who favor peace at any price seems savage. His time had now come; he was but thirty, he certainly had not waited long. Well-accomplished and fully experienced, he was sent as a quartermaster-general to play a part in the expedition to Rochefort, a dismal failure. Wolfe, however, initiated a plan which would have led to success but for the untimely caution of his senile superiors. "Vous avez manqué un beau coup," said the French prisoners, admitting the certainty of an English triumph had matters been pressed. But Wolfe at least had not lacked, and his desert was recognized. Pitt was now at the front, who made Wolfe a brigadier in the expedition to capture Louisburg. When a slow official remonstrated with the old King, and urged that Wolfe was mad, "Mad is he," said George II with a twinkle of Lincolnian wit, "then I wish he would bite some of the other generals." Louisburg fell, and he was the chief instrument of its downfall, and now we reach the exploit which was for the glory of Wolfe at once the acme and the eclipse. No page of history is better known than the story of the victory of Quebec. The results have been vast and are still accruing, and as all English-speaking men must believe, have been widely beneficent. The hero built better than he knew. In his fight he was not thinking much of the welfare of mankind in the large. In his limitation he was merely a patriot, hardly recognizing that "above all nations is humanity." His motive, so passionately felt, was to save to England her leadership—a motive narrow, perhaps, but nevertheless noble. To the duty he saw his devotedness was complete.

Nothing has done more to endear the memory of Wolfe to men and women of feeling than the beautiful tradition that while awaiting in the boat the moment for scaling the cliff, he relieved the suspense by repeating to his officers Gray's "Elegy," declaring that he would rather be its author than to win the victory for which he hoped. We are glad to note that Mr. Willson regards this example of fine sensibility as well authenticated, and gives ample reason for his conclusion. The story comes from Robison, a midshipman in the expedition, who afterwards became professor of natural philosophy at Edinburgh, and has generally been accepted by those best qualified to judge. To our mind, a strong proof of its genuineness is the complete unlikelihood that such a tale would ever be invented. What could be less congruous with the usual mood of a soldier at such a crisis or with the particular environment of the occasion! The reader of these letters can see that Wolfe was quite capable of such a demonstration. For what he did and for what he was James Wolfe was a hero too great to be allowed to fade in our memories, and his record, we believe, may best be studied in this book.

The American Commonwealth. By James Bryce. New edition, completely revised throughout, with additional chapters. 2 vols. New York: The Macmillan Co. $4 net.

The substantive changes in this long-awaited revision of Mr. Bryce's work, though not such as to swell greatly the bulk of the volumes, are in themselves considerable. In the first volume, supplementary notes have been added to the chapters on Merits of the Federal System, The Working of State Governments, and State Politics; while the Hon. Seth Low has quite made over his American View of Municipal Government in the United States, to take account of the most recent developments. Four new chapters, entitled, respectively, The Latest Phase of Immigration, Further Reflections on the Negro Problem, The New Transmarine Dominions, and Further Observations on the Universities, together with a note on recent legislation regarding primaries, have been added to the second volume. A comparison page by page with the previous edition shows, in addition, almost innumerable minor alterations in the text, chiefly by way of bringing the survey fully abreast of the latest practice, or of replacing earlier illustrations by later and better ones. In these particulars the chapters on State and local government have, naturally, been the most amended. Statistics of all kinds, of course, have been brought up to date. In the appendix to Volume I the sketch of the federal system of the English universities, together with specimens of provisions in State constitutions limiting the taxing and borrowing powers, have been dropped, and extended extracts from the Constitution of Oklahoma inserted in their place.

There can be no need of pointing out again the qualities which have made Mr. Bryce's work a classic. Its consummate union of philosophical insight and comprehensive observation leaves it still, after the lapse of twenty-five years, a political and social survey of incomparable excellence. Happily, too, for us, and pleasurably, we cannot but believe, for him, Mr. Bryce is still hopeful. In controverted political issues of the moment he does not, indeed, permit himself to express opinions; but the ugly revelations of public and private dishonesty, the rude shattering of many an idol and ideal, have not shaken his faith in the inherent soundness of the American state, or kept him from finding a fountain where others wail "mirage." If the defects of the electoral or party systems, of Congressional committee action, or of the Speakership are still apparent, they have at least, in his judgment, grown no greater. The vast expansion of Federal powers, in the effort to cope with great national exigencies, still savors little of "usurpation" or of fatal warping of the Federal system. State legislation, though still unconscionably bulky and ill-digested, is nevertheless more orderly, sensible, and progressive than it was; while the efficiency and purity of municipal government show decided gains.

Of the new chapters, those on immigration and the negro will doubtless seem to many the most important, dealing, as they do, with matters in regard to which almost everybody to-day feels himself entitled to an opinion; and they are certainly excellent examples of Mr. Bryce's method and intellectual habit. Recognizing fully the difficulty of assimilating the diverse social elements which have of late poured in upon us from southern and eastern Europe, and the burden which the civilization of these low-grade foreigners lays upon every community to which they come, Mr. Bryce nevertheless apprehends no permanent danger from their presence. They are not coming as fast as they were, and our social digestion is not yet impaired; and although much remains to be done to help the immigrant adjust himself to his new surroundings, the efforts of churches, schools, settlements, and other agencies win from Mr. Bryce distinct commendation. For the negro,

too, there is increasing hope, not merely through the elevation of the race to a higher plane of industrial efficiency, but also through the subsidence of race antagonism among the better class of Southern whites, and the recognition that it is the superior, as well as the inferior, race that suffers under a régime of injustice, violence, or neglect. Just as the best thought of America came at last, after long years, to a repudiation of slavery, why, asks Mr. Bryce, may it not in time come also to a removal of grounds of friction between the races under freedom? Doubtless such an inquiry does not sound the lowest depths of the fundamental problem of race; but it has at least the merit of holding up a rational moral ideal to be striven for, and an ideal, too, consciously pursued to-day by the men and women, North and South, who have studied the negro most attentively and impartially.

Mr. Bryce is not blind to the momentous growth of American democracy from primitive to complicated conditions, nor to the difficult problems of government and administration which such development involves. His power, however, and the permanent usefulness of his writing lie in the sureness with which he distinguishes fundamental political values in a community of rapid change. It has been said of "The American Commonwealth" that, beyond any book ever written about us, it has revealed America to itself; and for a book which can do that there should be, as unquestionably there will be, warm welcome to a new lease of life.

A Documentary History of American Industrial Society. Edited by John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner, and John B. Andrews. Vols. III, IV, and Vol. IV, Supplement. Labor Conspiracy Cases, 1806-1842; Selected, collated, and edited by John R. Commons, Professor of Political Economy, University of Wisconsin, and Eugene A. Gilmore, Professor of Law, University of Wisconsin. Cleveland: The Arthur H. Clark Co.

These three volumes assemble in convenient compass the records of early labor conspiracy cases, some of which —and these the more important ones— were previously not generally accessible. At the outset, these volumes present a sharp contrast to their two predecessors ("Plantation and Frontier," noticed in the *Nation*, October 13), in the use made of legal monuments to decipher industrial changes. In the two earlier volumes, the statute book and court records were conspicuous by their very infrequent citation: these later volumes contain judicial records exclusively, if we except the important prefatory essay. It is to be hoped that we may have at some time a full history of the doctrine of conspiracy as applied to trade disputes, with an appraisal of the validity or invalidity of the doctrine as a solvent of economic ills; but nothing of the sort is attempted in the volumes under review.

These judicial records are employed by Professor Commons in his introductory study as indicative of the early relationships between industrial classes, and particularly as casting light upon the origin of a self-conscious laboring class whose interests conflict with those of the capitalist-employer. The substance of this study was embodied in an article from Mr. Commons's pen which appeared in the *Quarterly Journal of Economics* for November, 1909. The history of the shoe-making industry alone is here canvassed, but inasmuch as nine of the seventeen conspiracy cases prior to 1842 had occurred among shoemakers, Mr. Commons contends that the emergence of class distinctions in this industry is "interpretative," if not typical (Vol. III, p. 58). This is plausible, even probable, but confirmatory evidence upon the point is desirable.

The gist of Mr. Commons's contention is that, in the United States at least, "it is the extension of markets more than the technique of production that determines the origin of industrial classes, their form of organization, their political and industrial policies, and demands, and their fate" (Vol. III, p. 28). The Marxian doctrine that the proletariat is created by the introduction of masses of machine appliances for production fares badly in the boot and shoe industry. It stumbles over the awkward fact that "even as late as 1851, all of the labor in the manufacture of shoes was hand labor" (Vol. III, p. 51), whereas long before 1851, the organized laboring class had appeared in this industrial field.

The first, or colonial, period of industry is made by Mr. Commons to extend to the decade of the twenties in the last century. He relies rather too much upon a single instance of a shoemakers' guild in 1648 in the colony of Massachusetts Bay, as affording a picture of the conditions of handicraft manufactures for a period of one hundred and fifty years. Whatever the incorporators of this guild desired to obtain, it is certain that the itinerant cobbler was not "suppressed" throughout this period. On the other hand, the first conspiracy case, the Philadelphia cordwainers (1806), presents a picture of the situation in the trade about the opening of the nineteenth century. The master commonly booked orders in his shop, and put out the work among his journeymen. An increase in wages was rather easily shifted upon the purchaser in an enhanced price for the wares. But when some small masters began to "stock up" with standard sizes, and even to a greater degree when stocks of low-grade shoes began to be sold in the public market for what they would bring, the easy control of price which had unified the interests of master and journeymen was threatened.

The widening of the market effected the final loss of control over prices (except for custom made shoes), by the small master. As enterprising shoe merchants sought for customers at a distance, these merchants found it necessary to quote prices that would not yield the customary wages to the cordwainers. The merchants, moreover, as they obtained their supplies eventually from widely separate sources, could regard with relative impunity the protests entered at first by both the small masters and their journeymen in any one particular locality. The small master who sided at first with the journeymen was forced to align himself with the large merchant-capitalists. Strikes followed, and the self-conscious labor organization was speedily evolved in the shoe industry.

A single comment may suffice, upon this really brilliant essay in industrial history. The extension of the market ought not to be regarded as an inert, half-automatic manifestation of impersonal economic energy—a sort of "force not ourselves that makes for production." The extension of markets is not merely a reflex of bettered means of communication, for this widening of the market was clearly in evidence before railways and canals had been built. It is an indication of enterprise, of a search for economizing expedients, for the savings of large-scale production. Moreover the comfortable torpidity of the old régime of the shop, where the customer was forced to pay an advanced price at the virtual dictate of the small master, egged on by his journeymen, was too invertebrate an industrial organism to offer very effective resistance to a virile competitor. It is true that the impersonality of modern industrial conditions has brought with it a menace in depressing some levels of work and life below what is socially or morally tolerable. It has also created the class antagonisms of today. But it has its advantageous side, as well as its defects, and chief among its excellences is its preferring the interest of the consumer to the lethargy of antiquated methods of production.

Peace or War East of Baikal? By E. J. Harrison. Twenty-three chapters, with illustrations and maps. Yokohama: Kelly & Walsh.

This book, the work of a journalist whose extended residence in the Far East somewhat qualifies him for his task, aims at giving the present status and future prospects of both Russia and Japan in China. The main question

treated is whether present conventional restrictions and treaty obligations can be faithfully observed; for upon this depends the prevention of a tumultuous change in the map of the Far East.

The first half of the book deals with the Russian situation; and that country is pictured as at present mainly engaged in working out the problem how to retain her Far Eastern possessions. The various schemes, by means of which Russia came into her Far Eastern heritage, are fully discussed in a style aggressive but incisive and lucid, though with more of a journalistic than a literary quality. The writer thinks that Russia's encroachment upon Manchuria opened up the whole of her Far Eastern empire to attack by removing the Manchurian screen. Due emphasis is laid on the significance of the fact that, in spite of great energy and expense in promoting various immigration schemes, Russia's East Asian empire is still very sparsely populated. Some interesting stories are given of Russian press censorship, one of which shows the punishment of an editor for publishing the report of an affair in which an officer wounded a comrade in trying to shoot a cap from his head for a wager. Numerous instances of Chinese contravention of agreements with Russia are cited to show that, since the war with Japan, China has regarded Russia as the under dog. The author insists on the assertion that it is a conviction of Russia that China and Japan have a plot for the undoing of Russia; hence the willingness of Russia, for the present, to curry favor with Japan. This is alleged to be the "yellow peril" from a Russian point of view; and the two chapters describing the position of Russia as that of the man who feels it better to "agree with thine adversary quickly while thou art in the way with him," are among the most interesting in the book.

In the section dealing with Japan in South Manchuria, extended notice is taken of the progress of the invader along all modern lines in the region occupied. The conviction is expressed that, though Japan is simply building upon the foundations laid by Russia, she is admirably avoiding much of Russia's misdirected use of energy. Port Arthur, rising amid tons of expended gold and rivers of human blood, is aptly described as a monument of human heroism and human folly. The important questions leading up to Secretary Knox's proposal for the neutralization of Manchurian railways are next considered, and the growth of an increasing ill-feeling towards the United States noted. The ground is taken that self-interest will insure peace on the Pacific. The chapters dealing with Japan at home give a full account of recent political and social progress. In discussing Japanese customs one notices a few errors: as, for example, the statement that Japanese school children are obliged to bow daily before the portrait of the Emperor. This act of veneration is restricted to national holidays and other national occasions, the Imperial picture at other times being veiled in the sacred alcove reserved for it. In summing up the Japanese character, Mr. Harrison wisely avoids the sweeping generalizations often indulged in by writers and publicists less familiar with the people, while he corrects a good many false impressions that have gained currency abroad.

It would be a mistake to regard the book as chiefly taken up with political disquisitions; for these are largely subordinated to topographical and ethnological descriptions at once instructive and picturesque. The writer has a good working knowledge of both the Russian and Japanese languages, which lends zest to some interesting details. The value of the work is enhanced by its having as appendices all the important conventions and treaties, with notes, relevant to the Far East, as well as good maps of the countries treated.

Democracy and the Party System in the United States, A Study in Extra-Constitutional Government. By M. Ostrogorski. New York: The Macmillan Co. $1.75 net.

This volume is an abridged edition of the second volume of Ostrogorski's "Democracy and the Organization of Political Parties" (reviewed in the *Nation* April 30, 1903). In bulk it has been reduced about one-half, and its contents have been brought up to date. One new chapter on extra-constitutional government in the legislative assemblies has been added. The general verdict upon the original work, that it is admirable upon the historical, critical, and analytical side, but weak in its suggestions for political reconstruction, may be safely reaffirmed. Some of the earlier proposals, such as the removal of the Presidency from popular election, have disappeared. But the insistence upon temporary, single-issue organizations to replace permanent political party organizations is continued.

The new material embodied in the present volume is traceable, first, to the recent emphasis given to "predatory wealth" in control of government; and secondly, to the variety of expedients now mooted for the regulation of primaries, conventions, and elections. The question of direct primaries is discussed with fairness and ability. The agitation in their favor is "likely to do service in the fight against the machine" (p. 348); but "neither the sanguine hopes of the reformers nor the fears of the bosses have been entirely justified . . . As a rule, the machine still makes up the slate" (p. 346). It is rather curious that in his inventory of patents taken out to improve political machinery, there is no mention of the Short-Ballot movement, particularly as Ostrogorski declares that the "first and greatest reform in the elective system is the curtailment of the system itself, the reduction of the number of elective offices to a minimum" (p. 444).

The new chapter upon extra-constitutional government in Congress and the State Legislatures is rather disappointing. In recounting the recent results of "Insurgency" in the House, the author falls into a rather notable error in saying that "the Speaker has been, at last, in March, 1910, deprived of his power to make up the committees of the House" (p. 286, *note*). It was only the Rules Committee, which was taken out of the Speaker's power. The Speaker is excluded from membership upon this committee, and the committee itself is elected by the House. The remaining committees the Speaker appoints as hitherto.

JUVENILE BOOKS—II.

A genuine volume of sport is "Walter Camp's Book of Football" (Century); it makes appeal to the best in the athlete, it describes the technicalities, history, ethics, and personalities of the game. In these days of various inventions, there are many channels of amusement and profit. Francis A. Collins's "The Boys' Book of Model Aeroplanes" (Century), by its very title, suggests the service of the young aviator in solving the problem of flying. The text is explanatory and historical. "The Romance of the Ship" (Lippincott), by E. Kehle Chatterton, and "The Romance of Modern Astronomy" (Lippincott), by Hector Macpherson, jr., belong to an excellent series which will please boys of a scientific turn of mind. They are lively in their narrative and authoritative in their facts. The volumes are attractively bound. W. Dwight Burroughs's "The Wonderland of Stamps" (Stokes) describes the designs of the most important stamps in the world, grouping them according to their characteristic symbols.

We are glad to be able to mention four books of plays for amateurs. Constance D'Arcy Mackay's "The House of the Heart" (Holt) is more literary than the others, the author being particularly interested in the morality form. The title piece was given by the New York Educational Theatre for Children and Young People. "Harper's Book of Little Plays" consists of six, by various hands, modelled along conventional school lines. It is designedly educational in purpose. Marguerita Merington's "Holiday Plays" (Duffield) are five in number, covering the festivals of the year. The characters and costumes are mostly historical. In view of the Dickens Centenary, H. B. Browne's "Short Plays from Dickens" (Scribner) will be of unusual interest.

"Where the Wind Blows" (Dutton) consists of ten fairy-tales retold by Katharine Pyle; their sources are from Japanese, Russian, Norse, German, Irish, Greek, and Indian. The copyright shows that the book was first written in 1902. Each

chapter begins through the initiative of the wind. Abbie Farwell Brown's "The Christmas Angel" (Houghton), with illustrations by Reginald Birch, should find warm welcome; the story is touching and effective in the same way as "The Christmas Carol." Eden Phillpotts has written "The Flint Heart" (Dutton), a mixture of Dartmoor and Lewis Carroll. Those who are unfortunate enough to hold the unlucky stone called the Flint Heart lose all gentleness and compassion. Disaster follows upon disaster. "Finella in Fairyland" (Houghton) is by Demetra Kenneth Brown, who has told very prettily and simply how a naughty girl was made good through the ministrations of flower fairies and of butterflies. Clifton Johnson has turned his hand to many forms of editing; readers will remember his Tree Fairy Series. This year he is editing for Baker & Taylor "Golden Books for Children," the first two being "The Arabian Nights" and "Robin Hood." We like the general scope of the series, with the introductions which give each story a setting, but we should be better pleased if we were surer of having before us the true versions. We would call attention to a cheaper edition of Barrie's "Peter Pan" (Scribner) with Rackham's delightful color plates, though we must warn the buyer that the story herein contained is not the same as that of the play. "Norse Fairy Tales" (Lippincott), selected and adapted from the translations by Sir G. W. Dasent, is an artistic volume copiously illustrated in color and line by R. L. Knowles. In their original these tales were not intended for children. L. Frank Baum, in "The Emerald City of Oz" (Reilly & Britton), declares that this shall be the last of the "Oz" series; he therefore assembles all of the characters, so enjoyed by children, for their farewell. The first of these books appeared in 1900, and we believe their popularity was due more to the fancifulness of a name, and the oddity of the characters, than to the fact, as the publishers think, that they were "bloodless fairy tales" which "led the way out of the dark ages of Bluebeard books for children." The Rand-McNally Company's edition of Browning's "The Pied Piper of Hamelin" has been effectively illustrated and lettered by Hope Dunlap. The color is very broad, but the conceptions are agreeable, and almost mural in scope. The black and white pages are equally effective.

"Famous Scouts" (Page), by Charles H. L. Johnston, is just the sort of book to please boys, for it is not only by the author of "Famous Cavalry Leaders," but it includes careers of trappers, pioneers, and soldiers of the frontier. It begins with Israel Putnam and ends with Buffalo Bill. A second volume in the Guide to Biography series includes "American Men of Mind," among them philanthropists and reformers, painters and sculptors, and so on. It is difficult to regard this work by Burton E. Stevenson (Baker & Taylor) as anything more than a cursory sketch of short related biographies, so arranged as to be a ready reference volume—another "Who's Who." The tone of Edwin M. Bacon's "The Boy's Drake" (Scribner) is to be recommended. It is a full biographical account based on an authentic record, and containing copious quotations; there are pictures, maps, and reproductions of title pages. Already there have been issued in this series "The Boy's Hakluyt" and "The Boy's Catlin." Harvey F. B. Wheeler has prepared an adequate volume entitled "The Boy's Napoleon" (Crowell). It is well written and is full in detail. A fit companion to this is Edward Fraser's "Bellerophon" (Stokes), which traces the record of the British man-of-war on whose deck Bonaparte gave himself into custody. The book is effectively printed, and bound in an attractive cover design.

Of books retold we may name the following: "The Boy's Cuchulain" (Crowell), by Eleanor Hull; "Knighthood in Germ and Flower" (Little, Brown), by Prof. J. H. Cox; "Stories from the Chronicle of the Cid" (Holt), by Mary W. Plummer; "Stories from Dante" (Crowell), by Susan Cunnington; "Heroes of the Elizabethan Age" (Lippincott), by Edward Gilliat; "Heroes of the Polar Seas" (Lippincott), by J. Kennedy Maclean; "Tales from the Alhambra" (Houghton), by Josephine Brower; "Stories from Shakespeare" (Crowell), by Thomas Carter; "Old Greek Nature Stories (Crowell), by F. A. Farrar, and "The Children's Plutarch" (Harper), by F. J. Gould.

It is almost impossible to give any adequate idea of the field of fiction for children. About 30 per cent. of the deluge consists of members of the series class, and these we pass by, warning the Christmas buyer. We have extracted from the mass a few volumes deserving of special attention. For young and old alike, we know of no more refreshing story than Inez Haynes Gillmore's "Phœbe and Ernest" (Holt), which tells in graphic manner the trials of a hero and heroine during a transformation age. Norman Duncan's "Billy Topsail & Company" (Revell) contains all the splendid dash of a former volume. H. H. Jackson's "Nelly's Silver Mine" (Little, Brown) is a story of Colorado, worthy of the new form given it. Among the college stories, none is more distinctive than Katharine Holland Brown's "Philippa at Halcyon" (Scribner). It may be overcharged with a certain moral tone, but it abounds in fun and good cheer. John Masefield's "Martin Hyde: The Duke's Messenger" (Little, Brown), a story of the Pretender, loses slightly by its first person narrative, but it has excitement in it, and a deal of movement, besides good writing. The same criticism applies to Gulielma Zollinger's "The Rout of the Foreigner" (McClurg). No more charming story has reached us for a long time than Charles Major's "The Little King" (Macmillan), which tells of the varied adventures of the child Louis XIV and Sweet Mam'selle. The illustrations are striking. Lieut.-Com. Yates Stirling, jr., U. S. N., is the author of many volumes, in a series of which "A U. S. Midshipman in the Philippines" (Penn) is one. The same may be said of Commander E. L. Beach's "Midshipman Ralph Osborn at Sea" (Wilde). In passing we must note Rupert Hughes's "The Lakerim Cruise" (Century), Annie Fellows Johnston's "Mary Ware in Texas" (Page), "Patty's Success," by Carolyn Wells (Dodd, Mead), and Margaret Sidney's "A Little Maid of Boston Town" (Lothrop, Lee). Dudley and Stratemeyer are also well represented.

Notes.

The two volumes which will supplement the text of "The Cambridge Modern History" will include an historical introduction, an atlas properly following the order of the narrative, and in the second volume an index consisting of genealogical tables, lists, and a general index.

A facsimile reproduction of the manuscript of the "Canterbury Tales," which is in the possession of the Earl of Ellesmere, will be published by the Manchester University Press.

John Adams Thayer's "Astir," which appeared in France last June simultaneously with its publication here, is to be brought out in London early in 1911, by T. Werner Laurie, with the title "Getting On: The Confessions of a Publisher."

A. C. McClurg & Co. announce for the autumn of 1911 a translation of Vicente Blasco Ibáñez's story of bull fighting, "Sangre y Arena," by Frances Douglas (Mrs. Charles F. Lummis).

At a meeting of the American Academy of Arts and Letters, which was held at the New Theatre on Thursday and Friday of last week, it was announced that the gold medal of the Institute of Arts and Letters was this year awarded to James Ford Rhodes, the historian.

Dr. William Sadler will publish with A. C. McClurg & Co. "The Physiology of Faith and Fear." The same house has made arrangements with Charles Carver for dramatizations of the following books: Randall Parrish's "My Lady of the South" and "Bob Hampton of Placer"; Charles E. Walk's "The Silver Blade," and Will Lillibridge's "Ben Blair."

Henry Frowde announces for immediate publication an addition to the Church Art in England Series, viz., "Wood Carving in English Churches," by Francis Bond, which has much to say about stall and tabernacle work, bishops' thrones, and chancel chairs; there will be 124 illustrations. Another volume, "Wood Carvings," is being written by P. M. Johnston, which will deal with chests, almeries, organ cases, doors, and collecting boxes.

Mexico, Cuba, Argentina, Colombia, Venezuela, and Spain are represented in "Las Mejores Poesias Liricas de la Lengua Castellana," edited by Prof. E. C. Hills of Colorado College and Dr. S. C. Morley, which Holt & Co. are issuing shortly.

Holt & Co. also promise "Das Märchen von Heute," edited with notes and vocabulary by M. C. Stewart (which includes besides the title story "Der Elfen Geheimnis" and "Der Glückspitz"), and "The Silver Thread and Other Folk Plays for Young People."

The Appletons will have ready February 1 "The American Year Book," which undertakes to cover the history of the year 1910 entire and to serve as a convenient handbook.

A new, large paper edition of Wordsworth's complete poetical writings, in ten volumes, with a series of photogravures, is announced by Houghton Mifflin for appearance this month.

The list of books to be published in January by Frederick A. Stokes Co. includes:

"Sydney Carteret, Rancher," by Harold Bindloss; "Woman and Marriage," by Margaret Stephens; "Garden Flowers in Colors: Orchids, Daffodils"; "The Book of Cupid, Anthology," by Henry Newboldt, and "Favorite Operas from Mozart to Mascagni," by Cuthbert Hadden.

A ninth volume in the Beaumont and Fletcher of the Cambridge English Classics (Putnam) adds five plays: The Sea-Voyage, Wit at Several Weapons, The Fair Maid of the Inn, Cupid's Revenge, and the Two Noble Kinsmen. With the tenth volume the labors of the editor, A. R. Waller, will be ended.

The "Greek Studies" has been added to Macmillan's new Library Edition of Pater. Only one more volume is needed to complete the set.

A committee of the Harvard Alumni Association, with C. Chester Lane as chairman, has compiled a "Harvard University Directory," which is published by the University Press. In a stout volume of nearly 1,300 pages, the names are listed, amounting to 32,188, of all living men who have at any time been students of the university. For 1,656 of these men no addresses could be found; for the others, the address and degrees, with dates, are given. Various statistical tables at the end of the volume increase its usefulness.

That this year, the centenary of Mrs. Gaskell's birth, would not pass without the reissuing of one or two of her novels, was inevitable from the publisher's point of view, and was a pleasant thought to that growing body of readers to whom her work singularly appeals. Bell & Sons of London have set forth "Sylvia's Lovers" in a rather handsome edition, with colored illustrations by M. V. Wheelhouse. The preface, by Thomas Seccombe, contains a very readable life, and undertakes to define Mrs. Gaskell's position in English fiction.

If you ask for the normal type of English novel in the highest degree of perfection to which it ever attained, I should certainly be inclined to say, take "Mary Barton," "North and South," "Sylvia's Lovers," and "Wives and Daughters." Not one of them altogether or entirely attains to the perfection of which Mrs. Gaskell herself was capable. But they fully and adequately reveal her power, and likewise her intention of subordinating herself in some degree to a form of the potentialities and limitations of which, alike, it seems to me, she had an intuition surpassing the utmost efforts of any of her greater contemporaries.

"Wives and Daughters" is issued by Henry Frowde, as an addition to the series of "World's Classics." There are a few pages of introduction by Clement Shorter.

The importance of Boston in the history and culture of the country makes M. A. De Wolfe Howe's "Boston Common, Scenes from Four Centuries," which is issued by the Riverside Press, Cambridge, a book of more than local interest. Old drawings, plans, and maps, and modern photographs present the city from a very primitive stage down to the present day; town records carry the history back to the very beginning. We read of the year 1646:

That there shall be kept on the Common bye the Inhabitants of the Towne but 70 milch Kine; . . . that there shalbe no dry cattell, younge Cattell, or horse shalbe free to goe on the Common this year; but on horse for Elder Oliver; . . . that if any desire to kep sheep, hee may kep foure sheep in liew of a Cow.

How persistently the Common has been the centre of public life in Boston is revealed by this book clearly enough. Present residents will look with special curiosity at a plan of the streets made by Capt. John Bonner in 1722, whereon we note that Treamount Street runs into Common Street.

"The Oxford Book of Italian Verse" (Clarendon Press) contains three hundred and forty-five lyrics, from the thirteenth century to the nineteenth century, chosen by St. John Lucas. About one hundred writers are represented by significant poems, and in general the selections are judiciously made. No reader who is familiar with Italian literature will, naturally, agree in every case with the editor's judgment. For instance, among the ten poems quoted from Carducci we miss the famous "T' amo, o pio bove," which is often spoken of as the finest sonnet of the nineteenth century. As no living poets are included, Carducci brings the collection to a close. In an introductory sketch Mr. Lucas gives a spirited account of the historical development of poetry in Italy. The opinions expressed are those generally accepted; the different poets are neatly, if sometimes rather too definitely, classified and withal the editor's enthusiasm is persuasive. There is no bibliography, except for the occasional mention of a title in the notes, along with the extremely concise biographies. A few of the historical allusions and fewer still of the difficult words are explained. Sometimes the information given is exceedingly scanty, as in this note on Vittorelli (a poet, by the way, whose fame is just now having something of a revival in Italy): "Born at Bassano. Held a public appointment at Venice. Byron liked his poetry. ["Rime," Venezia, 1851.]" Similarly, the notary of Lentino, properly called either Giacomo or Jacopo, but here dubbed Giacopo, is dismissed as "another of the Sicilian group of poets." But if the annotation is limited in extent and in usefulness, as a collection of verse this Oxford Book is a delight to the eye and to the mind. Uniform in style and method with the English and French anthologies from the same press, this new volume will be even more welcome to lovers of poetry, owing to the lack of competitors in its special field.

Walter Tyndale's "Japan and the Japanese" (Macmillan), which comes to us arrayed both inwardly and outwardly in festal apparel, is the work of an English painter, who wisely sketched and colored in the rainy and misty climate of Japan only when he could secure the right light, atmosphere, and appropriate natural conditions. Hence, the twenty-two full-page illustrations in color have a home-like look to an old resident in the sunny isles of the cherry blossom. To others the tints may seem extravagant. Mr. Tyndale's landscape is ever a thoroughly human one, and probably no illustrated book thus far produced shows more significantly the effect of natural beauty on fine manners. Praiseworthy is Mr. Tyndale's desire to paint the blooms less directly associated with Japan, like the oleander and the pomegranate; though the standard features of the vegetable world and of art and architecture are not neglected. The perspective is unusually good. The author's text is light, pleasing, and accurately descriptive of the daily ways and temperament of the Japanese. He exposes some ridiculous notions, among others that of the mythical Chinaman in the Japanese banks, who keeps the money. There is an index.

In "Tennyson as a Student and Poet of Nature" (Macmillan), Sir Norman Lockyer and Winfred L. Lockyer have gathered together and classified all the passages from the poet's works "which deal with the scientific aspects of nature." "The highest poetry," Sir Norman observes in the preface, "should be associated with the highest knowledge. Tennyson's great achievement has been to show us that in the study of science we have one of the bases of the fullest poetry." Tennyson was a close friend of Sir Norman's, whom he often visited, and the astronomer and man of science was astonished at the poet's "minute knowledge in various fields." Sir Norman continues:

So far as my memory serves me, I was introduced to the late Lord Tennyson by Woolner about the year 1864. I was then living in Fairfax Road, West Hampstead, and I had erected my six-inch Cooke equatorial in the garden. I soon found that he was an enthusiastic astronomer, and that few points in the descriptive part of the subject had escaped him. He was therefore often in the observatory. Some of his remarks still linger fresh in my memory. One night when the moon's terminator swept across the broken ground round Tycho, he said: "What a splendid Hell that would make." Again, after showing him the clusters in Hercules and Perseus, he remarked musingly: "I cannot think much of the county families after that." In 1866 my wife was translating Guillemin's "Le Ciel" and I was editing and considerably expanding it; he read many of the proof sheets, and indeed suggested the title of the English edition, "The Heavens."

Of Tennyson's conception of the cosmogony, Sir Norman writes:

In Tennyson we find the complete separation of Science from Dogmatic Theology thus foreshadowed by Milton, finally achieved . . . The modern *Systema Mundi* which Tennyson dwells on over and over again is dominated by

Astronomy and Geology, terrible Muses.

In "The Beaux and the Dandies" (Lane), Clare Jerrold has collected for those whose curiosity runs after such matters a fair-sized volume of anecdotes of Nash, Brummel, D'Orsay, and their courts. The beaux for whom Mr. Jerrold has a soft heart really began with the Restoration, when Charles II drew a crowd of young men about him; but they flowered in later reigns. Some of the anecdotes which the author has got together are excellent for their humor or wit, but there is much that might have been omitted. He recalls a story of the heartless Sheridan, who was at Bath, under Beau Nash. Meeting, after a long absence, one Major Brereton, who was noted for his high play at gambling, Sheridan asked: "How are you, major, how have you been going on of late?" "I have had a great misfortune since last we met," was the reply. "I have lost Mrs. Brereton." "Aye," answered Sheridan. "How did you lose her, at hazard or at quinze?" A number of George Selwyn's stories are given, and altogether it is almost as much a book of wits as of beaux.

"Gambetta's Life and Letters" (Appleton), an authorized translation by V. M. Montagu of M. Gheusi's "Gambetta par Gambetta," published in Paris in 1909, is, as the French title shows more clearly than

the English, composed almost entirely of Gambetta's own writings, principally letters, collected together as a sort of posthumous *Apologia*. The chief value and interest of the book lie in its refutation of certain stories that have been diligently circulated about Gambetta. The first is the famous and infamous tale that Gambetta madly blinded himself in the right eye because his father would not take him away from the little seminary at Cahors, to which the boy had taken a violent dislike because it was run by priests. The second story is yet more dramatic—that Mme. Léonie Léon ruined Gambetta's life and then, when he failed to carry out a *coup d'état* on his own account, murdered him for the sake of another lover. These stories, to the regret of all lovers of scandal, M. Gheusi refutes once and for all. It is to be hoped that they will not be resurrected again. Gambetta brought himself into public notice first in November, 1868, when he made his famous speech in the Procès Baudin. In vain did the President try to stop his eloquence: he refused to stop speaking. His words were a veritable flood, and the reporters, "after breaking their pencils in the effort to follow him," as his biographer enthusiastically relates, sat rapt in admiration of his overwhelming eloquence. He was busy in the courts defending revolutionary and radical leaders from the time of that speech to October, 1869, when he was elected a Deputy to Parliament. There he at once gained a commanding position through his eloquence and extraordinary activity. M. Gheusi deals somewhat too gently with the amatory passages in Gambetta's highly irregular life, and makes too sympathetic a scene out of a death that was caused in great part by irregular living at the time when Gambetta was at the summit of his career. Still, even to the unsympathetic reader, the letters in this volume will seem more than sad. There is a vein of tragedy running through them all. The fearful struggles the man went through against poverty and ill health, and his consummate bravery, do much to eradicate the unsavory taste of his life in other respects. And there is a touch of fineness in the letter of his father, who, when asked that his son's body might be sent to Paris for burial, replied: "You had him when he was alive; now that he is dead, worn out by your politics, I wish to have him. He shall rest in the cemetery at Nice, whither his mother has preceded him."

In "The Qualities of Men" (Houghton Mifflin Company) Joseph Jastrow presents in popular form the results of an extended study soon to be published with the title of "Character and Temperament." Dr. Jastrow emphasizes throughout innate sensibility as chief motive of right action. Men differ more in their sensibilities than in their logical capacity. Four general grades of sensibility are distinguished, the Poietic, Kinetic (executive), Dull, and Base. In the case of Poietic man, the adjustment of individual sensibility to social convention is necessarily a very complicated one. Indeed, the success of the adjustment is in direct ratio to its elaborateness. Of simple lives and utopias Dr. Jastrow is no friend. On the practical side the book is largely a plea that our democracy should make larger use of the man of imagination. Our danger, he finds is in over-exaltation of the kinetic type; and in resentment of spiritual superiority. In many ways this book confirms independently the sociological views expressed by George Bourne in "The Ascending Effort" (reviewed in the *Nation* August 11). Both critics, by emphasizing the value of sensibility, approach the pragmatic position, and both by insisting on the validity of remoter ideals, evade this fashionable classification. Dr. Jastrow's manner is robust and interesting, but possibly by reason of insistent cleverness of phrase a little difficult. One could wish the teaching taken up by one who had the public ear. This little book whets one's appetite for the larger study of which it is a forerunner.

From Doubleday, Page & Co. we have an American edition of "Mountain Adventures at Home and Abroad," by George D. Abraham, well known to readers of mountain-climbing literature as author of "The Complete Mountaineer," and as an enthusiastic member of various organizations of the climbing fraternity in England and on the Continent. If the Englishman is subject to some reproach for seeking his pleasure in going out and killing something, it must be admitted as an offset that going out and getting killed is just as constant an element in his recreation. The disasters incidentally recorded make Mr. Abraham's volume rather grewsome in parts, though it must be said to his credit that he uses these stories, not to feed a morbid interest in the sensational, but to counsel such sane methods of climbing as will eliminate the large proportion of really avoidable accidents and free an exhilarating and ennobling recreation from undeserved reproach. Bits of Virgil, Byron, and various other poets give to this volume a certain air of literary cultivation often missing in current books of adventure, though one cannot accuse the author of reaching the level which he alleges against the late Sir Leslie Stephen, whose account of an ascent of the Schreckhorn, in 1861, "reaches such heights of literary excellence that nobody since has been able to identify the route taken." Old accounts of the distressing physical effects of ascent to high altitudes lead the author to the conclusion that the human race is gradually improving in its capacity to endure the rarified atmosphere of high levels, and that, so far as this difficulty is concerned, the highest Himalayan summits may yet be conquered. The volume is provided with a brief glossary of the technical terms employed in the text, and a fairly complete index.

Thomas Okey is an industrious bookmaker, who has turned his hand to many themes. His "Venice and its Story" (Dutton) is a combination of history, guide-book, and art-manual. The historical sketch is mainly an epitome of Horatio Brown's larger work, written with an eye on the picturesque or dramatic episodes. One misses, however, the essential—the clear tracing of evolution in the life of a people that extended over eleven centuries. Mr. Okey's remarks on the painters, sculptors, and architects are of little value. There are pen-and-ink and several colored illustrations, which give the book a holiday air.

"A Book of the Black Forest" (Dutton), as we are told in the prefatory note, "does not pretend to say everything there is to say about the Black Forest." But it very nearly does it. Section after section is taken up by the author, C. E. Hughes, and we get a description of the scenery, of the towns, industries, and inns, with a spice of legend that helps to make it readable. Mr. Hughes spent several holidays in the forest, and he must have taken notes with a certain plodding fidelity that is perhaps too well reflected in his clearly-printed pages. In short, the utilitarian object of the book makes it seem just a little too uninspired. But it is assuredly full of information for the traveller, it contains two good maps and above twenty illustrations by the author.

Of all the great natural spectacles within the borders of the United States, the Grand Cañon of the Colorado River of the West, in Arizona, probably is the greatest. It shows the world in the making. Including the Marble Cañon division this chasm is 283 miles long as the river runs, with an average depth of some 4,000 feet, and a width across the top ranging up to twelve or fifteen miles. It must be studied physiographically and historically to be understood, and George Wharton James has done well to present in compact and attractive form this guide-book ("The Grand Canyon of Arizona"; Little, Brown), which contains a large amount of necessary information, and is easy to carry. There are excellent photographs in half-tone, and the text is lucid and comprehensive. The tourist who wishes to approach the wonderful scene in a state of preparation should first read this book.

The October number of the *American Journal of International Law*, just issued, opens with Paul S. Reinsch's comprehensive paper on the Fourth International Conference of American Republics—a body which, he declares, has assumed a well-defined and dignified position among great international organizations. This Fourth Conference met at Buenos Ayres on July 12, under the active presidency of Dr. Bermejo, Chief Justice of the Supreme Court of Argentina. It was understood beforehand that certain aspects of the general welfare of the Continent were to be the subject of the Conference. Technical reasons for denying admission of representatives were brushed aside; delegates from all the republics were welcomed, even those of Nicaragua, whose dominant *de facto* government had not been universally recognized. The organization of the Pan-American Union was a subject of detailed and careful consideration in committee, and the tentative draft of a treaty was adopted by the general body. No action was taken looking to any essential modification of the Union's functions, which, however, were strongly emphasized. The Union has intervened in unifying consular documents, in improving custom-house regulation and sanitary police, in promoting the construction of the Pan-American Railway, in the improvement and promotion of steamship service, the interchange of university professorships, the strengthening of international confidence. Samuel B. Crandall discusses the law as applied to the Spanish treaty claims commission. Lester H. Woolsey considers early cases on the doctrine of continuous voyages—a subject with which the Supreme Court dealt after 1861. He shows that that court, in decid-

ing cases involving this doctrine, simply applied what had been held by British courts half a century before.

Two papers touch Chinese questions: one, by E. T. Williams, on the abolition of slavery in the Empire—noting that recently a rescript has been promulgated declaring that the institution is abolished, and almost procuring that end, though the Manchus seem not to have been brought within its terms as completely as have the Chinese proper; the second, by William R. Manning, on China and the Powers since the Boxer Movement. This is an elaborate narrative of international events occurring since 1899 that have affected the Empire. In most of them China has herself directly participated, including entry into arrangements with Russia and Japan touching Manchurian railways. She has relinquished much. In fact, she has virtually withdrawn from Manchuria, as far as railways are concerned. The Japanese press is urging that suzerainty in Manchuria be assumed; the Japanese treat the country as a conquered one, her railway guards being found at great distances from the railway, and interfering in matters outside of their province. But since the Treaty of Portsmouth Mr. Manning thinks that China has won courage to resist; *e. g.*, when in 1908 Russia asserted exclusive jurisdiction at Harbin and elsewhere in the railway zone over both Chinese and foreigners, China interposed; was supported by the United States consul, and in May, 1909, Chinese sovereignty there was recognized by Russia, and the jurisdiction divided. The Supplement with this number presents copies of twelve treaties and conventions affecting China, and correspondence on one international matter affecting her. Important also is the complete award, covering forty pages, of the Arbitrators in the North Atlantic Coast Fisheries case between Great Britain and the United States, with the reasoning *in extenso* on the various points decided.

The Rev. George Wolfe Shinn, who for thirty-one years was rector of Grace Church, Newton, Mass., and lately its rector emeritus, died last week, at the age of seventy-one. He was the author of a "Manual of the Prayer Book," and edited for twenty-five years the Whittaker Series of Sunday School Instruction.

Dr. Emil Reich, author and lecturer on history, died last Sunday. He was born at Eperjes, Hungary, in 1854, and was educated at Eperjes, Kassa, Prague, Budapest, and Vienna University. Up to his thirtieth year he studied almost exclusively in libraries. Finding books unsatisfactory for a real comprehension of history, he determined to travel extensively in order to complement the study of books with the study of realities. He spent five years in the United States, four in France, and about twelve in England, where he lectured frequently at Oxford, Cambridge, and London Universities. The British government employed him to assist in the preparation of the Venezuela boundary case. Among his publications were: "History of Civilization," "Græco-Roman Institutions" (Oxford Lectures); "Hungarian Literature," "Atlas of English History," "Handbook of Geography," chiefly physiographic and mathematical; "General History," "Foundations of Modern Europe," "Success Among Nations," "The Foreigner in History," "Select Documents Illustrating Mediæval and Modern History," "Atlas of Ancient History," "Atlas of Modern History," "Principal Characters from the Great Philosophers," "The Fundamental Principles of Evidence," "Imperialism," "The Failure of the Higher Criticism of the Bible," "Plato as an Introduction to Modern Life," and "Success in Life."

Gen. Henry Edwin Tremain, a distinguished veteran of the civil war and the author of "Last Hours of Sheridan's Cavalry," "Two Days of War," and "Sectionalism Unmasked," died last week, at the age of seventy. He was a member of the American Academy of Political and Social Science, and of the American Authors' Society.

The death is reported, in his seventy-third year, of Prof. Robert Flint, D.D., formerly professor of moral philosophy at the University of Edinburgh. Of his many writings may be mentioned: "Philosophy of History in Europe," "Historical Philosophy in France," and "Theism."

Science.

Reptiles of the World. By Raymond L. Ditmars, Curator of Reptiles in the New York Zoölogical Park. With a frontispiece in color and nearly 200 illustrations, from photographs taken by the author. New York: Sturgis & Walton Co. $5 net.

In this volume—needlessly large from the thick paper of the text—there are 185 (not several hundred as claimed on p. v) admirable pictures of living species of turtles, crocodilians, lizards, and snakes from all parts of the world. The nearly exterminated Tuatara of New Zealand, representing the otherwise extinct group, Rhynchocephalia, is briefly discussed in the Introduction; it might well have replaced the gaudy but less instructive Rhinoceros Viper of the frontispiece. Excepting about twenty pages of lists of genera which are somewhat out of place in a popular treatise, the text comprises descriptions of selected forms, directions for their housing and food, and accounts of their habits, often based upon the author's personal observations; some of these are thrilling and some amusing, for example, that related on pp. 266-267. Figures and descriptions of structure are few, and the soft parts are nearly ignored; this is fortunate, perhaps, for the general reader, if we judge from the treatment of a single case: the easily recognized difference between alligators and crocodiles, viz., the pit in the upper jaw for the reception of the fourth lower tooth in the former, which becomes a notch in the latter, might have been made clear by a simple diagram and a few words, but is clumsily treated on three separate pages.

Actual errors and important omissions are commendably few. There is no picture of a gavial. The "flying dragon" should have been shown also in the folded condition. On p. 75 the discovery of the presence of a true crocodile in Florida is credited to Director Hornaday in 1875, whereas it was made in 1869 by Jeffries Wyman. The comprehensive work of Boulenger of the British Museum is properly referred to; but there is no mention of the numerous publications of Stejneger of the United States National Museum; neither is it hinted that a monograph of the turtles of North America was published by the elder Agassiz nineteen years before Mr. Ditmars was born. There are occasional attempts at "fine writing" which will merely befog the reader. Indeed, beginning with the subtitle, where "Eastern and Western Hemispheres" would imply the existence of others, there is hardly a paragraph that might not be improved. But these faults are trivial compared with the lack of coördination between the illustrations and the text, for which the publishers are equally to blame. With two or three exceptions, the forms shown in the plates are not described in the contiguous pages; the plates bear no reference to the appropriate pages, which may be far distant; the text lacks all reference to the plates, and the index refers to the text alone. Comparable defects in a mathematical or classical treatise intended for beginning students and general readers would bar it from publication.

The irony of selecting such a title as "Orchids for Everyone" (by Charles H. Curtis. New York: Dutton) for a work on the most fashionable and costly decorative plants is merely apparent. The title must be read between the lines. It means orchids for those who have a few extra hours each week and a little space in a greenhouse. The author was formerly keeper of the orchid collection at the Royal Gardens, Kew, where there can always be found an immense number of species under observation, and where there is a fair percentage of the hybrids and variants prized in cultivation. Consequently, Mr. Curtis can speak with a good degree of authority and give good counsel. The treatise itself belongs to the type of garden books of which we have lately had so many; a small quarto or very large octavo in size, with heavy paper and broad margins, a true *édition de luxe*. The colored illustrations are of unequal merit; some of them being almost exact reproductions of the subjects in hue and brilliancy, while some of the others are below any reasonable standard. The best are exceedingly attractive and satisfy the eye fully, exhibiting the features which have long rendered this order of plants the favorites of wealthy amateurs. Here one can see the slight differences in shape and color which command fabulous prices, and which are likely to keep their place until they are, in their turn, supplanted by successful rivals. We can heartily commend this work for its wise advice and abundant information.

The noted French physician, Henri Huchard, who was an officer of the Legion of Honor and a member of Academy of Medicine at Paris, died last Sunday, at the age of sixty-six. He founded the

Journal Médical des Praticiens, and wrote the following books: "Traité des névrosos"; "Traité clinique des maladies du cœur et de l'aorte"; "Consultations médicales," in four volumes, and "Les Maladies du cœur et leur traitement."

The death is announced from London of Mrs. French Sheldon, M. D. She was born in this country, but later married and settled in England. Mrs. Sheldon made three journeys around the world in the interest of ethnological research. In addition to her scientific concerns, she wrote on a wide range of topics, and translated extensively, her rendering of "Salammbô" having been placed by the French government in Flaubert's tomb at Rouen.

Prof. Cooper D. Schmidt, professor of mathematics for twenty-one years in the University of Tennessee, and dean of the university, died last week in Knoxville, aged fifty-one.

The death is announced from Boston of Dr. John Cummings Munro, ex-president of the Society of Clinical Surgery, and a member of many other surgical and medical fraternities.

Dr. John Chalmers Da Costa died last week in Philadelphia in his forty-eighth year. He ranked among the great surgeons of the country, and at the time of his death he was emeritus gynæcologist at Jefferson College, chief gynæcologist at St. Agnes's Hospital, and president of the Philadelphia Obstetrical Society. He wrote "A Manual of Modern Surgery."

James Huff Stout, a leader in educational movements in Wisconsin, died last week at his home in Menomonie. Institutions which he founded, viz., schools of manual training, domestic science, and agriculture, were later consolidated as Stout Institute.

Drama.

During the past week Sarah Bernhardt has appeared in the Globe Theatre in several characters never before acted by her in this city. In one of them, Photine, the heroine of Rostand's Biblical fantasy, "La Samaritaine," she failed to make a deep impression. The work itself, full as it is of religious aspiration, broad humanitarianism, and poetic fancy, is not suited to the theatre, where its reverential feeling is vulgarized, and much of its imaginative beauty destroyed. The part played in it by Christ—dignified, tender, and impressive, in the printed book—becomes painful on the stage, because of its inevitable insufficiency. Moreover, the legendary Photine, a dashing and reckless wanton arbitrarily converted into an evangelizing saint, is, on the boards at least, too obviously theatrical a figure to be credible or inspiring. And the manifest artificiality of Madame Bernhardt's devices to emphasize the transformation of the sinner was fatal to the creation of emotional sympathy. As usual she astonished by the variety of her expression, the aptness of her poses, and the vigor of her torrential declamation. But the character is not one in which she shines preëminently. She was much more fortunate as the pretended humpback, René, in Zamaçois's delightful romantic fantasy, "Les Bouffons," well known in this city by the adaptation called "The Jesters." This is an exceedingly dainty, humorous, and imaginative work, and the part of the hero, with its oratorical opportunities and its poetic amatory appeal, calls for the exercise of some of her choicest gifts. Her delivery of the verse was marked by all her old declamatory ability, and, in the love scene of the third act, by exquisitely musical and tender modulation. The general performance by her company was exactly in the right veins of romance and humorous extravaganza.

On Monday evening Madame Bernhardt appeared as the unhappy wife and mother in Bisson's "La Femme X"—known here as "Madame X"—and completely eclipsed the memory of the local version. The play, except for its purely theatrical qualities, which are strong, has no real value, but the performance by the French company was extraordinarily good. Half a dozen members of it would be "stars" here if artistic capacity were the sole test of advancement. Madame Bernhardt made the spiritual, not the bodily, ruin of Jacqueline the main feature of her embodiment, which was marked by a psychological subtlety that raised it far above the level of common melodrama. The different phases of the woman's career were illustrated with startling passion, a most subtle portrayal of morose despair, and many delicate strokes of maternal pathos. The actress never exhibited surer instinct or more capable execution. Whether the worth of the character repaid the labor and skill bestowed upon it is another matter. M. Maxudian, M. Deneubourg, M. Tellegen, M. Canroy, and Madame Duc were all prominent in the notably fine cast.

Haddon Chambers has just completed a new play. It has been acquired by Frank Curzon and Gerald du Maurier for Wyndham's Theatre in London. It bears the title of "Passers-by," is in four acts, without any change of scene, and deals with modern London life. It is said to break fresh ground, and to stand as far apart from "Captain Swift" as from "The Tyranny of Tears."

Herbert Trench has engaged Phyllis Neilson-Terry for the new piece which will succeed his revival of "The Blue Bird" in London.

"The little French Theatre in London" is soon to be established by Vaughan Grey at the Boudoir Theatre, Kensington, in conjunction with Léo Claretie and Prof. Victor Spiers. The French tragedian, Mounet-Sully, has made a provisional promise to appear at the opening performance. Subsequent engagements include those of Gallipaux and Jeanne Granier. The idea is to give three matinées and three evening representations in each week, and there will also be regular "Causeries." The staple entertainment will be comedy of a high-class order.

Josephine Preston Peabody's fine play, "The Piper," which won the prize in the recent Stratford-on-Avon competition, will be among the Christmas theatrical novelties in London. F. R. Benson has arranged with George Alexander to present it for a series of matinées in the St. James's Theatre.

L. N. Parker has been talking to an English reporter about his new Disraeli play. He said:

It is not a Disraeli play in the sense that Fauchois's "Beethoven" was a Beethoven play. So far from its being a stage version of a biography, the story is almost entirely fictitious, and the only real characters in it are those of Lord and Lady Beaconsfield. It will be found, when this play is produced, that I have taken a very great liberty with history, social and political.

Bernard Fagan, author of "The Earth," is preparing for stage presentation his friend Robert Hichens's well-known novel, "Bella Donna."

The current number of *Modern Philology* contains interesting confirmation of the theory, the joint work of Messrs. Pollard and Greg, that the following quartos of plays by or ascribed to Shakespeare were all actually printed in 1619, the earlier dates on the title-pages being forgeries: "The Whole Contention" (n. d.); "A Midsummer Night's Dream" (1600); "Sir John Oldcastle" (1600); "The Merchant of Venice" (1600); "Henry the Fifth" (1608); "King Lear" (1608); "Pericles" (1619); "The Merry Wives of Windsor" (1619); "A Yorkshire Tragedy" (1619). Mr. Pollard's discovery that these nine quartos are uniformly larger than their fellows and that they all appear together in three, and probably four, early bindings, led Mr. Greg to an examination of the watermark of the paper on which they were printed, an examination which convinced both Mr. Greg and Mr. Pollard, if not from the nature of the question all the world beside, that the paper in each case was from the same stock. This evidence Mr. Sidney Lee and others positively reject, and with Mr. Pollard's summary of the various matters in controversy in his "Shakespeare Folios and Quartos" (1909) the dispute could be terminated only by the introduction of new and determinative evidence. This W. J. Neidig in *Modern Philology* supplies by applying to the study of the printed page "a system of exact measurements not unlike the modern Bertillon system of measuring criminals." Comparing the 1600 title-page of "The Merchant of Venice," for example, with the 1619 title-page of "Pericles," he finds that the blank spaces above and below the line "Written by W. Shakespeare" and the spaces on all sides of the printer's device are of the same depth in both; and that the lines show precisely the same spacing and the same amount of quad material. Such coincidences can hardly be due to chance, nor would it be possible for a printer to duplicate an older title-page with such mathematical accuracy. A composite photograph shows that the lower halves of the two title-pages exactly correspond. The explanation offered is that the lower half was "lifted" and made to do duty for no less than seven of the nine quartos. The work of the printer in doing this is followed, step by step, leading to the conclusion that the quartos bearing dates of 1600 and 1608 were printed within a few days of those dated 1619. The investigation was carried out with the highest degree of mechanical accuracy, and the twelve half-tone plates that accompany the article are offered as the most perfect facsimiles of title-pages ever produced.

The Vienna correspondent of a London journal gives an account of "Der Junge Medardus," an historical tragedy by Arthur Schnitzler, calling it in every way the most ambitious of Schnitzler's work. It is composed of twelve more or less historical tableaux setting forth the period just preceding and including the second

occupation of Vienna by the French in 1809, and culminating in the attempt upon Napoleon's life at Schönebrunn. With atmosphere entirely Viennese, it is a satire in the manner of Sardou; it has twelve principal characters, and lasts five hours, with only one pause of any length.

Henry Guy Carleton, the playwright, died in Hot Springs, Ark., last Saturday, aged fifty-four years. He had been producing plays since 1881. Among them are "Mennon," "Victor Durand," "The Pembertons," "The Lion's Mouth," "Ye Earlie Trouble," "Princess of Erie," "A Gilded Fool," "The Butterflies," "That Impudent Young Couple," "Ambition," "Colinette," and "Jack's Honeymoon."

Music.

PUCCINI'S NEW OPERA.

When Giacomo Puccini, who is undoubtedly the most popular of living opera composers (his income from royalties is said to approximate $50,000 a year), visited this country a few years ago, he attended a performance of "The Girl of the Golden West," by David Belasco, whose dramatic version of Luther Long's story, "Madame Butterfly," had served him as libretto for his last opera, the first American performance of which he had crossed the ocean to superintend. Although he could not understand the dialogue, he was so much impressed by the picturesque Western scenery and costumes and the romantic incidents that he decided then and there that this was the popular play he had been looking for to serve as basis for his next opera. He allowed his librettists abundant time to make their version—not an altogether easy task, in view of idioms and Western slang—and then devoted eighteen months to writing the music. Long before it was done the announcement that it would have its first performance in New York aroused great indignation among the Italians, who seemed to have forgotten that they had behaved so rudely toward "Madama Butterfly," when it was first produced in Milan, that Puccini made an immediate repetition impossible by taking away the score.

It would be difficult to imagine a more striking contrast to this fiasco of what is now the most popular of all operas than the enthusiastic reception of "The Girl of the Golden West" at its Metropolitan production last Saturday. At double the usual prices the house was crowded, and there were at least fifty recalls for Puccini, Belasco, Toscanini, and the principal singers, Caruso, Destinn, Amato, all of whom had far surpassed their previous achievements, at least from the histrionic side. The possibility of having his new work produced with such a cast, and under the magnetic direction of Toscanini, would in itself explain why Puccini preferred New York to Milan, which has no singers or conductor to match them. But there were other reasons. The management of the Metropolitan paid $5,000 extra for the privilege of being first to stage this opera. Moreover, Belasco himself had not only allowed Gatti-Casazza to copy his scenery and costumes, but had promised to coöperate as stage manager. For several weeks, while orchestral rehearsals were going on, he drilled the cast—seventeen persons in all—for hours every day until Caruso looked and acted like a real California bandit, Didur like a Wells, Fargo & Co. express agent in pursuit of him, Destinn like a genuine girl of Western romance, serving whiskey in her bar, while teaching the Bible and softening the hearts of the miners; Amato like a gambler and sheriff of Bret Harte's, Reiss like a bartender to the counter born, Bourgeois and Mattfeld like a real Indian and his squaw, De Segurola like a colored minstrel, and Missiano like a Mexican bandit, while the eight miners named Sonora, Trin, Sid, Bello, Happy, Joe, Hopper, and Larkens were impersonated with the same realism in costume and action.

The significance of the situation lies in this, that the Metropolitan Opera House had been made for the time being into something similar to what Wagner wanted his Bayreuth theatre to be—a place for the creation of traditions. With both Puccini and his high priest presiding over the rehearsals, the musical side was sure to be correctly presented, while the presence of Belasco insured realism in scenery, costumes, and action. All this made the Metropolitan performance of great interest, without regard to the intrinsic value of the opera. But as for traditions—apart from those which relate to the orchestra and the singing—it is to be feared that when "The Girl of the Golden West" is produced in Italian cities, the California miners will be converted, in the absence of Belasco, into the traditional Sicilian brigands so familiar to opera-goers.

Paradoxical as it seems to say it, this may prove the salvation of Puccini's work. To be a real work of art, an opera must have music suited to the action. The action and local color in "The Girl of the Golden West" are intensely American and Californian. The music is not; it is thoroughly Italian—that is, in the modern sense of the word—and would seem less out of place around the sulphur mines of Sicily than the gold mines of the Pacific Coast. Brahms was no opera composer, yet when he wrote his "Academic Overture," at the time when he was made an honorary doctor, he instinctively did the right thing by making several popular student songs the melodic themes of his composition. When Belasco produced his Californian play he had a quartet singing "Old Dog Tray," "Camptown Races," "I Bet My Money on a Bob-Tailed Nag," and similar ditties of the day. Puccini should have woven into his score some tunes of this sort for the miners to sing. He did introduce Foster's "Dooda, dooda da," but so altered in the melodic curve that no one but an expert would recognize it. The few Indian tunes he introduced are also Indian to those only who know about them. In a word, there is in this opera hardly a trace of what can be called American from any point of view; and those who had hoped that just as Gluck and Meyerbeer, though Germans, had written real French operas, so Puccini, though an Italian, would give us a real American opera, are grievously disappointed.

Besides the desirability of local color, there was a further reason why he should have adopted American melodies in the fact that his own melodic fountain seems to have run dry. In the whole opera there is not one of those stirring, broad, sensuous melodies which have made "La Bohême," "Tosca," and "Madama Butterfly" famous. The orchestration is rich and varied and betrays great technical skill; but in this direction—the direction taken by Berlioz and Richard Strauss—operatic success does not lie. We shall be very much surprised if "La Fanciulla del West" is a success in any European country. How it will be received in Chicago and Boston we shall know in a few weeks.

Arthur Friedheim will give a recital at Mendelssohn Hall on Saturday afternoon, December 17. His programme will include the Liszt sonata (the playing of which is a revelation), Liszt's "Benediction," twelve Chopin preludes, Liszt's Ballade in B minor, Mephisto Waltz, Pesther Carnival, and 1 Mazurka in A flat by Chopin. Mr. Friedheim is virtually the last of the genuine pupils of Liszt, and his playing is always a delight.

Two special Wagner concerts will be given by Lillian Nordica and the New York Symphony Orchestra, Walter Damrosch conducting, in Carnegie Hall, on January 4 and 11. Mme. Nordica will sing excerpts from all the Wagner music dramas in which she has appeared, including "Die Walküre," "Siegfried," "Götterdämmerung," and "Tannhäuser." The great American prima donna seems to be in particularly good form this winter.

Max Bruch has, at the age of seventy-three, composed a new violin concerto. It will be published soon by Simrock in Berlin, and Willy Hess will have the privilege of introducing it to the world.

Nothing is more remarkable in the musical world than the increasing interest in Grieg's songs and instrumental works. They are sung and played five times as often as they were a few years ago, the musicians having discovered at last that nothing more surely brings applause. Like the music of Chopin and Schubert, Grieg's music combines popular luscious melody with harmonies that delight epicures.

Art.

What Is Art? By John C. Van Dyke. New York: Charles Scribner's Sons. $1 net.

The title of Professor Van Dyke's new book suggests a treatise on pure æsthetics; it is rather an attempt to meet certain current misconceptions. We get, Mr. Van Dyke fears, our notion of art chiefly from museum officials and dealers, and that means that we indulge both the historic and commercial fallacy. Art is neither a curiosity nor a commodity; "art is primarily a matter of doing, somewhat a matter of seeing and feeling, and perhaps not at all a matter of theme or thinking." If the dealer and the pedant have variously misled us, the modern artist also has often been faithless to the tradition of his craft. For pungent good sense commend us to the chapter on The Use of the Model, which is incidentally a quiet but scathing exposure of the literalism that afflicts modern art. A tour through a gallery might almost persuade the visitor that memory and invention had been stricken off the artistic vocabulary.

Towards the connoisseur who treasures what is rare and the Philistine who adores only what is dear, our author is impartially severe. Both are enemies of sane art appreciation. Mr. Van Dyke deprecates the creation of fanciful personalities in art. It offends him, for example, that Mr. Berenson's Amico di Sandro gets into the art histories and even "influences" artists who are there by grace of documents. It seems to us that these ingenious reconstructions stand or fall by their own credibility. If Mr. Berenson has correctly assembled the works of an unknown personality, that artist, whom we may call Amico di Sandro, or Master of the Chantilly Esther—the name not mattering—may perfectly well have influenced a contemporary. Objection lies, if at all, to the reconstruction, not to the name or imputed influence.

To feel quality is the chief business of art appreciation, and while Mr. Van Dyke may not have successfully defined quality—an almost impossible task—he sufficiently intimates how it is to be looked for. What we want is the immediate effect of the work of art itself. A connoisseur of our acquaintance asks himself on entering a gallery, What are the two finest pictures in this room? and arrives at results often contradictory to catalogues and guidebooks. Mr. Van Dyke deplores the craze for old masters and urges an intelligent patronage of our own art. Here it seems to us is some neglect of fundamentals. A really intelligent patronage of our own art might leave nine-tenths of it wholly unpatronized, while the grievance against the plutocratic collector is not that he affects Rembrandts, but that he does not love those he owns. Any kind of honest love of art as art must work for the artistic good of the country. A fine work of art, we think, is never expatriated where it finds a lover. And quite practically it has been the enlightened collectors of older art among us who were the best patrons of Whistler, Puvis, and Manet. We heartily wish that the tyranny of the dealer and art historian may be abated, and we feel deeply the insincerity of much collecting, but we are convinced that the only salvation is to eschew the bad and hold fast to the good art of whatever period.

Throughout this little book, Mr. Van Dyke shows his familiar qualities of literary distinction and clear thinking. It will do good wherever it is read. Whether a prophet of the beautiful who consents neither to bait with florid phrase nor yet to adopt the yawp barbaric can make himself heard in our particular desert, is quite another question.

The whole period in which Gothic architecture arose, found a completer expression than other styles have ever attained, reached its limit of possible development, and then suddenly declined, was less than four centuries. To study its essential features we need seek no example outside the narrow geographical limits of the old Royal Domain, whose structures have been very happily described in "Cathedrals and Cloisters of the Isle de France," by Elise Whitlock Rose, with illustrations from original photographs by Vida Hunt Francis (2 vols., Putnam). All the genius of the northern French—a race whose daring imagination and undeviating adherence to direct and logical expression fitted them to measure themselves with the noblest problems of architecture—was concentrated on these buildings. In the other arts they took no such significant part. Thus they expressed a deeper religious sentiment than Europe had yet known, and demanded of common and often inferior materials a long series of constructive *tours-de-force*. In the fact that nothing was built purposelessly or fantastically lies the interest of their work. Huysmans has found from the patient examination of a single cathedral that every detail of carved stone or painted glass is to some extent a mystical exposition of the history and doctrine of the Church; Viollet-le-Duc and Choisy show that every moulding was cut in conformity with an underlying constructive idea, and even in the matter of contemporary history the stones of these churches are more truthful witnesses than the written records. The author of the present volumes has a scholarly historical knowledge, and, better still, she shows an intimate acquaintance with the buildings themselves. The work of the illustrator is in sympathy with the text. Besides the familiar general views there are many charming details of porches, chapels, and galleries.

"The Whistler Book," by Radakichi Hartmann (L. C. Page & Co.) bears an over-ambitious title, and is here and there marred by phrases more florid than exact or expressive. On the whole, it is a sympathetic and judicious criticism. It takes courage to assert the comparative emptiness of the famous "White Girl," and independence to write that technically Whistler was probably not "the best etcher of his day." In the nocturnes and lithographs our author finds the most individual and exquisite expression of Whistler's genius. The entire book is an odd combination of real perceptiveness, with extravagance of statement and allusion, but it has the virtue of readableness and enthusiasm, and often it cuts to the heart of the matter. It is carelessly printed, proper names being frequently disfigured. Monet for Manet, on page 79, and Walter Gray for Gay, on page 226, are perhaps the worst instances. There are fifty-seven illustrations, a bibliography, and a list of paintings not quite complete or up to date.

"Peasant Art in Sweden, Lapland, and Iceland" is the attractive title of the special Autumn Number of the *International Studio* (John Lane Co.). On inspection one regrets the prominence given to Swedish art, much of which seems derivitive from southern models. In silver-smithing and weaving, however, we have the true primitive note. Whatever is given from Lapland and Iceland seems pure gold. Especially the bed panels of Iceland preserve a robust tradition running back to the so-called dark ages. Beside the illustration after peasant objects there are photographs and color-prints after paintings depicting the houses and the peasants themselves, in all six hundred cuts.

The Pennsylvania Academy of the Fine Arts announces its one hundred and sixth annual exhibition, which will open to the public Sunday, February 5, and close Sunday, March 26. The exhibition will consist of original works by American artists in oil painting and sculpture, which have not before been publicly shown in Philadelphia. All works intended for exhibition must be entered upon regular entry cards, which must be properly filled out and sent to the academy by Monday, January 2. The jury of selection consists of the following members: Painting—Willard L. Metcalf, chairman; George Bellows, Adolphe Borie, Joseph De Camp, Daniel Garber, Walter MacEwan, Carl Newman, De Witt Parshall, Henry J. Thouron, and J. Alden Weir. Sculpture—Hermon A. MacNeil, Bela L. Pratt, and John M. Bateman. The hanging committee is composed of Willard L. Metcalf, Charles Grafly, and Adolphe Borie. The academy's committee on exhibition has as chairman Clement B. Newbold.

Richard La Barre Goodwin, the landscape painter, died at Orange, N. J., last Saturday, at the age of seventy years.

From Paris comes news of the death of the landscape painter Jean Emile Renié.

The death is announced from Berlin of the artist Ludwig Knaus, who, in the seventies of the last century, was considered one of the great *genre* painters of the world. At the Metropolitan Museum are to be found his Repose in Egypt of the Holy Family, The Old Woman and Cats, the female figure of Peace, and a Girl's Head. Other important pictures by him are Funeral in a Hesse Village, His Excellency Travelling, The Village Musician, The Inn, The Refractory Model, Solomon's Wisdom, and Peep Behind the Scenes. He was born in Wiesbaden in

1829, and from 1874 to 1884 was professor at the Berlin Academy.

Finance.

WALL STREET AND WASHINGTON.

That financial markets should have excited themselves, both before and after Mr. Taft's message to Congress, over what the President would advise regarding this session's company legislation, was in reality quite needless. The Stock Exchange (which may have got a peep at advance sheets of the message) professed cheerful expectation that the President would advise against further restrictive laws as to corporations. The expectation was fulfilled, to the extent that Mr. Taft declared his opinion that "the existing legislation with reference to the regulation of corporations and the restraint of their business has reached a point where we can stop for a while and witness the effect of the vigorous execution of the laws on the statute books." Since, however, the President not only assumed that existing laws would be enforced, but also declared that he should not renew his former proposals to authorize railway "pools" for establishing joint rates, the message, from Wall Street's point of view, contained bitter as well as sweet. When it was published in full, the stock market lost all its advance of the two preceding days.

But the concern of the market, over either sort of recommendation, was superfluous. It is true that laws of the first importance have on rare occasions been enacted in the final three months' session of an expiring Congress—even after an "opposition landslide" in November. The passing of the Specie Resumption Act in 1875 is a notable case in point. But in 1875 the dominant party, though defeated at the polls, still had a workable majority of 100, good until March 4. The dominant party of to-day has less than half that majority, and such majority as it has is not workable, in the face of the schism in the party.

The points of interest which were lacking in the President's message were to a certain extent provided in the Department reports. One introduced the remarks of the Secretary of Agriculture, repeating enthusiastically the Secretary's well-known views on the crops of 1910. We have produced this year, he points out, farm products "with a value reaching $8,926,000,000," which "is larger than that of 1909 by $305,000,000," and is a sum the meaning of which "nothing short of omniscience can grasp." The value of the corn crop, in Mr. Wilson's language, "belongs to the stories of magic"; the value of the cotton crop is 13 per cent above the five-year average.

All this is reassuring, but possibly just a little overdrawn. When a statistician deals with the actual size of successive crops, with their effect on railway traffic, on the country's export trade, on the cost of living in the case of grain and on activity at the mills in the case of cotton—he stands on firm ground. But when he begins to deal with values—especially with values obtained through multiplying total bales or bushels by the market price on a single stated day—he sometimes arrives at strange results. Such calculations may not belong to the stories of magic, but they are very likely to take their place in the realm of sleight-of-hand, or in the field of expert accountants retained to prove a case. Our crops of 1910, all things considered, are a mainstay of the financial situation; but the wheat crop is far more useful a contribution to prosperity because wheat prices have fallen, and the cotton crop very much less so because cotton sells at so exorbitant a figure. Mr. Wilson's line of argument lurches perceptibly over into that inverted political economy which hails with delight a deficient crop with excessive prices, and has serious doubts over a "bumper yield" sold at values more inviting to consumers.

The Secretary of the Treasury, as was to be expected, indulges in no such jugglery of figures; it is rather his conclusions which are interesting to finance. He takes up courageously the question of currency reform, and makes some really pregnant comments—as, for instance, that the present system of distributing and redistributing bank reserves is vicious, that there is no way now of suddenly increasing currency in a crisis, except through the futile and obsolescent law of 1908, and that the present bank-note system, with its requirement of government bond collateral, will not adapt itself to the fluctuating needs of trade.

But when Mr. MacVeagh approaches high economic theory in his report, he arrives at some deductions quite as novel as Mr. Wilson's. That "panics are no longer necessary and no longer respectable" is at any rate a safe assertion. No business man and no economic philosopher was ever heard to declare that a panic was needed for the general welfare, or that a run on banks, which was being chronicled in his diary, was a highly respectable event. But the Secretary's further deduction that panics are not only avoidable, but that "we can continue to have panics or we can stop having panics, exactly as we prefer," and that "it is for the government to say whether it will have panics in the future or whether it will not," calls for somewhat different comment.

A well-ordered currency and a proper centralization of financial resources would do much to mitigate the evils of those violent reactions in financial stability and financial confidence, which are partly inherent in human nature and partly, in this country, a consequence of the excessively daring use of credit by our greatest capitalists. But it would hardly bring about a financial millennium, in which fright over really alarming financial situations should be a thing of the past.

One of the strongest arguments for a Central Bank, for instance, is the prospect that it might, under wholly enlightened and independent administration, exercise over the most powerful manipulators and promoters, and over the excesses of the financial community in general, just such imperious restraint as is exercised abroad by the Banks of England and of Germany; that it might, at a moment when the strongest powers of Wall Street had overstrained bank resources to support an extravagant Stock Exchange speculation, put up the official rate of discount, not lower it, as was done in New York city, with the natural results, last October and in the same month a year ago. If a scheme for a Central Bank which, beyond any cavil, guaranteed exactly such large-minded oversight in affairs financial could be contrived and presented to the people, it would probably be accepted. But the question appears to be, can just that disinterested policy, at such times and by such an institution, be assured?

TWO BEAUTIFUL HOLIDAY EDITIONS

SHE STOOPS TO CONQUER

AND

THE GOOD-NATURED MAN

By OLIVER GOLDSMITH

With Illustrations in Full Color by F. S. COBURN. *Two Volumes. Gilt tops, handsomely printed and bound. Each in a box. Sold separately, each* **$2.50** *net.*

No more irresistibly witty plays than those of Goldsmith were ever written. By the unforced brilliancy and naturalness of their dialogue, by the high comedy of their situations, by their racy humor, and by the perfect truth of the characterization these plays rank among the great comedies of the world.

GOURNIA

AMERICAN EXCAVATIONS IN CRETE

By HARRIET BOYD HAWES, M.A., L.H.D.,
B. E. WILLIAMS, R. B. SEAGER and E. H. HALL, Ph.D.

Large Folio (17x21 in.). With Plan, 24 Photogravure Plates (11 in Color) and many Illustrations in the Text. Limited Edition. In Portfolio $25.00: Bound $26.00

"This sumptuous volume is a monument of self-denying, scholarly work, and should be included in all reference libraries."—*The Nation.*

"Personne ne lira le chapitre, *Homeric Problems*, sans y trouver des idées originales et dignes d'attention. . . . On aura l'impression, en lisant ce livre, que Mme. Boyd-Hawes nous a donné un des plus intéressants mémoires qui existent sur la question crétoise et sur le problème homérique. Ce labeur de longues années, qui comprend non seulement la besogne considérable des foullles et la publication des objets trouvés, mais encore tant de lectures, tant de mûres réflexions sur la civilisation prehellénique, est de nature à imposer l'estime et le respect à tous ceux qui ont abordé eux-mêmes ces divers genres de travaux et qui en ont senti les difficultés redoutables."—*Journal des Savants.*

"Die Farbentafeln des grossen Gurniawerkes sind die bisher besten kretischen Vasenpublikationen."—*Zeit und Dauer der Kretisch-Mykenischen Kultur.*

". . . Mrs. Hawes comes before us as actually the first of her sex who has both directed in person a scientific excavation in classic soil and edited in chief the scientific statement of its results. . . . The book offers a dozen full-page plates of drawings in line, done by the 'fading-out' process from photographs of many hundreds of objects; also two full pages of photogravure views and coloured plan, and, finally, eleven fine plates in colour, which display both most delicate representation of the original objects and supreme success in reproduction of tints. . . . For one thing, Gournia gives us the one almost complete ground-plan of a Minoan town that has yet been laid bare; for another, since its ruins were entirely unremarked and unplundered till Mrs. Hawes dug into them, Gournia has preserved for us *in situ* much the most varied and comprehensive apparatus of Minoan domestic economy available for study. . . . if you wish to see how a whole Minoan town was laid out in blocks; how its communication ways were disposed; how it lay in relation to its chieftain's stronghold; what utensils and implements it used in domestic life; where it set up its holy places and how it furnished them; what high artistic aim and achievement went with restricted provincial means in that remote age—why, then, you must either visit Gournia and the galleries at Candia, which contain its spoil, or buy or borrow Mrs. Hawes's book. . . . The main thing is the orderly and adequate setting forth of the Gournia results, and this could hardly be improved."—*London Times.*

SEVEN GREAT STATESMEN

In the Warfare of Humanity With Unreason

By ANDREW DICKSON WHITE

Lately President and Professor of History of Cornell University

"One arises from a reading of this book with a feeling that he has grasped the main movements in Europe in the last three hundred years, and that he has portraits of seven of the men who have done so much to take statesmanship out of the slums of Machiavelli and place it where it now exists."—*Book News Monthly.*

"The most important book of its kind on this season's list."

"The reader of this single volume will get in a course of winter evening reading a better insight into the great events and the great human forces in European history than he would be likely to do in a more ambitious course in mediæval and modern history."—NEW ORLEANS TIMES-DEMOCRAT.

"It is not only a contribution to the literature of biography and to the exposition of political principles and the art of statecraft, but it is a great study in human nature, as well, and as valuable to the psychologist as to the historian."—THE OUTLOOK.

"An admirable and valuable contribution to permanent literature."

The Revision and Amendment of State Constitutions

By WALTER FAIRLEIGH DODD, Sometime Henry E. Johnston Scholar in the Johns Hopkins University. 368 pages, 8vo, cloth. Price, $2.00.

This important study in American Constitutional Law gives a statement, descriptive and critical, of the methods adopted in this country for the amendment and revision of State Constitutions, and discusses with a thoroughness not elsewhere to be found the legal powers of conventions and of legislatures with reference to constitutional revision and amendment. The historical aspects of the subject, especially with respect to the Constitutional Convention, also receive careful consideration.

Rodolphe Christen: the Story of an Artist's Life

By his WIFE. Profusely illustrated by Sketches in Color and Black and White, and several Portraits. 8vo. $7.00 *net.*

Born in a remote valley in Switzerland, Monsieur Christen's determination to become an artist vanquished all obstacles, and carried him triumphantly to success. He was well known as a brilliant and successful teacher of French methods and ideals in art, and spent many years painting pictures and portraits. As a record of picturesque and romantic travelling, much of it on foot, through Spain, Italy, France, and Switzerland, the book will appeal strongly to all lovers of the artistic and the unconventional.

Clara Novello's Reminiscences

Compiled by her daughter, CONTESSA VALERIA GIGLIUCCI. With Memoir by ARTHUR DUKE COLERIDGE. With 3 plates. 8vo, pp. vi+216. $3.00 *net.*

These Reminiscences compiled from the great singer's manuscript notes give vivid pictures of her early life, when Charles Lamb and all manner of distinguished literary and musical people were frequent guests at her father's house. After her marriage with Count Gigliucci she lived in Italy, and there are various interesting side-lights on the stirring times of the *Risorgimento* and the unification of the kingdom of Italy.

Recollections of a Scottish Novelist

By MRS. L. B. WALFORD, author of "Mr. Smith," "The Baby's Grandmother," etc. With 3 Portraits and 3 other Illustrations. 8vo. pp. xii+317. $3.00 *net.*

"The lights and shadows of Scottish life and character sparkle on almost every page in picturesque description or piquant anecdote. The book is alive with genial humour and shrewd observation, and deserves to be widely read."—*Standard, London.*

By MAJOR C. G. BRUCE, M.V.O., Fifth Gurkha Rifles. Fully illustrated. 8vo, $4.20 *net.*

The Himalaya is a world in itself and Major Bruce has journeyed through it mountaineering, in pursuit of big game, or in the performance of his professional duties, for more than twenty years.

The Architects' Library—NEW VOLUME

Edited by F. M. SIMPSON, F.R.I.B.A. Professor of Architecture in the University of London.

Building Construction. In 2 Volumes.

By BERESFORD PITE, F.R.I.B.A., F. T. BAGGALLAY, F.R.I.B.A., H. D. SEARLES-WOOD, F.R.I.B.A., and E. SPRAGUE, Assoc. M.Inst.C.E. Medium 8vo. **Vol. I.** With nearly 250 drawings and diagrams. Pp. viii+452. $5.00 *net.*

CONTENTS
- Brickwork. By Beresford Pite.
- Stonework. By F. T. Baggaliay.
- Carpentry. By H. D. Searles-Wood.
- Construction in Metals. By E. Sprague.
- Index.

"The aim of the volumes on Building Construction in the Architects' Library is, while treating the subject in a practical manner, to give to it also architectural expression. With this object in view most of the chapters have been entrusted to well-known architects. Existing books on Building Construction are in most cases excellent in some respects, but too often fail to place before students the treatment which is necessary if buildings are to be not only sound, but also architecturally satisfactory. Building Construction in itself is merely a skeleton; its effective covering is Architecture."—*Preface.*

ALREADY PUBLISHED.

A History of Architectural Development

Vol. I. ANCIENT, EARLY CHRISTIAN, AND BYZANTINE. With 180 Illustrations. 8vo. $4.00 *net.*
Vol. II. MEDIÆVAL. With 257 Illustrations. 8vo. $6.00 *net.*
Vol. III. RENAISSANCE. [*Preparing.*]

" . . . The same quality of sympathetic understanding of a still more difficult subject distinguishes Mr. Simpson's work on mediæval architecture. His aim, likewise, is 'to trace the development of architecture through the planning, construction, materials, and principles of design of the buildings described,' with frequent reference to the influences which shaped that development. . . . A valuable and illuminative volume." —*N. Y. Times.*

The UNITARIAN ADVANCE

A MONTHLY MAGAZINE OF PROGRESS IN RELIGION

GEORGE H. BADGER, *Editor*

YOU have always taken it for granted, no doubt, that a religious magazine must necessarily be heavy, dull and uninteresting—though good!

Some religious magazines are just that. We aim to make the UNITARIAN ADVANCE different.

We believe that Religion can be made the most interesting thing in the world,—if you have the right sort of religion: eager; up-to-date; virile; not a thing of cant, but of reality; not an echo of old-time dogma, but a live-wire of tingling progress.

CHIEFLY: are you not interested to have the world progress in reason, justice, truth and freedom: to have religion made human, rational, honest to the core, manfully invigorating, not thinly and softly sentimental, but stalwartly enthusiastic, kindling, and dramatic in modern zest of progress?

Well, that is what THE UNITARIAN ADVANCE is concerned with. Why not have a part in its enterprise?

One Dollar a year; three months for 25c.

The Nation

NEW YORK, THURSDAY, DECEMBER 22, 1910.

The Week

For a subject that was pronounced "dead" a year ago, tariff revision is proving itself a particularly lively corpse. Both houses of Congress are giving up hours to its discussion. It is evident that the Western Republicans mean business; they are just as hot against dishonest tariff taxes now as they were during the campaign. An agitation of that kind, once started, gets rebellious ideas into the heads of the people, and will not die down. Even Senator Aldrich now perceives that the popular wrath against his handiwork cannot be laid by smooth words, and is prepared to concede something to it. A great light has also dawned upon Senator Lodge, and he—helped on, of course, by the angry Massachusetts sentiment which makes his reëlection doubtful—is also found among the tariff-revision prophets. Little can be expected of the short session, naturally, yet there seems a chance that a bill may pass making the Tariff Board permanent and enlarging its powers.

Postmaster-General Hitchcock is justly proud, in his annual report, of his reduction of the deficit of his department by $11,500,000. In his natural desire to wipe out the remaining deficit, he recommends the plan of making the magazines pay a higher rate for their advertising pages. Whatever the merits of this proposition, there is room for effecting great savings in other ways, by introducing business-like methods and getting the maximum work out of his employees. He has already proposed placing the low-grade postmasters under the civil-service rules. If he and Mr. Taft, without further ado, weed out a few hundred inefficient postmasters who hold office solely for political reasons, that alone will almost wipe out the deficit, provided that the postmasters are succeeded by energetic, enterprising business men. All newspaper publishers know how untrustworthy the present postal service is. Those in New York are doing a lot of the work of the post office, because the post office does not do it in any satisfactory way. The best way to improve its revenues would be to make it trustworthy and efficient.

Incredible as it seems, the House Committee on Invalid Pensions has favorably reported a bill to add nearly fifty millions of dollars to the existing pension roll. The pension of a veteran of sixty-two is by it increased from $12 to $15 a month. A veteran of seventy will receive from $50 to $75 a month additional, and one of seventy-five from $20 to $36 a month. An intermediate grade, between sixty-five and seventy, will come in for an increase of $20 a month. It is represented that in the first year the increase will "only be twenty-five millions," but the fact remains that within two years the extra pay will be fifty millions. What becomes of the proposed government savings? The debt to the old soldiers, which every one acknowledges, has been met more generously than any similar one in the history of the world. In addition, cowards, shirkers, and camp followers have profited by Treasury gifts until the privileged class of veterans has become as dulled to what is just and proper as have the protected manufacturers.

The significance of the New York State election, especially in the light of a defeat to Mr. Roosevelt, is emphasized by the official figures now published. We refer to the comparison between the plurality attained by Mr. Dix and those given to his associates on the State ticket. It is plain from these figures that Dix ran almost exactly 50,000 ahead of his ticket; his plurality was 67,401, as against 18,408 for the Comptroller, 18,332 for the Treasurer, and 18,066 for the State Engineer. Compared with the Lieutenant-Governor, his lead was not so great, while the comparison with the votes on Secretary of State and Attorney-General shows a greater lead; the reason in each case being obvious. Inasmuch as Mr. Stimson was an excellent candidate, this preferential vote of 50,000 in Mr. Dix's favor is clearly to be interpreted as a vote of protest; nor does it begin to measure the extent of that vote. For every Republican that entered his protest by simply discriminating in favor of Dix, there were probably three or four who either voted the straight Democratic ticket or did not vote at all. This conclusion, indicated by ordinary observation of the people during the campaign, is confirmed by the way in which the hoofs went with the hide—the Legislature with the Governorship—in spite of the advantages of Republican districting.

Both Gov.-elect Dix personally and the State of New York are to be congratulated on the decision of Mr. Charles E. Treman to accept the very important post of Superintendent of Public Works. One of the chief difficulties encountered by Governors, and especially by Governors of this State, in which the magnitude and complexity of the affairs to be administered are so great, is that of securing the services of men of a high order of ability in the principal offices connected with the Administration. Acceptance of these duties, on the part of the men most peculiarly fitted to perform them, almost always involves a personal sacrifice, and there is no truer patriotism than that which is manifested by shouldering these burdens for the public good. In the case of Mr. Treman, the question of health entered into the case, and hence his favorable decision is all the more to be appreciated.

There seems to be no doubt that Woodrow Wilson was approached by agents of Roger Sullivan when in Chicago recently, and offered a bribe in the shape of the votes of the Illinois delegation to the next Democratic National Convention if he would only not oppose Mr. Smith's election to the Senate. There are prominent politicians we might mention, whose mode of procedure would have been to palliate, consider, and compromise in order to be "practical." It would by many have been considered justifiable under the new theory of applied political ethics. But Mr. Wilson's reply was prompt and vigorous. For those who know him or have watched his political career, it is not difficult to imagine the fine scorn with which he waved these tempters aside, with complete contempt for any effect his act might have on his own career. This episode is, in fact, illum-

ined by a significant remark made by Mr. Wilson at the Southern Society's dinner last week. Introduced, with poor taste, as a probable "future President," Mr. Wilson promptly disclaimed any consideration of whither his new work would take him. He cared, he said, only for the task in hand, and not where he would arrive, except that he wanted to land "on the necks of certain people." There is every reason to believe that he will have his wish. The Americans who live in New Jersey, and those who live elsewhere, know a brave man when they see him. From all accounts, the State is rising to Mr. Wilson in a way to make Mr. Smith's brazen stand speedily appear an act of political suicide.

Pennsylvania's Legislative Reference Bureau is ready to perform its function of first aid to legislators. Although created by the Legislature of 1909, it was not until January of the present year that the Bureau began actual work. The first step was to establish a system of classification by which all the material to be gathered could be made available for instant use. The basis of this classification is the living statute law of the State, that is, the unrepealed statutes, exclusive of those which the courts have held to be repealed by implication or that have been declared unconstitutional. The 2,200 bills of the session of 1909 were then filed according to this classification, the history of each being indicated upon it. Cards were then obtained daily with the titles of bills introduced in the Legislatures of other States in the sessions of 1910, and the most important bills selected, sent for, and filed. Seventeen newspapers and a large number of periodicals were subscribed for, carefully clipped, and the clippings indexed and filed. Books and pamphlets, compilations of laws, and decisions of courts were also obtained. The object of the Bureau is to present to members of the Legislature information, digested and arranged, upon as many subjects as possible of those they may be interested in. The corresponding experiment in Wisconsin has been highly successful.

The seven selections for major-generals and brigadier-generals announced by the President represent almost a clean sweep for the bureaucrats of the War Department. Gen. Charles L. Hodges, one of the seven remaining civil war soldiers, is to be a major-general for three months before retirement—an honor no one will begrudge him. He is to be succeeded, not by one of the fifteen line brigadiers, but by the chief of the Coast Artillery, Brig.-Gen. Arthur Murray, whose place will in turn be taken by an officer on duty at the War Department, Col. E. M. Weaver. Of the four colonels to be promoted, the most gratifying fact is that they are colonels, and not captains or majors. On the other hand, all four are men who have been on detached duty from their regiments for the greater part of the last four years. Col. Duncan, one of the two infantrymen selected, is on duty at the War Department, to which Col. Schuyler of the cavalry was under orders. Col. Evans, too, is an officer who has been a great deal on special duty these last few years. This batch of promotions is, therefore, certain to be received by the army as official confirmation of the prevailing belief that the way to get ahead is to obtain duty near the powers that be in Washington.

Why should there be objection to Brigham Young's portrait on the silver of the battleship Utah? Are we not wiping out all historical issues of the past and forgiving everybody for everything? With Robert E. Lee in Statuary Hall in his Confederate uniform, and Southern Governors declaring that Jefferson Davis shall soon have a place there as well, why cavil at Brigham Young's honoring on a battleship? Lee was an admirable character and a wonderful general; Brigham Young was an amazing conqueror of the desert and a remarkable captain of industry. The one stood for slavery of the blacks; the other for the enslavement of women. But let us forget all that and put it purely on the ground of their own personalities. Let the dead political past bury its dead. Soon we shall have monuments to Benedict Arnold and Aaron Burr—indeed, a memorial to Arnold in praise of his gallantry at Saratoga was unveiled but the other day on the battlefield. In time, we shall commemorate as well Mr. Bryan's devotion to the cause of sound money and James G. Blaine's adoration of truth and common honesty. The statue of Matthew Quay stands in the Harrisburg Capitol. Whatever else we are, let us be charitable in regard to the past, and let us not impose standards of taste or ethics upon the rising generation. They have enough problems to face as it is.

The moral influence alone of the Census would justify its cost. Instead of inducing satisfaction over past achievements, the impartial figures have only spurred ambition higher. This is true in a two-fold sense. In Chicago, this ambition takes the paradoxical form of looking forward to the day when an obstinate Census Bureau will allow the claim of 2,500,000 individuals within its limits. This is a material reduction from the programme of the Three-Million Club, but, as an exchange of an impracticable ideal for a possibility, speaks well for the philosophic calm produced by the disappointing figures of 1910. But the great triumph of the Census is the emphasis it is leading many a city to place upon quality rather than quantity. Boston is modestly insisting that it is better to be just Boston than a so-called Greater Boston, which would not rival the largest centres anyhow. And to a number of other cities the population figures have brought this same lofty aim and solace.

Mr. Choate's announcement that Secretary Knox has worked out a plan by which the fifteen judges of the Court of Arbitral Justice, recommended by the second Hague Conference, may be chosen with satisfaction to the nations concerned, is most gratifying. Owing to the inability to devise a method satisfactory to the smallest countries, this court has languished. Few people realize how much good will come from the establishment of a permanent arbitration tribunal of this kind. Temporary arbitration courts have done valuable service; but what is needed is a permanent court to build up traditions and rules and lay down new principles of international law and justice. The question of enforcement of the decrees of an international court was discussed last Friday by a retired member of the Supreme Court, Justice Henry B. Brown. He regards the establishment of an international force to see to the acceptance of decisions as unpractical and as leading to the wars the world is anxious to stop. But many people will not be able to follow him in this. Why, for instance, assuming an arbitration be-

tween Germany and England, would it not be sufficient to have it known that France, the United States, Russia, Italy, and Austria would see to the acceptance of the court's decree? No actual use of force would ever be necessary.

The news from Cuba continues to be most unsatisfactory. So far as the Government is concerned, it long since forfeited whatever confidence of the business classes it ever had. Graft charges of a wholesale character are made every day, and Gomez himself, who is now reported to be in fear of his life, is the target of open accusation, and of much innuendo. No one believes that he will reside in Cuba, even if he survives his term. It has gone so far that a Havana newspaper is reported as laying the attempted assassination of Gen. Pino Guerra, once one of Gomez's close allies, at the President's own door. As for the regular army itself, which, contrary to common sense, the last American Governor of Cuba, Mr. Magoon, forced on the island with the consent of Mr. Taft, it has become a source of weakness, instead of strength. This was foretold at the time, but the blunder was insisted upon. Now Gomez is taking their ammunition away and scattering the troops over the island, to prevent their turning upon him. As the present Cuban situation is largely the result of Mr. Taft's own policy, he cannot fail to be deeply concerned over the unhappy outlook.

Pauperism in Great Britain has greatly decreased in amount, although it has increased in cost. At present, the outdoor pauperism is the lowest ever recorded for England and Wales, and the lowest in London for seven years, while the indoor pauperism of the metropolis is the lowest for three years. Indoor pauperism has remained stationary during the last ten years, says John Burns, president of the Local Government Board, because the workhouse is no longer the Bastille it used to be, and because children within the wards of the poorhouse no longer experience the treatment that was meted out to the Oliver Twists of fifty years ago. Above half of the indoor poor are now in special institutions, where their ailments are better looked after than in the old mixed general workhouse, which was a combination of the lunatic asylum and the jail, "with a little bit of street-corner thrown in." The increase of cost is due to the higher standard of relief for the aged, the sick, and children. It is better economy to spend $250 in getting rid of sickness before the patient is fourteen years old than to spend $1,500 in palliating his symptoms after he is forty. Of the total pauperism, 30 per cent. is ascribed to sickness, and 45 per cent. to age and infirmity.

As the fourth decade since the annexation of Alsace and Lorraine by Germany draws to a close, the region formed by the two conquered provinces is about to enter on a new stage of its existence as part of the German Empire. The Bundesrat has adopted the draft of a constitution for Alsace-Lorraine, including the creation of a bicameral Legislature, of which the lower house is to be elected by universal suffrage. This may safely be regarded as marking a stage in the subsidence of anti-German feeling in the Reichsland, in which such a step is regarded as unobjectionable by German sentiment in the ruling classes. The event may serve, too, as a reminder of the virtually complete disappearance of the *revanche* idea in France, a thing which, forty years ago, hardly anybody regarded as possible in so short a time. Not that the sentiment of attachment to France has ceased to exist in Alsace and Lorraine, or that regret for the loss of her provinces no longer enters into the thoughts of the people of France; but the whole tone of the situation has changed. The fiery passions which for a few years after the great war seemed to burn with a quenchless flame, are now almost as completely a memory as are the like feelings which were for a time cherished in connection with "the lost cause" in our own South.

Monday's action of the Imperial Senate of China in adopting a resolution impeaching the Grand Councillors, brings the difference between the Progressives and the Regent party to an issue. Young China is impatient of further delay, and the imperial edict announcing that the demand for the creation of a responsible Cabinet was refused, has only tempted the provincial delegates to take the bit in their teeth. If the contest were between the Progressives and the Regent, prediction of the result would not be difficult. But Chinese politics is not so simple. The Manchu nobles, who are adherents of the Empress Dowager, voted in October with the Progressives for the immediate convening of Parliament, and thus declared themselves opposed to the conservative policy of the Regent. But when, flushed with their successes, the Young China party passed a resolution calling upon the Grand Councillors to appear before the Assembly and explain their reasons for sanctioning the Hunan loan, a hint was conveyed through the president of the Ministry of Finance, who had been on the side of the Progressives, that any further violent display of hostility to the Government might mean the dissolution of the House. The Progressives of the Senate are evidently in the temper to test their power to the utmost, but no one can be surprised if, whether dissolution comes or not, palace politics defeats their present move for an authority which will be theirs in the end, but very possibly after a long period of waiting.

If the late Professor Freeman still cares for what goes on in this world, an approving smile must have been seen on the features of his shade as he learned that the Asiatic Exclusion League of San Francisco had resolved last Monday to give up the use of the term "Anglo-Saxon." Its motives are not exactly those of scholarship. It is not a question of substituting "Old English." The point in this case is that the large numbers of Germans and Irish and, we suppose, Slavs who, with the League, are determined to keep the pure native stock of this country from being contaminated by Asiatic immigration, object to having our civilization described any longer as Anglo-Saxon. Hereafter it is to be known as "American"—though if anybody can tell what that word means, racially, he will be wiser than seven men that can render a reason. Professor Freeman held that Anglo-Saxon was inexact and misleading, but we doubt if he would have liked "American" any better. Freeman was once toasted, somewhat ambiguously, as "the historian who had shown such an intimate acquaintance with the rude manners of our forefathers," but we think that, even in that matter, the Asiatic Exclusion League could have convinced him that time's noblest offspring is the last.

OUR OFFICE-HOLDING SYSTEM.

The next great step in the advancement of the merit system in the Federal civil service was clearly indicated by President Eliot in his address at the opening of the thirtieth annual meeting of the National Service Reform League, in session at Baltimore. It is natural that the great extensions given to the system by successive Presidents, and the gradual but complete dying out of the futile opposition to it so long manifested in Congress, should have brought about a general feeling that there is nothing of much consequence left to do; but such is by no means the case. The number of offices outside the classified service is, indeed, not very great—only some 9,000 as against 294,000 in the classified service—but their exclusion is nevertheless a matter of unquestionable significance. Being of a high class, and therefore much sought after, they furnish a very considerable supply of spoils for the politicians; a part, by the way, that is also played by the large number of special exemptions within the classified service, stated by President Eliot to be 68,000. But it is more important still that, so long as they are filled by favor, there cannot be within the classified service that spirit of ambition, that incentive to superior excellence, which is indispensable to the maintenance of the work at a high level; and, as a rule, it will also be true that the persons in the higher posts will not themselves possess the qualifications that would be regarded as indispensable for such posts if they were treated as the natural goal of successful effort in the lower positions.

How great a stimulus would be given to the whole body of the service if these 9,000 posts, or all but a few of them, were thrown open to proved merit—if they were filled, as a rule, by promotion, and when not by promotion by competitive examination—can easily be imagined by any one who knows how the same kind of incentive operates in railways, in manufacturing concerns, in financial institutions, indeed in any calling where a salaried man may look upon his work as opening up possibilities of a successful career. That is what the classified service, great as has been the advance over the old spoils system, does not do. As President Eliot says:

> However meritorious these servants of the government may prove themselves to be, they cannot reach higher posts without procuring the active influence of a patron or without commending themselves in some way to the persons in whose gift the higher offices lie.

In the promotion of this extremely important advance in our official system, the Civil Service Reform League will be able to point to the unequivocal support of President Taft, shown in more ways than one. Dr. Eliot referred to the President's recommendation in his message that the first, second, and third class postmasterships should be placed in the classified list; and Mr. R. H. Dana spoke of the programme of civil-service legislation laid before Congress by the President as not only showing Mr. Taft's clear comprehension of the needs of the service, but also as indicating that public opinion has "advanced to a point where it will no longer tolerate existing conditions under which minor employees are selected for merit, while the superior officers in charge of the work are to a large extent chosen with regard to their political qualifications." In commenting thus on the President's position, Mr. Dana doubtless had in mind the sweeping recommendation made in the message that the Executive should be empowered to include in the classified service "*all* local officers" under the Departments of the Treasury, Justice, the Post Office, the Interior, and Commerce and Labor, the necessity of confirmation by the Senate to be in all these cases done away with. Although Mr. Dana may be too sanguine in thinking that public sentiment at this time calls for such a change, experience clearly shows that it will require only a vigorous and continued effort to educate public opinion to the point of effectively demanding it.

While the application of sound principles has thus been making continuous and splendid progress in the Federal service, it has to be recognized with regret that in the States there has been little advance to record for a number of years. This is partly, and perhaps entirely, to be explained by the circumstance that public attention has been directed so much to the overshadowing question of corporation abuses. But whatever the explanation, the fact itself is to be deplored. New York State—which furnished the great leaders of the civil service reform movement in the days of its militant youth—was a pioneer in the introduction of the merit system in State and municipal office; but that system has not grown in strength as it should have grown with the needs of the time and with the progress made in the Federal service. One of the tests of the quality of the incoming Governor will be furnished by his handling of this subject. Whether it be viewed as one of the means of procuring economy and efficiency, or as an element in that upbuilding of State powers which is part of the general programme of the Democratic party, the strengthening of the Civil Service Commission and the determined enforcement of the civil service laws are among the objects which, we trust, Mr. Dix will take seriously to heart. By so doing, he would greatly strengthen his hold on that independent sentiment to which he largely owes his election, and at the same time get rid of a considerable part of the office-seeking pressure which threatens to make life a burden to him.

WHAT THE ENGLISH ELECTION SETTLED.

As the close of the pollings in the English general elections leaves the strength of the respective parties in the House of Commons almost exactly what it was before the dissolution, there naturally are dissonant voices interpreting the result. If editors and public men were to be held to what they said before the election, or during its progress, it would be easy to decide what had been settled by the voting. Thus the London *Spectator* declared on November 12 that the Government did not need to procure so large a majority as they had before, in order "to place the Constitution at their disposal," for "we may dismiss as idle the notion that the King could resist." But this was merely meant to frighten people into voting Conservative, not as a deliberate opinion on what should be thought of the election after it was over. So, too, Prof. A. V. Dicey wrote in advance that the "true issue laid before the electorate" was simply this: "Shall the Parliament bill [the abolition of the veto of the House of Lords] become the law of the land?" We presume that the Oxford professor would not now admit that it must be. After the first day's voting, when it looked as if the Government might lose thirty seats, Lord Rosebery asserted that, if they lost no more than five seats,

they "could not go on with their proposals." Yet his Lordship, no doubt, will still be found fighting those proposals, although no seats were lost. "The veto of the Lords is dead," affirms John Redmond. Winston Churchill's phrase is: "The veto of the House of Lords has been referended." On the other hand, Mr. Balfour takes the view that the election has been indecisive, and that another one must follow next year.

With doctors on the spot thus disagreeing, it would be rash for an outsider to venture an opinion. What the course and order of business will be in the new Parliament; what the Government will attempt to do; what will be the attitude of the Lords; what position the King will take—about all these things it is impossible to make any safe prediction. But one result is assured. The election has taken one thing out of the realm of political controversy: it has made an end of the hereditary principle as the basis of the House of Lords. The actual change may be written into legislation and made a part of the British Constitution, slowly; it may be enacted in one of several ways; but the decree of the nation has now gone forth, and the House of Lords as we have known it is henceforth a thing of the past.

It is the culmination of a movement long pursued. In 1884, when the Lords had thrown out a franchise bill designed to give the vote to agricultural laborers, John Bright made a speech at Birmingham in which he directly attacked the hereditary principle as the basis of any legislative body. "Privilege," he maintained, "everywhere begets ignorance and selfishness and arrogance." While Bright admitted that some of the members of the House of Lords were able and hard-working legislators, he had nothing but scorn for the mass of the Peers who never showed their faces in Westminster except when they were summoned to reject some popular measure. Bright was strongly then for either making over the House of Lords or limiting its veto. The proposal which he made was so nearly like the one which Campbell-Bannerman and Mr. Asquith later introduced that it is altogether probable that they drew their inspiration direct from that tribune of the English people. Bright's exact language is worth quoting:

> The proposition that I should make would be this—that they should have, unimpaired, all the power they have now with regard to any bill that has passed the House of Commons for the first time during the session in which the Lords are called upon to deal with it. That is, in the case of this bill, they would be at liberty to amend it, and send it back to the Commons. If the Commons did not like the amendments, and would not accept them, the bill would go back to the Lords, and if the Lords chose, they might reject it. But in a second session, if practically the same bill was sent up to the Lords, they would then also have a right to debate and to amend; but when the bill came down to the House of Commons in this second session, and the Commons would not agree to the amendments of the Lords, then the Lords should be bound to accept the bill.

It was virtually on this issue, as defined by John Bright in 1884, that a Liberal Government went to the people in 1910 and were sustained. Important events had, of course, come between. Chief among them must be reckoned the action of the Lords themselves, under severe political pressure, in voting solemnly that the hereditary right to sit in their House ought not to be alone sufficient for membership. That was the knell of a passing régime. The details of the reform remain to be worked out. The plan of the Conservatives is to reconstitute the Lords but to leave their powers virtually as they are. In its naked form, the Liberal proposal is to have nothing to do with a reformed House of Lords, but to leave that body as it is and then practically paralyze it by taking away its veto on legislation. Yet if English statesmen have not lost their open-mindedness and their instinct for compromise, there ought to be found some way of adjusting the matter, by another conference or otherwise, so that what both parties profess to desire may be procured—namely, a dignified and efficient Second Chamber, as ready to consider Liberal measures on their merits as Conservative.

MR. CARNEGIE'S GREATEST GIFT.

Had the world not been, of late, somewhat accustomed to vast gifts from Messrs. Rockefeller and Carnegie, it would to-day be fairly dazed by the latter's magnificent contribution of ten millions of dollars to the cause of peace. Surely no great foundation was ever inspired by a better motive, or dedicated to a higher cause. There is no issue of greater importance before the world to-day, from the financial, the economic, and the moral point of view, than this of doing away, not only with war itself, but with that preparation for war which is becoming quite as deadly to social and ethical progress as actual slaughter. All this Mr. Carnegie has for years seen and clearly understood. In season and out of season, by the influence of his pen and his prestige, as well as by his wealth, he has furthered every movement to open men's eyes to the truth that war can no more be justified among those who profess to follow the doctrines of Christ than it can be justified among brothers of the same State or nation. So, with unfailing generosity, Mr. Carnegie gave the $1,500,000 Peace Palace at The Hague, and built also the noble home of the Bureau of American Republics at Washington, and the lately destroyed international court in Central America, which he is now to rebuild. For the Heroes of Peace in America, he gave a fund of $5,000,000, and for those in France $1,000,000; yet these are but a few of the moves in his high-minded and unselfish war upon war.

What war really is, Mr. Carnegie has described repeatedly, but never in terser or better form than in his deed of gift. We wish that every school house and library in America might have inscribed upon its walls these sentiments:

> War is "the foulest blot upon our civilization."
>
> Although we no longer eat our fellowmen, nor torture prisoners, nor sack cities, killing their inhabitants, we still kill each other in war like barbarians.
>
> Only wild beasts are excusable for doing that in this the twentieth century of the Christian era, for the crime of war is inherent, since it decides not in favor of the right, but always of the strong.

And it would be only right to say, too, that, as Mr. Carnegie also states, a nation is criminal which refuses arbitration. To his truth that "honor is the most dishonored word in the language," we might add that patriotism ranks next so long as it is held to be synonymous with a readiness to die for one's country while blotting out the existence of other men who are themselves innocent of blame or hate. The truth is that the making of war and the killing of the warmaker's pawns by the hundred thousand is but another form of the slavery of the masses to their rulers, from which the world has been so rapidly emerging. Is it not inevitable that in the years to come the monstrosity of the Franco-Prussian war, which made of two nations the pitiful victims

of a half-dozen politicians, will be a source of amazement? Will future generations not find it utterly incomprehensible that the power of life and death over millions should have been delegated to an Emperor or a Chancellor?

How is this great gift of Mr. Carnegie to be utilized? How can its vast income best be spent to further the cause? The newly appointed trustees themselves have no definite plan, and beyond indicating a few forms of activity, Mr. Carnegie himself rightly says: "Lines of future action cannot be wisely laid down." Yet, as soon as the trustees and their agents apply themselves to their task, provided they do so with the honest intention of a radical campaign against the common enemy, a thousand avenues of activity are certain to open up. Already the million dollar foundation made by Edwin F. Ginn in Boston is at work in education, carrying on a vigorous propaganda. This the Carnegie Foundation can increase in volume; it can carry the facts as to war and peace into every household and into every school. It can undertake a wise political propaganda of a national and an international character. How much education is needed here at home, the flaring headlines in the press, about the annual "war scare" in Washington, amply testify. Mr. Taft has withdrawn the alarmist report of his Secretary of War, who is one of the great disappointments of his Administration; but one of the first things the Carnegie Foundation can do is to pour the daylight upon these perpetual war-scares, and apply calm reason to such absurd statements as that of Congressman McLachlan that 200,000 foreigners could calmly land and intrench themselves on the Pacific Coast. Patriots of this kind, whether in England or in America, can usually figure out just to the dollar or shilling what such a fearful invasion will cost their respective fatherlands. And then the Foundation should certainly reveal the connection of ammunition, armor plate, ship and gunbuilding concerns with navy leagues and boy scouts, and the war propaganda of every kind.

Much will, of course, depend upon the trustees themselves, and there we confess to one disappointment in connection with Mr. Carnegie's gift. Not a single radical opponent of war is on the list, but many who (as did Mr. Joseph H. Choate at the Root peace dinner of February, 1908, and Mr. Roosevelt in Cambridge only last week) express an intellectual interest in peace, but are not against battleships, too. Great as are the services Mr. Root has rendered as a Peace Secretary of State, he has himself reached the time of life when the forces of conservatism are at their height, and with him are a number of trustees of much greater age—for instance, two of seventy-four, one of seventy-six, two of seventy-eight, and one of eighty-two years. Much will be accomplished in the matter of arbitration treaties, international courts, and conferences. But if the cause of peace is really to be advanced rapidly, it must be not by lip-service or by voicing the tiresome compromises that run, "Of course, there are worse things than war"; "there are times when people have to fight." *Uncompromising* opposition to war is what is needed—in the spirit of Tolstoy. However, no such regret can prevent the *Nation* from recording its deliberate belief that this gift of Mr. Carnegie's is an event of great importance for the world.

IN COLLEGE AND AFTER.

President Lowell, in an article in the December number of the *Harvard Graduates' Magazine*, undertakes to use, as a basis for judgment on the oft-discussed question of the relation between college-student rank and after success, certain statistics of the standing attained by Harvard A.B.'s in their subsequent studies in the Harvard schools of law and medicine. Two classifications are involved, the one according to the nature of the studies chiefly pursued by the student while at college, the other according to the rank attained by him upon his graduation as A.B. Under each of these classifications, the question is asked, what percentage of students of a given type took their professional degree *cum laude*. And this is President Lowell's summing up:

> The conclusions to be drawn from the whole matter are these: that it makes comparatively little difference to what subject a man devotes himself in college, but it makes an immense difference how good a scholar he is; and that the men who are destined to take the highest rank in the Law and Medical Schools are markedly better scholars both in the preparatory schools and in college than their fellows. In intellectual power, as in other things, the boy is father to the man.

From the second of these conclusions —that it *does* make a great difference whether a young man has or has not been a good student at college—there is no room for dissent; and this not only because the statistics are themselves conclusive, but also because the conclusion might well have been regarded as established as a result of common observation. It may be, as President Lowell says, that there is a "popular prejudice" in favor of the opposite view—the view that a poor student at college is as likely as a good one to be a success in professional work; but, like the similar prejudice to the effect that precocious children are likely to be stupid or commonplace adults, and that the children of men of genius are not likely to be much more gifted than those of ordinary persons, it has never rested on any respectable basis of fact, but has on the contrary been in manifest contradiction to facts obvious to any intelligent and unprejudiced observer. To the "popular prejudice" on this last head, Galton's "Hereditary Genius" may be regarded as having given the *coup de grâce* nearly half a century ago; and the figures adduced by President Lowell should go far toward removing such misapprehension as may exist on the subject of the relation between a creditable record of scholarship at college and a like record in professional studies. Thus the figures show that of men who simply got a plain degree at college only 6.6 per cent. succeeded in getting a *cum laude* at the Law School, whereas this success was attained by 22.7 per cent. of those who, at college, had graduated *cum laude*, by 39.2 per cent. of those who had won a *magna cum laude*, and by 64.7 per cent. of the *summa cum laude* men. As the statistics cover twenty years, and more than a thousand men, this is a pretty conclusive case of concomitant variations.

Concerning the first of President Lowell's conclusions, on the other hand, there is considerable reason for hesitation, both as to the conclusiveness of the statistics and as to the true significance of the conclusion itself. The four great divisions under which the men are classified according to the studies to which they were chiefly devoted are Language and Literature, Natural Science, History and Political Science, and Philosophy and Mathematics. Now, to begin with, President Lowell himself rules out the fourth of these divisions,

because the whole number of students under it in the Law School was only nineteen, and in the Medical School only eight. There remain, then, at best, only the three other groups as a basis for judgment. But an extremely important objection must be entered against this conclusion; namely, that each of these large groups includes an enormous range, and that studies chosen *within* the group may be of the most diametrically opposite character as regards mental discipline. In Language and Literature, it may make all the difference in the world whether one takes Greek or English; in Natural Science, whether the choice is physics or geology; in History and Political Science, whether it is political economy or modern history. In a word, the classification is too loose to be made the basis of any confident conclusion as to the indifference of choice of subjects. It is quite possible that if a subdivision were made which would segregate the highly disciplinary subjects, these groups would show the same extremely high average of after-success that is shown in the figures of the little mathematical group actually contained in the tables.

Apart from the question of the conclusiveness of the result, there is, as we have intimated, the further question of its significance. We do not refer to the distinction between selection and causation—between what is to be ascribed to the kind of men who choose a given group of studies and what is to be ascribed to the effect upon them of that choice—which is somewhat touched upon by Dr. Lowell. Waiving this, we must still regard the subject from two distinct standpoints. The studies pursued by a student in his college course may influence his success in his professional studies in two quite distinct ways —first, by the amount of direct equipment he gets for his professional work through the acquired knowledge; secondly, by the mental discipline which they impart and the mental habits which they engender. Upon the first point, the Harvard statistics may be regarded as throwing some light, and perhaps justifying the negative conclusion; on the second, for the reason already mentioned, they throw no immediate light, and if they justify any inference it is the opposite of that which would be read on their face. It does appear, from the statements of detail made by Dr. Lowell, that the amount of knowledge acquired at college in the direction of one's profession makes little or no difference in the end, at the professional school; whence if *any* inference can be drawn it is that what the student gains at college turns on the general development conferred by the mental discipline. As we have pointed out, the figures throw no light whatever on the relation between success in professional studies and severity of previous training; but, indicating as they do that the mere choice of general departments of knowledge makes no difference, they should leave unimpaired the conviction, seemingly based on abundant experience, and still entertained, we trust, by many, that a training in exact scientific thinking and accurate study of language is not an idle exercise of useless intellectual muscles, but the most bracing and effective preparation for a career of intellectual exertion in any field.

A REVOLUTION IN GREEK.

Now and then a book is written which shows that, however Greek may be dwindling in the classroom, it is still very much alive in the minds of a few solitary scholars. Such was James Adam's "Religious Teachers of Greece," published two years ago, the posthumous work of one who was himself a much-regretted teacher. Such is the volume of "Lectures on Greek Poetry," just published by J. W. Mackail, the professor of poetry in the University of Oxford. The book is a fit companion to his "Springs of Helicon" issued last year; if anything, we move here even more securely on that ground where literature and life come together than we did in the essays on Chaucer and Spenser and Milton. If we were criticising the book in detail we might indeed point to certain deficiencies, and especially to a false note that has its origin in Professor Mackail's too great fondness for the luscious style of Morris and Swinburne and in his constant use of these poets for comparison with the ancients. But there is life in these pages. The poets of Greece still speak here the tongue of living men; not only do their words carry the everlasting consolation which we are willing to accord to the memory of something beautiful and lost, but their criticism of life cuts into actual problems of the day and all days.

In some ways the most significant of the lectures is that which deals with the vexations of the Homeric Question —deals with them somewhat in the manner of Dante's Virgil with certain noxious souls: "Speak not of them, but look and pass." The very gist of the matter is in this rather cavalier treatment of a theme that for a century and more has muddied the waters of classical scholarship and has been the occasion of a library of indescribable books and *dissertatiunculæ*. The trouble began back in the early days of Hellenic criticism, when the school of "Separaters" tried to prove that the Iliad and the Odyssey were composed by two different poets. Suspicions of the authorship of the poems crop out two or three times at the Renaissance and after; but the real debate, "die homerische Frage," *Die Frage*, was started in 1795, when Friedrich August Wolf published his "Prolegomena," and attempted to prove that there was properly speaking no Homer at all, nor any two Homers, but only a number of rhapsodes whose unwritten recitations got finally run together somehow into the Iliad and the Odyssey. The effect was startling. It disturbed the Olympian repose of Goethe; it created what the manuals love to call the *neuere Altertumswissenschaft*, the new science of antiquity; it was the source of innumerable theories and counter-theories. This man reduced the Iliad to a disjointed conglomeration of ballads; another plucked out for you the heart of the poem, the *Ur-Ilias*, about which successive centuries had attached layers of easily distinguished accretions; another rewrote the poem in its original dialect and by the variation of forms could tell you nicely when and where the various members were composed. They worried the poems into rags, and themselves into rage. Their treatises remain on the shelves of every well equipped classical library as one of the stupendous monuments of pedantry.

In general, the German universities were the centres of the storm. But it spread. For some time England, owing as much to her backwardness in erudition as to her common sense, ignored the Question, but later it swept both Oxford and Cambridge. A genial man of letters, like Andrew Lang, might continue to scoff at the theorizers, but the university men who had a scholastic reputation to maintain, soon grew ashamed of such old-fashioned ignor-

ance. French scholars followed suit, and so generally admirable a work as the Croisets' "Littérature grecque" devotes the best part of a volume to disjointing the Iliad and Odyssey and takes up the significance and value of poems which are the fountain-head of European literature, as quite a secondary matter. Then came America. Only the other year a school history of Greek literature gave most of what little space it had for Homer to an account of the Question, and to-day a translator of the Iliad has prefaced his hexameters with his own theory of authorship.

But a change has come at last, and a scholar like Professor Mackail can now assume without apology or fierce argument that the Iliad was in the main written by one real poet (written, for the old notion that writing was then unknown has been quite discredited), and that the Odyssey was probably from the same hand. It would be an exaggeration to say that this simple acceptance of tradition has ended the horrid dispute, for many scholars, especially in Germany, still cling to their respective creeds of impersonal composition; but the trend is undoubtedly away from the whole complicated fabric of theory. The pilgrim of letters will soon be able to pass by the Question unafraid.

In part this return to common sense is due to more precise knowledge; in part it is connected with a larger movement. The Homeric Question was in reality only an aspect of German romanticism; it sprang up with the distinction between naïve and artificial poetry, and with the whole sentimental glorification of *Volksdichtung*, which in turn was merely one outcome of the Rousseilian cry, Back to the primitive, back to nature. If the Homeric poems were great, it must be just because they were authorless, the unconscious creation of the people. For a century criticism in Europe, with some notable exceptions, has been repeating in various disguises the dicta of Herder and the Schlegel brothers, and the revolt from the Homeric Question may lead to a sounder view of literature in general. It is a pleasant irony that the exaltation of primitive balladry should have resulted in so huge and so artificial a body of scholasticism.

And there is another and more immediately practical side to this movement. It is an undoubted fact that the Homeric Question has been one of the contributing causes to the decline of Greek. Its effect was two-edged. On the one hand, in itself and as part of the Teutonic system, it has tended to exclude from the professional study of the classics such men as had a clear vision of the relation of literature to life, and, on the other hand, it has helped to desiccate the teaching of those who have remained. It is almost an impossibility that a student who reads and digests the mass of books on this and similar questions should be able with the fag end of his strength to put any vigor into his teaching of Greek as a human document. It is in this sense that we judge Professor Mackail's chapter interesting in itself and significant of better things to come.

NEW YORK'S NEED OF AN ART GALLERY.

In varying year by year the display in its crowded galleries, the National Academy of Fine Arts merely rings the changes upon a distressful situation. The galleries of the Fine Arts building were never big enough to house a representative annual show. The Pennsylvania Academy exhibits regularly from seven to eight hundred numbers under favorable conditions. The National Academy can show, under the worst conditions of space, only about three hundred, and fails to hang at all a matter of a hundred pictures accepted on their merits. In the course of twenty years high buildings have cut off the sunlight from the Fine Arts building, so that a tolerable gallery light exists only for a few hours each day. This year, in order to give sculpture its due of a single gallery, the walls are so crowded with pictures that a visit is a penance to any sensitively organized taste. What can be done to liberalize the membership and policy of the Academy has been done, but from the sheer unattractiveness of its shows a venerable and useful public body must either shut up shop or linger on in artistic insignificance.

Of this emergency two views are held. Your æsthete is likely to say, What of it? Academies were never very good, and will hardly be missed. Your average public-spirited man is likely to dwell warmly upon the shame of not supporting an ancient institution devoted to the art of the land. As is so frequently the case, both the æsthete and the public-spirited man are right, each merely taking partial views of a somewhat complicated subject. It is perfectly true that no sensitive lover of art would care either to support handsomely or attend frequently any big annual art exhibition, be it National or Royal Academy, Salon or Société. These omnibus shows, æsthetically considered, are at best necessary evils. One who loves painting or sculpture will naturally go for his delight to a place where he can see a few things of choice quality under good conditions. More sensations of art may be had in an hour at a museum or at any good Fifth Avenue dealer's than may be gathered from the academies of a score of years. Admitting this frankly, there remains every reason why the National Academy should continue to exhibit and why it should have a proper building.

The large annual exhibitions, wherever held, are not primarily æsthetic or artistic functions; they are necessary civic institutions having to do with the fostering of certain fine handicrafts which we over-ambitiously designate as the fine arts. Let us recall that the terms of admission to the great exhibitions are not solely artistic, but technical and professional. To be accepted means not that, on a universal scale, the contributor has made a fine work of art, but that on the temporary scale of the day—the current art-school standard—he has attained a considerable proficiency in painting or sculpture. The public exhibition is, under the system that prevails, about the only chance a young man has of winning the formal approbation of his elder colleagues. Now, since it is very desirable for the adornment and dignifying of our life that all the fine handicrafts should be practised, the fixed exhibition renders an evident public service, and rightly claims public support. But that support should be asked and given in the light of what can actually be done, and without raising false æsthetic hopes about what exhibitions never have done and never can do.

To the trained artist, the large exhibition is valuable because it affords him the only comprehensive opportunity he gets for measuring himself against his strongest contemporaries. In an age too busy to seek the artist, the exhibition grants at least the possibility of public notice and private patronage. It gives

to the middlemen, the official and unofficial art critics, the privilege of celebrating new talent and marking the progress of established talent. If properly managed, the more ambitious exhibitions serve a useful purpose as a market and keep alive public interest in the arts. No fine or profound knowledge of art can in the nature of the case be gathered from annual exhibitions. Their scope is too narrow. They may, however, create that diffused enthusiasm without which the economic basis of art is lacking. If ever the time comes when people care enough for art to frequent the studios, big shows will become superfluous, but there is no indication that such a day is dawning. Meanwhile, we should face the facts as they are, without illusions and with clear-sighted public spirit.

A calm estimate of values ought to shake hesitating patrons of the National Academy out of their misgivings. There is no question that, on a money basis merely, or considering more broadly the production and patronage of art, the great exhibitions of London, Paris, Munich, Venice, Philadelphia, do a valuable service to their respective cities. If their wealthy men were met with a proposal to withdraw support from such exhibitions, the suggestion would be scouted with wrath. Yet New York incomprehensibly withholds such aid from an exhibiting body equally deserving. The public worth of an annual exhibition clearly depends on its comprehensive and representative character. A small show pleases neither the æsthete nor the public-spirited man. As things stand to-day, our most important branch of painting—mural decoration—is seldom shown in New York. The presence of the better decorative pieces of each year in the Academy would immediately add character and distinction to the display. The National Academy needs, and needs now, a building with abundant space and good light. It is amazing and not a little shameful that in this age of profuse benefactions no donor should yet have seized upon so evident an opportunity for public usefulness.

NEWS FOR BIBLIOPHILES.

Merle Johnson's "Bibliography of the Works of Mark Twain," just published by the Harpers, is an admirable piece of work. In it collectors for the first time have in an accessible form exact particulars of the first editions of many of Mark Twain's books.

Even when Mark Twain was writing for the Virginia City *Enterprise* and for the San Francisco *Alta-Californian* his material was freely copied by other newspapers. After his return from the "Quaker City" excursion and the publication of "Innocents Abroad," the English and Canadian pirates reprinted everything of his they could lay their hands upon. Long before the present international copyright law was in force, by taking advantage of the fact that the English laws granted protection to foreign authors, providing that publication was first made in that country, he was able to protect himself and his publishers there. In consequence the English editions of many of his books are actual firsts. Mr. Johnson, in many cases, has been able to ascertain the exact dates of entry and filing of copies at Washington and of publication in London. "The Adventures of Tom Sawyer" was published in London on June 9, 1876, whereas copies of the American edition were not filed in Washington until January 2 1877. Both titles are dated 1876. A comparison of the two editions shows that the American was actually the earlier text, which was edited more or less before it was printed in England. For example, in the fence-whitewashing episode (one of the best-known scenes in any of Mark Twain's books) all mention of Tom's sore toe is omitted in the English edition. In the case of "The Adventures of Huckleberry Finn" the London edition, published December 10, 1884, is dated 1884 on the title-page, whereas the American edition, published only three days later, is dated 1885.

For a long time most of Mark Twain's books were published by the American Publishing Company of Hartford, Conn., in the characteristic "subscription book" form of the seventies and eighties of the last century. And while the total number printed of many of the books ran far into the thousands, the first printings seem to have been small in number, and to identify these first issues has been Mr. Johnson's task. The special features of the actual first issues of some of these books were described in this column on September 22 last.

The Bibliography is divided into four sections: (1.) Books or pamphlets entirely by Mark Twain, and containing an important contribution by him; (2.) books containing speeches by him; (3.) books containing letters; (4.) books containing anecdotes attributed to Mark Twain. The first section includes nearly all of the items of importance. Few of Mark Twain's speeches achieved contemporary printing outside of newspaper columns, though about a hundred of them have been collected in a volume since his death.

Following the Bibliography are a series of interesting Notes and an Index which records the appearance in periodical and book of every one of Mark Twain's pieces, which can now be identified, whether collected or uncollected. An examination of this Index shows that there is still considerable material not included in any of the uniform editions.

The following titles ought to be added to Mr. Johnson's Bibliography. Both were discovered too late for insertion in the book:

Tom Hood's | Comic Annual | for | 1874. | With Twenty-three Pages of Illustrations | By the Brothers Dalziel. | London: | Published at the Fun Office, | 80 Fleet Street, E. C. | 8vo.

This pamphlet contains, on pp. 78, 79, "A Yankee Story" signed "G. R. Wadleigh," but actually by Mark Twain. In No. xvii of "Chapters from my Autobiography," published in the *North American Review* for May 3, 1907, Mark Twain tells over again the story of "Jim Wolf and the Cats," and states that it was an actual adventure of his boyhood days. In 1867, when, as he says, he had "failed in all my other undertakings and stumbled into literature without intending it," he wrote out the story for the New York *Sunday Mercury* and received $25 for it. In 1873, when he was lecturing in London, an impecunious American came to him for assistance, and, besides giving him money, Mark Twain introduced him to Tom Hood. The young man, who turned out to be a swindler, wrote out this anecdote of Jim Wolf, signed his own name to it, and sold it to Hood for three guineas.

What American Authors Think | About International Copyright. | New York | American Copyright League | 1888. 8vo.

A contribution by Mark Twain fills the left-hand column of page 10.

A considerable portion of Mark Twain's library will be sold at auction by the Anderson Auction Company in January. Besides books from his library a number of autograph manuscripts are included, among them the following: "Eve's Diary," 34 pages; "Extracts from Adam's Diary," 34 pages; "My Boyhood Dreams," 18 pages; "The Death Disk," 37 pages; "Italian Grammar," 41 pages; "Meisterschaft, in 3 Acts," 70 pages; "My Debut as a Literary Person," 64 pages; "Concerning the Jews," 37 pages; "A Horse's Tale," 147 pages; "How the Chimney Sweep got the Ear of the Emperor," 26 pages.

In our previous note on Mark Twain's books we referred to the statement prefixed to the "Extracts from Adam's Diary" (New York, 1904), that a friend of his had "printed a few copies in an incomplete form." The autograph manuscript, which we have now seen, has this note at the top: "Published (don't remember when), S. L. C."

Correspondence

A SOURCE OF "THE RAVEN."

To the Editor of The Nation:

Sir: The most important source of Poe's "Raven," Dickens's "Barnaby Rudge," has hitherto been dismissed by biographers and critics, including Ingram, Lauvrière, Woodberry, and H. E. Legler, with scant notice. Such an unconscious conspiracy of silence is not justifiable, however, in view of the noteworthy parallels between the two productions. As Mr. Woodberry declares, the proper starting point is Poe's review of "Barnaby Rudge," published in *Graham's Magazine*, February, 1842, in which he made the following suggestion:

> The raven, intensely amusing as it is, might have been made, more than we now see it, a portion of the conception of the fantastic Barnaby. Its croakings might have been *prophetically* [the italics are Poe's] heard in the course of the drama.

Significant words these, when we remember that Poe published "The Raven" in January, 1845, and may have written it consid-

erably earlier. He adopts, for example, his own suggestion in the very climax of the poem:

"Prophet!" said I, "thing of evil!—prophet still, if bird or devil!"

Poe's essay, "The Philosophy of Composition" (1846), purports to explain fully the genesis and composition of "The Raven"; but in reality, most critics now agree, it does nothing of the sort. It seems to have been in part a deliberate hoax, written in the spirit of Defoe and Swift. In this famous essay he does not mention "Barnaby Rudge," his only words on the subject of the bird being these:

Very naturally, a parrot, in the first instance, suggested itself, but was superseded forthwith by a raven, as equally capable of speech, and infinitely more in keeping with the intended *tone* [the italics are again Poe's].

This, by reason of the fact that the raven is "the bird of ill-omen." Such failure to acknowledge a debt to Dickens is not proof positive of the absence of the debt. Poe, unfortunately, was sometimes disingenuous in statement, especially when his vanity was concerned. Mr. Woodberry has emphasized this point with quite sufficient severity. I am aware, indeed, that there seems to be another objection to belief in any close likeness between the two ravens: in the passage from the review of the novel, quoted above, Poe refers to the "intensely amusing" character of the raven in "Barnaby Rudge." But any one who will take the trouble to examine those portions of the book in which Grip appears will perceive that Poe's phrase is not applicable to all of them; there are several important scenes in which the bird moves in a sombre atmosphere.

Moreover, the raven is inevitably connected—and Poe, as is proved by his review, wished him to be still more closely connected—with his master, Barnaby, who, on account of his infirmity of mind, lives in a half-supernatural world which Dickens has very powerfully described. Poe himself, in the review mentioned, quotes a passage in point. Now, if there is anything for which this American is famous, both in his stories and his poems, it is atmosphere. It is not to be expected, therefore, that so striking an atmosphere as that which surrounds the mad boy and his pet would pass out of the poet's memory in less than three years. It is questionable whether so salient a detail as the refrain, "Nevermore," was not suggested by the following, from a gloomy scene in the prison between Barnaby and his mother:

"You hope! Ay, but your hoping will not undo these chains. *I* hope, but they don't mind that. Grip hopes, but who cares for Grip?"

The raven gave a short, dull, melancholy croak. It said "Nobody," as plainly as a croak could speak.

"Who cares for Grip, excepting you and me?" said Barnaby, smoothing the bird's rumpled feathers with his hand. "He never speaks in this place; he never says a word in jail; he sits and mopes all day in this dark corner, dozing sometimes, and sometimes looking at the light that creeps in through the bars, and shines in his bright eye as if a spark from those great fires had fallen into the room and was burning yet. But who cares for Grip?"

The raven croaked again—"Nobody."

"He never speaks in this place"—speaks no word but "Nobody"; and Poe's raven speaks no word but "Nevermore." Moreover, the "fiery eyes" which "burned into the bosom's core" of the lonely watcher in the chamber are seemingly reminiscent of the peculiar brightness of Grip's eyes. Is there not some significance, also, as regards the expectant atmosphere of the poem, in the admonition of Barnaby's mother?—"You must not go out to-night. There are ghosts and dreams abroad" (p. 352). Truly, the ghost, as the villagers think it, of the murderer, Barnaby's father, continually makes itself felt in the novel. Ghosts and dreams! Such is "The Raven"; such stuff as dreams are made of. And the ghost of the lost Lenore hovers constantly in the background.

None of the foregoing parallels, I hasten to say, shows anything that may be called plagiarism—although Poe himself, that literary detective, might have called it such in Longfellow or other poets. Dickens made no charges against his American admirer; and even "Outis," who bitterly attacked Poe for his charges of plagiarism against Longfellow, did not mention "Barnaby Rudge." Certainly "The Raven" possesses sufficient original features, such as the somewhat melodramatic perch of the bird upon a bust of Pallas, the skilful if artificial progress of the poem to a strangely effective climax, and especially the reverie of a lover over the death of a beautiful woman—a topic which Poe, in "The Philosophy of Composition," declares to be "unquestionably the most poetical in the world." But, finally, is it purely accidental that the opening words of "The Philosophy of Composition" should have been these?—

Charles Dickens, in a note now lying before me, alluding to an examination I once made of the mechanism of "Barnaby Rudge," says, etc.

In no better way could Poe have unconsciously acknowledged a debt which extends to much greater detail than has commonly been supposed.

HARRY T. BAKER.

THE QUEST OF THE ULTIMATE.

To the Editor of The Nation:

Sir: I have read with interest your article of November 17 on "The Quest of the Ultimate." You certainly make out an attractive contrast between the seeming uncertainty of the realm of religion and the eternal realm of art and beauty; and you make certain writers upon religion seem very boastful and ridiculous in their expression of a faith that mankind can ever enjoy such rest and satisfaction in religion as the lovers of beauty have felt in the great works of art. May I raise the question whether it is necessary, or true, to make this contrast, and to part company between the lovers of beauty and the lovers of religion? Is it not possible that you fail to understand the point which the writers to whom you refer are seeking to make? It may appear that they are nearer to the main drift of your article than you imagine.

I can best express what I mean, first, by quoting the remark of a very learned student of religion (one of your own valued contributors), who said in a conversation, "There has been a vast deal of superstition in the world, but so far there has been very little real religion." It might be added—what every one must agree—that there has been a vast deal of discussion about religion, though real religion has always been somewhat rare. Must we not now say very much the same with regard to art? We have loads of crude art in every town; we have art schools and endless books on art. But the great masterpieces, giving joy and peace, are very rare; and yet they are so real that the artistic sense of the world is continually being renewed by the inspiration of these few great pictures, statues, temples, or poems.

Would you call it very presumptuous, then, if a lover of the beautiful masterpieces, writing to express his sincere feeling about them, ventured his faith, or hope, that the world will come to find more and more permanent satisfaction upon the lines of artistic excellence, already laid by the great artists and poets; that the beautiful things are the simplest; that it is useless to strive and strain after effect and sensation; that to possess a single object of beauty, yes, if only a flower, and to love and enjoy it, is better than to fill a palace with bric-à-brac; that to hold in memory a few stanzas of the masters of verse is happier than to learn the columns of an encyclopædia? I can imagine a lover of art saying something like this, with the intent to call people's attention from the distracting sight of the commonplace, everywhere set up in the market, to those very things which, you well say, rest and satisfy men's souls as often as they are seen.

Now I suggest, I hope without dogmatism, that the lover of religion may try to say the very thing about the great, simple, and everlasting values of religion, at its best, which you have said about art. Is it absurd or boastful to urge that the coming man is likely to be free, to an ever-increasing degree, of the haze of superstitions that have overclouded the sight of true religion; that he will learn to care more for the painting itself than for any particular style of framing about it; that he will set his heart on the beautiful teachings which rise like mountain peaks out of the Scriptures of the world, rather than on the monotonous levels in which these great teachings find their base; that even children and the unlearned may catch the meaning of certain splendid psalms and hymns which have always rested the souls of good men and women; that it will be held true to the end of time, as Paul wrote, that "the fruits of the spirit" are love, joy, peace, courage, patience, and the rest; and that the image or ideal of the good life (let them call it the "Christ-life," if they please), set up in the shrine of the simplest man's heart, is more precious than big books of dogmatic discussions about religion?

Now that I have risen to speak, may I be allowed to add a few words which seem to me to have importance, as bearing upon the permanent policy of the *Nation*? I may be justified in my interest in the paper, for I became one of its readers, I think, in 1868. I have highly valued its utterances and have rejoiced often in its vigorous preaching of righteousness. On the other hand, I am one of a large number of its readers who have wished that it might more often have added generosity and humanity to its keen sense of justice and truth. It has seemed to us to suffer from the prevailing peril of the people of a small sect. Their danger lies in severity, and in failure of

sympathy toward those who differ in the least from themselves. They behave as if truth were a narrow line, and they alone were following it. Have you no use for a host of men whose faces may be honestly turned toward the light, but whose view of various subjects is somewhat different from yours? Of course, you answer, yes, but you often give the contrary impression.

For example, I have to assume that the *Nation* represents a philosophy of optimism, or at least of meliorism, which is surely a form of optimism. Otherwise, what use would there be in publishing a journal of ethical and political reform, if its promoters did not believe that truth and righteousness are the victorious forces in the world? If the *Nation* does not stand, upon the whole, for faith in human progress, we have misread all the best things that it has ever published. Why, then, should you seem to show a sort of displeasure, such as would befit your treatment of "the wicked" (if there were ever any persuasiveness in such treatment) when you deal with the views of other optimists, and especially more hearty or confident optimists, outside of your own editorial rooms?

I should think that you would be pleased to encourage all the actual friends of your great cause, even though they may not speak with the precise phraseology of your editorial room. I should think that you would like to try to understand them rather than to misunderstand them. Indeed, I should think it might occur to your own brilliant writers that there may be other tenable forms of faith in human progress, besides that cautious and somewhat chilling type which you sometimes affect. Or, do you imagine that the men of faith in religion and in the possibilities of civilization, who dwell outside your own circle, have no eyes to see the great obvious facts of life and death, that they do not measure the inexorable law of cost that rules the world, and that their faith and hope are only a blind necessity of their temperament, and not the result of serious and thoughtful convictions?

CHARLES F. DOLE.

Jamaica Plain, Mass., December 5, 1910.

RAILWAY RATES AND CREDIT.

TO THE EDITOR OF THE NATION:

SIR: A sentence in the interesting letter of Mr. W. D. Hinds (the *Nation*, December 15) struck me with great force. It reads: "Bearing in mind that the improvement of railroad credit is a matter of vital interest to the public, it would seem contrary to the public's own interest for the government to prevent increases in rates and thereby obstruct the protection of railroad credit, merely because the railroads have not yet realized an ideal standard of efficiency far behind that realized by well-managed industries in general." Indeed, why should the government be more reluctant to bestow large favors upon the railways than it is to bestow them upon other great business corporations? Is it not a cardinal principle of our unwritten Constitution that large interests, regardless of their mismanagement, should be fostered by subsidies, protection, and privilege? And the railways are not even asking for subsidy or tariff, but are only requesting the privilege of making the public bear the expense of mistakes in management. Surely, if the government is willing to put a premium on poor business methods practised by many other favored industries, it ought at least to allow the railways to recoup themselves without going to the trouble of making, with a view to economy, a detailed analysis of their business and a reform from top to bottom.

The people of the country have just given their opinion on the subject of sacrificing the public for the profit of greedy corporations. Industries, pleading their infancy—*i. e.*, their inefficiency—as justification for their alleged inability to compete with foreign rivals, persuade Congress to allow them to dig deeper into the pockets of the consumer for their maintenance. But the people have begun to show that they perceive the meaning of these unceasing supplications for public bounty. It is not altogether impossible that when all is done it may be found that an increase of rates would be permissible; but public interest and public sentiment demand that if the railways or any other business enterprise sin against business laws they should repent of their sins before asking for additional assistance. Is not the promotion of efficient business methods itself a matter of "vital interest to the public"? and would it not certainly "seem contrary to the public's own interest for the government" to promote increases in rates and thereby obstruct the progress of economy and efficiency in business life?

D. R. ANDERSON.

Richmond, Va., December 17.

THE TARIFF BOARD'S REPORT.

TO THE EDITOR OF THE NATION:

SIR: The Americans are unquestionably an impatient people. They want work done well, and yet done quickly. The keynote of Professor Emery's recent speech at Chicago was a statement of the fact that we cannot remake our tariff quickly and make it well. He states that it is inevitably a laborious task and that time is essential. The many schedules of the Payne-Aldrich bill were encompassed in five months. This haste and the best methods we had at hand resulted in a bill which deluded the people, which was unsatisfactory to the country, and broke the Republican party. The tariff board was created to put things straight, by a system which after careful investigation should appear to be reliable and efficacious. The chairman of that board now states emphatically that such a system is possible, but to make it operative without arduous labor and sufficient time is impossible.

There are many business men in this country who have been and are still in favor of a tariff commission, but it is an anomaly that many of these have been under the impression that an immediate revision of certain schedules is quite practicable. Professor Emery, however, has made it very clear that this cannot be expected.

He has also proved conclusively that a tariff commission cannot be of real value until it is a permanent institution. He has with great frankness discussed the pitfalls and dangers, but he just as frankly states that the ultimate result can be only for the general good.

The value of the tariff board cannot then be determined until sufficient time is given to demonstrate it. The five months' actual work is proof positive that no just tariff rates can be made in that time. This therefore upsets the statement that the existing bill is as good as it should be. It also makes it clear that it is not yet time for revision, and establishes the fact that revision can and should be accomplished—"one schedule at a time."

Another most important "finding" is the great value to commercial interests which a well-compiled glossary of the facts would have, aside from the making and recommendations of rates of duty. This has long been needed in this country, and should prove of inestimable importance.

The final conclusion is one that stands out boldly. This country needs a tariff commission, needs it permanently, and needs the kind of a tariff commission which Professor Emery has so ably advocated.

Never mind which political party accomplishes it, let it be accomplished.

HENRY T. WILLS,
National Tariff Commission Association.

WAS SAMUEL DANIEL AN ITALIAN?

TO THE EDITOR OF THE NATION:

SIR: In an unpublished record of expenditures (Public Records Office, Exchequer Accounts, Bd. 433, No. 8) made by Sir David Murray, Keeper of the Privy Purse to Prince Henry, son of James I of England, there occurs the following item: "June 14, 1609. To Daniell the Italian . . . 1 li. 10s." Since the record contains numerous similar payments to poor scholars, artists of all kinds and degrees, and in one case to "an Italian jugler," this item might be passed over as insignificant, were there not evidence of considerable weight to connect it with the poet Daniel.

In the same account book, under the date January 3, 1608 (09), there is a payment "To Mr. Daniell be comand . . . 7 li." This undoubtedly refers either to the poet or possibly to his brother, John Daniel, the musician, who was later master of the Queen's choir boys of Bristol; and it may be conjectured that the payment in June was to the same person. The fact that Daniel's brother and perhaps his father were musicians is in itself significant, since in the time of James I most of the masters of that art—Ferrabosco, Bassano, Lupo, and others—were Italians. The name Daniel, or, as it was usually spelled, Danielli, should cause no difficulty, for it was borne by the Italian mentioned in the payment, and it differs but slightly from the Italian forms Daniele, Danielli, or Daniello.

The poet's close friendship with the Italian John Florio should also be considered. Two of his sonnets written for Florio's works are addressed "To my dear friend . . . ," and a third to "To my deare friend and brother. . . ." Daniel possibly owed his pension and his position in the Queen's court to the influence of the Italian language-master; in the "Accounts of the Queen's Household, 1615-16," his name follows immediately after that of Florio. The latter, it will be recalled, was the son of a Florentine Protestant who came to England shortly before the reign of Edward VI; one is tempted to explain the friendship of the

two writers on grounds of family intimacy and kindred race.

That Daniel travelled in Italy in his youth is shown by the headings of two sonnets in the Delia sequence, "At the Author's going into Italie" (sonnet lii), and "This Sonnet was made at the Author's beeing in Italie" (sonnet liii). In Wright's "Elizabeth and Her Times" (II, 315), we hear of a Samuel Daniel abroad and in the company of an Italian doctor, Julio Marino. "A Description of Beauty translated out of Marino" (Daniel's Works, ed. Grosart, I, 263) can hardly be connected with the doctor, since the poet's given name was Giambattista, but it may serve to illustrate Daniel's knowledge of the Italian language and his interest in Italian literature. His first published work, entitled "Imprese," was a translation of a Latin tract on crests and seals by the contemporary Italian historian Paulus Jovius. His friendship with the poet Guarini is indicated by the following sonnet addressed to Sir Edward Dimmock, Daniel's first patron, on an English translation of Guarini's "Il Pastor Fido":

I do rejoyce learned and worthy Knight,
That by the hand of thy kinde Country-man
(This painfull and industrious Gentleman)
Thy deare esteem'd Guarini comes to light:
Who in thy love I know tooke great delight
As thou in his, who now in England can
Speake as good English as Italian,
And here enjoyes the grace of his owne right.
Though I remember he hath oft imbas'd
Unto us both the vertues of the North,
Saying our costes were with no measures grac'd,
Nor barbarous tongues could any verse bring forth.
I would he sawe his owne, or knew our store,
Whose spirits can yeeld as much, and if not more.

Lines 9-12 of the sonnet refer clearly to conversations with Guarini, and apparently to a personal friendship. Furthermore, it seems highly improbable that the pronoun *thy* in the second line would have been used by a poet who had every reason to consider the English translator quite as much his own countryman as Dimmock's.

Here, it is true, the point is weakened by the occurrence of *our* in lines 11 and 13, though the possessive in these cases indicates residence rather than citizenship. In general the value of the evidence that Daniel, though an Englishman by allegiance and perhaps by birth, was an Italian by parentage, must depend chiefly on its cumulative effect. We have a payment to an Italian named Daniel from the same source and not long after a payment to the poet. We know that the latter was of a family of musicians in an age when most professional musicians were Italians. We know that he travelled in Italy, translated from Italian writers, spoke the language, was on intimate terms with an Italian poet, and that one of his best friends was of the same stock. In the absence of exact information regarding his birth and parentage, these seem sufficient reasons for assuming that the stylistic purity of "well-languaged" Daniel is that of a writer for whom English was not strictly the mother tongue. ALLAN F. WESTCOTT.

Columbia University, December 16.

WOOL AND SHEEP.

TO THE EDITOR OF THE NATION:

SIR: Your Pittsburgh correspondent (the *Nation*, December 8) is excited over wool. How great the cry! How little the wool! Cannot the American farmer learn to raise sheep and not be a mere wool-grower? With sheep prices where they have been for years, why mention wool at all?

Now I was once a breeder of sheep, and Merinos, too; and I made many a Merino breeder angry because I then said the tariff was robbery. It enabled the few of us to get a greater price for sheep and wool, but for one of us there were hundreds whom we were plundering in the price of clothes. I then sold my Merinos and went to breeding sheep. And I bred them all through the nineties when the fool-killer was at home attending to his own business. I did not call upon the fool-killer, but gave my sheep good care, and made excellent profits from them every year. If wool brought ten cents a pound, it was clear gain, for good sheep, with proper care, will pay if they do not produce a pound of wool.

Sheep-breeders who call for high tariff remind me of those who bred cattle for their hides. Years ago I used to know many who sold their cattle-hides in the spring. That was their harvest, but they wanted a tariff on hides, as their cattle paid nothing. Those farmers who to-day are raising sheep for wool are to be pitied in the same manner as we should pity the farmers who raise cattle for their hides, and hogs for their hair.

J. A. BARTHOLOMEW.

Literature

CHANCELLORSVILLE.

The Campaign of Chancellorsville: A Strategic and Tactical Study. By John Bigelow, jr. New Haven: Yale University Press. $10 net.

This work by an experienced soldier, who later became known as the teacher of military science in the Massachusetts Institute of Technology, and as the author of works on campaigns in Europe and America, is a notable contribution to strategic literature. We think that no campaign of our civil war has been more accurately, elaborately, or ably described than is Chancellorsville in these pages, and soldiers in every land will thank the author for a technical study so satisfactory. No important detail of the eventful story from Hooker's assuming command at the end of January, 1863, to the retirement of the Army of the Potomac across the Rappahannock at the beginning of May, is omitted. The author does not restrict himself severely to the military record. Lincoln's unpleasant quarter of an hour with "Mother," after submitting himself to be kissed by the ladies at Hooker's headquarters, led on by the Princess Salm-Salm—that, with the joke through which Lincoln got out of the breakers, has a place in the narrative as well as the impact of the cannon ball which stretched Hooker senseless on the porch of the Chancellor house. Such occasional particulars, though irrelevant to the purpose of the book, serve at any rate to enliven.

We confess to some surprise at the author's selection of Chancellorsville as the campaign of the civil war most fruitful in lessons. He says that he chose it "because it presented a greater variety of military problems and experiences than any other in which an army of the United States had taken part. In no other was there so rapid a succession of critical operations. Moreover, no other one approaching it in importance has been so imperfectly apprehended and described." This assertion will not pass unchallenged. The reasons given for selecting Chancellorsville apply much better, we believe, to Gettysburg. The Gettysburg story bristles with problems over which the authorities continue to dispute. To mention a few: Lee, instead of invading Pennsylvania, might better, perhaps, have used his interior lines and reinforced Bragg in east Tennessee; then, assuming command himself, he could have thrown his mass, by forced marches, upon Cincinnati. Such operations in May and June might have caused Grant to let go his grip on Vicksburg; indeed, a concentration like this of Southern power against the greatly depressed North might have made it possible to penetrate far into Ohio, and to the east from the west. Whether or not Lee erred here is a point not settled, the study of which is full of instruction to the soldier. Did the Confederate right delay its attack unduly on July 2 and on July 3 was Pickett's charge a reckless enterprise? Or had Lee good warrant for his rush at the Federal centre? On the side of the North, should Sickles be condemned for occupying, on July 2, the Emmitsburg road, or is the contrary view to be accepted—held, we believe, by Sheridan and Gen. H. J. Hunt—that the position assigned the Third Corps at first was untenable, and that it was only prudent to occupy the higher ground in advance? Again, as to the ending of the battle, should there have been a counter-stroke at once upon the repulsed Confederates, as Lincoln thought and as perhaps the world in general has come to feel, or was Meade wise in not risking further battle?

We submit that in comparison with such problems as these the campaign of Chancellorsville offers little indeed. There is almost no difference of opinion as regards any important movement. Hooker taking command of a dispirited army restored promptly its morale and discipline. He struck at an opportune moment when Longstreet had been detached to southeastern Virginia with two divisions. He had two men to Lee's one, and more. His cavalry served him not in the best manner; but keeping Lee in doubt as to his plans by good manœuvres, he succeeded in crossing the Rappahannock and placing his army in

excellent position on Lee's left flank. So far his work was admirable. Now, however, he forsook his fine initiative, and, while his lieutenants stood amazed and protesting, retired to a position much inferior where he awaited attack. Lee was not slow to seize the offensive which Hooker had abandoned. Leaving a strong detachment to guard Fredericksburg, Lee pressed close upon the retiring Federals. He weighed correctly Hooker's incapacity, and with extraordinary audacity dispatched still another detachment, this time of half the force that remained to him, under Stonewall Jackson, to march across the front of the Federal army and turn the right. The movement was no secret; the march was plain to the Federals, but utterly misinterpreted. Hooker, with his vast preponderance, watched the advancing column, making only futile efforts to harass its progress, and awaking to his danger only at sunset, when the crushing blow fell upon the Eleventh Corps. His right was destroyed, but he still stood, more than two to one, compactly arrayed, close at hand to Lee's army, now divided into three well-separated fragments. But Hooker's efforts were more futile than ever. Two splendid corps, under Reynolds and Meade, probably his best subordinates, were scarcely employed at all: the corps that fought were misdirected. Sedgwick, advancing from the east, stormed Marye's Heights, and tried hard at Salem Church to fall on the Confederate rear. While his tactics may have been sometimes faulty, his promptness and resolution were in general admirable. But Hooker, out of his huddled thousands, sent him no help, though Lee from his handful strengthened the opposing line abundantly. A contusion quite disabled Hooker for a time, and perhaps affected his powers until the close of the battle. But there was no transference of command. The Army of the Potomac virtually had no head. To a large extent his corps had not been engaged. It was flung back in deep humiliation across the river which it had so proudly passed, and occupied its old camps with a bitter sense of complete and quite unnecessary failure. Such are the main features of the story of Chancellorsville, a story, we believe, universally accepted. Scarcely one of the points mentioned is in controversy; nor does Major Bigelow in his narrative present any point in a different way. So far from abounding in problems and situations in controversy, the case as to all the main incidents is remarkably clear.

With Major Bigelow's treatment of his theme, after once selecting it, we have almost no fault to find. The presentation is always clear, the maps numerous and careful. To note a small thing, we think undue liberty is sometimes taken in spelling proper names. The author speaks of the difficulty here: he has to do with a large number of unimportant localities and humble individuals whose names in an unlettered country are often of most uncertain orthography. In the effort for correctness he sometimes goes too far. For instance, one of the most important points on the Chancellorsville terrain is "Tally's," a farm with a log cabin, where Stonewall Jackson first struck the Federal right. In the text this name always appears as "Taylor's"; so also in the maps, although here "Tally" is given in parenthesis after "Taylor's." Heretofore the locality has always had the name "Tally's." It was so known on the battle-day and has been since. In 1904, the present writer visited the spot, enjoying a talk with old "Tally," a patriarchal figure who had interesting things to say about the bearing of Stonewall Jackson. The farmer walked at Jackson's stirrup as his guide, while the last dispositions were made for the attack.

We have insisted that in dealing with Chancellorsville the student has very plain sailing. Among the few things that are debatable perhaps no one is more interesting than why Hooker behaved as he did. Our author cites here some graphic testimony. Two months later Doubleday, Hooker's close friend, said: "Hooker, what was the matter with you at Chancellorsville? Some say you were injured by a shell, some say you were drunk. How was it?" Hooker answered good-naturedly: "Doubleday, I was not hurt by a shell and I was not drunk. I lost confidence in Hooker, and that is all there is to it." Major Bigelow appears to adopt this explanation: Hooker failed through irresolution, which, of course, springs from a lack of confidence. Probably the explanation is correct; but there will always be a suspicion that Hooker's well-known drinking habit affected him here. Couch and others, who were in close contact with him, declare that he took no liquor, but there may be something in the allegation, mentioned by Bigelow but not endorsed, that abstinence from his customary draughts left him not at his best when his faculties should have been most alert.

We feel like saying a word on the ideas prevalent as regards the vast literature of the civil war. In the general mind it is becoming classed under three heads. There are, first, the official records, which are coming to be held as the Bible, so to speak, infallible, or at any rate possessing a trustworthiness approaching perfection. Then we have an Apocrypha, containing the less formal documents of the great leaders' autobiographies, memoirs, and such papers as have been gathered in the "Battles and Leaders of the Civil War," documents less valuable than the canon, to be followed with caution, and yet instructive. Lastly, we have the multifarious Profane Literature, the accounts of humble participants, and obscure observers and commentators, which, though often interesting, are of worth far inferior, and not to be taken as sources of truth without careful scrutiny. To men inclined to take this view, the exclamation of that good soldier, Gen. George H. Gordon, in one of his books, ought to be disturbing: "God help the history that is based on official records!" He was outraged at the report of his corps commander. In the records themselves one may find a statement of Graham, a brigadier of the Third Corps, denouncing as utter falsehood the report of one of his colonels as to the achievements of his "Zouaves" on a certain field. These out of many. The fact is that many things conspire to make an official report constrained and formal. There is the natural desire of every man to put the best face on things for himself as he sets his case before the government and the world: subordinates must be let off leniently; you must live with them, and it impairs comfort to have them sullen. To make a statement unpleasant to a superior might be construed as insubordination. The public welfare makes it imperative to tell a flattering tale. The temptation is constant to tell not quite the whole truth and nothing but the truth. There are important suppressions of fact in the official records, none more so, perhaps, than as regards Chancellorsville. Hooker's report was never published; our author says "he never made it." Still more: other reports were held back till Hooker should speak, among them so capital a piece of testimony as that of Carl Schurz; for what this admirably qualified witness saw and felt at Chancellorsville we must go, not to the official records, but to Carl Schurz's "Reminiscences." Indeed, it is the case that the roar of many a catastrophe becomes in the official records as mild as the piping of a sucking dove.

We should be sorry to be thought to minimize unduly the value of the official records. Unquestionably they form by far the most important body of evidence as to the period, but they require constantly to be checked and supplemented by other evidence. The memoirs of the leaders, written in after years, though they must be read with discrimination, are most informing. The compendium known as the "Battles and Leaders of the Civil War" is declared by Henderson, the best English critic of the struggle, to be "one of the most important military authorities ever published"; nor will the student enter fully into the crush and agony of the time who neglects such stories as that of Haskell, who, as an aide of Gibbon, was in the heart of things at Gettysburg, or the diary of the humble "war clerk" at Richmond, or that of Mrs. Chesnut, kept amid the wreck of a Southern home. It

is worth while to say thus much as to the weight properly due to the various classes of evidence relating to our civil war, because men here sometimes judge wrongly. We think that so great an historian as Rhodes falls to some extent into error, and we observe signs in this book that Major Bigelow is not entirely free. Speaking in his preface of his sources, our author has much to say of the high value of the official records, and very little as to testimony of any other kind. We are bound, however, to declare that in the citations in the text there is no neglect of testimony of any kind. The home-letters of the rank and file, newspaper waifs, the gossip of camps and cities, are utilized judiciously to throw light.

Altogether, Major Bigelow's book is masterly. We know of no more satisfactory scientific treatment of a military topic by any American writer. Shall we be thought trifling if we say that the book, while very handsome, is also very heavy? It weighs nearly five pounds and is nearly a foot square. Says Major Bigelow: "Whoever expects to follow a campaign reclining in an easy-chair, with a book in one hand and a cigar in the other, is doomed to disappointment." We should say so. Some of our young soldiers are said to need exercise, and it will perhaps be a good thing if, while perfecting themselves in their art, they can at the same time enjoy a strenuous gymnastic; but what of the discomfort of the old-timers during the many hours necessary to a proper perusal?

CURRENT FICTION.

Just Folks. By Clara E. Laughlin. New York: The Macmillan Co.

The heroine of this modern story of Chicago is a "tiny sprite of a fair-haired girl," a probation officer of the Juvenile Court. Called by the children "de p'leece lady," she resolves to level all barriers that might separate her from them, and we first meet her half-wistfully renouncing a residence in Hull House. The privileges of that "splendid institution" she meant to turn to her advantage and that of her boys and girls, but she elected to avoid the stigma of any appearance of "professional benevolence" by living in the most modest of rooms in the most modest of streets, and by turning her back on the luxury of even a settlement dwelling. The book naturally is a document of the most personal social service among "the other half," carried on under enlightened modern conditions. That any new theories are advanced is not to be said. But the book gives an account of the slums and the slum-dwellers, from the point of view of an equal, one might say, were it not rather as from that of an inferior, treating of her betters. The writer understands her Irish, her Russian, her Pole. She puts her characters through diverse paces of shiftlessness, misdemeanor, fidelity, heroism. Her heroine faces difficulties ranging from the recovery of pawned clothes to the tracing of traffickers in white slaves. She is full of tenderness and good sense, and only temporarily is tempted to defy the law in behalf of her stray lambs. The "awkward Samaritanism" of the rich is her reddest rag, and she does not always escape on her own part sentimentality for the poor. But hers is a clear ray shed upon dark questions, and her story a modest lesson in unaffected brotherhood.

The Vicar of the Marches. By Clinton Scollard. Boston: Sherman, French & Co.

For those who like to hasten with an autobiographical hero through a series of hearty adventures, tinged with hate and vengeance, and colored with love, Tiso di Camposanpiero will make a welcome companion; his struggles against the fell power of Ezzilino da Romano, "well christened by some," as Tiso himself says, "Ezzilino the Devil," are both valiant and plentiful. Indeed, Mr. Scollard has written a story thoroughly impregnated with the spirit of the rough times of the old Italian city-states, when Guelph and Ghibelline were at each other's throats, and feud and rapine were rife in the land. If the occasional clank of machinery makes a jarring note in the story, and if we find both hero and villain even more prodigious in their respective qualities than is usual in tales of the type, "The Vicar of the Marches" is, none the less, good reading enough, and the spirit of old romance is softened here and there by a poetic note, the echo of its author's familiar verse.

The Old Flute-Player. By Edward Marshall and Charles Dazey. New York: G. W. Dillingham Co.

A wealthy American woman suspects her companion, a well-bred young German girl, of stealing a diamond ring. She hastens with the accusation to the girl's father, an impecunious musician. He, instantly taking his daughter's guilt for granted, assumes the responsibility for the crime. The daughter arrives in the nick of time to prove her innocence —the ring has been given her by her employer's son, to whom she is engaged. The implacable mother will consent to the match only on condition that the shabby musician shall not attempt to see his daughter again. Everybody breathe hard! The musician, by documentary evidence, proves himself "Count Otto von Lichtenstahl." Down falls mamma at his feet and entreats his daughter's hand for her son.

To make the presence of humor more than doubly sure, the author has introduced several dialects, including an alliance of German, Cockney, and Italian. Perhaps the realest thing in the book is a burlesqued Ellis Island scene, in which the faithful M'riar, an amusing specimen of the familiar "slavey" type, figures with distinction.

The Purchase Price. By Emerson Hough. Indianapolis: The Bobbs-Merrill Company.

In "The Purchase Price" Mr. Hough has given a glimpse of the troubled days of the Missouri Compromise. Politics and history are freely discussed and treated with attention to detail. The dominating character is that of a beautiful Hungarian countess, an emissary of Kossuth, who puts her heart and fortune into the abolitionist cause. Her influence is so great that the authorities at Washington have her quietly kidnapped. Here the love story begins, and it proves to be an exciting one, though not before Josephine St. Auban has lost her fortune, and, like many pioneers of reform, has been badly treated by those she tried to help.

Aside from the romance, the book should be of interest to those who are not wholly familiar with that period of our history, in which conflicting Federal and State laws complicated the issue between the advocates and opponents of slavery. "As neither of the great parties of the day filled its ranks from either section," says Mr. Hough, "so in both sections, there were many who espoused, as many denied, the right of men to own slaves. We speak of slavery as the one great question of that day. It was not and never has been the greatest. The question of democracy —that was even then, and it is now, the greatest question." The book has received a dress worthy of the theme.

The Blue Arch. By Alice Duer Miller. New York: Charles Scribner's Sons.

"Most women are loved for something they give a man, for the relation, not for themselves. But you will be loved for what you are, for yourself, like some stupendous natural beauty. . . . Women who are loved like that are not easily forgotten." Such is the distinction of Nina Sinnott, who, besides, is an engaging blend of *ingenue* and *savante*. She graduates from college with an astronomical bent, and pursues her vocation in the face of family opposition and dismay. As a crotchety astronomer's secretary in a mountain observatory, and later as teacher in a college, she achieves gratifying successes; but being, by her innocence and involuntary seductiveness, quite unfitted to cope with the insidious dangers of an academic community, she is caught in the toils of a faculty scandal. Thereupon the crotchety astronomer turns human enough to extricate and marry

her. He had never made the mistake of forcing his love upon her. He had merely permitted her to carry him his luncheon, and to stay up nights recording his observations.

The atmosphere of the whole book is rather thin and cold and dry. One is oppressed by a sense of restricting conventions, and the danger of lapsing from a great height. It is difficult to believe that beings of real flesh and blood could keep alive, much less make love in it. Some of the subordinate characters, especially a likable flirtatious sister of Nina's, are graceful and distinct, but they have all to be sternly repressed in order to vindicate the attractiveness of a very special type of intellectual femininity.

Edward and I and Mrs. Honeybun. By Kate Horn. New York: Brentano's.

The pastoral adventures of Lord Edward Estcourt, second son of the Marquis of Adair and of his child-wife Gabrielle: how they endured poverty for a season at King's Chevral, a small property on the Suffolk Broads; how they were there subject to the heavy-handed ministrations of a single servant, Mrs. Honeybun; how, for a period, they were delivered from her by one Seth Cattermole, agriculturalist; how, in a dark hour of misfortune and financial stress, Mrs. Honeybun returned upon them in her true character—a blessing well disguised; how in due time, by the discovery of a hidden legacy, they were restored to happiness and abundance.

There is a delightful incongruity in pretending to introduce such exquisites as "Edward and I" to "the sordid miseries of poverty" and in picturing them involved in the complexities of the simple life. The sweet fragility of a Gabrielle was clearly never intended for rough uses; nor was Edward designed for endurance. The story is told in a whimsically artificial wording, graceful, decorous, a little stilted, like the pose of the Chelsea shepherdess on Aunt Sabitha's book-shelf, and leaves the reader with a charming impression of the idyllic, at once naïve and antiquated.

TYPES OF UNIVERSITIES.

Great American Universities. By Edwin E. Slosson. New York: The Macmillan Co. $2.50 net.

Mr. Slosson has rendered a valuable service to that large proportion of the general public, with or without a tincture of letters, which is mainly dependent upon intercollegiate athletes for its ideas of the characteristics of our leading educational institutions. He has spent a week—not an afternoon on the "bleachers"—at each of the fourteen universities ranked by their annual expenditure for instruction at the head of the list prepared by the Carnegie Foundation: Columbia, Harvard, Chicago, Michigan, Yale, Cornell, Illinois, Wisconsin, Pennsylvania, California, Stanford, Princeton, Minnesota, and Johns Hopkins. The record of his brief sojourns makes without padding a volume of over five hundred pages. It is no exaggeration to say that he presents a more distinct and many-sided view of every institution considered than many an old graduate could give of his own alma mater. The amount of solid information that he conveys along with his personal impressions is surprising. He has had an eye to the picturesque aspects of undergraduate life. He has meditated on the mysteries of university architecture. He has listened to the significant gossip of students and faculty. But he has also invaded the offices of registrars and presidents and presidents' secretaries; has visited classrooms and laboratories; has studied catalogues and university annals. He presents his facts in the effective form of graphs and diagrams, and he relieves the burden of the tale by the help of a dry humor and copious illustrations. He has, furthermore, ideas enough about administration, education, and research to set up a college president. The book is therefore no mere piece of superficial impressionism; it has what Mr. Slosson likes to call "dynamic" qualities. In order to appreciate its virtues it is necessary to understand that its author is literary editor of *The Independent*, that he is from Kansas, and that he is an ex-chemist.

As a journalist he urges the universities to keep in touch with the modern world. He thinks the humanistic brethren are somewhat slow in availing themselves of mechanical appliances such as the stereopticon, the phonograph, and moving pictures to relieve the monotony of their lectures. He is struck by the inability of many of the universities to maintain literary magazines and literary interests among the undergraduates. Perhaps his boldest suggestion relates to the doctor's thesis in English literature. It touches, at any rate, upon the sterilizing influence of much of our "higher" English study. Mr. Slosson cannot understand why doctors' theses in English should be limited to linguistics or literary history. Arguing from analogy with other professional degrees he says:

> It seems to me that it would be only fair to require of every candidate for Ph.D. in English literature the writing of a successful novel, a volume of good essays, a poem of distinct merit, an acceptable play, or some contribution to belles-lettres that will meet with the approval of the judicious if not of the public. . . . That is, if literature is a science, it should require original contributions to knowledge like the other sciences. If it is an art, it should require craftsmanship like the other arts. If it partakes of the character of both, it should meet both requirements instead of dodging both by keeping between.

As a western man, Mr. Slosson is a modernist, an ardent progressive, and a believer in "the people." He feels heartily in sympathy with the dominant ideals of the State universities—their industry, their democracy, their industrial and professional education, their immediate service to the commonwealth. He experiences no academic languor in the presence of milk tests, cement tests, soil analysis, scientific cookery, and pottery. These things seem to him as legitimate curriculum material as rhyme tests, style analysis, and poetry. For he recognizes, in short, as few Eastern bred men are able to do, the "utilitarian idealism"—please accentuate "idealism"—of Martha, busy about many things.

Mr. Slosson, as we have said, is, like Mr. Eliot, an ex-chemist, and his scientific proclivities reënforce his Western modernism and progressivism. He failed to catch the enthusiasm when they talked to him at Yale about their traditions. For traditions as such he obviously does not care a snap of the fingers. On the contrary, that a thing is an innovation appears to him decidedly in its favor. If it is not an improvement, it is at least an experiment; and the experimental temper indicates that a man is looking where the West looks, where science looks—into the future. Like Mill, he believes it is important "to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be considered customs." Not disposed, as some renowned educators are, to fix his eyes upon the peerless perfections of a single institution, he deplores the imitativeness of the universities, wishes them to specialize, and differentiate themselves as much as possible—each one to work upon an original plan of educational salvation.

Mr. Slosson takes what we may call the university point of view as distinguished from what he calls the point of view of the "old-fashioned college." He has the open mind, the catholic taste, and the optimism of the younger generation which *believes in everything.* It is interesting to compare with this spirit, the diagnosis of the present educational situation recently made by an English journalist, Mr. Chesterton. The one thing from which we are all shrinking to-day, says Mr. Chesterton, is that "ancestral responsibility to which our fathers committed us when they took the wild step of becoming men. I mean the responsibility of affirming the truth of our human tradition and handing it on with a voice of authority, an unshaken voice. That is the one eternal education; to be sure enough that something is true that you dare to tell it to a child. From this high audacious duty the moderns are fleeing on every side;

and the only excuse for them is (of course), that their modern philosophies are so half-baked and hypothetical that they cannot convince themselves enough to convince even a newborn babe."

Intimate Society Letters of the Eighteenth Century. Edited by the Duke of Argyll, K.T. With Portraits, Facsimiles, and Other Illustrations. In two volumes. London: Stanley Paul & Co.

There is nothing that serves so well to revive the past as a body of old letters, especially when these are artless, unpremeditated epistles, free from every trace of literary self-consciousness, and springing from no other inspiration than that of affection, interest, the urgency of affairs, or the mere love of gossip and the need of human intercourse. Then no subject, no turn of expression, is taboo, and the reader has all the advantage of the eavesdropper without any of the sensations of shame and guilt. To be sure, it requires to some extent a special imaginative and historical faculty to extract from such letters all they have to yield.

This is the principal difficulty for the general reader in the present work. It consists largely of letters written by men and women who, if not unknown to history, are quite unknown to literature. These not infrequently display small literary aptitude. Hence there is much in the two bulky volumes that will appeal only to those who are accustomed to the study of contemporary documents and the dry task of separating the grain of wheat from the mass of unremunerative chaff. The opening series of letters addressed by John, second Duke of Argyll, to Queen Anne, and to Lord Godolphin, on the subject of the union of England and Scotland are occupied exclusively with political affairs and official business, and are scarcely related to the plan and scope of the work as indicated by its title. The same is true in a measure of the next series of "Documents relating to the Jacobite Wars in 1716 and 1745," though they contain some interesting particulars of military movements in the Highlands during those exciting and romantic years. A chapter of "Domestic Documents," including accounts which show "the cost of living" at Holyrood Abbey, a part of which was regularly occupied by the Dukes of Argyll, comes closer to answering the reader's expectations.

By far the greatest number of letters in the first volume are those written either by, or to, Elizabeth, Duchess of Hamilton and Argyll, who, of course, was one of the beautiful Gunning sisters, and who married successively the Duke of Hamilton and the Duke of Argyll, having two sons by each marriage. As all of these, in turn, succeeded to their family estates, she was called "the wife of two Dukes and the mother of four." The lady's letters show the intelligence and force of character for which she is remembered almost as much as for her beauty. But for a really human note, one must turn to the letters which open the second volume, and which were written to the Duchess by Dr. Moore, father of the "hero of Corunna," concerning her younger son by her first marriage, Douglas, Duke of Hamilton. This rather shallow and indolent young man was engaged in making the customary European grand tour with the learned and serious doctor as his preceptor and companion, and it was part of the latter's duty to make periodic reports upon the progress and physical and moral health of the fledgling peer. The relations between the two are not without their side of unconscious humor, especially when the Duke, breaking bounds, allies himself with several young English officers, and accompanies them to Magdebourg, giving his mentor the slip, and leaving him to write an uneasy but guarded account of the escapade to the truant's mother. The poor doctor's patience must, indeed, often have been sorely tried, and one feels that it was only a trace of obsequiousness towards the rank of his noble patrons, coupled with a prudent desire to conserve the good will of so influential a family, that kept him from throwing up his job or at least making a much more candid report of his charge's character and shortcomings than any which he sends the Duchess. Here, at least, there is a real side-light upon society in the eighteenth century, though it is scarcely a novel one. At all events, it is pleasant to know that Dr. Moore received his reward for his fidelity, even though this was not entirely disinterested or unmixed with what we should to-day call "snobbishness." It was through the Duchess of Hamilton and Argyll that his son received that commission in the Fifty-second Regiment which opened the way to his brilliant military career. As it was through the influence of the same lady that Wolfe also received his commission, it should seem as if England owed much to this beautiful Elizabeth Gunning, who was herself daughter of a soldier.

European experiences of another sort were the lot of Lord John Campbell, who toured the Continent, in 1803, and who barely escaped arrest at the orders of Napoleon by crossing the Swiss frontier, dressed as a woman. He had previously met the First Consul, of whom he gives two interesting descriptions in a letter to the Marquis of Lorne. It must have been the fresh and unspoiled simplicity of the young Briton that fascinated Mme. de Staël. Not the least interesting letters in the collection are those which that lady wrote him from Coppet, where he and a friend named Robinson had visited her. With much ardor she expresses her desolation at their departure, and her desire to see them again. "There is that in your character and in the spirit of both of you," she writes, "a kind of charm which makes me feel a perfect happiness, and I do not know what one would not do to rejoin those who have the magic talent of making one feel happy." Doubtless what really speaks in these effusive epistles is the active boredom of the brilliant woman cooped up in her provincial chateau, and kept by her tyrant from returning to that Paris where alone she felt it possible to live.

The bulk of the books is rather gratuitously increased by the appending of English translations to the French originals of these letters and of those from Saussure, son of the great Swiss naturalist, who was another of Lord John's Continental acquaintances. Also the work as a whole would have profited if it had been shortened by half. Some of the letters, though of slight intrinsic interest or importance, were naturally retained because of the fame of the writers—William Pitt, George Washington, Samuel Johnson, Rob Roy, and others. But there are groups where it would have been wiser to make a representative selection. That the editor did not do this is due in part, perhaps, to a pardonable pride in the family archives of the Camphells, Dukes of Argyll, and a desire to reveal their wonderful richness for the documentation of social life in the eighteenth century.

Louise Chandler Moulton, Poet and Friend. By Lilian Whiting. Boston: Little, Brown, & Co. $1.50.

This is the life of a very feminine and sympathetic woman of talent by an extremely sympathetic and somewhat irritatingly feminine biographer. Mrs. Moulton was a writer of stories for children, literary correspondent, and reviewer for several journals, and a minor poet of slender compass but with an interesting personal and lyrical note. She had the temperament that craves and wins love, friendship, and admiration, and she repaid all her creditors with a bountiful hand. "In criticism," she says, "I made up my mind, long ago, that one should be like Swedenborg's angels, who sought to find the good in everything." The fruit of this angelic spirit in criticism may be suggested by the fact that at her death her library included about six hundred autographed volumes, of which not more than a fifth, according to Prof. Arlo Bates, contained "well-known names." Born in 1835, Mrs. Moulton was a critic and author by the time of the civil war, and she continued to write and make friends with writers, both in America and in England, till 1908. Her list of literary ac-

quaintances begins with the Boston and Cambridge group of Holmes, Whittier, Longfellow, Alcott, and Lowell, and extends to John Davidson, A. C. Benson, and William Watson.

There was material here for something more than a memoir of a coterie or a parish, but the possibilities have not been realized. The biographer sets out in this lofty and alarming strain:

> Genius, love, and friendship make up a triple dower which holds within itself the possibilities of high destiny. Their changing combinations comprise all intensities of human joy and human sorrow: the richness of sympathetic companionship; the enchantments of romance; the glow and passion of artistic achievement. . . .

After such an overture one relinquishes hope of any distinct presentation of Mrs. Moulton's character or appraisal of her poetical accomplishment. Between her and the reader there has been introduced the veiling enthusiasm of an admirer without a particle of humor, critical discrimination, or feeling for literary perspective. The result is the more distressing for the reason that humor and a sense for perspective are not prominent qualities either in the specimens of Mrs. Moulton's letters and journals here displayed or in the abundant extracts from the letters of her appreciative friends. As solemnly as if appealing to the highest tribunal, Lilian Whiting quotes Mrs. Spofford's verdict on Mrs. Moulton's last volume of poems: "'At the Wind's Will,'" says Mrs. Spofford, "fitly crowns the literary achievement of the century. . . . Her work exhibited in previous volumes has given her a rank among the foremost poets of the world." The labor expended by the biographer in accumulating testimonials of this nature is only equalled by her industry in setting forth the "brilliant" dinners, receptions, evenings-at-home, etc., at which Mrs. Moulton was present, together with a list of the other "brilliant" guests, checked off with comment suitable to the "Society" column of a daily newspaper. The point of view is parochial.

Notes

Smith, Elder & Co. are preparing for publication early next year a supplement to the Dictionary of National Biography which will include names of persons who have died in the interval between the death of Queen Victoria, January 22, 1901, and the close of 1910. Suggestions are invited by the editor, Sidney Lee, which may be sent in the care of the publishers.

The opening article in the *Annales de Géographie* directs attention to the work of the hydrologic service of the United States Geological Survey. It is stated that through its long-continued and widely extended observations it has contributed more than any other similar service to the solution of the great problems of erosion and continental denudation which lie at the base of physical geography. A detailed account, illustrated by reproductions of photographs, is given of the sixth geographical excursion of the French university students made last June, during which the western Alps were studied.

The "List of Books Printed in the Fifteenth Century in the John Carter Brown Library and the General Library of Brown University," which originally appeared as an appendix to A. W. Pollard's "Catalogue of the Rush C. Hawkins Collection," has been issued in separate form, with two plates not in the previous publication. These show the front and back covers of a binding which is signed "illigatus in Gyslingen 1470 per me Richenbach." There is a short account of the work of Johannes Richenbach of Giesslingen, who was probably the most widely known bookbinder of the fifteenth century, in the *Zentralblatt für Bibliothekswesen* for last September, by Seymour de Ricci of Paris. M. de Ricci describes seven surviving bindings signed by Richenbach in European collections, and notes the sale at auction of three more, the present location of which he has not traced. The John Carter Brown example makes the eleventh recorded.

In his "Hidden Signatures of Francesco Colonna and Francis Bacon" (Boston: W. A. Butterfield) W. S. Booth devotes about half of his book to the subject of his title, and the rest to other forms of Baconian "evidence." For the attacks made on his previous acrostics in Shakespeare's Folio he can find no better refutation than ridicule. In his present argument he relies mainly on a single acrostic signature, similar in principle to his former ones, but complicated by the presence of certain numerical properties relating to the date of the play, etc. In working out these numerical properties the author has used figures at will to suit his own aims; and that he should gain such results by such methods is not surprising. We have found numerical combinations almost as astonishing in the first book which came to hand. And the explanation of our method is also the explanation of Mr. Booth's. Had we formulated what we were looking for beforehand, our chances of finding it would have been very small; but we were not looking for a set formula, but simply for *any* striking combination. Mr. Booth was not looking for a signature Baconicsicnarf, but for any one of his many combinations which would work out, and his chance of finding such a signature is not his chance of finding Baconicsicnarf (as he erroneously assumes) but his chance of finding any one of a great number of combinations. All Mr. Booth's mathematical reasoning is wrong because he ignores a very fundamental principle; that the chances of having anything occur are given by a fraction, having all possible chances as its denominator *and all possible favorable chances as its numerator*. For instance, a man's chance of drawing any one particular card in a pack of 52 would be 1-52; but his chances of drawing a heart would be 13-52. Now suppose that a man before drawing should be satisfied with any heart, but that after drawing he decided that the heart actually drawn was the only one he wanted. His real chance of success would be 13-52 or ¼; but he would say that his chance of success was 1-52. This represents Mr. Booth's position exactly, and shows why he can prove things impossible by mathematics when other men have proved them possible in practice. He says that there is one chance in eighteen of finding a capital B beginning the first line in the Folio. But a capital F, I, M, O, S, N, or T would have offered him just as favorable a chance, for each of these letters occurs at one end of some of his acrostics, and each could have been justified later by some different juggling of his hints and numerals. Moreover, the position held by the M of *Mast.* would be just as significant as that held by the B of Boteswaine, had it worked out. We have then eight possible letters and two possible positions for each; and the chance of getting started is not 1-18, but nearly 16-18, or almost certainty.

As for the rest of the book, Mr. Booth's literary scholarship seems of a piece with his mathematics. The fact that Bacon could write a sonnet in an age when sonnetteering was a fad is no proof that he could write Hamlet's soliloquy; nor does the fact that he showed some admiration for poetry prove that he could write "The Tempest," for on that basis all cultivated men would be Shakespeares. Neither are we greatly impressed when the author sets his own unsupported literary judgment above that of Spedding. When Spedding said that a few lines of Bacon's best verse were almost equal to Dryden's, he did not mean that it was quite equal to Shakespeare's. These books on the Baconian theory are like the desert, tedious to travel through and useless to mankind.

In "The Historic Episcopate" (Philadelphia: The Westminster Press), Dr. Robert Ellis Thompson, favorably known by his history of American Presbyterianism and by his interest in church unity, has given an admirable introduction to the main question at issue between Presbyterianism and the Episcopacy. Firmly believing that the way can be cleared for the reunion of Christendom only by a reëxamination of the historical grounds for the theory of the "divine right of the historic episcopate" and "of an Apostolical Succession of manually consecrated bishops as the necessary channel of grace in the Christian church," he devotes himself to the study of the matter historically in the hope of contributing to a consensus of opinion. He concludes that the theory mentioned has no warrant in the Scriptures, as Jerome testifies, or in the earlier Christian literature; for the writers of the second century, Ignatius and "Ireneus" (so the name is consistently spelled) excepted, are "The Presbyterian Fathers," as the title of the second chapter significantly suggests. Dr. Thompson has difficulty in accepting the Ignatian Epistles as authentic, and is convinced that the monarchic bishop therein presupposed is not the diocesan bishop of modern times, but the pastor of an urban church whose members constitute a single congregation. He does not allude to the suggestion of Harnack in his treatment of Third John (1897), that Diotrephes is the first monarchical bishop whose name we know. Of Irenæus, the writer is also suspicious, at least of his reference to the establishment of a monarchic episcopacy in Rome. He thinks, however, that the estimable Bishop of Lyons was too wise to commit himself to the theory

that John set up a monarchic bishop in Ephesus. Not in the New Testament, not in the second century really, but in Cyprian is to be found the conception of the church "as a visible corporation, within which alone, and through whose bishops alone, the Holy Spirit confers grace upon men," and the other conception "of the succession of those bishops to the authority and functions of the Apostles." These conceptions, leading to papacy, were "elaborated from age to age by the later fathers," in spite of Jerome, by the "Romanist Canonists since 1570, and the Anglican polemics since 1589." Dr. Thompson closes with the question: "Are these to remain the permanent obstacle to a reunion of our Protestant Christendom?"

Fletcher Moss, who is his own publisher at the Old Parsonage, Didsbury, England, has sent us "The Fifth Book of Pilgrimages to Old Homes." It is an agreeable mélange of genealogy, archæology, and general history, mostly referring to Wales and the Scotch border. Naworth Castle, where the author took time to transcribe some amusing domestic accounts, Lanercost Priory, Newcastle, Stokesay, the Roman Wall from Newcastle to Carlisle, are typical subjects. The large octavo volume contains more than two hundred halftone cuts. Mr. Moss's greatest find is the actual wall behind which Caractacus made his last stand against the Romans. A sceptic might have his doubts. In fact, the book is chiefly interesting as giving the point of view of an amiable and almost extinct race, that of local antiquaries. Whoever reads Mr. Moss's recipe for roadside tea is sufficiently warned of idiosyncracy:

> Into a nice china teacup put three or four or more lumps of sugar, according to taste. On to the sugar pour boiling hot, freshly brewed tea, enough to cover and melt the sugar. Fill up with sweet cream skimmed from the fresh milk of cows. Drink and be thankful.

There is no accounting for popular taste. C. Reginald Enock's "The Andes and the Amazon," which received a scant welcome from geographical critics in 1907, has now gone into its fourth edition, to meet the demands of a public that likes to read about "The beautiful Andes; the terrible Andes; the life-giving Andes; the death-dealing Andes!" Perhaps one reason the book has been so popular in England is on account of its attitude toward the United States. In speaking of the Monroe Doctrine, at which Mr. Enock is inclined to look askance, he remarks: "Unfortunately the business and administrative methods of the North Americans are not such as to warrant their taking up the position of mentor to any one. . . . One thing is certain, the closer their association with Great Britain the sooner will their capacity for righteous administration be developed." The latest edition (imported by Scribners) is in a cheaper form than the others. The colored plates and the map have been omitted, but the charming frontispiece portrait of the distinguished author has been retained. Otherwise there is no change.

A new and revised edition of "The Industrial History of the United States," by Prof. Katharine Coman of Wellesley College, first published in 1905, is issued by Macmillan. The particular merit of this book for those wishing to familiarize themselves thoroughly with the subject, is the copious bibliographical references in the margin, for authority and further information on the topics briefly handled in the text. These references have been brought so closely up to date as to include historical or economic publications issued from the press barely a month ago.

Emerson Hough's "Singing Mouse Stories" (Bobbs-Merrill) are not stories, but sketchy allegories, somewhat lacking in concreteness and, accordingly, in effectiveness. Parable is so neglected in our time that any indication of interest in it on the part of a writer might be welcomed, but to call this collection much more than such an indication would be to exaggerate the facts. A selection will best show the tone of the book:

> "Do you know the story of the Wedding of the Times?" said the Singing Mouse. "You know, all life is a wedding. The flowers love, and the grasses, and the trees; and the circle of the wedding ring is the circle of life and the sign of eternity. Death and life, not life and then death, is the order and the law."

Less commonplace in idea and finer in expression is a short paragraph in the section entitled The Bell and the Shadows:

> "Thoughts," said the Singing Mouse softly. "Thoughts and remembrances. These are the things that live for ever. It is only the shadows that are real!"

In "Daniel Boone and the Wilderness Road" (Macmillan), H. Addington Bruce continues his work in the interesting field he entered with his "Romance of Western Expansion." As a biography of Boone—and the present book is more than that—it would not be just to compare it with the valuable life by Dr. Thwaites. But as an account of the work of Boone and his companions it is a book of real value. Mr. Bruce's historical writing is of a kind which, fortunately, is more common than formerly, and which, while written in an entertaining and popular vein, is far from back work. The author has sought to make the book serve the double purpose of a life of Boone and an account of the first phase of the nation's territorial expansion west of the Alleghenies. This idea has been well carried out. Boone's contribution to the upbuilding of the country is set forth in all its stirring and romantic details, but the author has not allowed the biographical matter to hide his deeper purpose of portraying the process of expansion in its political, economic, and military aspects. Indeed, his success in balancing these two purposes is so well done that it is difficult to say whether the book ought to be classed as a history or a biography.

The Cole Lectures at Vanderbilt University, Nashville, Tenn., for the year 1910 were delivered by Bishop William Fraser McDowell of the Methodist Episcopal Church, and are published under the title "In the School of Christ" (Revell). Concerned with the training of young men for the Christian ministry, they set forth the religious lessons the prospective minister should learn from a devotional study of the Gospels. Much of their matter is neither new nor original, but the spirit is earnest, practical, and devout. The most valuable suggestion is that each clergyman, as well as the religious leaders of a city or country district, should have a well-defined programme of work, based on careful study of the field. The plea for a more effective ministry is forcefully spoken. The same lectures at Vanderbilt University for the previous year were by the Rev. Charles McTyeire Bishop, on "Jesus the Worker: Studies in the Ethical Leadership of the Son of Man" (Revell). Their publication has been delayed until now. Dr. Bishop surveys the activities of Jesus during his ministry as examples and incentives for Christian service to-day.

"Shelley's Prose in the Bodleian Manuscripts, edited with corrections, additions, notes, and unpublished fragments" (Frowde), by A. H. Koszul, is intended to serve as a sequel to C. D. Locock's examination of the verse in the same collection. It presents conveniently the "Essay on Christianity," "A Defence of Poetry," and fragments on marriage, God, and metaphysics and morals. The substance of these fragments, often rough notes, adds little or nothing that is new to the body of Shelley's thought before published; but may be useful in fixing more precisely than we knew before the dates at which certain of his mental attitudes first took hold of him.

Alfred Söderström of Warroad, Minn., has been occupied for some years past in collecting material for a history of the Swedish press in America. This material, written largely by himself, with contributions by others, he has now published under the title "Blixtar på tidningshorisonten." We find reminiscences, anecdotes, character sketches, etc. On pp. 16-53 there is a complete list of Swedish-American newspapers and other periodical publications, in all not less than 1,158, of which 58 weekly and 232 monthly journals are still current.

Two or three years ago Dr. Ernst Schultze of Hamburg, the well-known promotor of the cause of public libraries published the first volume of an *Archiv für das Volksbildungswesen aller Kulturvölker*, which was intended to be a repository for information about all phases of popular education. Unfortunately, only this one volume appeared, but it is really complete in itself, as its several articles make up a handbook on the progress of public libraries, museums, lecture courses, etc., up to the date of its issue, in the year 1907. The two numbers which have so far appeared of the quarterly *Volksbildungsarchiv*, published for the Zentralstelle für Volkswohlfahrt as "contributions to the scientific intensifying of the movements for popular education," and edited by Dr. Robert von Erdberg, contain several important contributions. Rudolph Eucken offers some thoughts on the ideal of popular culture, while Walter Hoffmann in Dresden publishes a large amount of statistical material on the reading of the working classes.

The next, or tenth, publication of the Gutenberg-Gesellschaft will be a new work by Seymour di Ricci, the author of the "Census of Caxtons," being a "Catalogue raisonné des premières impressions de Mayence," together with minute descriptions, the history of each copy to date, and the price paid for it. This announcement is made in the ninth annual report, from which we also learn that the society is to bring out a study by Gottfried Zedler of Albrecht Pfister, the printer of Bamberg, who came into possession of Gutenberg's

earliest type. As usual, the report is accompanied by the address at the annual meeting—"Die liturgischen Druckmäler in ihrer Blütezeit," by Dr. Karl Schottenloher.

The twenty-eighth annual meeting of the Modern Language Association of America will be held at the College of the City of New York, Wednesday, Thursday, and Friday, December 28, 29, 30.

The general meeting of the Archæological Institute of America for 1910 will be held at Brown University, Providence, December 27-30. There will be five sessions for the reading of papers, including joint sessions with the American Philological Association and the American Anthropological Association. The titles of the papers to be presented are as follows:

"Roman Privernum," by Henry H. Armstrong, Princeton University; "The Purification of Orestes," by William H. Bates, University of Pennsylvania; "New Facts Regarding Justus van Ghent," by Morton H. Bernath; "Report on the Excavation of Sardis," by Howard Crosby Butler, Princeton University; "Classical Studies and the Awakening in Art," by Mitchell Carroll; "An Archaic Greek Grave Stele in the Museum of Fine Arts, Boston," by Lacey D. Caskey, Boston; "The Bird Motive in Ancient Pajaritan Pottery," by Kenneth M. Chapman, Santa Fé; "A Bronze Cista in the Loeb Collection," by George H. Chase, Harvard University; "The Erechtheum," by George W. Elderkin, Princeton University; "The Case of Kyniska," by Alfred Emerson, Chicago; "Report on the Excavation of Cyrene," by Arthur Fairbanks, Museum of Fine Arts, Boston; "The Work of the School of American Archæology in 1910," by Alice C. Fletcher, Washington; "Two Lekythoi in the Worcester Art Museum," by Elizabeth M. Gardiner, Worcester; "Measurements of 1910 in the Spiral Stairway of the Leaning Tower of Pisa," by William H. Goodyear, Brooklyn Institute of Arts and Sciences; "Philistine and Hebrew in Palestine," by Elihu Grant, Smith College; "American Excavations in Crete in 1910," by Edith H. Hall, Mt. Holyoke College; "The Tewa Game of Kahtohphe," by John P. Harrington, Santa Fé; "The Sequence in the Development of Art in Copan and Quirigua," by Edgar L. Hewett; "Parthenon Studies," by B. H. Hill, Athens; "The Harvard Excavations of 1910 in Samaria," by D. G. Lyon, Harvard University; "Classic Myths in Art," Edmund von Mach, Cambridge; "Della Robbias in America," by Allan Marquand, Princeton University; "Italian Paintings in America," by Frank J. Mather, jr., Princeton University; "Some Ostraka from Samaria," by George F Moore, Harvard University; "The Historical Value of the Books of Chilan Balam," by Sylvanus G. Morley, Santa Fé; "The Excavation of Balcony House, Mesa Verde National Park," by Jesse L. Nusbaum, Santa Fé; "Survivals of Primitive Religion in Syria," by Lewis Bayles Paton, Hartford Theological Seminary; "Some Incantation Bowls from Nippur," by James A. Montgomery, University of Pennsylvania; "The Chair of Maximianus in Ravenna," Thomas J. Preston, jr.; "Coptic Architectural Fragments recently acquired by the Metropolitan Museum," by Caroline L. Ransom, New York; "Two Copies of the Head of Athena Parthenos from Corinth," by David H. Robinson, Johns Hopkins University; "Notes on the Recent Egyptian Acquisitions from Gizeh now in the Boston Museum of Fine Arts," by L. Erle Rowe, Boston; "A Marble Roman Bowl from Bagdad," by Oliver S. Tonks, Princeton University; "Methods of Classifying Roman Concrete Structures," by Esther Boise Van Deman, research associate of the Carnegie Institution, Rome, and "The Work of Domitian on the Palatine Hill in Rome," by Esther Boise Van Deman.

According to the report of the treasurer of the institute, which has been distributed in anticipation of the meeting, the income from all sources in the last fiscal year, exclusive of the gift of James Loeb for the endowment of the Charles Eliot Norton memorial lectureship (noticed in the *Nation* October 21, 1909), amounted to $36,684.47; the number of members is now 3,000, distributed in thirty-two affiliated societies. The rapid growth of the institute in recent years is indicated by the fact that as late as 1902 it had approximately 1,000 members, and an income of less than $7,500 a year.

The death is announced, in his forty-third year, of Paul Eve Stevenson, the author of the following books: "A Deep Water Voyage," "By Way of Cape Horn," and "The Race for the Emperor's Cup."

Science

Common Weeds of the Farm and Garden. By Harold C. Long, in collaboration with John Percival. New York: Frederick A. Stokes. $2 net.

This book deals with British weeds, but since weeds are cosmopolites, much of the treatise may be applied to these plants found anywhere under the same general climatic conditions. The authors —one a member of the Board of Agriculture and Fisheries, and the other a professor of agricultural botany in University College, Reading, England—have given us a very readable and instructive work.

There are sundry mischiefs attributable to weeds: they hinder proper and thorough cultivation; they harbor injurious insects and fungi; they diminish the ease with which a crop can be harvested; their seeds may reduce the value of harvested grain; they may block an entire system of underdraining; and, worst of all, they take up room and absorb much moisture, air, light, and heat. The sum of injury is variously estimated by good observers as from 30 to 47 per cent. In other words, the farmer is obliged to calculate whether it is worth while for him to fight to save this large percentage. Such a question is one of great importance to every cultivator, whether he is farmer, gardener, or merely an amateur.

But how came certain seed-plants to be the enemies of man? They are not all of them descendants of the punitive thorns and thistles. Why should a few plants more than others contest with cultivated crops the right to every foot of the soil? If we glance at what has taken place in recent times a partial answer can be suggested, namely, that these plants, called weeds, have by some unhappy accident obtained a start over the others and have kept the supremacy. A single illustration will make this suggestion probable. The island of Tasmania possesses a climate which is favorable for rapid and healthy growth of almost any vegetation of the temperate zones. Some of the early colonists, wishing to surround their homes with garden plants holding pleasant associations with their English birthplace, selected, among other things, the common sweet-briar, the eglantine. Within a few years this innocent plant had invaded much arable ground, rendering it absolutely useless, and resisting all attempts to exterminate it. In short, it has now become one of the worst possible weeds, exceeding in its pertinacity even the most troublesome thistles. It had been freed from all of its British enemies of fungi and insects, and it proceeded to run riot. As time passed, it found some Australasian foes, but they were not those of the old surroundings. Another illustration is found in the so-called "water-hyacinth," which, coming from the district of the Amazon, spread so rapidly in the still waters of Florida as to call for governmental intervention to eradicate it. But there is this marked difference between the plants which suddenly encroach upon the domain of other plants in a new country and the common weeds, that the former soon reach a point of luxuriance from which they decline, whereas most weeds hold their own against all comers. Nevertheless it is probable that some temporary freedom from enemies gave most of our weeds a start at the outset.

Our flowering plants have in general two modes of reproduction, one by seeds, and the other by buds or offshoots of some kind. The very process of "weeding" by hoeing or pulling may break the plant into fragments, each of which is virtually a "cutting" or "slip," ready for independent growth. And hence it happens that the cultivator may be a distributor of the very plant he is trying to eradicate. But the immense number of seeds produced by plants must not be forgotten as an important factor in their distribution. And, moreover, it must be remembered that the seeds of a certain number of our weeds are mature at about the time of harvesting, and are by it disseminated. Still further, it must not be forgotten that almost every plant under cultivation is a helpless thing, dependent upon man for enrichment of the soil and for a certain degree of protection from harmful influences. On the other hand, weeds, as a rule, can look out for themselves and avail themselves of the enrichment of the soil, so that, in fact, the strife between weeds and crops is very unequal. In all of its aspects it is a strife which is extremely interesting to every onlooker except the farmer or the gardener. The present treatise shows plainly how the cultivator can give his crops much-needed aid.

With the issue of this month the *Political Science Quarterly* completes its twenty-fifth year. The one hundredth number, like the first, appears under the managing editorship of Prof. Munroe Smith of Columbia University. Prof. F. J. Goodnow, who contributed an article to the first number, furnishes the opening article in this issue. In "The Legislative Power of Congress Under the Judicial Article of

the Constitution," Professor Goodnow argues that Congress has wide powers of legislation which are still unused, and that, in particular, it might establish uniform law to be applied by the Federal courts in controversies between citizens of different States, and between citizens and aliens. C. F. Robinson writes on "The Mortgage Recording Tax"; J. B. Ross on "Agrarian Changes in the Middle West," showing that the drainage of rich prairie lands is producing a reverse current of migration from the West eastward; Prof. C. F. Emerick calls attention to "A Neglected Factor in Race Suicide"; Prof. W. M. Sloane concludes a series of studies on "Radical Democracy in France," and Prof. Edwin Maxey describes "The Reconstruction of Korea" by Japan. A leading review of Croly's "The Promise of American Life" is contributed by Prof. Royal Meeker.

The University of Berlin was founded in 1809, and in commemoration of this fact Prof. H. Wagner of Göttingen calls attention in *Petermann's Mitteilungen* to its notable contributions to our geographical knowledge by its professors during the first century of its existence. Those whose work is particularly described are Carl Ritter, characterized in the Encyclopœdia Britannica as "the greatest geographer of modern times"; H. Kiepert, Baron Ferdinand von Richthofen, and the present incumbent of the chair, Albrecht Penck.

The death is reported from Turin of Prof. Angelo Mosso, the physiologist, at the age of sixty-four. He received, 1899, from the Accademia dei Lincei the Grand Prix for his work on the circulation of the blood in the brain. He invented several medical instruments, founded the scientific institute on Monte Rosa, writing his results in connection with it in "L'Uomo sulle Alpi," and as an archæologist excavated in South Italy and Crete.

Drama

Percy MacKaye's satirical comedy "Anti-Matrimony" has been published (Frederick A. Stokes Co.) in attractive book form. A reading of it does not greatly modify the impression made by its recent performance on the stage. It is brightly written, contains many effective humorous and satirical strokes, and is sound in its ridicule of various social vagaries. But it is too crazy in its construction and too grotesquely violent in its incidents to have much theatrical or other value.

"God's Heroes" is the title of a five-act drama by Laura Clifford Barney which has been published (J. B. Lippincott Co.) with an elaboration of ornament altogether out of proportion to the value of the subject matter. Every page is illuminated with presumably symbolical Oriental designs. The story, which claims to be historical, deals with a modern Persian religious movement—apparently a semi-Christianized Mohammedanism—which is said to be spreading and has already had its martyrs. In that respect it is interesting, and it is plainly the product of a fervid enthusiasm, but it has no serious literary or dramatic value, and its influence is not likely to be widespread.

Henri Bataille's "The Foolish Virgin" created somewhat of a sensation in Paris, when it was produced there last winter, but is not likely to prove successful here. The English version of it, given in the Knickerbocker Theatre, is of indifferent quality and the performance is distinctly poor. It is an essentially French piece, full of all sorts of emotional extravagances, which suffers much from the heavy-handed methods of the English speaking stage. In spite of its pretensions to serious social and philosophic purpose, it is only domestic melodrama, the exaggeration and inconsistency in both characters and incidents relegating it to this category. Its main thesis, apparently—for it deals sensationally with more motives than one—is that in cases of marital infidelity man is not always the seducer. Mr. Bataille might easily have provided a more plausible illustration of this indisputable proposition, if he had not been more anxious about theatrical effect than any sort of truth. He has imagined a school girl reared under the best domestic influences, daughter of a wealthy duke, who becomes the enslaver of a middle-aged barrister; and who, guided by passion alone, persists—in spite of warnings from father, mother, and her lover himself—in carrying him off from his devoted wife, and casting her own and everybody else's reputation to the winds. He has succeeded in making his heroine a wanton, but not in shifting one feather's weight of responsibility from the shoulders of the man. The deserted wife is resolute in the defence of her husband, stands by him in evil, as in good report, watches over him perpetually, excuses him as the victim of an irresistible power, interposes to save him from the hand of the avenger, and so demonstrates the nobility of her love that her rival becomes suddenly remorseful, and commits suicide, in order that the truant husband may be at liberty to return to his allegiance. There is much emotion, with some effective situations, in the story, but precious little truth of nature or life. Mrs. Patrick Campbell, who enacts the superhuman wife, exhibits some striking outbursts of passion, but emphasizes the unnaturalness of the character by her mannerisms of speech and gesture. No discretion was shown in the choice of her supporting cast.

It is pleasant to note the return of comedy—very light but genuine comedy—to the stage of Wallack's Theatre. In "Pomander Walk," which was produced there on Tuesday evening, Louis N. Parker, in an interval of his labors as pageant master, provided an uncommonly fresh and pleasant entertainment in a form which in many respects may be said to be new even to veteran playgoers. His scene is a little red brick crescent of six practicable houses, which he has peopled with a group of personages who live their everyday life, as it were, in neighborly converse and exhibit their personal peculiarities in the course of their ordinary pursuits, without the least apparent consciousness of serving any dramatic purpose whatever. A small riparian suburban community is brought into the limelight for a day or two and then the curtain is dropped upon them and all is over. Two or three love stories are brought to a happy conclusion, just to give the necessary spice of romantic interest, but there is no trace of a plot, no harrowing emotion, no sensation, and no mystery. And the effect is singularly life-like, untheatrical, and charming. The piece is in no way remarkable for literary brilliancy or novelty in characterization. There is no more straining after effect in the dialogue than in the incidents. But the underlying idea of it is as original as it is ingenious, and it opens up a new field for dramatic experiment. It is not necessary here to enter upon descriptive details. A brief synopsis would be unintelligible. The time of the action is supposed to be in 1805, which offers rich opportunities to the costumer. Among the principal personages are a choleric, jovial old admiral, one of Nelson's men, superbly played by that finished comedian, George Giddens; a retired butler, aping fashionable airs, excellently acted by Lennox Pawle; a shy musician, very well done by Reginald Dance, and half a dozen women of various types, all cleverly embodied. The general representation is notably competent. "Pomander Walk," in short, is delightful entertainment, and it was evidently enjoyed heartily by a very large audience.

John Masefield's tragedy, "Pompey the Great," which has just been acted by the Stage Society in London, appears to be an uneven work, in which passages of great beauty and nobility of ideal are mingled with anachronistic modernisms of all kinds, as if to show, in spite of Molière, that the ancients and the moderns are very much alike.

C. M. S. McLellan's play, "Judith Zaraine," will be produced here in Christmas week, with the well-known English actress, Lena Ashwell, and Wilton Lackaye in the leading characters. The story deals with a labor crisis in a Pennsylvania town. A mill employing thousands of operatives has been forced out of business by a stronger rival, and the men are thrown on the street, filled with an intense bitterness against the powerful corporation. They are led by Judith Zaraine, who is one of the workers, and who centres her condemnation upon the head of David Murray, the guiding spirit in the Trust. The situation reaches the acute stage when troops are called out to protect the company's property. David Murray, who likes to do his thinking for himself, and to examine into conditions, visits Minetown, where he poses as a reporter for a New York paper, sent to cover the labor troubles. He interviews Judith, they become interested in each other, and their intercourse results in much mutual enlightenment. The end of the piece may be guessed.

The announcement has been made already in this journal that Marie Tempest is to be seen soon in the New Theatre as Becky Sharp in a version of "Vanity Fair" which is new to this country. It appears that she is also to enter upon a career of actor-manager, both in this country and in England. Here she will open proceedings next autumn in Maxine Elliott's Theatre, where she will produce, among other things, a piece dealing with vaudeville life by Paul Kester, entitled "The Bill Toppers," and a comedy by George Pastor, entitled "Clothes and the Woman."

Lewis Waller has agreed to give a scene from "Julius Cæsar" in a London music hall. Soon he is to appear in a new play called "Bardeleys the Magnificent."

Charles Frohman will soon produce in London a new light comedy by W. Somerset Maugham. It is entitled "Loaves and

Fishes," and the principal part will be played by Irene Vanbrugh.

Ellen Terry has begun in the Christmas number of the *Windsor Magazine* a series of articles on "Shakespeare's Heroines."

Music

Massenet and His Operas. By Henry T. Finck. New York: John Lane Co $1.50 net.

It is strangely true, as Mr. Finck observes, that there was no English work on Massenet until the publication of the present volume. It is equally true that there was no widespread interest in the creations of the French Puccini till the indefatigable Oscar Hammerstein, seeking material with which to infuse individuality into his seasons at the Manhattan Opera House, hit upon the happy idea of giving Massenet's operas in a characteristically Parisian manner. Mr. Finck is justified in his assertion that the few scattered performances of "Werther," "Manon," and one or two other of Massenet's operas at the Metropolitan Opera House never focussed public attention upon the peculiar manner of this interesting French master. The presentation of "Manon," in the days when Jean de Reszke made an enchanting melodic personage of the Chevalier des Grieux, was one in which the work, as a whole, was prostituted to the office of glorifying two or three singers. There was something like real pathos in the one appearance of the unfortunate Sybil Sanderson in the title rôle, but her flitting across the operatic stage cast but a momentary shadow upon the glamour that went with the name of Jean de Reszke. Later, we heard the opera with other *prime donne*, but none of them even faintly suggested the real Manon.

Mr. Finck is most amiable in his comments on the present-day representatives of Manon and des Grieux at the Metropolitan. With all his kindness, he must feel in his heart that it is not an ideal French conception of the work that is offered to the public. He doubtless felt this when he was impelled to write comments showing that he placed the productions of Oscar Hammerstein above those of the Metropolitan Opera House. There can be no question that the juster appreciation of the value and the character of Massenet's operas dates from the night when Mary Garden revealed to New York her ravishing Thaïs. Mr. Finck recognizes the artistic importance of this incident and very properly accords to Hammerstein's productions of Massenet's works the first position in his volume. He deals with the Metropolitan performances afterward, and reserves for the final part of his book consideration of those operas which are not yet known to the American public.

The plan of the present book is simple and direct, and the work will undoubtedly serve excellently its purpose. Mr. Finck, by reason of his warm sympathy with the French school of opera and his high admiration for some of its leading interpreters, was precisely fitted to produce a book of this type. Without doubt, he could have subjected Massenet's art to a more searching and discriminating criticism, had he so chosen to do; but it is obvious that this would have been outside the scope of his present volume, which is plainly designed as a help to further public understanding of the nature and beauties of these charming operas. It is pleasant to find that he has not hesitated to pay a proper tribute to such impersonators of Massenet's people as Mary Garden, Dalmores, and Renaud. Nor has he forgotten how much the works owe in America to the insight and affection of Cleofonte Campanini, a conductor wonderfully free from racial or national prejudice and narrowness of view. Perhaps in the final estimate of things musical, whenever that shall be made, it will appear that Mr. Finck has not laid too much stress on the greatness of Maurice Renaud. In the lyric world, he is, indeed, a splendid artistic figure. His interpretation of the monk Athanael ought to live in operatic history as one of the most pathetic and poignantly tragic creations. Its perfect counterpart was his assumption of the rôle of the Friar Cook in "Le Jongleur de Notre Dame," an exquisitely poetic piece of human comedy, of which the gentle humor and fathomless sweetness of temper will assuredly remain perennially clear in the minds of thoughtful lovers of opera.

A few years ago Richard Strauss announced that he would write no more orchestral tone poems, but would confine himself to the operatic field. He has done so, yet he finds time meanwhile to dash off an occasional song. Melody is scarce in these products, wherefore it takes a vocalist of the Wüllner type to make them palatable. Strange to say there has been hitherto no collection of the Strauss lieder. This want is now supplied by "Forty Songs by Richard Strauss," just published by the Oliver Ditson Company. In accordance with the plan of the Musicians Library, to which this volume belongs, James Huneker, being the foremost American champion of Brahms, was engaged to select the songs and write an introduction; but why did he devote eight columns to that composer's career and his orchestral works and less than two columns to his songs? As a measure of their value this may be just, but in a special collection of these songs, and the first one, too, one would have welcomed more copious comments from one so well-informed and so enthusiastic—one who finds that Strauss is, in these lieder, "the patient, curious master of miniatures, the ivory worker of exotic shapes"—a characterization that seems more applicable to Franz. Exception may also be taken to the statement that Strauss "knows Schubert, Schumann, Franz, and Brahms only to avoid them." Franz peeps at us from more than one page, and who, on hearing Strauss's "Morgen" (op. 27 No. 4), would ever suspect that anybody but Brahms could have written it? Grieg was in Strauss's memory when he penned "The Saffron" and "The Three Holy Kings." Two of the most popular songs—the "Serenade" and "Cæcilie"—are not included in Mr. Huneker's list. One wonders, also, why he excluded the songs in the comic vein, like "Herr Lenz" and "Für fünfzehn Pfennige"; but as it stands, the collection he made undoubtedly affords a good birds-eye view of the lyrics of Germany's most prominent composer.

David Bispham will give another all-English recital at Carnegie Hall, on the afternoon of Tuesday, January 3. The programme will include a group of modern songs, several excerpts from operas of Verdi and Wagner, and a recitation of Tennyson's "Enoch Arden" music of Richard Strauss.

In Italy the most popular of Puccini's operas is "La Bohême," which was sung last year some five hundred times. In other European countries and in America, the favorite among his operas is "Madama Butterfly," which was given last year in seventy-three theatres in Germany alone. In France, according to *Comœdia*, 833 performances of foreign operas were given between January, 1899, and January, 1910, at the Opéra Comique, and Puccini stood first, his "Bohême," "Tosca," and "Butterfly" having received in that period 390 representations, or nearly one-half the total number.

The popularity of Puccini and Wagner, and also of some of the older French composers — Bizet, Gounod, Massenet, Saint-Saëns—has moved the younger opera writers to form a "defensive and offensive league" for the purpose of obtaining more attention for their work. To this the authorities replied that their justification lies in the fact that the old familiar operas pay, while the French novelties do not. Lydia Lipkowska, who is to do Thaïs in Boston, says that Massenet has rearranged some of the music so that it will better suit her voice.

Art

THE WINTER ACADEMY.

The feature of the Academy exhibition at the Fine Arts Building is the memorial display of five Winslow Homers in the Middle Gallery. Lacking the specific preciousness of fine painting, these pictures are so nobly imagined, so simplified to the bones of the graphic theme, that they give far cleverer pictures the look of not much mattering. Surely the business of landscape and marine painting is to enhance the vision of the ordinary man, to give him some aspect or emphasis beyond his common visual experience. Unless the landscape painter enlarge and intensify my seeing, to what purpose does he paint?

Such a standard would give to a good deal of our landscape merely the value of a rest cure for the artistic temperament. Yet here and there something is being done. A group, who, for convenience, may be called the naturalists, has at least recovered a fresh and vigorous idiom in paint. Redfield, the most accomplished member, is not represented this year, but we have Ernest Lawson's tingling Harlem River, George Bellows's Blackwell's Bridge, with a surging blue tideway; Gardner Symons's River Gorge, and Cullen Yates's The Rising Fog. One could wish this last hung by the Winslow Homers. It has the assured pictorial quality that the naturalists generally lack. Most of them paint and see with a sort of impatience that too often ends in swagger and casual emphasis. They are alive and help one to see keenly, but there is strangely little modulation in their product. In America to-day, there is no cleverer contriver of the minimum indication that spells light, distance, texture, than Mr. Bellows. Yet his East River scene tends to fall apart and abounds in uncertain indications. Gardner Symons has ably caught the look of a mountain in afterglow beyond a shadowed river valley; has caught everything but the main thing, the sense of vast space and of a unifying atmosphere. Mr. Lawson permits us to look through a crystalline lens that intensifies the view. Such painting as his is in itself almost pictorial, but not quite. Cullen Yates gets his picture out of simple constituents. An eroded cut in the rock swings down to a lapping sea, the horizon of which is lost in mist. Dipping strata, largely drawn, and giving a sense of continuity with unseen rock systems, interlock at the turns of the little gorge. It is extraordinary that so blond a mass seen under masked sunlight can be so vigorous, and that so hemmed-in a view can give its sense of immensity. It is in this kind of rhythm that much good painting is deficient. Childe Hassam naturally falls into this group. In poor light his Summer Idyl, with its tiny figure set in a big oblong of highly schematized saplings, seemed monotonous. While the fine executants just mentioned have notably improved and invigorated the practice of landscape art among us, many will feel that the most enjoyable landscapes are still painted by men whose vision is perhaps more distinguished than their handling.

Here may be mentioned Groll's desert scene, with its fairly illusionary clouds poised in the middle distance; W. A. Coffin's A March Evening, with an immensity of cold sky encompassing a sombre upland; Leonard Ochtman's Morning in Early Summer, a delicate blending of silvery and tawny values. Ben Foster, in his picture of a weedy pool at Longpré, reveals a novel and interesting manner, but there is perhaps some lack of pictorial harmony between the insistently realized water and the ghostly poplars beyond. William Ritschel's Night Shadows, the Grand Cañon, is one of the most ambitious and serious canvases shown. Its nearness to the Winslow Homers betrays the lack of characteristic and defining accent, or again it may be like many other landscapes the victim of a gloom cast by neighboring sky-scrapers. Charlotte Comans's Hills of Elizabethtown has a quiet and charming intimacy. William S. Robinson's Golden Days, which wins the Carnegie prize, is sumptuous in autumnal russets and ochres, but without distinction of arrangement.

As if in deference to the mighty shade of Winslow Homer, marine painting is somewhat in abeyance this year. Such strong men as Woodbury and Paul Dougherty are absent, so is Carlsen. Rehn and Bogert, from whom one expects better things, appear in rather sugary dilution. Henry B. Snell's Island, St. Ives, firmly set between a pale stretch of tidal sand and a lowering sky, and F. J. Waugh's colorful Harbor Cove in Sunlight, seem about the only contributions of note in this class.

In recent Academies street scenes, holiday crowds, have been prominent and good. This year the hanging committee has sternly set its face against these ephemeralities. Only Joseph Pennell, an accomplished master in this *genre*, occupies the line. Mr. Olinsky's illuminated Piazza of St. Mark's, Venice, has been sent to the "morgue," together with Ernest Lawson's Umbrellas, Coney Island. One can see that these are strong pictures, even by electric light, but only surmise that they are fine ones.

So long as the Academy has no wall space for large decorative designs, so long its representation of current figure painting will be merely fractional. We have this year the *plein-airistes* Dufner and Lillian Genth in agreeable but entirely familiar vein. George Bellows displays a new side of his versatile gift in a polo scene. It has not merely the rattle and rush of the subject, but is also well put together. Three very typical kinds of figure painting are represented by the president's contribution, a purely decorative, one might say calligraphic, arrangement of two female forms; by Kenyon Cox's A Book of Pictures, an academic performance in the best sense, and Charles W. Hawthorne's Refining Oil, which comes near the modern ideal of painting for paint's sake. Of Mr. Alexander's always debonair and graceful accomplishment no new word can be said. It has its roots, probably, in the rhythmical decorators of the past, the Venetians for choice, and it has taken eclectically the muted harmonies of the Whistler tradition. The result is a thing pictorially sure and invariably pleasing, but without great vigor or variety. It may be that a hundred art students have already murmured "old hat" before Kenyon Cox's academic group. If so, let them reflect that a few thousand up-to-date art students will pass away before any of them will do anything nearly as good. Mr. Cox has succeeded, where he often fails, in striking an equilibrium of bright colors, the linear drawing of the group of mother and child is exquisite, and the expression is where the mob always refuses to look for it, not in the eyes and lips, but in the whole figure. The abstract merits of fine analytical design and learned arrangement are not much valued to-day. No more will the taste that loves hasty syncopations and specious approximations be much valued in some wiser to-morrow. Mr. Cox's picture is not worse, but better, because it recalls the blithe mastery of early Renaissance painting in Italy. Though Mr. Hawthorne has an excellent eye for character and some regard for arrangement in line and mass, his preoccupation is mainly with paint. And this is, so far as it goes, high commendation. But it means, too, that he exalts the grammar of his art a little at the expense of its rhetoric. It is the flashing of green glass and pottery in a dusky interior that this time has challenged his able brush. These indications of an evanescent reality he grasps and records with fine gusto. As mere painting it is very nearly of the best. If it fails to make an impressive pictorial effect, that may be partly because the arrangement is obvious and rather uninteresting, and even more because the scale is miscalculated. We have in the dimensions of life what is really a cabinet piece. The same careless attitude with regard to scale is shown in Mora's spirited study of young yachtsmen, which unkind fate has relegated to electric light. And while on the sore topic of the "Morgue," be it said that by a proper installation of reflectors the horrors of what one regrets to call The Academy Room could be mitigated. The Independents last winter had the same problem, and solved it with relative success.

A good deal of the portraiture of every year necessarily is what may be called official. Workmanlike up to a certain point, deserving of exhibition, it arouses neither enthusiasm nor dissent. This year there is little stirring among the portraitists, and the exhibition, if reduced to a single class, might best stand on such contributions as Tarbell's President Timothy Dwight, superior official portraiture; Louis Betts's forthright head of Gardner Symons; Mary Foote's very picturesque study of Mrs. John Carpenter in keen blue hat and pink coat; Wilton Lockwood's tense and reserved presentment of Dr. J. W. Elliot; Albert Rosenthal's Peggy MacRae, wholly winsome in port, and a lovely shimmer of dull lilac and rose; Lydia

Field Emmet's Portrait of a Lady, most aristocratically conceived, and, last but not least, MacCameron's profound and sympathetic interpretation of a young man of poetic type, and Blumenschein's charmingly natural and humorous delineation of Mme. G. MacCameron's paint has beautiful quality. With little polychromy he achieves the sense and depth of color much as Venetian portraitists did of old. Blumenschein has not merely an extraordinary eye for the accents that mean character, but also a sympathetic humor that evokes idiosyncrasy, without suggesting caricature. Last winter his striking portrait of a comedian did not win me. I thought it overemphatic. I must have been wrong, for this year I delight in an almost identical treatment of Mme. G. How piquant the awkward way in which she slants comfortably across the oblong, how diverting the harmony, Debussy type, of a magenta footstool, with a wrap just flushed with palest salmon pink, how engaging the sense of good humor, self-possession, and genial self-criticism! Mme. G. is documentary of a civilization. It is as good as reading a novel in Henry James's latest manner, to reflect that no well-to-do American woman would ever permit Mr. Blumenschein to tell this amount of interesting truth about her.

Wilton Lockwood's Peonies is an exquisite bit of painting. Perhaps nothing in the exhibition except Alden Weir's little girl, in Playmates, approaches it for distinguished conception and flawless execution.

About a hundred and fifty pieces of sculpture are set in the South Gallery, and the apparent compensation for crowding is that for the first time in many years the display is fairly representative. French's memorial to Alice Freeman Palmer and Karl Bitter's portrait of President Angell of the University of Michigan, both high reliefs, occupy the end walls. French's composition is symbolic: a matronly woman guides from behind a slight girl who carries the lamp of learning. The general motive is that of an Attic stele. The arrangement of the figures is rhythmical, and the sense of protection and guidance is feelingly given. The relief is a good example of the studied grace of French's best work, and is a worthy memorial of the one-time president of Wellesley. Karl Bitter's presentment of President Angell is genial and evidently an excellent portrait. It hardly fills a space which in parts is overburdened with small accessories, but in its destined architectural setting the proportions may come right. James Earl Fraser's capital marble of a baby's head, and a finely posed nude called Grief, are from the point of view of craftsmanship among the more attractive displays. Three portrait heads by Grafly show a severe simplicity of modelling which is instinct with style. He has highly developed the sense of artistic economy, a rare merit. In contrast with this method, a young English sculptor, Theodore Spicer-Simpson, works out his bronze head of the late Moncure D. Conway in all detail, without losing the specific sense of intellectual melancholy. The work recalls not unworthily the famous Hellenic idealization of Homer. A group of portraits by Edith Woodman Burroughs and a marble portrait head by Evelyn Longman show kindred qualities of elaborate and sensitive modelling.

F. J. M., JR.

"Notes on the Post-Impressionist Painters (Grafton Gallery, 1910-11)," by C. J. Holmes, will be issued immediately by Lee Warner.

The sculptor Charles Verlet, professor at the École des Beaux-Arts, has been elected successor to Emmanuel Frémiet at the Académio des Beaux-Arts, after a spirited contest going to nine ballots.

A reproduction has been made by Dr. Gerolamo Calvi, under the auspices of the R. Istituto Lombardo di Scienze e Lettere at Milan, of Leonardo da Vinci's treatise on the nature of water, which is in the library of the late Earl of Leicester at Holkham.

In the Church of S. Martino a Strada, near Florence, has been found a large fresco of the Annunciation which is ascribed to Spinello Aretino.

A family legacy has added to the Louvre collection a series of more than sixty works of the elder Isabey (Jean Baptiste). It greatly supplements the known work of this portrait painter of the Revolution, Constituante, Directory, Empire, Bourbon Restoration, and Louis Philippe's monarchy. Isabey died in Paris in 1855, at the age of eighty-eight, and he painted to within a few years of that time. The new acquisitions begin with the artist's own portrait, painted at eighteen (1786); he already wears the hat which has since been identified with Bonaparte. From 1789 we have a crayon portrait of David, in whose studio young Isabey was working. There is a vignette of 1791, representing the luckless little Dauphin at his promenade near the Château of Meudon. There is a probable portrait of the Revolutionist, Collot d'Herbois; Madame de Staël, at thirty, with attractive looks belying the tradition of her ugliness; a sepia of Napoleon at Notre Dame; Josephine, Hortense, Madame Mère, the baby King of Rome, fifteen days old, and Marie Louise a year later; Talleyrand and Metternich in 1812; Josephine as retired Empress; Prince Eugène, Louis XVIII, Paul I of Russia, Duc de Bordeaux (future Comte de Chambord or "Henry V") as a boy in 1830; Dufaure, who lived to be Thiers's minister under the Third Republic, as he was in 1841, when he was a member of Thiers's cabinet, under Louis Philippe, and many unofficial celebrities in between.

An album, "La Peinture Chinoise au Musée Guimet" (Paris: Paul Geuthne, in the series of Annales du Musée Guimet), by Tchan yi-tchou and J. Hackin, reproduces some notable works from a late exhibition of Chinese paintings. It is prefaced by an excellent short history of Chinese painting; and its alphabetical index of painters is praiseworthy for being accompanied by the Chinese characters. Reproductions in the Japanese art review, *Kokka*, made known some time ago the rich collections of such paintings in Japan, and showed the inspiration caught from them by Japanese artists. The late Empress Dowager presented to M. Guimet two particularly noteworthy landscapes. One, by Tchao Po-kin of the eleventh century, has a delightful impressionist effect: the sun is setting behind a mountain whose base plunges in water from which mists are rising, while the summit is still in the golden light. There is a finely executed court scene by the Emperor Siuan-ho (twelfth century); paintings in camaieu of Tchao-Mongtou (thirteenth century); landscapes of T'ang-hi (fourteenth century); a magnificent warrior leaning on his sword, and various Buddhic or Taoist personages (seventeenth century); sample sketches from life, from which Chinese artists prepare the portraits of ancestors, showing great truth of expression. There are also rubbings from more ancient engravings on stone, reproducing among other subjects a portrait of Confucius, by Wou-Tao-tseu (eighth century), and similar reproductions of the works studied by Professor Chavannes of the Collège de France, in his book on Chinese sculpture, in stone, of the Han dynasties (tenth century). Besides its human and historic interest, all this opens new vistas in the technical history of art and art processes.

Another step forward has been taken in bringing forth from the shadows of documentary hints and expert's conjectures, a "Maitre de Moulins," as successor of Fouquet, painter of earliest Bourbons. A drawing in the Louvre collection, hitherto catalogued as Flemish of the fifteenth century, was swung round to this unknown artist at the exhibition of French primitives in 1904. Last May, at the Lanna sale, in Prague, the Louvre acquired a drawing (No. 199), on a leaf numbered "xxxiii," and torn from the same album as certain other designs which were dispersed at the Klinkosch sale in 1889. These have been attributed by Sir W. M. Conway to Gérard David, and as such the Lanna leaf was sold. Now, by comparison with other Louvre drawings and paintings, it is going to swell the mysterious master's claims to existence and fame.

A sixteen years' discussion of the authenticity and priority of two similar pictures of Leonardo da Vinci—Our Lady of the Rocks in the National Gallery, London, and La Vierge des Rochers in the Louvre, Paris—seems to be finally settled by Salomon Reinach in a communication, made to the Académie des Inscriptions et Belles-Lettres, of documents from the notarial archives at Milan. The French picture was painted by Leonardo at Florence before 1483. In April of that year he received an order from Milan for a Virgin with two prophets, and he took the two Milanese brothers De Pretis to aid him in accessory details. With his usual dilatoriness, he delivered the painting only in 1492; but, instead of prophets, he had painted a Virgin and Child with the Angel and St. John, in other words, a replica with a few varia-

tions of his Florentine picture. It is the Milanese picture which is in the National Gallery. It was painted with the help of Ambrogio de Pretis, probably, says M. Reinach, because Leonardo was overladen with other work. If this version is accepted, Messrs. Claude Phillips and MacColl come out best among the critics who have taken part in the controversy. Sir Edward Poynter was all at sea in his identification of the different periods of Leonardo's art. Something yet more severe should be said of Richter and Müntz, who led the attack on the British picture, disparaging Leonardo at the same time. It will be remembered that a previous communication of M. Reinach showed from similar documentary sources the futility of such art criticism about Leonardo's Mona Lisa as "the ineffable, mysterious, plaintive, and haunting smile that had fascinated and perplexed the world century after century in the portrait of La Gioconda!"

Finance

CHAPTERS IN HIGH FINANCE.

To a rather unusual degree, the Wall Street community has displayed interest in the rearrangement of membership in the firm, announced by J. P. Morgan & Co., whereby George W. Perkins, a partner since 1901 and a leading figure in the spectacular finance of the ensuing decade, retires, and two new partners of highly conservative antecedents are admitted—W. H. Porter, now president of the Chemical Bank, and T. W. Lamont, vice-president of the First National. The public's particular ground for interest was undoubtedly the great place which this banking house has filled in American financial history during the decade past. In the financial world, personalities play at times as large a rôle as events; indeed, when one reviews the notable chapters in recent Wall Street history, it is not easy to say which is the more important key to the story of the period—the influence of personalities on events, or the influence of events on personalities. No doubt the conspicuous individual achievements in the financial history of years like 1901 and 1906 and 1908 and 1909 would have been impossible but for the particular underlying conditions in each of the four years. But, on the other hand, it is extremely doubtful if events would have shaped themselves exactly as they did, on any of the four occasions, but for the personal qualities, ideas, methods, and influence of the conspicuous financial leaders.

The history of the world's great banking houses, in this and in former generations, is a fascinating study. But it is apt to be difficult to discover from it just how large a part, in any given instance, the individuality of partners played. From the beginning of great financial operations, the power and prestige of such a house depended also on the private capitalists with whom it could surround itself. Sometimes, membership of that surrounding group has been the focus of public interest, rather than membership of the banking house which acted for it. But, on the other hand, there are numerous instances where the leadership of the banking house itself has been of so vigorous and personal a character as to obscure completely the individuality of outside capitalists numbered in its following.

The familiar episode of Mayer Anselm Rothschild's getting his start in high finance through safeguarding the Elector of Hesse-Cassel's fortune after Jena, and returning it with interest nine years later, in the Waterloo year, was an individual achievement. But the great place which his five sons acquired in European national finance resulted much more obviously from their power of massing the financial resources of their race. Nobody but the Rothschilds could have defeated, as punishment for the expulsion of the Jews, Russia's extensive plans of 1892 for borrowing in Paris; yet that action was hardly a matter of individual initiative. It was action by the group. But the bold and aggressive stand taken by Nathan Mayer Rothschild in defence of British public credit, during the darkest days of the Napoleonic period, was a personal achievement; even his associates began to criticise him as a man who took rash chances.

As a rule, the high traditions of great houses have been sustained through a series of generations; yet even in this there have been exceptions. Walter Bagehot pays the highest tribute to the older members of the great London banking house of Overend, Gurney & Co.; but he adds that, later on, "the rule in it passed to a generation whose folly surpassed the usual limit of imaginable incapacity." This led to 1866. The inside history of the house of Baring Brothers has not been convincingly written. That house, too, was a family institution, and the family was and still is a very remarkable one; Lord Cromer, the financial administrator of Egypt, is one of its members in the later generation. But something went very seriously astray with the business judgment of the house in 1889 and 1890. The episode was the more extraordinary in that the natural following of the house in Lombard Street was drawing cautiously away from Argentine investments, at the very hour when Baring Brothers were underwriting and bringing out loan after loan for the Buenos Ayres government.

Among financial houses of the really highest grade, commercial death has been extremely rare. But changes in relative position of such houses are constantly going forward. The house of Morgan cut no such large figure in New York finance, two or three decades ago, as it does to-day. In the United States government's operations in the money market of 1878 and 1879, August Belmont & Co. easily held the centre of the stage. Probably Wall Street would say that the successive steps which really gained for the Messrs. Morgan their more recent commanding position were the government bond syndicate operation of 1895, the railway reorganizations of 1897 and the railway combinations afterward, and the industrial recapitalizations of 1901. These were in very large measure individual achievements, made possible by the remarkable personality of the head of the house. One of the interesting problems of the day is, whether the country itself may not have passed into a new economic era, which will give no further opportunity for achievements of that peculiarly spectacular character. If so, the great finance houses will have different problems of policy to solve.

However this may be, the century or so in which high finance on the modern scale has prevailed, in Europe and America, has established at least these principles: First, continued maintenance of a great position of the sort, by any banking house, depends on continuance of absolute public confidence in its character, capacity, and financial judgment. Beyond this, it is essential that the career of such a house should be marked by continuing achievement in large affairs—along the lines, however, of real conservatism. That such attributes will be largely created by the personality of those who direct the great financial houses, is the teaching of all the century's history; and that explains why financial markets watch with the largest interest all changes which come, in the vicissitudes of time, to the membership of such houses.

Now Ready

A HISTORY OF THE FRENCH ACADEMY, BY D. MACLAREN ROBERTSON:

An original history in English from the Academy's foundation, compendious yet adequate, treating of its General History; of that of its Dictionary, an institution of itself; of its Membership (with its composition in three different lists), whose literary achievement is placed under the eye of the reader in brief biographies in a more compact form than anywhere else between two covers, even in French. Shows clearly, also, the relationship between the five great national Academies and the Institute of France, of which the history is sketched in outline.

The authority of its sources, its thoroughness and completeness within its scope, its fund of information and anecdote, should make this book what it aims to be, a permanent work of reference as an authority in English on (in Hallam's phrase) "the most illustrious institution in the annals of polite literature," besides forming for the general reader an agreeable story and for the student an introduction to the French literary and political history of nearly three centuries.

8vo. Cloth-bound. Seven full-page half-tone illustrations. 405 pages. Price, $3.00 net. Postage, 15 cents.

AMERICANS: An Impression
By Alexander Francis.

SECOND EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to This Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning, and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

A GREATLY NEEDED WORK ON AN INCREASINGLY IMPORTANT SUBJECT

A Cyclopedia of Education

Edited by **PAUL MONROE,** Ph.D.

Professor of the History of Education, Teachers College, Columbia University; Author of "A Text-Book in the History of Education," "Brief Course in the History of Education," "A Source Book of the History of Education for the Greek and Roman Period."

To be completed in five volumes at $5.00 *net, each.*
The first volume will be ready on January 25.

Three conditions show clearly how greatly this work is needed.

First. The vast and varied character of educational literature, reflecting a corresponding variety in the actual practices and educational ideas.

Second. The growing importance of education as a social process, of the school as a social institution, and of the teacher as a social functionary.

Third. The increasing numerical strength and unstable character of the teaching profession.

Not only teachers, but professional men, editors, ministers, legislators, and every administrator who deals with the large questions of public welfare which are intimately connected with education, need a reference work which will give them the outlines of any educational problem, the suggested solutions, the statistical information, and in general the essential facts concerning any topic in education which cannot now be obtained from existing books of reference.

Among the Departmental Editors associated with Dr. Monroe are:

ELMER E. BROWN, PH.D., LL.D. United States Commissioner of Education, Washington, D. C.	SECONDARY EDUCATION
EDWARD F. BUCHNER, PH.D. Professor of Education and Philosophy, Johns Hopkins University.	BIOGRAPHY PHILOSOPHY
WILLIAM H. BURNHAM, PH.D. Professor of Pedagogy and School Hygiene, Clark University.	HYGIENE
GABRIEL COMPAYRE Inspector General of Public Instruction, Paris, France.	EDUCATION IN FRANCE

From THE CHRISTIAN ADVOCATE

December 15, 1910

The Nation, published weekly, in dignified typography, concerns itself with politics, morals, education, and literature. Independent in politics, but not neutral, its sword is seldom in its sheath or used for self-defence. Educational topics are treated with exceptional intelligence and vigor. The book news and reviews excel in fulness and thoroughness any department of this sort outside of the periodicals exclusively devoted to literature. The names signed to the letters in the section devoted to correspondence indicate the quality of the Nation's clientèle, probably the most intellectual in the land. (The Nation, New York. Weekly, $3.)

BOOKS—All out of print books supplied, no matter on what subject; write me, stating books wanted; I can get you any book ever published; when in England, call and inspect my stock of 50,000 rare books. BAKER'S GREAT BOOKSHOP, John Bright St., Birmingham, England.

For books hard to find, or any books, write to E. W. JOHNSON, Bookseller, 121 East 23d St. Good books and autograph letters bought. Correspondence invited.

WANTED—Numbers and vols. of *The Nation* later than vol. 70.
A. S. CLARK, Peekskill, N. Y.

The UNITARIAN ADVANCE

A MONTHLY MAGAZINE OF PROGRESS IN RELIGION

GEORGE H. BADGER, *Editor*

YOU have always taken it for granted, no doubt, that a religious magazine must necessarily be heavy, dull and uninteresting—though good!

Some religious magazines are just that. We aim to make THE UNITARIAN ADVANCE different.

We believe that Religion can be made the most interesting thing in the world,—if you have the right sort of religion: eager; up-to-date; virile; not a thing of cant, but a reality; not an echo of old-time dogma, but a live-wire of tingling progress.

CHIEFLY: are you not interested to have the world progress in reason, justice, truth and freedom: to have religion made human, rational, honest to the core, manfully invigorating, not thinly and softly sentimental, but stalwartly enthusiastic, kindling, and dramatic in modern zest of progress?

Well, that is what THE UNITARIAN ADVANCE is concerned with. Why not have a part in its enterprise?

One Dollar a year; three months for 25c.

THE UNITARIAN ADVANCE
104 East Twentieth Street
New York

SECOND EDITION NOW READY.

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning, and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

FIRST EDITION EXHAUSTED IN 7 WEEKS.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.
$5.00 *net. Postage* 26 *cents.*

BOSTON **NEW YORK**

MORPHOLOGY OF GYMNOSPERMS

By JOHN M. COULTER AND CHARLES J. CHAMBERLAIN

This work is a revised and enlarged edition of the book brought out by Professors Coulter and Chamberlain in 1901. Each of the seven great groups is here presented in detail, and a final chapter discusses the problem of phylogeny and points out the evolutionary tendencies. The extinct groups, notably the primitive "seed ferns," are now included for the first time; and vascular anatomy is fully recognized as a morphological subject of first importance. The entire presentation is thoroughly and systematically organized and arranged with a view to the greatest possible clearness. The illustrations are numerous and in large part original. 470 *pages*, 462 *illustrations*, 8*vo*, *cloth; postpaid* $4.22.

FLORENCE NIGHTINGALE

THE ANGEL OF CRIMEA

By LAURA E. RICHARDS

Illustrated with a frontispiece portrait of Miss Nightingale, and many other photographs and portraits. 12mo, cloth, $1.25 net.

The life of this wonderful and justly beloved woman, "The Angel of the Crimea," told by one whose father was in part responsible for confirming Miss Nightingale in her determination to devote her life to nursing. While the name of Florence Nightingale is a household word, the precise nature and scope of her work, and the difficulties and discouragement under which it was accomplished are unknown. As would be expected from the name of the author, the story, though written primarily for young readers, is told with an interest and a beauty of style that will cause many older people to enjoy it, and the record of so noble and uplifting a life is in itself sufficient recommendation for parents to wish to turn toward it the thoughts of their children.

Descriptive Meteorology

By WILLIS L. MOORE

Chief U. S. Weather Bureau

A book that brings the essentials of meteorology up to date, in an available form. The fact that meteorology may be an entirely new subject to the reader has constantly been kept in mind. An effort, too, has been made, by the inclusion of a chapter on forecasting, to show the practical uses to which the science of meteorology is every day being put. Chapter IX is especially of interest to those engaged in the navigation of the air.

Many charts and illustrations. Cloth, $3.00 net.

Problems of the Elementary School

By ARTHUR C. PERRY, Jr., Ph.D.

A book which cannot fail to interest not only superintendents, principals, and teachers, but the lay reader and the student of education as well. The first of its two parts deals with the general problem of the elementary school—its organization and the relation thereto of the curriculum and moral training. The second treats of certain specific problems in method and management; it offers solutions of these growing out of the author's personal experience in the school and class-room.

12mo, cloth, $1.25 net.

The Reconstruction of the English Church

By R. G. USHER

Instructor in History, Washington University

This book traces the development and reconstruction of the English Church in the day of Richard Bancroft, whose life it in part narrates. It is the result of long and unusually comprehensive research in America and England, with the assistance of such persons as the Archbishops of Canterbury and York and the Bishops of London, Oxford, Durham, and others. It will make a wide appeal to Catholics, to economists, to lawyers, and to historians because it deals with an important period of English History, concerning which no work has been published containing so much new material.

8vo, gilt top, rough-cut edges, 2 volumes, $6.00 net.

The Place of History in Education

By J. W. ALLEN

Professor of History, University of London.

This book is a scholarly treatise of an important subject. The author shows that the study of history possesses other values than the mere cataloguing of past events; and that it is worthy of a prominent place in any educational system. Cloth, 12mo, $1.50 net.

FOR EARLY SPRING PUBLICATION

The Religious Training of Children

By GEORGE HODGES

A wise and practical guide for parents, guardians, Sunday School teachers, clergymen, etc. Sane and suggestive in its discussion of such subjects as religious influences at home, church attendance, moral development, with practical chapters on prayer, the Sunday School teacher, etc. 12mo, cloth, $1.50 net.

Prejudices

By CHARLES M. FLANDRAU

Author of "Harvard Episodes," "The Diary of a Freshman," and "Viva Mexico."

Widely varied and familiar in subject, humorous and reflective in style, these essays, on such topics as servants, travel, parents, and children, actresses, etc., are exceptionally realistic representations of people in action and thought. Cloth, 12mo, $1.25 net.

The Nation

NEW YORK, THURSDAY, DECEMBER 29, 1910.

The Week

It is with much regret that we have read the report of the majority of the Senate's Committee on Privileges and Elections in the case of Senator Lorimer. It is, of course, true that Senator Lorimer was not personally connected with any acts of bribery, and, so far as is known now, not enough votes were bought really to elect him. But that Mr. Lorimer should remain in his seat in the Senate when it is known that there was proved bribery, does not argue in the Senate a delicate sense of what constitutes fitness among its members. Of course, if Mr. Lorimer were a high-minded man instead of the cheap machine product that he is, he would have resigned long ago and gone back to the Legislature for a vindication. The whole thing is enough to make any American hang his head, particularly when he remembers that the House of Commons last winter disqualified a man who it thought had, in the course of his canvass, utilized too many automobiles to be within the strictest construction of the Corrupt Practices Act.

Boss Sullivan of Illinois is having greater success in his efforts to name the next Mayor of Chicago than he had in his attempt to designate the next Senator from New Jersey. Samples of his work are the expulsion from one of the ward organizations of four precinct committeemen, elected by the primary, because they were supporters of Carter H. Harrison for the Mayoralty nomination, and the conversion of another Harrison supporter, who explained his change of heart in these words:

> It is true I was for Carter Harrison for Mayor. I am now for Mr. Graham. I will tell you why. The credit man for a large business firm called on me and asked me to be for Mr. Graham. I do collecting for this firm. The credit man told me that Mr. Graham had a large interest in the firm, and that inasmuch as I was in its employ, I ought not to oppose Mr. Graham.

At the meeting at which these facts came out, a statement was read showing that patronage outside of civil service protection, valued at the exact sum of $26,621.84, was due to the Third Ward. The expelled committeemen declare that the organization has no power to drop members who were elected in the primary, but at the headquarters of the party such action will be accepted as final in the distribution of favors. A movement has been started among the Republicans to nominate Alderman and Prof. Charles E. Merriam for Mayor, on the ground that the New Jersey idea of "the schoolmaster in politics" might work well in Chicago.

It is a pity that a journal devoted to such high aims as those that actuate the *Survey* should not exercise more care as to the admission of extravagant or misleading statements. Thus in the most prominent article in a recent issue, dealing with health conditions in Pittsburgh and entitled "Tomfoolery with Public Health," Samuel Hopkins Adams says, with reference to tuberculosis:

> Pittsburgh's situation in respect to this most terrible of all scourges is desperate. I know of no other word by which adequately to characterize it. Not that it is worse than in many other American cities. Indeed, the whole problem of tuberculosis seems to me to be growing constantly graver in a national sense.

There follow certain statements calculated to arouse feeling, but having not so much as the slightest tendency, so far as we can see, to substantiate the above assertion. The reader, if he stops to think, must wonder on what basis Mr. Adams arrived at his discouraging conclusion that, after several years of unprecedented effort in combating tuberculosis, the situation is graver than ever. Our own suspicion is that he derived this conclusion entirely from the workings of his inner consciousness. The latest census report on mortality statistics, which is for the year 1908, tells a very different story. For the entire registration area of the United States, the annual number of deaths per 100,000 fell from 201.6 in 1904 to 193.6 in 1905, 184.2 in 1904, 183.6 in 1907, and 173.9 in 1908. In Pittsburgh, the rate was 181.6 in 1904, 185.1 in 1905, 160.0 in 1906, 139.1 in 1907, and 139.2 in 1908. Mr. Adams may have better sources of information than those accessible to the Census Bureau, but no indication of the possession of such facilities is vouchsafed by him in connection with his alarmist statement.

Mr. Rockefeller's final gift of $10,000,000 to the University of Chicago is accompanied by the resignation of his personal representatives from the board of trustees. In his statement, he refers to his "early and permanent conviction that this great institution, being the property of the people, should be controlled, conducted, and supported by the people, in whose generous efforts for its upbuilding" he has "been permitted simply to coöperate"; and in the minute adopted by the board of trustees on the occasion, it is emphatically asserted that Mr. Rockefeller has never suggested the appointment or removal of any professor, and has never "interfered, directly or indirectly, with that freedom of opinion and expression which is the vital breath of a university." It is gratifying to find these aspects of a university's life and significance made so conspicuous on an occasion in which the magnitude of the series of gifts now brought to a close might have overshadowed other considerations. The total of $35,000,000 is beyond all precedent, but for that very reason the importance of guarding against the suspicion of domination by the power of the purse has, from the beginning, been peculiarly great at Chicago.

The announcement that Columbia University and the College of Physicians and Surgeons are to be brought into alliance with the Presbyterian Hospital means much for medical education in New York. The gift of $1,300,000 by a donor as yet unknown which makes this plan possible proves once more that our rich men are as far-sighted in cherishing projects of benevolence as they are in money-making schemes, and that they are anxious to make the city of their pride preëminent in education and philanthropy as well as in finance. The joining of forces now made feasible should do for Columbia much that the Johns Hopkins Hospital in Baltimore has done for the Johns Hopkins University. With the new facilities for coördinated study of medicine, and with the near-by Rockefeller Institute for Medical Research going on to new conquests,

New York ought soon be to be in a position to attract ambitious medical students from all over the world.

Now that statistics have demonstrated the connection between high marks in college and success in life, one is prepared to meet with the further paradox that Greek is the best training in the world for a scientific career. Nothing short of this is the contention of a writer in the *Classical Journal*, who cites a Dartmouth professor's statement that the boys selected to assist in the science courses are almost uniformly those who offered Greek in preparation and no science; and that of an Amherst biologist who has found the same type of boy best equipped for work in his department. This is interpreted to mean that the Greek boy, before the end of his college days, has outstripped the science boy in his own field. All of this is in line with the privately expressed opinion of an eminent astronomer that Greek offers better training than science because it is generally better taught; scientists of first and even of second quality are apt to be too much engaged in research or otherwise to enter the classroom, whereas the best among the Hellenists devote themselves to teaching because there is nothing else for them to do with their talents. If there is here the suspicion of a fallacy, the argument itself is a sign of the times. An article in the *Popular Science Monthly*, attacking the classics, moreover, endeavors to reopen the battle of the books by asserting the intellectual and artistic superiority of the moderns over the ancients. The return of the debate to the realm of literature is almost refreshing; civil strife among the books is even at its worst preferable to the more modern warfare between them on the one side and the allied frogs and mice of the science laboratories on the other. Indeed, the time seems almost ripe for some reactionary to startle the world with an argument that the study of the classics is good in itself.

The death of Adams Sherman Hill takes away a man whose knowledge and ability had made him an influence in places far removed from his classroom. How much the higher regard in which the teaching of English is now held over its former low estate is due to the quiet work of this one instructor, it is impossible to estimate. But no one who knows anything of the extent to which his various rhetorics have long been used, not only by the ordinary teacher and his pupils, but by other text-book writers, can doubt that their author was the greatest single factor in bringing about the importance now everywhere attached to the study of English and the complete revision of the method of teaching the writing of English which came to pass at Harvard from 1880 on. He did a pioneer's work, but he did it so well that those who were capable of making the necessary improvements and advances upon it found themselves going back to him for the fundamentals. He was, moreover, within the classroom one of the most brilliant and stimulating of teachers. No one could sit under that keen, vigorous personality and not have his whole range of vision enlarged. Finally, it is interesting to note, he went straight to his teaching from the writing of newspaper English.

In the statement made here before the Legislative investigating committee by the president of a fire-insurance company, that he did not care anything about a $2,500,000 or $3,000,000 fire loss, that in fact he would rather have it, there is nothing surprising or shocking —the statement being understood to be made in a purely business sense. The business of a fire-insurance company is to insure. Setting aside terrific disasters which upset all calculations, the bigger the fire risk the greater the scale of the insurance business; and as for rates, they can be made high enough to cover the risk. But while all this is true from the standpoint of the insurance company, a very different aspect is presented from the standpoint of the insured, and of the community at large. Like other matters relating to fire insurance that have cropped up in the course of this inquiry, this brings up considerations of great importance that cannot be properly looked into by an ordinary Legislative committee, but which ought to be thoroughly studied and authoritatively reported on by a competent body of expert investigators. We refer to the matter of discrimination in rates of insurance granted to property according to the degree in which it is safeguarded against fire. To what extent these safeguards shall be adopted —both as to construction and as to defensive appliances—is dependent upon the policy adopted by the fire insurance companies; and the remark above quoted is a reminder of the absence in their case of any vital interest in the promotion of sound methods. In the mutual associations, of course, in which the most extreme standards are insisted upon, the insurance rate drops to a very small amount; but apart from this it is doubtful whether anything even remotely approaching a proper discrimination is practised.

"Free Trade Helping Our Island Traffic" is a newspaper headline over the encouraging report of the chief of the Bureau of Insular Affairs. Of course, it helps traffic; that is the purpose of free trade, precisely as it is the purpose of protection to keep down traffic between nations. Here we have another conspicuous example of the benefit of freer commerce and incidentally convincing evidence of the damage done by false ideas as to nationalities. A few years ago, in Spanish days, any one who suggested the removal of tariff barriers against Philippine products would have been decried as an enemy of American labor. He would have been asked whether he wished Philippine pauper-labor to take the bread out of the mouths of American workingmen, with their high standard of living. Now, with an approach to free trade, the only persons complaining are the Trusts that profited by the tariff. If we could conceive of the United States annexing France or Brazil, the tariffs against those countries would come off precisely as have those against Porto Rico and the Philippines, and as the duties upon Cuban products ought to disappear, as one contribution to a decreased cost of living. We have but to consider the world as a group of federated States to see that the folly of tariffs between them is as great as the absurdity of tariffs between California and Maine.

So far as the rest of Gen. Edwards's report is concerned, it is, if we may judge by the printed extracts, decidedly encouraging. He states that peace and order have reigned throughout the Philippine Islands, not a single call having been made upon United States troops, and this favorable report is hardly affected by the fact that since it was written United States cavalry has been

called out in one of the southern islands. It is evident, too, that the arts of peace have progressed greatly during the last twelve months. Many miles of railways have been laid, the number of Filipino depositors in the postal savings banks has risen from 4,927 to 8,547, and the Filipinos now constitute 65 per cent. of the depositors. There have been excellent crops. What Gen. Edwards calls the "Filipinization" of the civil service is also steadily progressing. Filipinos are put in more and more responsible positions and are found to be thoroughly reliable. So far as skilled workmen are concerned, there is no complaint that they will not work. Altogether, the report makes good reading—if only there were anything to be found in it to make one believe that the Filipinos hated the Americans less.

The cost of voluntary idleness is emphasized by a writer in the London *Spectator*. Calculations are often made regarding the waste caused by excessive drinking, or by bad housing, preventable disease, and premature death, says this writer, but probably the loss occasioned by sheer love of idleness, resulting in neglect, unemployment, and under-employment, outweighs them all. Especially does this seem to be true when it is considered how large a proportion of those other wastages could fairly be charged to it. "Men drink because they are dispirited, and are dispirited because they are idle." This analysis brings out the desperate problem of the social reformer. It is the lifting of those who will do nothing to lift themselves. In a less closely-knit social order than ours, one might shut his heart even if he could not shut his eyes, and let the dregs of humanity settle to their fate. But no such course can be thought of in a modern community, with its intimate inter-relations. Pity and selfishness unite to urge the doing of whatever can be done to keep the lowest level of society as high as possible.

The diplomatic tone of the French Government toward striking workmen is audible again in the measures announced for the purpose of preventing general strikes. Conciliation and arbitration are proposed as weapons "as powerful as the strike." The latter, in the interest of the public, must be forbidden, so far as employees of the state are concerned. On the other side, it is pointed out that the state, in setting up public monopolies, does not waive its right to interfere in behalf of the workingmen. There is something amusing in the reference to the Declaration of the Rights of Man as the source of these concrete provisions for preserving order and determining wages and rates. That declaration obligingly lends itself to any borrower, and the real process of the Ministerial reasoning has doubtless been to arrive at conclusions by the direct path of applying logic to existing conditions, and then to hitch the results to a document the authority of which no party would dream of questioning. This, too, is diplomatic. But what framer of the Declaration would have believed that the progress of international arbitration would have been such as to make it seriously available as an example for industrial war?

Germany's finances, as unfolded to the Reichstag by the Minister of Finance, Herr Wermuth, are in a better condition than for some years, but can hardly be said to be as yet on a satisfactory footing. Resort to loans is still necessary, though the sum to be borrowed under the present estimates is but $25,000,000, as compared with an average of at least $60,000,000 for the past ten years. The Finance Minister stated drily that "the market still showed considerable distaste for German loans." In regard to the yield of the new taxes enacted a year ago, Herr Wermuth admitted that the expectations of the Government had not been met. The product of the new taxes had been officially estimated to be $117,000,000; in actual result, they had yielded $72,000,000. An increased revenue from them of from $7,500,000 to $8,500,000 was estimated for 1911. While the Government had to confess that the new taxes had not turned out as well as was hoped, yet they evidently constitute a great and sure means of income. Let the Reichstag, appealed the Finance Minister, "devote all its efforts to rolling the rock of their finances up the hill." A voice from the Left cried out, "an apt metaphor." It is, indeed—for Germany and all other countries.

In Spain, Prime Minister Canalejas has won a great victory in finally getting his so-called "padlock bill" (*ley de cadenas*) through the Cortes. It is really but a moderate measure in the struggle with the Vatican, providing only that no more religious orders shall be established in Spain, and that those in existence shall be brought under stricter Government control; while the life of the law is limited to two years, in the obvious hope that before they expire negotiations with Rome may have resulted in modifying the Concordat so as to put the whole matter on a fair and permanent basis. Spain's troubles are something other and deeper than Clericalism. Social and economic causes really produce more unrest than the religious question. Yet there can be little doubt that the triumph of the Ministry in its attempt to curb the regular clergy, will strengthen the liberal movement in general, and help bring about those political and industrial and educational reforms which reflective Spaniards believe to be the crying need of their country.

A considerable stir in Italian universities has been caused by the decision of the Government that professors must take the oath required of all employees of the state. This oath, which in form dates back to the unification of Italy, runs as follows: "I swear to be faithful to the King and his royal successors, . . . and to discharge all of my official duties with an eye single to the inseparable well-being of King and country." The point is that not a few university professors in Italy are Socialists or Republicans, and cannot take this oath without mental reservations. It is something which has not been asked of them hitherto, as, indeed, the laws relating to education seem clearly to differentiate the occupants of university chairs from other public employees. To emphasize the absurdity of the requirement, it is pointed out that several professors in Italian universities are foreigners; they certainly cannot be compelled to swear allegiance to Victor Emmanuel and the royal family. Prof. Luigi Einaudi of the University of Turin has an article of vigorous protest in the *Corriere della Sera*, arguing with abundant citation of the statutes that the oath in question was never intended for teachers, and calling upon the authorities to recede from a position which would be a reproach to the nation and "disastrous to the liberty of learning."

LANDSLIDES AND DIRT.

Political landslides are in several respects true to their analogy. In politics, as in nature, when a great dislocation occurs, the loosened masses sweep along with them a vast amount of offensive rubbish. A landslip cannot discriminate, but takes in its rush barren rocks as well as fruitful soil; and if heaps of refuse are in its course, they, too, are borne onward and may appear to be the most prominent thing on the surface. And in the history of our political upheavals we know well that, along with good men, many of the unfit or even scoundrelly are carried into office. This has been true of both parties. The Cleveland landslide of 1892 gave a temporary grip on political power, in the States and in Congress, to many an incompetent, many a corruptionist, many a party traitor. And the successive Republican electoral sweeps from 1896 to 1908 brought to the front a more precious set of rascals than those whose presence in the Continental Congress John Adams recorded. Is the landslide of 1910 to be an exception to the rule?

Probably not in its entirety. A great deal of the wood, hay, and stubble that the landslide of last month fetched away with it, will doubtless remain as a vexatious incident of a political movement which was, in the main, needed and wholesome. But there is noticeable to-day one difference from former periods of the kind, and that is the encouraging anxiety of the Democratic party to take measures betimes to prevent the landslide from being obscured by the dirt. What we particularly mean is the effort put forth in the States which unexpectedly chose Democratic Legislatures, and which now have it in their power to elect Democratic United States Senators, to secure the choice of men from whom neither the party nor the nation will be compelled to walk backward with averted gaze. About this matter, there appears to be a new and gratifying sensitiveness, and a surer party sagacity. It is felt that action must be taken before the mischief is done. Loyal and sensible Democrats do not want to see the President, whom they hope to elect in 1912, hampered and betrayed as Cleveland was by the Gormans and Brices and Smiths and Murphys who were in the Senate of his day. That is the chief reason why the Senatorial contests in New Jersey and Ohio and New York are followed with such interest throughout the country. To avoid being handicapped and mortified and discredited by unworthy Senators after their election, the brains and morals of the Democratic party desire to take a bond of fate by preventing such a choice at all. That is the explanation of the opposition to McLean in Ohio, to Smith in New Jersey, and in New York to a man like Sheehan.

This is no time for a Senator with "claims" upon the party. The fact that a candidate has freely given money in past elections, that he has helped to keep up the party organization in times of discouragement, or that he is expert in laying pipes or pulling wires, cannot be allowed to weigh for a moment against a proved disqualification, whether in ability or character. The matter of an election by the Legislature ought to be treated exactly as if it were a question of a nomination to go before the people to be voted upon. In both New Jersey and New York, the Democratic party is now committed to the popular election of United States Senators. In either it ought to be flatly impossible for a man to be chosen who confessedly would not have a ghost of a chance if the voters could get at him directly. Fancy James Smith an avowed candidate and on a ticket that could be scratched! Fancy W. F. Sheehan nominated for Senator at the same time that John A. Dix was named for Governor! It was unthinkable before the election, and it ought to be unthinkable after.

Anyhow, such a thing cannot be done in a corner. We know what discussion of records and sifting of political and personal associations would have filled the press, if either of the men referred to had been a direct candidate for the Senatorship. But they will have to encounter the same sort of exposure and attack if they seek it from a Legislature, instead of from the people. Mr. Sheehan, for example, must be perfectly aware of the deadly ammunition which the Republican newspapers are prepared to expend upon his candidacy, if he announces it. Their guns are already shotted, waiting only the signal to fire. And their aim will be not only at Mr. Sheehan, but at the party which is asked to accept him. This, they will say, is the promised Democratic reform! This is the new leadership, this the cutting free from a discredited past!

There is no disguising the fact that the situation is critical. The very labor which high-minded and disinterested Democrats are putting forth shows how acute is their sense of the peril. A great party victory has been won, but the danger is that some unworthy intriguer, some "fellow in the cellarage," may render it empty by making one of its leading results contemptible. If the New York Democracy cannot elect a Senator whose views on public questions are known, who has taken his part in the intellectual and moral work of his time, who can speak and give counsel, whose election would be universally hailed as a sign of a new time and a proof that the Empire State is to be represented in the Senate by neither a money-bags nor a dummy nor a corruptionist, nor by a politician every drop of whose blood has eyes that look downward, then it may as well confess that the Democratic landslide of 1910 did little for it, except to cover it with dirt and disgrace.

THE "SEPARATION OF POWERS."

Prof. H. J. Ford of Princeton has an interesting article in the January *Scribner's* reviewing the origin of the American theory of sharply divided powers in government, and making some remarks upon its practical working. He has little difficulty in showing that Montesquieu—whose influence upon the framers of our Constitution is notorious—misunderstood the actual nature of the British Constitution, as, indeed, did those English commentators whom Montesquieu followed. The paper account of the relations of the English executive and the English legislature was very different from the fact itself. This has been shown by Bagehot and a host of others. In reality, there was not the complete separation of functions, "power being checked by power," which Montesquieu supposed. Even in the eighteenth century the executive was in England a great force in legislation; and the development of Cabinet government has brought it about that to-day the executive is the chief force in legislation.

In going over this ground, Professor Ford's main purpose is to suggest that the American doctrine of "separation of powers" is not only thus mistaken in its supposed derivation from English

practice, but is also a bad thing in itself. Entrenched as it is in long tradition, it ought rather to be regarded, in Professor Ford's opinion, as a harmful superstition. It paralyzes vigorous initiative, diffuses instead of concentrating responsibility, and has proved not merely a drag upon our legislative progress, but an active source of political corruption. Moreover, the theory is breaking down. We see it here quietly abandoned, there openly ignored. The commission form of municipal government, of which the vogue seems to be steadily on the increase, is a direct denial of the sacredness of the separation of powers. And in State and nation we more and more often find that resolute executives find ways to take part in the work of legislation. Professor Ford foresees an entire reconstruction of our forms of government, marked by an ever franker desertion of the ancient theory of divided powers, though he expresses the hope that this constitutional reorganization may be "gradual and safe."

Without denying the general historical soundness of Professor Ford's position, we may yet observe that there is such a thing as being misled in the political history of the United States, too, by a paper theory of separated powers. Because they are written in our Constitution, upheld by our jurists, and lauded by our orators, it does not follow that they have always been regarded like a law of the Medes and Persians which altereth not. Some executives have a store of energy that insensibly passes from them into the coördinate branches of government. On the other hand, resolute and daring leaders in the legislative branch may trench upon executive powers. In the impeachment of Andrew Johnson they sought virtually to destroy the Presidency altogether, or to reduce it to no more than the importance of the Presidency of the Swiss Confederation. Even a member of the judiciary, like Marshall, may far overpass the limits which had been thought to mark his functions, and render himself a force to change or vivify the whole conception of the government. Indeed, the "powers" have never been kept in separate and water-tight compartments. They rather adjoin each other like fluids divided only by a thin membrane, through which the process of osmosis is continually set up. No one with his eye close on the fact could assert that the "powers" were rigidly separated under Jefferson or Jackson, under Lincoln or Roosevelt. Our paper theory collapses under the weight of facts as surely as did the English.

It is, however, when Professor Ford leaves the historical path for the speculative or—shall we say?—the dogmatic, that we feel most like questioning his views. He gives to his article the badly chosen title, "The Cause of Political Corruption"; and commits himself to the statement that a democracy cannot make the principle of separated powers work without corruption. He adds: "This is the secret of the disharmony between American society and American politics. The rule of the people cannot be made effective for lack of appropriate institutions." Now, if our author had confined himself to asserting that the governmental maladjustments which he signalizes are one cause of political corruption, there would be little to say; but in declaring that the evil upon which he dwells is "the" cause—alone sufficient to account for vote-buying and bribe-giving and stealing from the cities and robbery of the Treasury at Washington in the shape of bounties and pensions and needless offices—he seems to us to be as open to attack as any of the rash generalizers whom he corrects. Corruption is not wholly dependent upon political forms or governmental machinery. It may be facilitated by one system more than another, but the ultimate causes lie deep in the habits, the circumstances, the *ethos* of a given people. It was not the separation of powers which made the corrupt England before which Benjamin Franklin stood aghast. Completely fused powers did not prevent the government of Napoleon from being one in which plunder was rife. Boss Tweed had completely disposed of the "balances" of constitutional government. He had usurped all the powers; he was executive, legislative, and judicial, all in one; he was the whole thing in such a way that he could defiantly ask: "What are you going to do about it?" It is impossible to assert that the sink of corruption into which he dragged New York was due to "the" cause that Professor Ford points out. The analysis has to be pushed further. Certain types of politician, certain tempting opportunities, certain demoralizing measures of legislation—like protective tariffs and pensions—will work corruption under any system and can be prevented from doing so by no mere system. Both cause and remedy lie elsewhere.

There is nothing but praise for the spirit of cautious experiment in which Professor Ford would have the changes which he advocates undertaken. The new form of city government must be tried out, instead of being hastily made universal. The endeavor to give the executive more power over legislation had best at first be tentative rather than thorough. We are not yet ready for a "plebiscitary" Governor or President, one who appears as the alleged mandatory of the people and demands that all others yield to him. Not even on the score of efficiency in government are we prepared to put all power in the hands of one man. The separation of the powers makes for stability and even, sometimes, for orderly progress when the method of convulsion and instant "doing things" leads no whither. There is on this subject a passage in Montesquieu which Professor Ford does not quote, and which is, in substance, as follows: "The people with a hundred thousand arms sometimes destroy everything, and then, with their hundred thousand feet, find it impossible to move."

LET US STANDARDIZE.

Our colleges and universities have been long under fire, and in many ways, yet, strangely enough, the fundamental trouble with them has still been hidden. But now that—thanks to the report made by a mechanical engineer to the Carnegie Foundation—the light of modern industrial methods has been thrown upon them, there will no longer be any excuse for their persistence in evil. It may take a little time to put the new standards into operation, but that is merely a detail. The new day has dawned, and the only question is what institutions will be foremost in gaining the favor of far-sighted and broad-minded men of wealth by conforming their ways to the principles of industrial efficiency. Student-time-units per professor, number of pages of standardized lecture notes, coördination of janitor-work with teaching-time, and a score of other measurements of efficiency which will occur to every competent college president, will take the place of those vague and intangible

ways of estimating the merits of our institutions of learning which have hitherto prevailed. To argue the merits of the change would be a waste of words. In this age of industrial and commercial advance, a reform which means progress toward mechanical standardization of methods and values is sure to receive a universal welcome; its success is assured from the start.

But as the crying need of mechanical standardization has been so surprisingly overlooked in the college and university world, it will occur to every thoughtful person that there must be a number of other departments of human life, fully as important, in which the same defect exists and is equally in need of remedy. Nor does it require much looking about to find them. Take the case of mothers, for example, in their relation to infants and little children. It has probably not occurred to one mother in a thousand to consider whether the time she expends upon endearments and caresses, upon entertainment and instruction, is applied in the way calculated to produce the maximum results as regards either the happiness of the child or its future economic efficiency. Nor can it be expected that any individual mother could make such a calculation, even with the best will in the world. Only through systematic observation by trained experts can any trustworthy conclusion in these matters be arrived at. A certain amount of kissing and fondling is doubtless good for a child, but who shall say whether a considerable percentage of the time actually devoted by the ordinary mother to this purpose might not be better employed in other ways? It will be evident to any scientific and mechanical mind that actions in this field based upon spontaneous impulse, upon the inspiration of the moment, must, in the nature of things, be in the highest degree wasteful. The most important of all industries is that of rearing human beings, and yet in one of its chief phases it is allowed to go on in an utterly haphazard fashion, without supervision by experts, without any statistical tabulations, without any standard schedule. Surely it cannot be long before some beneficent multi-millionaire will establish a Foundation whose income shall be used to bring at least some approach to orderly and business-like methods into this domain.

It is needless to multiply examples; they exist around us on every hand. Who, for example, will not see that the inadequate hold of the Christian religion upon mankind through all these centuries has been due to the absence of scientific methods in the business of preaching? Had accurate statistics been kept of the number of souls saved by each minister or priest per annum, of the amount of time he spent in parochial visits on the one hand and in preparing his sermons on the other, of the percentage of attendance at his services, etc., a business organization would long ago have been built up that would put to shame the Pennsylvania Railroad and the Standard Oil Company. And, indeed, we can see in some professions that even a distant approach to mechanical systematization is capable of producing beneficial effects of a striking character. In the matter of acting, for example, the modern practice of playing the same part a thousand nights in succession has effected a revolution in this ancient art. We no longer have the erratic manifestations of mere personal genius which, in a more primitive day, caused people to go into childish raptures over a Booth or a Salvini or a Garrick; when the manager finds out what is wanted, he just sets the actor to work doing that thing night after night, knowing that in this, as in all other employments, precise mechanical repetition means the greatest economy of effort and the largest output. And again, in the author business, has not everybody observed the rise that has taken place in the standard of literary excellence since the practice of a monthly announcement of the six best sellers has provided us with a truly scientific method of finding out what's what?

While, therefore, the merits of a proposal to standardize our universities, to abolish life tenure of professorships, and regulate research speak for themselves, it is somewhat interesting, perhaps, to speculate on the probable origin of the idea. And here we venture a conjecture which we think must commend itself to the judicious. It is not so much to the defects of our own universities, we imagine, that the scheme owes its inception but rather to the notorious failure of the universities of Germany, in which these defects have been far more pronounced. There they have never even had such a thing as a college president; and the professors have not only had an absolute life tenure, but have been allowed a degree of liberty in teaching that is simply scandalous. This has been going on for generation after generation, and everybody knows the result. German students have been slipshod and inaccurate, and no foreigner has gone to a German book for enlightenment or to a German university for training. As for research, these Germans have simply run riot; a German professor will spend years of his own time and that of his students in some obscure research, without asking anybody's advice or consent. And the consequence has been not only that deplorable intellectual sterility to which we have already referred, but a backwardness in the arts and industries depending on the applications of science —the chemical industries, for example —which has made modern Germany a laughing stock to her European neighbors. If we wish to avoid a like fate, we must hasten to standardize our universities, set time-clocks on the professors, and guard with scrupulous care against the spending of either time or money on any research that has not obtained the formal approval of the president of the university, the board of trustees, and the Consolidated Audit Company.

RAILWAY REGULATION AND RAILWAY IMPROVEMENT.

We do not fancy that anybody is going to take seriously the suggestion made last Thursday before the Railroad Securities Commission by Mr. Robert Mather, a man formerly prominent in railway management, as to the logical next step in connection with Government regulation. Indeed, it may be set down as highly probable that Mr. Mather, and other serious and competent railway men who talk in a somewhat similar way, do not mean any such proposal as he made to be taken practically, but rather as a sort of *reductio ad absurdum* of the policy of rate-regulation. "Federal regulation," he said, "has put the railroads of this country in the position of not having got sufficient means or credit to go ahead with their work of development, and in view of such impairment of credit, it is urgently essential that something should be done. . . . When such a condition is brought about, and when

the great mass of second-class securities are made undesirable by Federal regulations, I say it is time that the Government should extend its credit to the railroads in order to assist them in their difficulties."

To prove that any such condition actually exists would not be easy. Of course, there can be found particular railway properties whose "second-class securities"—securities other than first-mortgage bonds and the like—are at the present time "undesirable," but there has never been a time when that was not the case; and we venture to say that, if a general comparison were made, railway stocks would be found to-day in quite as good standing in comparison with gilt-edge bonds as they have been at most periods before government regulation was thought of. It is a tendency that few persons whose interests are affected can resist, to ascribe adverse phenomena that have occurred since the passage of some obnoxious law to the operation of that law, and even to see such phenomena where they do not exist. A remarkable example, to which we drew attention at the time, was furnished some months ago by no less a man than Mr. James J. Hill, who found that extraordinary losses had fallen upon our trade across the Pacific in consequence of the workings of the Hepburn act; the fact being that his comparisons were made with the enormous figures of the years of the Russo-Japanese war, which happened to occur shortly before the Hepburn act was passed. It is easy to have a blind eye to the things one is not anxious to see.

It is fair to suppose, indeed, in justice to such a position as that represented by Mr. Mather's talk, that, in the minds of those who hold it, it rests rather upon the abstract logic of the case than upon the facts adduced in its support. "The Government having gone so far," says Mr. Mather, "it should go still farther." Having in a sense put a limit on profits, it ought to guarantee that the resources necessary for successful operation and maintenance shall be provided. The answer to this may not be entirely simple, but it is adequate. In the first place, the existing procedure itself cannot be reduced to any strictly logical scheme; for, like the mongrel system it displaces—a system that was itself half-competitive, half-monopolistic—it deals with conditions of an exceedingly heterogeneous character in an exceedingly complicated manner. There is no exact limitation of profits. The rate fixed in any one case is the resultant of a thousand comparisons and a thousand considerations of equity. And, secondly, it must be pointed out that if logic is your cry, you cannot stop at the action contemplated by Mr. Mather. If mere logic declares the next step after regulation of rates to be government guarantee of securities, much more emphatically does it declare that the next step after that—a step which must follow much more swiftly—is government ownership. Of one thing we may be sure, the business is not going to be settled by abstract logic, but by considerations of practical wisdom and expediency.

However, we do not wish to be understood as denying that the consideration at the bottom of this and similar pleas is of most serious importance. It will not do for either the Interstate Commerce Commission or the Railroad Securities Commission or the public to lose sight of the cardinal importance of maintaining such an attitude toward the whole question of regulation as will continue to attract the investment of capital in railway betterments. There is not, we believe, on the part of either of the official bodies, any reason to fear that this consideration will be neglected; in the case of the public, there is, of course, always more or less danger of a thoughtless or short-sighted insistence on immediate gains at the cost of permanent well-being. There is a vast amount of improvement that our railway system needs, and any policy that brings a little immediate advantage at the cost of discouraging the investment of capital for the procuring of these improvements would be a costly error. But it is in the power of the great railway men themselves to do more than any one else toward forming a sound public opinion on the whole subject. This they can do by taking a sound position themselves; accepting regulation as established, and stating their case not as special pleaders, but as men who, knowing the facts better than anybody else, can and will present them to the public with entire fairness and impartiality.

LOGIC AND LIFE.

The rare conjuncture by which, according to Japanese zodiacal symbolism, the festival of a certain shrine fell recently upon the Dog's day of the Dog's month of the Dog's year, was responsible for several serious injuries. Upon the occasion of this festival charms made of paper are sold, having the power, if tradition does not err, of protecting the possessor against disasters by water. The coincidence of the three "Dogs" induced the belief that water-charms purchased on that day would be especially effective, and the result was a rush through the temple gates as soon as they were opened, in which several of the eager charm-buyers were hurt. The fate which superstition thus met—the incurring of a present misfortune in the attempt to provide by fanciful means against future trouble—seems altogether fitting to our irreverent Western way of thinking. We have so long been emancipated from such gross credulity that it is difficult to appear tolerant of it. Who among us fears a comet? What have we ever found terrifying in the notion of the evil eye? When could any one accuse us of beating drums to drive away a pestilence? Our actions are governed by reason.

A little consideration, nevertheless, suffices to explain the irrational mental processes which we stigmatize as Oriental. It is only because we are, happily, accustomed to the idea of effect following hard upon cause, that we take it as a matter of course that the swallowing of a certain amount of any well-advertised nostrum is succeeded by improvement in the bodily condition. Let due allowance be made for unfamiliarity with the reasoning behind the facts, and is it so strange that, to an unenlightened being, there should not be that connection between remedy and recovery concerning which the demonstration of experience confirms the forecast of reason? Could we wonder, indeed, if to the savage mind there seemed something in the mysterious performance not far removed from his own trusted use of charms? Both are rewarded, often, by the desired effect. And does one lose faith in reason because it makes an apparent mistake now and then? If we are to leave off our pills and powders whenever we fail to discern their beneficial results, too many of us will drift into forgetting

them altogether. We must, therefore, be charitable to the foolish Oriental.

We shall be the more inclined to such charity if we think of the difficulty of showing an unreasoning being the sagacity which determines our public policy. The great rule of self-government, as we have carefully developed it, is the election to office of men whom we value for their avowed unlikeness to those whom we elected on the last occasion preceding, coupled with a violent effort to get them to be really different. It would be hard, perhaps impossible, to demonstrate to a less astute type of mind than our own the advantage of this double process over the simpler one of choosing men who would do what we want without coercion. It would be fully as difficult to justify the rivalry of the Occidental nations in the race to see which of them can soonest exhaust its credit by the ingenious device of employing large numbers of men to operate great fleets during the time necessary to build new ones to replace those which are not quite so new. Even the thoroughly logical presentation of the questions recently confronting the English voters would probably, to a low type of intellect, appear confused. We cannot be too thankful, when we contemplate these results of our devotion to the mandates of reason, that we have been able to throw off those fetters of superstition and prejudice by which the unfortunate Orient is still bound.

In taking a broad view of the sovereignty of reason in the Western world, however, we are compelled by candor to risk the disapproval of our readers by expressing satisfaction over certain limitations in the application of logic to life. We do not feel at all sure that the absolute distrust of instinctive impulses is invariably correct. Not to speak of that large field of love and friendship in which, even with us, the affections often dispute the supremacy with reason, there is something to be said for the man who makes up his mind regarding public affairs mainly from his unreasoned impressions. It may not be desirable to adopt the practice of judging a stranger by his photograph, but character is to be discerned at least as accurately by the effect of acts, big and little, upon one's susceptibilities, as by those grosser scales to which we are shut up in arriving at our formal opinions in the courts. There is nothing inherently ridiculous in the statement that one does not like the look of things in relation to a person or a situation. It is not logical, and it is unreasoning, but it is often thoroughly reasonable. The fact that it is open to great abuse is no more against it than the corresponding fact that the same thing is true of the processes of induction and deduction. Viewed rightly, the real triumph of logic is its recognition of its own limitations.

SAMUEL BUTLER OF "EREWHON."

So multiform were the genius and art of Samuel Butler, he did so many things so surprisingly well, that the world has almost dismissed him as a dilettante.* Personally I feel that the career of Samuel Butler is the refutation of that stupidest of moral don'ts, *Ne sutor, etc.*, yet being also convinced that the worst judgment of the world is usually right so far as it goes, I cheerfully conform to it to the extent of making "Erewhon" and its sequel, "Erewhon Revisited," the central theme of this essay.

I.

"Erewhon" grew out of certain meditations of the Cambridge graduate become sheep rancher in New Zealand, and its background is that epic landscape of mountain and ravine in which Butler pitched many a camp. A Johnian at Cambridge, he had taken as high a rank in classics as befits a gentleman, studied the music of Handel, and learned to sketch. The various religious ferments of the early fifties had worked upon him; doubting most of the Thirty-nine Articles, he had given up the churchly career to which he was destined; he was equally to develop doubts as to the new Darwinian hypothesis, and as to the ruling code of social morals. In four years of the high pastures of New Zealand, these doubts fructified into very definite convictions. Of course he knew his Aristotle, but what is more important, he worked out anew an ethic of moderation which underlies all his literary work. Fanaticism under whatever sanction is the great bane of the world; the great virtue is moderation. Believe nothing too strongly, be guided in faith and action by the example of "nice people." These nice people were to Butler as solemn and guiding a reality as ever the *spoudaios* was to Aristotle. Be not virtuous overmuch, temper your individual ardor, hatred, or admiration, by study of the attitude of those whom you perceive to have an instinctive genius for life.

Whether the Erewhonians are to be reckoned as nice people is one of those ambiguities that surround the study of Butler, but I think we may so regard them. They are of soft manners and rare personal beauty. This is due to the fact that they punish sick folk drastically as enemies to the state. Here they follow to an extreme Butler's favorite doctrine that we must treat people strictly by facts and not by what we imagine to be their intentions or deserts. The British philistine, Mr. Higgs, who blunders over the range to Erewhon is kindly received because he is physically a fine man and has in his rare blondness a "meritorious complexion." A rich man the Erewhonians quite frankly venerate, estimating his worth by the weight of his accumulations. They are nice people, too, in taking all their most sacred principles with a grain of salt. They have an official religion, but accompany it with the unadmitted cult of Ydgrun. Grundy is the real divinity of Nowhere—hereafter I shall not resolve Butler's obvious anagrams. The High Ydgrunites, with whom the wisdom of the people resides, are elaborately trained in colleges of unreason, where they waste many a year in translating Erewhonian into the hypothetical language. By this perfectly useless training, they are spared the dangers of real knowledge and gain a generous detachment from sordid concerns. In supporting the Musical Banks which in return for real coin of the realm supply a droning psalmody and a token currency, the Erewhonians especially show their liberality. Nobody believes in the banks, and everybody knows that the currency is trash, but all loyal Erewhonians encourage their women to attend the banks, and all insist that the token coinage has an ineffable and mystic value. Stern towards disease, towards moral delinquency the Erewhonians were of an amazing charity. That a man was poor, or dirty, or had a cold seemed an obvious reason for shunning or even punishing him, but that a man had inadvertently and exceptionally committed a theft or homicide was merely a cause for sympathy and correction of the defect of judgment or temper.

This admirable system of compromises had not been attained without a struggle. In the past lay fears and fanaticisms. Mr. Higgs was amazed at being imprisoned for possessing a watch; later he saw the relics of wonderful machines in museums, and learned that at a certain point in its history Erewhon had abolished the machine. Wise men had seen that by natural selection machines would become ever more complicated and durable, and that were the slight step of acquiring consciousness and will once taken by the machine, mankind would straightway become the helpless parasite of the organisms his own ingenuity had created. This excellent if over-sub-

Erewhon, or Over the Range; Erewhon Revisited; The Way of all Flesh; Unconscious Memory. By Samuel Butler. New Uniform Edition. London: A. C. Fifield; New York: E. P. Dutton & Co.

tic parody of Darwinism was written as a separate article years before "Erewhon" was conceived; it is the germ of the book. The problem of animal food had brought the commonwealth to a direr pass. An apostle of the rights of animals had converted the land to a vegetable diet. But meat was eaten in dens of ill-repute. General youth battened on the forbidden food, though exposure meant tragic disgrace. Dietetic hypocrisy was rife when the deliverer arose. He was a venerable professor of the College of Unreason, and he pursued the eminently Erewhonian tactics of accepting the dogma of animal rights while elucidating the new doctrine of the rights of vegetables. Between starvation or double sacrilege the Erewhonians promptly chose the latter.

For various causes Mr. Higgs's standing grew doubtful, and he determined to escape in a balloon. Enlisting the queen's curiosity, and professing an intercessory visit to the refractory Rain God, Mr. Higgs set sail with an Erewhonian sweetheart hidden in the car, and after perils by sea and land, returned to London.

Such intimations may dimly suggest the ingenuity of the satire; they leave untouched the masculine charm of the style. There is a tang about Butler which we get only when men of action trespass in literature. As I read "Erewhon," I think of such writing as Burton's in "Mecca and Medina," or the Memoirs of Grant, or of a Machiavelli endowed with humor. Butler has the Swiftian merits of verisimilitude. One gets not merely the sense of real mountain and torrent, but those mere figments, the Erewhonians, fit with all their overt perversities into some credible fringe of one's experience. One of the rare passages in literature is the account of Mr. Higgs's progress over range and torrent bed towards the land he had glimpsed. He "pumps" a sullen Maori servant, and the process suggests a veritable Homeric simile:

> As upon a cold day in winter, when one has churned (as I had often had to do), and churned in vain, and the butter makes no sign of coming, at last one tells by the sound that the cream has gone to sleep, and then, upon a sudden, the butter comes, so I had churned at Chowbok, until I perceived that he had arrived, as it were, at the sleepy stage, and that with a continuance of quiet, steady pressure the day was mine.

This massive unconventional quality is in every paragraph that Butler ever wrote, and, as here, the solidity of the phrase and thought is enlivened by underlying humor.

II.

Four of the best chapters of "Erewhon" were written as independent fantasies before 1870. The book was knocked together in the winter of 1870-1871. George Meredith read the manuscript for Dickens's publishers, and advised its rejection, on the ground that it was over-philosophical and little likely to interest the public. Butler commends this opinion. Published anonymously, "Erewhon" was a nine days' wonder, and still lives feebly on the lips of men. Thirty years later it was somewhat amplified and overhauled, but one may doubt if it will ever be galvanized into real popularity. For Butler lacked the simplicity of intention that, rightly or wrongly, the world requires of a moralist. And this is what ails the author of "Erewhon." With all the ingredients of a perfect satire, inferior in penetration and phrase to none of its illustrious predecessors, we never quite know where to find the author. He is disconcertingly Puck-like. Are the Erewhonians held up for our imitation, or are we mocked in them? Sometimes one, sometimes the other, sometimes, apparently both. We are not attacked in the forms, but impishly pelted from a score of coverts by a throng of shifting antagonists. This very mobility is the charm of Butler; it is, I think, not incompatible with literary and moral integrity, but it is a disastrous grace for a universal satire. When one is surveying the moral order, one will not simultaneously play ducks and drakes, or will do so only on the clear understanding that it is play.

Shortly after "Erewhon" an anonymous hoax, "The Fairhaven," which revealed while professing to harmonize the inconsistent accounts of the Resurrection, was hailed by the orthodox press. Already Butler was following up the anti-Darwinian lead. "Life and Habit," 1877; "Evolution Old and New," 1879; "Unconscious Memory," 1880; and "Luck and Cunning," 1886, were so many formidable attacks upon the doctrine of a mechanical natural selection. At the time Darwinism had so completely become the orthodoxy of the Extreme Left that Butler was disregarded as merely a trouble-maker. It would not be surprising if he were revived as a prophet, so fully did he anticipate the most recent criticism of mechanical natural selection. In fact, most of the now popular vitalistic hypotheses he advanced thirty years ago. I have no competence to appraise this part of his achievement, but I can appreciate the athletic merit of his polemic. "Unconscious Memory" is perhaps the central manifesto of this campaign. In it Butler insisted that apparently purposeful habits and adaptations of any organism must, in fact, be purposeful. And this led him to the assertion that a degree of life and memory inhered in all matter. Alum crystallizes because it has an unconscious memory of the pleasure of previous successful crystallizations. Equally important and more plausible is Butler's theory that the embryo in the fullest sense partakes of the life of the parents. There is an actual overlapping of what we call soul from parent to child, and whoever produces his kind enjoys in his offspring an actual if partial survival after death. By his fiftieth year the recluse of Clifford's Inn had pretty well purged his bosom of this perilous stuff, and settled down to the gratification of various accomplishments and the crowning of his career as a satirist. A legacy made the frugal life from now on a matter not of necessity but of choice. Between 1880 and 1900, he published "Alps and Sanctuaries," 1881, and "Ex Voto," 1888, both devoted to art and nature about Varallo. In 1898 and 1908 appeared his prose translations of the Iliad and Odyssey, as a kind of guarantee that his treatise of 1897, "The Authoress of the Odyssey," however revolutionary, had been based on serious study. He endeavored to memorize these epics entire, an attempt which succeeded with the sonnets of Shakespeare, which he edited with a commentary in 1899. Here he faced the problem of sin and depravity without blinking, brought the breath of reality into a subject traditionally stifled under evasions and empty apologetics. In these years fall also two cantatas and minor musical compositions in collaboration with his friend, H. Festing Jones, as well as a biography of Butler's grandfather, master of Shrewsbury School and Bishop of Lichfield. And then at sixty-five Butler took up the dropped thread of satire, and wrote an "Erewhon Revisited." Stricken in his beloved Palermo, he was brought back to London to die in mid-June of 1902.

III.

The balloon in "Erewhon" has every look of a shift to end the story. If so, it illustrates that luck in which Butler was so firm a believer. What more admirable starting point for a satire on the founding of a religion than the miraculous ascension and disappearance of a marked individual bent on placating the rain god. If the rain comes, the vanished intercessor of necessity becomes a god. Soon after "Erewhon," Butler tells us, the notion of deifying Higgs occurred to him. It was thirty years before the convenient season came, and then "Erewhon Revisited" was struck off in a single impulse, in a matter of four months.

After twenty years in England, Mr. Higgs is impelled to pass once more over the range. The smoke of factories now pollutes the air of Erewhon. His first encounter is with two pundits, Hanky and Panky, who, on an outing, are discussing the management of a new religion, Sunchildism. With dismay, Higgs perceives that he himself is the Sunchild, recognizes distorted fragments of his religious talk of twenty years ago, and worst of all learns that a temple is

about to be dedicated to himself in the town of his earlier captivity now rechristened Sunchildtown (pronounce Anglicé Sunch'ton). Proceeding to town, he marks the preparations. In booths are sold the Sayings of the Sunchild, with grotesque or ingenious commentaries; the hoardings offer "dedication trousers" at a bargain. Horror stricken, he determines to speak out at the dedication, and the pundits, suspecting his identity and scenting the peril to the new faith, plot to make away with him. Deliverance comes, as it always does with Butler, through certain "nice people." Yram, the jailer's daughter, had pitied him in his captivity. A by-product of that compassion is George the ranger, with plenary police power from the King. Mr. Higgs is among friends, not to say kin. Yram is now wife of the admirable Mayor of Sunch'ton, who made the best of things and fathered George. Of the whole family, Mrs. Humdrum, an incarnation of prosaic good sense, is the confidant and abettor. How among them they outwitted Hanky and Panky and sent Higgs back over the range, constitutes one of the drollest comedies of intrigue within my knowledge. Suffice it to say that Mrs. Humdrum's solution required perjury of every party to the contest. "Nothing is perfect, and Truth makes her mistakes like other people; when she goes wrong and reduces herself to such an absurdity as she has here done, those who love her must save her from herself, correct her, and rehabilitate her." So opines Mrs. Humdrum. It is some relief that, in private, the King is to be told the facts.

At the risk of his life, Higgs speaks out at the dedication. On reflection, he sees that Sunchildism is so deeply ingrained in the morality of Erewhon that an uprooting would be disastrous and decides to let well enough alone. There is an amazing interview, in which the theologians ask him "as a man of the world," what is to be done about Sunchildism. Higgs's answer is short. They must do away with the absurder beliefs that have sprung up about the ascension. For the rest, he is delighted to note that their best moralists have far improved upon his own crude missionary efforts. The conclusion of the matter is:

> You Musical Bank managers are very much such a body of men as your country needs—but when I was here before, you had no figurehead; I have unwittingly supplied you with one. . . . Sunchildism is still young and plastic; if you will let the cock and bull stories about me tacitly drop, and invent no new ones, beyond saying what a delightful person I was, I really cannot see why I should not do for you as well as anyone else.

Some idea of the sheer audacity of the invention this bare analysis may give. The novelist's sense for spiritual emergencies, the shrewd and plausible characterization of the actors, the tonic sweep of the whole narrative the reader, since my term is near, must take on faith. As compared with the first "Erewhon," which was loosely knit and episodical, the second is magnificently composed and unified. Yet the author admits his fear that the first "is the better reading of the two." And here Butler was right. A certain Voltairean neatness and unmitigated flow of wit are possibly the defects of this great satire. There is no space for such horror and compassion as here and there sparkle in the dense texture of Swift's "Gulliver." With a content of intellectual passion and ingenuity hardly inferior to Swift's, it seems in comparison an artificial masterpiece after the fashion of the *contes* of Voltaire or Flaubert's "Temptation of St. Anthony." Some such pale and secondary immortality as these works enjoy may pretty certainly be predicted for it. The earlier "Erewhon," with all its nonchalances, comes nearer to drawing blood.

IV.

If there is any teaching in "Erewhon Revisited," and often I doubt if the fable has a moral, it is this: we must put up with the worst paradoxes of religion, lest worse befall us in the way of individual fanaticisms. The wise man attenuates the incompatibilities of his credo by the simple expedient of not believing too much. Butler himself was a broad-churchman and a communicant. His single novel, "The Way of All Flesh," illustrates in actual life a catechism the first article of which may be read, "What is the first duty of man?" Answer, "To glorify God, but not excessively."

This novel, begun in 1870 and finished in 1884, coincides with Butler's studies of heredity and is their human commentary. We see the Pontifex family in three generations. George, a self-made business man and moderately the British prig and philistine, begets Theobald, rector of a stupid parish, and in his own household a tyrant without spirit or imagination. There is perhaps no other character in fiction of so formidable a moral clamminess. The theme of the book is chiefly the reaction of the son Ernest against the father. Unhappily, the attempt is thwarted by circumstances and by the unwisdom of Ernest himself. For if the Rev. Theobald is a cold fanatic, the Rev. Ernest bids fair to be merely a hot one. Caught by every wind of religious enthusiasm, he pays both with his person and in his pocket for a dozen preposterous causes. Now he plans to found a college of moral pathology at the instance of the insidious, and, one guesses, depraved, college-mate, Pryer. Again he risks his moral sanity by aimlessly living among the poor whom he does not understand. And here the flesh has its revenge upon him; he finds himself not unjustly imprisoned for a moment of madness that made the evangelist seem a ravisher. Prison is both the beginning of new fanaticisms and of wisdom. How he tried to make a new life as a working man, married a drab, shipwrecked once more, it would be superfluous to tell. External redemption comes to the enthusiast through the luck of having enlisted the interest of an aunt and her executor. "Nice people" pull him out of the bog he has trodden for himself, and he begins philosophy. In all his spiritual vagaries an occasional vision of choice souls who are virtuous or peccant with instinctive discretion has haunted him. Out of this thought he evolves a system of morals. We read, for example, "That vice pays homage to virtue is notorious; we call this hypocrisy; there should be a word found for the homage that virtue not unfrequently pays, or, at any rate, would be wise in paying, to vice." As to the church: "We should be churchmen, but somewhat lukewarm churchmen, inasmuch as those who care very much about either religion or irreligion are seldom observed to be very well bred or agreeable people. The Church itself should approach as nearly to that of Laodicea as was compatible with her continuing to be a church at all, and each individual member should only be hot in striving to be as lukewarm as possible." And the sum of the teaching is this:

> That a man should have been bred well and breed others well; that his figure, head, hands, feet, voice, manner, and clothes should carry conviction upon this point, so that no one can look at him without seeing that he has come of good stock—this is the desiderandum. And the same with a woman. The greatest number of these well-bred men and women, and the greatest happiness of these well-bred men and women, this is the highest good; towards this all government, all social conventions, all art, literature, and science, should directly or indirectly tend.

At first reading of such extracts, we seem to face a remorseless intelligence. But the whole tenor of Butler's life and work contradicts so easy an explanation. The man was reverent beneath his mockery and ever conscious of the tears latent in things mortal. Indeed his habitual mood is so sensitively complex as to baffle the analyst. Yet his own theory of alert and delicate compromise may help us. He felt at liberty, within bounds, to exercise all the functions of his spirit. Out of his most serious reflections wriggles some imp of cerebral tomfoolery. To both he gives their right in the sun. Secure in his own predilection for health, beauty, and sanity, he casts the reins upon the neck of his Pegasus and hurtles perilously near the props of society. Nothing will be knocked down, he knows,

that ought not to fall, but the spectacle of such caracoling is perforce terrifying to slow wits and persons with smug vested interests. The man was absolutely detached, and society, dearly loving an actor, cannot abide a spectator who avows the rôle. Moreover, Butler was an Ishmaelite. Every Victorian movement found in him a foe. Religion he robbed of its supernatural warranties, leaving it only the sanction of the salutary dulness of its directors and devotees. Scientific materialism, vague humanitarianism, socialism, and the official skepticism of the Huxley sort, he branded as merely so many forms of offensive bad breeding and worse thinking. Of the Briton's sense of national divine election he made pure comedy. The great compromisers, the Kingsleys, Tennysons, and other prophets of "far off divine events," he alienated by holding up an ideal immediate, human, and Greek. To some irreducible minimum of Christianity he clung, as the road to serene athletic paganism. His gospel of an authoritative genius for living in "nice people" might be called a red-blooded version of Matthew Arnold's doctrine of the remnant, but I doubt if the two prophets could for five minutes have endured each other's society. Finally he seemed to commit the unpardonable sin of not caring. In this, they did him an injustice. Butler cared, cared tremendously for his Aristotelian art of life. But his counsel of consulting as to life those who evidently have *savoir vivre* was too simple, too elementary, too uninspiring for the expansive romanticism of the times. He had not even the art, like Beaumarchais, of being dangerous without seeming so. Yet his rugged skepticism and placid faith may stand when many of the prophets have vanished. So Attic is the man's intelligence, so akin to the temper of Socrates, so genuinely Aristophanic his wit that I cannot believe the world will let him die utterly. And when the gospellers of to-day have extinguished themselves in humorless counsels of perfection, possibly Butler's simple formula of directing life by those who live it successfully may come to honor. The Carlyles and Tennysons will never be taken more seriously than they have been. For the more detached intelligences, the Montaignes, Emersons, and Butlers, the future may well hold increasing possibilities.

Correspondence

GLADSTONE ON THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: My letter in the *Nation* for November 24 was misinterpreted by Mr. Pershing in his communication, published December 1. Gladstone without doubt meant to be taken seriously when he spoke of our Constitution. What I found fault with was the effort of text-book writers to stimulate interest in their works at the expense of Gladstone's intelligence. Let us read the context in which the quotation occurs. The following is from "Kin Beyond Sea," published in the *North American Review*, September, 1878:

Their [the colonies'] infancy had been upon the whole what their manhood was to be, self-governing and republican. Their Revolution, as we call it, was like ours in the main, a vindication of liberties inherited and possessed. It was a conservative revolution, and the happy result was that, notwithstanding the sharpness of the collision, . . . the thirteen colonies made all provision for the future in conformity, as to all that determines life and manners, with the recollections of the past. The two constitutions represent rather the differences than the resemblances of the nations. The one is a thing grown, the other is a thing made; the one a *praxis*, the other a *poiesis;* the one the offspring of tendency and indeterminate time, the other of choice and of an epoch. But as the British Constitution is the most subtle organism which has proceeded from the womb and the long gestation of progressive history, so the American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the mind and purpose of man.

It has long been customary to use this last clause as a foil in teaching young pupils that the Constitution was not made out of whole cloth—that it was based on certain "sources," as the student of literary evolutions might say. It seems unfair to misuse a man's words, using his name, even for this laudable purpose. Of course it was perfectly well known to Gladstone, as to every other careful student of literature and politics, that the human mind creates nothing, in the sense that the twisted use of his words would imply. He probably did not know our colonial charters and State Constitutions, and therefore could not have referred this or that clause of the Constitution to its source; but he was familiar with the processes by which the instrument was evolved. It seems scarcely necessary to call attention to the fact that his comparison is to emphasize the universally recognized truth that, whereas the English government is based on conventions, ours began with a written basis which our statesmen voluntarily selected and promulgated.

Critics of the work of the Convention of 1787 should avoid two extremes of statement. One assumes that the Fathers undertook their work completely oblivious of colonial experience. Such an error could be committed by the very young or by those entirely unfamiliar with history, but by no other. A second error, and one that now seems more common, is to minimize the work of the Convention and call the Constitution "simply the recorded and well-arranged statement of what experience showed to be the safest method of governing the American States." If this quotation, which is from a recent book by a distinguished scholar, were pressed to the limit as that from Gladstone's essay has been, it would be almost as ridiculous as to say that certain of Shakespeare's plays are simply the dramatization of parts of Hollinshed's "Chronicle."

A great deal of scholarly authority was put behind the misuse of Gladstone's expression by Professor Johnston's essay, "The First Century of the Constitution," in the *New Princeton Review* for September, 1887, cited by Mr. Pershing. It may be remarked that John Fiske, after reading Professor Johnston's essay, took Gladstone's words at their face value (see the "Critical Period," p. 223). Now let us see what Professor Johnston really said:

The verdict of approval [of the Constitution], however, has taken the form which implies a certain *fiat* power in the Convention. The first number of the *Federalist* [by Jay], issued in the month following the adjournment of the Convention, speaks in this wise: "It seems to have been reserved to the people of this country to decide, by their conduct and example, the important question whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force." The implications of this passage are only carried out to their logical conclusion in Mr. Gladstone's often-quoted sentence: "The American Constitution is the most wonderful work ever struck off at a given time by the mind and purpose of man." Is this sentence, in its full force, within the range of possibility? Is it possible for even the wisest and most patriotic body of human beings, through debate in less than four months, to create out of nothing a scheme of government which shall endure with no practical change for a hundred years of the most active national life modern times have known?

It should be remembered that John Jay, who is here quoted, was one of the most learned lawyers of his day, and one of the ablest statesmen in America. Is it probable that he did not know the Constitution was not created "out of nothing"? Professor Johnston says that his interpretation of Gladstone's expression is possible only if it is taken "in its full force." He might more fairly have said, "if the meaning is altered somewhat."

EDGAR DAWSON.

New York, December 19.

JULES CLARETIE.

TO THE EDITOR OF THE NATION:

SIR: Mr. Eliot Gregory's letter in the *Nation*, of December 8, describing the fête at the Théâtre Français to M. Jules Claretie on the twenty-fifth anniversary of his accession to the management, is extremely interesting. M. Claretie is a most brilliant and versatile man. At the time of his appointment he was, as Delaunay says in his memoirs, "publiciste, romancier, et critique connu plus de vingt ans," already a member of the French Academy; and it is universally admitted that, for tact and business ability as theatrical manager, he has been as remarkable as for his achievements in letters. No doubt he well deserved the honor of this fête. But Mr. Gregory makes two statements which amazé me. He says:

In 1885 he received from his predecessor, M. Perrin, a theatre singularly abandoned by the public, and a troop of actors composed chiefly of nullities, brightened by one or two burnt-out stars, and from this discouraging beginning was able to build up an ensemble that has remained for almost a generation without its equal in Europe.

In short, according to Mr. Gregory, M. Claretie regenerated the Français. A little further on, Mr. Gregory says: "He opened its doors wide to the youth of that day—Lavedan, Brieux, Rostand, Rivoire, Pailleron, owed their start to his timely

and enlightened aid." What were the obligations to M. Claretie of the first four, I do not know, but he certainly did nothing as manager to start M. Pailleron. M. Pailleron was born in 1834, six years before M. Claretie. His "Dernier Quartier" was played at the Français in 1863. Then several more plays were accepted there, and in April, 1881, was produced at the Français "Le Monde où l'on s'ennuie," which had instant and tremendous success, has been played year after year, and still keeps the stage. In 1881, also, M. Pailleron was elected to the Academy.

These are a few members of the large cast at the first performance of "Le Monde où l'on s'ennuie": MM. Got, Delaunay, Coquelin; Mesdames Madeleine Brohan, Reichemberg, Broisat, Jeanne Samary. All these persons were playing in 1885. Got and Delaunay were elderly men, but delightful until their retirement some years later. Coquelin was then, I think, forty-four, and, though he retired from the Français in 1886, he continued to be a star of the first magnitude until his death, a year or two ago. Madeleine Brohan retired in 1885, by no means broken down at fifty-two. Madame Broisat, in 1885, was thirty-seven. The lovely Suzanne Reichemberg was thirty-four and looked about twenty. Jeanne Samary, one of the most brilliant actresses of the nineteenth century, was twenty-eight, and looked particularly fresh and youthful, *dulce loquens dulce ridens*, until her untimely death some years later. In 1885 there were many other great players at the Français. Madame Jouassin, admirable in light comedy, retired, in 1887, aged fifty-eight. Mlle. Bartet, mentioned by Mr. Gregory as still the most graceful and beautiful of *doyennes*, played Denise in 1885. Mlle. Baretta, a little younger and in the first rank, a year or two before had married Worms, another fine actor, who died only the other day. In 1885 he was forty-eight. MM. Féraudy and Truffier were then young, but played leading parts, as they still do, and Coquelin Cadet, eight years younger than his brother, was perfect in some parts. How can any one who ever saw the company in which these persons were prominent say that it was composed chiefly of nullities, brightened by one or two burnt-out stars?

I never had Mr. Gregory's advantage of knowing any of them personally, but they so often delighted me that I resent the statement. I saw the company in London in 1871 on the occasion of its famous flight from Paris, and I saw it constantly in Paris in 1873 and 1876. By 1885 it had lost Bressant by death, and the erratic Sarah and Croizette by resignation, but it had gained others, and I maintain that it had, as a whole, quite as much talent as it had fourteen years earlier, and had in no way lost its prestige. I have seen its performances on six different visits to Paris since 1885, last of all in 1909, and, although among the theatres of the world I believe it still *facile princeps*, I do not believe that M. Claretie would assert that he now had anything like as accomplished actors as he had twenty-five years ago.

Philadelphia, December 18.

DANTE AND ST. AUGUSTINE.

To the Editor of The Nation:

Sir: In your issue of December 16, 1909, I proposed an interpretation of the mysterious words of Love to Dante in the "Vita Nuova," chapter xii: *Ego tamquam centrum circuli, cui simili modo se habent circumferentiæ partes; tu autem non sic* (I am as the centre of a circle, to which all parts of the circumference bear a like relation; but thou art not so). Although the poet feigns not to understand this symbolic self-definition of Love at the time, he would appear finally to have realized its significance, when, initiate in heavenly mysteries, he says:

> Already my desire and will were rolled—
> Even as a wheel that moveth equally—
> By the Love that moves the sun and the other stars.

He too had become, like Love, "as the centre of a circle, to which all parts of the circumference bear a like relation." The term "equally" (*egualmente*) indicates that the wheel to which Dante compares himself regenerate, like the circle of which Love is as the centre, is a true circle; there is no inequality.

This symbolizing of moral perfection by the geometric "equality" of a circle, and comparison of the love "which is nobleness" to the centre of a circle, is anticipated by St. Augustine in his dialogue entitled "De Quantitate Animæ."* To illustrate how the incorporeal soul may exert power even over the material body, Augustine has recourse to pure mathematics. By a series of Socratic questions, he brings his young interlocutor, Evodius, to agree that of all plane figures the circle is the most perfect in "equality," in that its circumference is everywhere "equivalent" (*coneors*), its "equality" is broken by no angle, and from its centre to all parts of the circumference equal lines can be drawn (*et a cujus medio ad omnes extremitatis partes pares liniæ duci possunt*). We are reminded at once of Love's words to Dante.

But why Evodius's instinctive preference for such geometrical "equality," or symmetry? Really, explains his mentor, the instinct is at bottom the recognition of "high and inviolable justice." Justice is based on equity; equity is so called from equality. Thus the circle is a *natural* symbol of justice.

The determinant and measure of a circle, however, is the mathematical point, its centre. For a circle is described by the revolution of the point at the end of the radial line about the fixed point at the other end. And by definition, a mathematical point, having neither length, breadth, nor thickness, is incorporeal. In potency and incorporeality, therefore, it is a natural symbol of the soul; and, when the moving centre of a circle, a natural symbol of a just soul, that is, of a soul "conforming equally on all sides to reason."

Certainly, Augustine's explanation exactly fits the self-definition of Dante's Love, "lord of nobleness," or virtue. Virtue for Dante, as for Augustine, is "a certain divine harmony of relations" (*divina quadam congruentia rationum*) in the soul.

Love denies to Dante present possession of this "divine harmony" of soul; hence the tribulations which follow in the "Vita Nuova." A later passage in Augustine's treatise helps to motivate these tribulations.

In this passage Augustine traces in Neo-Platonic fashion the seven grades of ascent of the human soul back to God. In the first, or lowest grade, the soul is life-force without consciousness, that which we have in common with the plants; in the second grade, it is sentient, but not rational, that which we have in common with the brutes; in the third grade, it is rational, but not moral. The wisdom of this third grade is worldly wisdom. With the fourth grade, divine wisdom enters in to purge the soul of worldliness and selfishness; in the fifth grade, the purged soul confirms itself in its "new life" by works of piety and charity; and in the sixth grade, it yearns in contemplation from afar for that blessedness of union with God, which is its Sabbath, or seventh grade. But no grade in this ascent, no rung in this ladder of love, may with impunity be skipped; there are no short cuts to blessedness. The highest good is, indeed, to behold God; but "whosoever would do this before they are cleansed and healed, are so stricken by that light of truth that they see in it not only no goodness, but even much evil, and, therefore, deny to it the name of truth, and with their lusts and miserable pleasures, refusing health, flee away in their darkness, which is even their death." So Dante, yearning for the reward of Beatrice (blessedness) before he is healed and cleansed, is tempted to call love an evil thing, to flee from Beatrice, from blessedness itself, because it chastens; and he is racked by conflicting impulses until he feels his death at hand. He is saved by turning his over-presumptuous soul back to the neglected fourth grade of self-purgation, finding his peace in selfless worship. Only will he be worthy of the reward (*mercede*) of Beatrice, or blessedness, when his love shall have become also as the centre of a circle that is moved, like a wheel, equally,

> By the Love which moves the sun and the other stars.

*Patrologiæ Latinæ Tom. xxxii, 1035 et seq. Dante himself cites the dialogue in the epistle to Can Grande, sect. 28.

INFLATION OF DICTIONARIES.

To the Editor of The Nation:

Sir: The further improvement of dictionaries will so much depend on a clearer general recognition of what language is, that I hope your recent editorial on "The Way of Words" will not add currency to the notion that our actual English vocabulary has been enormously increasing. The great numerical gains between the Johnson of 1818 and the Webster of 1909 represent an addition, not only of English words previously unrecorded, but of variant spellings, obsolete and proposed; of the Latin nomenclature for plant and animal species, common to scientists of all lands; and of phrases which, besides idioms and compounds, include a host of such "readers' handbook," entries as *army organization*, *Arn.* (abbreviation of Arnold), *arpent d'ordonnance*, and *American Socrates* (*i. e.*, Benjamin Franklin!). If, disregarding these,

one were to count as words only distinct, ultimate, and independent sense-units, the recent total of 400,000 would probably shrink by three-fourths. Even then the question how many actual words remained would rest upon ambiguities. One must first settle what differences of function and form are variations in the same word, and what yield different words. Thus the new Webster enters *mountain* as an adjective, to cover its attributive uses—in "*mountain* laurel," etc.—but every common name in the language may thereby count as two words. Its separate entry of transitive and intransitive uses doubles the showing for most verbs. Many thousand entries result merely from the unstable lines between English parts of speech. As to forms, one must note that the count which you cite took in both title-words and "the inflected forms which appear in small capitals." Every compared adjective, therefore, gives three words; every verb, from three to five. It is plain that before we can make any profitable comparison with the early totals quoted by Dr. Long, we must know precisely how the count was made in each case.

The rivalry of modern dictionaries in the matter of numerical totals has been subject to one rule: every form recorded must be taken from actual use. What this comes to practically is that its occurrence must be provable by a printed, or at least a documentary, source. For thousands of words, however, the proof of their occurrence is quite irrelevant. I refer to what Sir James Murray has called 'perpetual nonce-words." No feature of English speech is more characteristic than its stock of free formatives—*non-, anti-, pro-, semi-, sub-, un-, -ation, -ly, -ness, -ish,* etc.—by which one may improvise needed words at will. Every vigorous and accurate thinker uses scores of such words, not half of which ever fall under the eyes of dictionary compilers. Take the list under *un-*. You find *unhealth, unhealthful, unhealthfully, unhealthfulness unhealthy, unhealthily, unhealthiness;* but you find no corresponding list for *wealth.* Yet *unwealth, unwealthy,* etc., would be unimpeachable English words, every one of which has doubtless occurred in uttered or written speech; nor can you fairly urge against it that, taken alone, it looks superfluous, for given certain exigencies of context, it becomes the sole word "pour fixer les nuances." To ransack books and papers for such forms is time wasted. They can be derived equally well by some formula of permutation. And, be it noted, these words have always belonged to the language as what Berkeley might have called its "latent possibilities of experience." Self-evident derivatives, in fact, together with more or less self-evident compounds, make it futile to talk of "the number of words in the language," for at any period their number is virtually unlimited.

Imposing as the modern dictionary appears, a scrutiny of the character of its entries will show that so far as concerns a census of words, its hundred thousands might as well be millions. In fact, entries of the classes I have mentioned represent a selection from almost numberless terms equally legitimate as words. Botany and zoölogy alone have thousands of names now excluded as not "of popular or semipopular interest," and if animate species threaten to run short, the quantitative classification of rocks will supply *ad libitum* such verbal gems as *dargase, scotare, umptekase, quardofelie, dofemane.* Clearly, an omnium gatherum, which unites with a word-book of spoken and written English so much that is extraneous to the business of thinking, does not in the least reflect the status of our medium of mental exchange. The vocabulary by which ideas are expressed is quite unaffected by the presence or lack of labels for sixty-odd species of parrot or for 3,000 distinguishable grasses. And of this central vocabulary, no one can say that it is "passing into the hands of the favored few," or that its growing volume will swamp all but the genius and the specialist. Growth, indeed, it does show, but the growth that interests a dictionary chief is not its mere accretion of speech material, but rather the slow crystallizing within it of distinctions that make for clarity. Mr. F. Sturges Allen, chief of the latest Webster staff, has remarked that the present-day thesaurus, which includes virtually all word-forms in sight, does a service to the next generation by reducing to absurdity the superstition that a word gains standing by its mere inclusion. The question whether or not a given form is entered will then give way to questions about the formative laws that yield it; and in tracing a word's sense-progress dictionaries may aim to record less of the accidents of its career, and more, so to speak, of its intentions: of the larger notional drift reflected in its development. Much that gives bulk to the English vocabulary can be disregarded, once its analytic principle has been decanted off.

ALFRED D. SHEFFIELD.

Cambridge, Mass, December 17.

ERRORS IN THE CAMBRIDGE ENGLISH LITERATURE.

To the Editor of The Nation:

Sir: I have noted a number of errors in the two new volumes of the "Cambridge History of English Literature" ("The Drama to 1642"), to which it may be worth while to call attention, as they were not mentioned in your review of December 15, and as the History will be used by scholars for reference. As these mistakes were remarked in a mere preliminary glance through the volumes some weeks since, one is justified in supposing that others remain to be discovered.

In Volume V I have noted the following:

Page 234, line 7: For "nine and thirty" read "seven and thirty." You justly criticise the amazing system which Professor Saintsbury employs in this chapter on Shakespeare, but I know of no system, or lack of system, that can count as Shakespeare's more than thirty-seven plays, unless one has recourse to Mr. Tucker Brooke's "Apocrypha"!

Page 461, line 6 from bottom: The reference should be to Vol. IV, not Vol. VI.

Page 463, line 15 from bottom: There should here be added a reference to the bibliography of Vol. IV, chap. vi, where Greene's lyric poetry is given.

Page 468, line 20 from bottom: The last entry under "Symonds, J. A.," should appear under "Ellis, H." A confusion has here occurred owing to the fact that J. A. Symonds wrote the "General Introduction" to the Mermaid Series which was published in the volume of Marlowe's plays. But the special essay on Marlowe is the work of Havelock Ellis.

Page 476, line 6: "The Comedy of Errors" is omitted from this bibliographical list of Shakespeare's plays. This may be because there are no special studies of the play; but neither are there any of "The Two Gentlemen of Verona" which is, nevertheless, included in the list.

Page 482, line 22: For "Furness, H. H." read "Furness, H. H., Jr."

The following corrections should be made in Volume VI:

Page 344, line 2: For "W. H. Furness" read "H. H. Furness," and correct the entry in the index.

Page 482, line 13: Havelock Ellis edited both volumes of Middleton's plays in the Mermaid Series. Swinburne did not edit Vol. I. The Introduction, however, is a reprint of his essay on Middleton, originally published in the *Nineteenth Century* for January, 1886.

Page 483, line 22: The bracketed note should follow the entry under "Stork" not that under "Zeitlin."

See also the index under "Mantuan," where reference is given to page 364. At that place I have found no mention of the poet, unless we are supposed to consider certain "Italian sources" as a sufficiently clear designation!

I have by me notes of other minor errors. Professor Saintsbury misquotes, but that is to be expected; a title in the text, though ostensibly quoted verbatim, does not agree with that given in the bibliography; the title of a recent sumptuous edition of Shakespeare is incorrectly given; the index is defective in more than one place

Literature

BOOKS ON AFRICA.

The Basutos: The Mountaineers and Their Country. By Sir Godfrey Lagden, K.C.M.G. With 70 illustrations and 9 maps. In two volumes. New York: D. Appleton & Co. $6 net.

Service and Sport in the Sudan: A record of administration in the Anglo-Egyptian Sudan. By D. C. E. ff. Comyn. With 29 illustrations and 3 maps. New York: John Lane Co. $4 net.

In the Torrid Sudan. By H. Lincoln Tangye. With maps and illustrations. Boston: R. G. Badger. $3 net.

To Abyssinia through an Unknown Land. By Capt. C. H. Stigand. With 36 illustrations and 2 maps. Philadelphia: J. B. Lippincott Co. $3.50 net.

In the Heart of Africa. By the Duke Adolphus Frederick of Mecklenburg. Translated by G. E. Maberly-Oppler. With maps and numerous illustrations. New York: Cassell & Co. $5 net.

A Voice from the Congo. By Herbert Ward. With illustrations from photographs, sculpture, and drawings by

the author. New York: Charles Scribner's Sons. $2.50 net.

In Africa: Hunting Adventures in the Big-Game Country. By John T. McCutcheon. With photographs and cartoons by the author. Indianapolis: The Bobbs-Merrill Co. $2.50.

Basutoland comprises the Drakensberg range, the Switzerland of South Africa, and has been in the possession of its people for nearly a century. It first came into touch with the whites in 1833, when its chief, Moshesh, asked for a missionary to come and live with him, and give him advice in governing. Largely through the wisdom of their chief the Basutos have fared well. In 1854 he published an ordinance against the introduction of spiritous liquor, which contains the statement, "We deem that a good chief and judge cannot claim to be competent to execute his duties, if he make use of anything of an intoxicating nature." Independence being endangered by the encroachments of the Dutch settlers, Moshesh procured in 1842 the protection of the British Crown.

The narrative of the events during his rule occupies the larger part of the two volumes. They were mainly little wars, intertribal and with their neighbors in the Orange Free State, boundary disputes and negotiations with the British officials, of whose mistakes and unjust acts there is no attempt at concealment. Prominent among these was the issue of a command to the Basutos to give up their firearms, which caused serious trouble for several years, until the policy was abandoned and the act repealed. It is hardly necessary to add that there are countless instances of the heartless treatment of the natives by the Boers. Basutoland is still virtually independent, though under the supreme authority of the Crown. In 1903 a large share of the government was delegated to a National Council partly selected by the chiefs and partly nominated by the government. At its first meeting it adopted a code of laws, one of which provided for the "statutory punishment for seduction and abduction of women." Its present condition is as remarkable as its history. There is no pauperism, and "it has a balance in the bank of £150,000, without any debt or liabilities whatever." According to the latest statistics available, there are 248 schools with 12,195 pupils, and two years ago "78,000 men went abroad at intervals for work, not all absent at the same time." Their social and economic life is founded on the communal ownership of land, which has prevented Europeans from purchasing or otherwise gaining occupation. Sir Godfrey's work, it must be confessed, is not easy reading, so much of it is taken up with detailed accounts of small matters and with long extracts from documents.

Major Comyn's book, like Sir Godfrey's, describes the author's rich first-hand experiences with natives—in his case the Sudanese. For the larger part of the four years, he was a member of the civil administration, his principal duties being dispensing justice, settling disputes, building stations, opening roads, the cultivation of oases, and "patrolling." This meant going from village to village to come in touch with the sultans, as the chiefs are termed in many tribes, though they may be lords of only two hundred men. He also did much exploring in the little-known regions bordering on Abyssinia in the southeast and on the Nile and Congo watershed in the west. Many times he was obliged to defend his camp from the attacks of lions. In one instance, he says:

> The fires were lighted, and shortly afterwards we began to see lions walking round our camp, the firelight playing on them, and showing, as they stood and stared at intervals, the corners of their cruel mouths drooping. There were quite thirty of them.

Elephants were very numerous in many places, and here is his account of an experience with giraffes:

> I fear I will be dubbed a dreamer, or worse, when I state that one day a herd which numbered from 500 to 800, followed the gunboat so closely that we could distinguish the markings on their heads. They evidently took our yellow funnel for the neck of their Mahdi. This herd moved in quite a military formation. The thick mass in the centre was surrounded by advanced guard, flankers, etc. That it should have followed us is not extraordinary, for the giraffe is intensely curious.

The "self-sacrificing earnestness and practical intelligence" of these "pioneers of administration" are well attested by "In the Torrid Sudan," of which the main purpose, however, is to recount the author's extensive journey. Starting from Khartum, Mr. Tangye ascended the Dinder, one of the affluents of the Blue Nile, to the Abyssinian frontier, which he was not allowed to cross. Here is a post established to prevent the slave-trade, and so effective is its work that "only one case of slave-running occurred in 1908." From this place, he crossed to the White Nile, through a region which he characterizes as a "breezeless, burning, shadeless furnace—the home of great loneliness." In the one hundred and sixteen miles traversed, there were only two places in which water could be found. Up the main river, he came to the marsh land where dwells "man in the raw state, perhaps nearly as God created him in the first instance." Much interesting information is given of these Nuers, Dinkas, and Shilluks, who attain an enormous height, the leg being of great length, probably because of the constant necessity of wading. Among other things, he learned that the laws of the Dinka are "drawn up in a well-defined code. . . . Many provisions have resemblance to laws detailed in the earliest books of the Bible."

The almost unknown region, lying between British East Africa and Abyssinia, is the portion of Africa which Capt. C. H. Stigand has chosen to describe. With a modest following of thirty porters and a headman he made his explorations, which he describes in "To Abyssinia through an Unknown Land." There are vivid pictures of life on the trek, and much information, including some folk-lore tales, is given about the twenty different tribes encountered, some of which had never before seen a white man. In three of them the custom prevailed of strangling the first-born child and throwing the body away to be eaten by the crocodiles or hyenas, in obedience, they asserted, to a decree of their ancestors.

Duke Adolphus Frederick, in his explorations "In the Heart of Africa," was accompanied by a scientific staff consisting of topographer, geologist, botanist, zoölogist, ethnologist, bacteriologist and doctor, and seven hundred men were employed as carriers. Some idea may be gained of what it costs to maintain such an expedition by the fact that "during the first fourteen days" they "disposed of 20,000 bunches of bananas." The research work was confined to the northwestern part of the German East African Protectorate, and considerable space is given to reports by leaders of parties sent out to make special investigations. The most original work was the investigation of the animal and plant world, and more especially of the geological conditions of the Virunga volcanic region, then virtually unknown. From one of its eight gigantic peaks eleven eruptions were observed:

> The columns of vapor, illuminated as if by a smelting furnace, shot up from the broad mouth of the crater like pillars of fire to the heavens, gleaming blood-red, and then fell down to earth again, sparkling and scintillating in a glorious rain of glowing ashes.

Many craters, one over a mile in diameter, and lava tunnels and caves were found, and elephants were tracked to heights of above 7,000 feet. The natives said they "always kept to the mountain slopes and never shifted their quarters to the plains." The homeward journey was made through the Congo State. The account leaves a favorable impression of some of the Belgian officials and their methods of government. The stations were well-built and attractive, with gardens and with rubber, cotton, and coffee plantations, and the natives seemed on good terms with their rulers. One station at which "foreign visitors had never before been received" was the headquarters of a district which, it had been recently discovered, was rich in alluvial gold. A mining industry had been started with twenty-one engineers and prospectors and eight hundred

workmen. To bring this region, in which all the creeks and rivers carry gold, into nearer touch with the civilized world, the government had just decided to build an automobile road to Lake Albert, and "the first 130 miles were finished in the spring of 1909." When completed, Kilo will be only fourteen days distant from the Indian Ocean. While passing through the Congo territory the duke was impressed with the way in which Stanley's memory was cherished by the natives. Prominent Europeans are designated by his name, "Bulamatari," breaker of rocks. "The governor and heads of districts are frequently given this name; I myself was honored with it at times."

The aim of Herbert Ward in "A Voice from the Congo" is to call forth sympathy for his African friends, among whom, while in the Belgian service, he passed the five most impressionable years of his life. The stories which he tells reveal in the native a rare amount of noble devotion and loyalty. Among the interesting men who flit across his pages are Tippoo Tib the great slave-hunter, Stanley, and Capt. Deane, the gallant defender of Stanley Falls against the attack of the Arabs. But his references to them are rather disappointing, as is the lack of information in regard to the Congo State as it existed in his time, now more than twenty years ago. Some of his anecdotes and observations are trivial and unworthy of publication. The seventy-two illustrations are, many of them, of unusual interest. They include reproductions of photographs of the native, of his implements, and of some remarkable sculptures, one of which, a bronze statue of a Congo chief, won a gold medal at the Paris Salon in 1908. There is also given the music of two native songs.

For graphic description of the romantic life and adventures of the hunter after big game, "In Africa," by John T. McCutcheon, the well-known cartoonist of the Chicago *Tribune*, can be heartily commended. The object of the expedition, of which he was a member and Mr. Akeley the head, was to obtain specimens for the American Museum of Natural History in New York; the familiar region of British East Africa, the home of the lion and elephant, being the hunting-ground. Its success was partly due to Col. Roosevelt, who had promised to coöperate in the work; for a time the two expeditions were joined. The farthest point reached was Mt. Elgon on the Uganda frontier; the wonderful caverns on its slopes were explored. They have been inhabited from ancient times, "and in places the solid rock was worn smooth and deep by the bare feet of centuries of naked people." At the end Mr. McCutcheon had a unique adventure. Riding in a carriage drawn by two mules, just outside of Nairobi, the seat of government of the protectorate, he came suddenly upon three lions, two immense males and a female, and pursued them for hours unsuccessfully. In addition to his narrative, he describes with great care the different species of big game which are to be found in this region, and gives much useful information for intending sportsmen. The only criticism which we have to make is that his material has not been wisely edited.

CURRENT FICTION.

The Barrier. By René Bazin. Translated by Mary D. Frost. New York: Charles Scribner's Sons.

M. Bazin is professor of law at the University of Anger, and member of the most intellectual society in the world, the French Academy. But he is also a member of that great church which still —when every tendency of the times makes for the fusion and identification of the divine with the human—insists with some vestiges of its ancient power upon the absolute distinction between the spiritual realm and the kingdom of this world. For him, therefore, religion is not the facile bond that unites a heterogeneous multitude in church teas, expensive music, and social reform. It is, indeed, the bond of true believers. But it is also, as of old, the dividing sword between father and son, and lover and beloved. Within its circle is the warmth of the world; without, the coldness of an eternal separation. The note of M. Bazin's novels is a rare spiritual sensitiveness which impresses one as being at once essentially feminine, eminently French, and distinctively Roman Catholic. It is the protest of a sense which is rapidly becoming obsolete as a human faculty—the sense of *religious* purity.

The hero of the book is Reginald Breynolds, son of an English baronet, who is a political and religious Tory. Reginald, an officer in the army, is a curious latter-day Newman. For him the question of "the Real Presence in the sacrament," upon which he has been brooding in the Indian jungle, constitutes "the essence of religion." He settles the question as did the Cardinal, and thus establishes the barrier between himself and his father. Félicien Limerel is a young Frenchman reared in a family nominally Roman Catholic, but in practice entirely worldly. Félicien, after painful struggles, loses his faith and becomes a skeptic. His unbelief constitutes the barrier between him and his cousin, Marie, with whom he is desperately in love. Marie is the type and touchstone of religious purity. She loves, or loved, Félicien, but to her marriage is a sacrament to be celebrated only with believers. When Reginald goes to Rome, the two young people who are within the pale are powerfully attracted to each other. They refrain from union, however, for the present, out of delicacy for the memory of Félicien. The book is, of course, an anachronism for those outside the timeless church. It is not necessary to recognize the validity of "the barrier"; but unless one is interested in the religious questions involved, the story is naught, for the characters are quite insignificant except as they illustrate the plot.

Cynthia's Chauffeur. By Louis Tracy. New York: Edward J. Clode.

In the rôle of hired chauffeur, a young English lord of distinguished military, diplomatic, and scientific attainments conducts an American heiress and her chaperon on an extended trip. This arrangement permits him to dazzle the lady with his knowledge of English history and poetry, to save her from a ducking in the Wye, to protect her from the matrimonial designs of an unscrupulous French count, and to fall in love with her himself; but the discerning reader will readily see that it will never enable him to win the heart of "Cynthia, who is proud and queenly, and who will strive against the dictates of her own heart because it is not seemly that she should wed her father's paid servant." However, when Cynthia's predilection has been reinforced by a sight of his mansion in Cavendish Square, and my lord in his own titled person has granted satisfaction to the wicked count, and fallen, desperately wounded, on the sands of Calais, the experienced eye sees the way clear to an international alliance. And when, learning of his ensanguined plight, and realizing that she has missed the next train to Calais, Cynthia moans, "Would I could fly there!" no reasonable reader can refuse full sanction to her ardor.

A year or two more and Mr. Tracy will be able to put an aeroplane at the immediate disposal of similarly placed heroines. For the present he has had to content himself with a motor-car as the vehicle of romance. And never before has the intractable automobile been subdued to so sympathetic a part in human drama.

Fraternity: A Romance of Inspiration. New York: Harper & Bros.

When, last summer, J. Pierpont Morgan heard that this novel was to be republished, he took occasion to congratulate the publishers: "I consider it," he wrote, "one of the most helpful books published during these latter years that has come under my cognizance." Now, what he admires the book for is its exemplification of "the spirit that should animate human kind in the endeavor to develop civilization through a real cooperation." This is magnanimous in one whose immense fortune has sprung from competition. But we do not doubt Mr. Morgan's sincere admiration for a book whose spirit does not seek expression in the embarrassing form of prac-

tical theory. The vague socialism it preaches does not profess to embody itself in any such Utopian scheme as newer writers, from Bellamy to Wells and London, have been wont to offer. Such moral as it has lies in the spectacle of a single disinterested and aspiring life. The hero is a young Welsh schoolmaster, a man of generous spirit and warm aspiration. The machinery and flavor of his private romance is Trollopean. He falls in love with a Welsh girl pupil, and runs away from her as soon as he finds that she loves him, because he regards her as his social (and pecuniary) superior. His own origin is obscure; but everything is readily brought out right in the end by the revelation of a very respectable birth and a sufficient inheritance as his due. Where he breaks with the Trollopean tradition is in giving up his birthright to the half-brother who has been brought up in expectation of it. However, he accepts a small competency as his share, and we are comfortably sure that this marriage with the Welsh girl does not entail those material uncertainties on her part which sometimes fall to the lot of those who try to live on terms of coöperation in a world where competition still rules. The book, from its quaintness of method (for Trollope is already quaint), and its fresh, if vague, enthusiasm, is pleasant to read. We doubt whether Mr. Morgan is justified in believing "that great good will come from an enlarged promulgation of its principles"; or rather we doubt if such promulgation is likely to result from the present republication. The principles in question may be found in every primer of modern socialism; and in much modern fiction which is chiefly effective because it is of to-day.

Out of Drowning Valley. By S. Carleton Jones. New York: Henry Holt & Co.

Here is a complicated web of adventure woven around the good old theme of a fabulous gold mine. The whole train of breath-taking dangers and narrow escapes is run off with such speed and smoothness, and is related with such a vigorous, convincing plainness of phrase, that the reader has no chance to be either critical or incredulous. Even the obliging landslide, whose strangely opportune intervention saves Scarlett and his boyish sweetheart from death in the flooded cavern, excites unmixed sentiments of admiration and relief.

THE SERMON OF THE DEED.

Twenty Years at Hull-House, with Autobiographical Notes. By Jane Addams. With illustrations by Norah Hamilton. New York: The Macmillan Co. $2.50 net.

"Which is better," asks Professor Cooley in his "Social Organization, "fellowship or distinction? There is much to be said on both sides, but the finer spirits of our day lean toward the former, and find it more human and exhilarating to spread abroad the good things the world already has than to prosecute a lonesome search for new ones. I notice among the choicest people I know —those who seem to me most representative of the inner trend of democracy —a certain generous contempt for distinction and a passion to cast their lives heartily on the general current." This penetrating observation is suggested by Miss Jane Addams's new book on her life at Hull-House. About a third of the material has previously appeared in the magazines; but unlike the author's previous books setting forth conclusions based on her experience, this traces the experiences themselves with the invaluable sidelight emanating from her own early history.

Miss Addams was born in the village of Cedarville, Illinois, in 1860, the daughter of a Hicksite Quaker who, from 1854 to 1870, was a member of the State Senate, and sufficiently conversant with politics to enjoy the intimate confidence of Lincoln. Her mother died when the future founder of Hull-House was a baby. Despite her physical infirmity—a curvature of the spine—her childhood was a joyous one. The family was well-to-do, if not prosperous; there was an ample air of public interest and public spirit stirring in the household circle; and more than the ordinary heritage of culture. She records that even as a child, her "mind was busy, however, with the old question eternally suggested by the inequalities of the human lot" (p. 14). Like her older sisters before her, Miss Addams went to the seminary, now college, at Rockford, Illinois, one of the earliest schools in the West for the higher education of women, and dubbed, because of affinity of spirit, "The Mount Holyoke of the West." All the fine enthusiasms of those early days of collegiate education for women found in Miss Addams hospitable lodgment, though she records with a bit of waggishness how once upon occasion, in an intercollegiate oratorical contest, she was pitted against no less a competitor than William Jennings Bryan (p. 55). Her father's death occurred soon after she left college. Diverted from the professional study of medicine by a long illness, she spent some years in study, and in travel and residence abroad, until Hull-House in Chicago was opened in 1889. She speaks with an amusing impatience of "the snare of preparation," and with true feminine relief at the thought that "I had at last finished with the everlasting preparation for life," however ill-prepared I might be" (p. 88).

The social settlement has become so familiar an institution that an estimate of its nature and functions is less necessary than an insight into the convictions and character of the best known of its early founders in this country—and this, for the reason that Miss Addams's work has had so strong a formative influence upon settlements everywhere in the United States. The fundamental motive which seems to have actuated her proceeded from her conviction of the utter futility of a detached attainment of moral excellence. This root idea she expresses at times negatively in terms of revolt, or at least of reaction, against a premature overdose of individualistic cultivation, "a moral revulsion against this feverish search after culture" (p. 75). Positively, the same dominant impulse she describes almost passionately as a belief in the supreme moral worth of democracy in social relationships. During the eight years that fell wasted in "the snare of preparation" she "was absolutely at sea so far as any moral purpose was concerned, clinging only to the desire to live in a really living world and refusing to be content with a shadowy intellectual or æsthetic reflection of it" (p. 64). At times, a note almost bitter against the intellectual surfeiting of college training is sounded—"lumbering our minds with literature that only served to cloud the really vital situation spread before our eyes" (p. 70). Or again, when she avers that the "first generation of college women had taken their learning too quickly, had departed too suddenly from the active emotional life led by their grandmothers" . . . had lost that simple almost automatic response to the human appeal" (p. 71).

Her positive attachment to democracy, in the sense of "universal fellowship" in the life-adventure of the race, will appear most clearly if treated conjointly with Miss Addams's second ruling trait, a curious detachment coupled with skepticism about any system, religion, or panacea which falls short of her dominating idea of "universal fellowship." She herself ascribes her rejection of the evangelical assault upon her at college as due to her father's insistence upon "moral integrity" in the forum of conscience as the supreme law of the soul. But some years after, when all outside pressure was withdrawn, she voluntarily was baptized and became a communicant. The recital of the episode is exquisite—as "mere literature" finer than St. Augustine's conversion, in our opinion—but, while explicit as to the absence of disturbance of soul or strong compunction, she adds this revelatory comment:

> There was also growing within me an almost passionate devotion to the ideals of democracy, and when in all history had these ideals been so thrillingly expressed as when the faith of the fisherman and slave had been boldly opposed to the accepted moral belief that the well-being of a privileged few might justly be built upon

the ignorance and sacrifice of the many? (p. 79).

After this one does not wonder that the single-taxer who sought to convert her to his cult by sudden prayer for her in her presence went away sorrowful (p. 57); or that she failed to convert herself to Socialism, though she conscientiously made the effort (p. 186).

It is interesting to notice how this underlying conviction and motive determine her attitude—and incidentally the attitude of settlement workers so largely—upon public issues. Of factory legislation in behalf of the weak, children and women, they approve (p. 174). With trades-unionism so far as "it is a general social movement concerning all members of society and not merely a class struggle" (p. 213), they are in sympathy. For a discriminating State regimentation they stand, for "if certain industrial conditions are forcing workers below the standard of decency, it becomes possible to deduce the right of State regulation" on the ground that "the very existence of the State depends upon the character of its citizens" (p. 229).

There is a fortunate sanity of temper and attitude flowing from the ground idea of "universal fellowship" in social relations which, while misrepresented and at times maligned, has kept the settlements close on the track of their quest of social betterment. Even when outbreaks of individual anarchists have driven the proud logicians into panic and grotesque absurdity, the settlement workers, and Miss Addams in particular, have emerged with signal credit. Even their hero-worship has been in a way transfigured by their guiding motive. Miss Addams confesses that, instead of Carlyle's "Heroes and Hero-Worship" which she had once purposed to give to young boys of promise, she actually presented Schurz's "Abraham Lincoln." Moreover, in retrospect as to "the actual attainment of these early hopes," she remarks, "so far as they have been realized at all, [they] seem to have come from men of affairs rather than from those given to speculation" (p. 193).

The various experiments of Hull House, its failures and triumphs, its inner life as well as its outer activities, are all set forth engagingly in this volume, with a surprising modesty as regards general scientific conclusions such as the professional sociologist would expect. Miss Addams has generally a direct way of putting things, and an enjoyment of humorous by-products. Occasionally, however, there is a note of wistful pathos—"the sense of universality thus imparted to that mysterious injustice, the burden of which we are all forced to bear and with which I have become only too familiar" (p. 27).

Miss Addams's narration of her visit to Tolstoy, and her appraisal of Tolstoyism, will be of particular interest at this juncture. The prophet in his peasant's garb glanced disapprovingly at her large sleeves which were then in vogue, and, "pulling out one sleeve to an interminable breadth, said quite simply that 'there was enough stuff on one arm to make a frock for a little girl' (p. 268). He would have said something similar about an historic alabaster box of ointment. Miss Addams is fortunate in her illustrator. There are an arresting power and a suggestive charm about some of the plates that entitle the artist to distinction.

The Literature of the South. By Montrose J. Moses. New York: Thomas Y. Crowell & Co. $2.50 net.

It is significant—and ominous—that the recognized authorities on American and, more especially, on Southern literature have carefully refrained from attempting any such elaborate history of Southern literature as this well-printed volume is designed to be. Why they have refrained is quite apparent after one has read the present book. Mr. Moses has done a large amount of reading and he has brought together a mass of more or less valuable material, including a useful bibliography of twenty-four pages. His general point of view, which implies the treatment of literature as the product of social conditions, is admirable in principle. His judicial attitude toward such creative Southern literature as he can discover is praiseworthy. He is capable of warm, yet not undue, appreciation, as is shown in his sympathetic and pleasing chapter on the poets of the civil war. Yet one closes the volume with the conviction that the work was scarcely worth while, unless it was the writer's purpose to put it beyond all doubt that the literature of the South possesses as a whole insufficient æsthetic value to merit elaborate treatment apart from the general body of American literature.

As a matter of fact, Mr. Moses does not seem to meet a single one of the conditions entailed by his historical point of view. He often fails to give definite and well-ordered facts just where they are most needed (*e. g.*, in the case of Hugh S. Legaré); and the perplexed though honestly inquiring reader lays down the volume knowing little more in the way of detailed knowledge than when he took it up. Again, the statement of causes in the form of "social forces" is neither clear nor succinct. Finally, owing partly to poor arrangement of material, Mr. Moses fails, in our judgment, to establish the connection between his causes and his results.

To illustrate these defects is an easy task. Although one-third of the book is taken up with a consideration of the social conditions that are supposed to have produced Southern books and writers, the author is continually driven to acknowledge the extreme poverty of the resulting literature. The chapters on the Colonial period, amounting to eighty-seven pages, close with the anticlimactic admission that the period "produced nothing large in the South"; and that, so far as concerns the authors, "As Englishmen they came to see and as Englishmen they wrote" (pp. 86-87). The twelve pages devoted to Jefferson (pp. 130-142) deal with everything but his writings; and this is true of the treatment accorded to the South Carolina statesmen and to the orators of the civil war. Worse still, one is first astonished, then wearied, with the analysis of social conditions in the "New South." All this may belong to a treatise on present-day economics, but it seems sadly out of place in a history of literature. And when at last Mr. Moses actually abandons his judicial point of view and descends into the arena to do battle for his own opinions as against those of Mr. Cable (p. 435) and Mr. Dubois (p. 445), the reader's patience almost comes to an end.

This result would have been avoided in part if the writer had not massed and distributed his material so carelessly. Irrelevant matter is everywhere, and even misleading chapter headings are not lacking. For example, Chapter vi, Revolutionary Literature (pp. 142-159), has for its sole sub-heading Poetry and Poets, although the first twelve pages of the chapter treat writers of miscellaneous prose. Again, though chapters headed Social Forces deal in every other case solely with social conditions, Chapter xiii (pp. 295-338) devotes its last thirteen pages to specific literary criticism. And why is Lanier placed in the civil-war period? Superfluous digressions such as that on William and Mary College (p. 140); irrelevancies, such as the gentle admonition to Miss Glasgow (p. 463); inconsistencies, such as the including of Poe (Chapter xii) after he has been ruled out by definition, abound throughout the book.

Faulty structure, in conclusion, is supplemented by a worse than faulty style. Obscurity, turgidity, incoherence in sentence structure, and violations of usage occur in scores of passages. We are told, for example, that "We glean of Jefferson's position through his own writing, through the opinions of others" (p. 142). A hundred pages later we have the phrase, "redolent with savage uncouthness" (p. 240). Farther on we encounter such jargon as the following: "This digression from the logical sequence of literary development is purposely done to arrive at the conclusion that democratization, as it applies to literature, virtually means a deepening realization of social and economic con-

ditions, and does not demand the relinquishment of environment" (p. 464). Such a style and such inability to handle the materials he is so well qualified to amass will render Mr. Moses's future work as disappointing as the present volume if he does not seek to remedy his defects as a writer.

The World of Homer. By Andrew Lang. New York: Longmans, Green, & Co.

Mr. Lang can more easily write a new book on the Homeric question than the reviewer of its predecessors can find a fresh formula with which to welcome it. He has not appreciably altered his opinions. The Iliad is in the main the work of one supreme poet working as Shakespeare and Scott did with preëxisting materials, and it presents a consistent picture of a coherent civilization. "The World of Homer" is the sub-Mycenæan world which burned its dead and piled cairns over their ashes, purchased its wives of their fathers for a bride price, wore the peplos fastened by a safety-pin, and, though it knew something of iron, still belonged to the age of bronze that preceded Ionia and the return of the Heracleidæ. Of so much Mr. Lang is certain. On other matters he preserves an open mind. He neither affirms nor denies that the Achæans were dolicho-blonds; and if, as many scholars have maintained, they were chivalric invaders from central Europe, he is willing to leave to ethnologists the determination of their precise connection with the autochthonous civilization of the Grecian peninsula. They may have brought the Greek language with them, or they may have learned it from the "Pelasgians."

If a critic were to object that a new volume is not needed to tell us this, Mr. Lang would reply that fresh archæological evidence accumulates rapidly, and that so long as the disintegrators persist in embodying their fallacies in big books, the philological world is out of joint and his facile pen is destined to set it and them right. In this he has our entire sympathy. No one, of course, can prove that any particular book, episode, or line of Homer may not be an interpolation. But the so-called scientific analysis of the Iliad has always been a pure bluff. On the linguistic and statistical side this bluff has recently been "called" by Professor Scott, Mr. Shewan, and Miss Stawell; and Mr. Lang does common sense a good service in reminding us once more how little support this pseudo-science receives either from sound archæology or sane literary criticism. He might have added that it usually brings bad luck and betrays its practitioners into mistranslation or misinterpretation of the text, as it does Professor Murray on pp. 144 and 217 of his "Rise of the Greek Epic," and even Miss Stawell when she ventures into this field (cf. *Nation*, Vol. xc, p. 189); but it would be invidious to multiply instances.

Two recent works have either escaped Mr. Lang's observation or have appeared since his book went to press. One is the admirable summary and dismissal of the Homeric question in the introductory chapter of Mr. Mackail's "Lectures on Greek Poetry." The other is Dr. Mülder's portentous volume on "Die Ilias und ihre Quellen," received with much applause in Germany. This book goes far to show that the Homeric question will remain a permanent phenomenon of pathological psychology. Mülder rejects as futile the past literature of disintegration and proclaims his belief in a real Homer. He then, with a sudden *volte-face*, reinstates the banished scholasticism and all its vicious methods by an attempt to demonstrate the precise way in which Homer worked up his material. For an illustration: when Hector's charioteer, struck in the temple by a stone from the hand of Patroclus, falls headlong from his chariot, Patroclus mockingly compares him to a man diving for "oysters." Mülder's critical *flair* detects here "what no scholar has ever observed before": the oysters, we are gravely told, *are* the charioteer's eyes, which he dives after as they lie on the ground, and Homer, working over the old story of the last battle of Patroclus, introduces the irrational use of a big stone as a weapon solely in order to knock out the eyes and so "place" his own special, original contribution, this horrid Teutonic *aperçu*. This, we think, fixes the high-water mark of Homeric philology. Mülder has "left no hyperbole for his successors," as Isocrates would put it. Mr. Lang may do justice to Mülder in his next book. We can only echo the schoolboy who translated Ὦ μοι ἐγών by "O my eye!"

China as I Saw It: A Woman's Letters from the Celestial Empire. By A. S. Roe. With 39 illustrations. New York: The Macmillan Co. $3 net.

It is a refreshment to discover that the author of these letters learned enough of the colloquial tongue to make the greater part of her trip through China without an interpreter. For a period of eighteen months, she lived in or wandered about the great triangle defined by the cities of Peking, Ch'entu, and Hangchow, visiting the Yangtse region and parts of three northern provinces, but leaving untouched the southern half of China proper. This itinerary does not perfectly satisfy the implication of the title that the author saw the whole Empire, but she at least refrains from those dangerous generalizations which spoil the accounts of many travellers. The reader who goes astray by applying what she says to the people of the South has himself to blame, for she tells us nothing of how that other half lives. The style is sufficiently fresh, and an occasional quaint phrase lifts her narrative above the level of monotony: at Shanghai the river "consists half of brown mud and half of brown boats"; there is a street in Kuei Fu "oozing with pedestrians"; the common cooking oil everywhere in evidence in China happily suggests "the musty odor of mouse-traps and black-beetles." The main impression which the author conveys is not, however, one of humorous portrayal; she emphasizes, rather, her sober interest in the land which she has come to study, and gets, on the whole, little fun out of the discomforts of travel. Not much is told us of the temples and tombs; politics are wholly ignored; the work of the missionaries—who were everywhere her hosts— is referred to with respect rather than with active sympathy.

The reader accustomed to works on China gets a fresh sense of the old order changing, even there where he finds that stock-in-trade of former travellers, the Examination Hall, described as a ruin, and the institution a thing of the past. But the new order does not impress the author as very firmly established:

> Side by side with the ruined cells stands the new government school, built of wood and plaster—new, showy, and unsubstantial. The thin wooden frames to doors and windows are painted a brilliant royal blue, the slender walls are of dazzling white, the buildings—chiefly one-story high and built round courts—look as fragile as bathing sheds. One asked one's self—how long would they last? And one thought of old China, rigid and unchanging through the centuries, and new China, starting like a growth of mushrooms in the night, breaking out in patches in unexpected places.

Upon returning from a summer spent in Japan, the author ventured alone by rail from Tientsin to Tai yuen, the capital of Shansi. Here is a Provincial "university" erected with money which Protestant missionaries refused to accept as indemnity for the Boxer massacres, besides schools and colleges of sorts. More than four thousand students are trained in the new learning in this city alone. Female education, though bravely started here, is not yet on the same plane with that imparted to boys, instruction in foreign languages being especially hard to obtain, owing to the lack of qualified teachers. It was, perhaps, for this reason that Miss Roe was allowed to take a class for a few weeks in her friend's school, after which experience she has this to say of her pupils:

> There is a great charm about these Chinese girls with their dainty, courteous ways and dark eyes which light up merrily at the least encouragement. But everything in China has its surprises, and the gentle

little school-girls are no exception to the rule. My hostess once planned to give them a treat on her birthday. They were to choose what it was to be. Picture to yourself those dainty little maidens had but one wish—they wanted to go to the execution ground to see the beheading!

On the whole, though we are not brought into very intimate contact with the people, we leave these pages with an agreeable impression of the Chinese, not only as a shrewd and mightily laborious folk, but as an alert and kindly folk, lacking but one quality to make them great, and that quality is moral character.

Notes

The index of the *Nation*, July 1 to December 31, will be printed with the issue of January 5.

Richard G. Badger is to publish at once "The Individual and Society," by James Mark Baldwin. At the present moment Professor Baldwin is in Mexico, delivering the opening series of lectures at the New National University of Mexico.

"The Burial of Olympia," the subject to which the *Geographical Journal* for December gives the largest space, is a study of the present conditions of the city famous for its worship of athletics, by Ellsworth Huntington. With the Yale Expedition he visited it in September, 1909, and after careful observation of the ruins and the neighboring region came to the conclusion that its burial, synonymous as it were with the decay of Greece, was due to pulsatory climatic changes such as he had discovered in central Asia, and to malaria. The absolute correctness of this theory was questioned by a number of eminent scientists in the animated and lengthy discussion of the paper when read before the Royal Geographical Society, and much light was thrown upon this interesting problem. P. A. Talbot describes an extraordinary tribe, the Ekoi of southern Nigeria, among whom he, as member of the government service, was the first white man to live. He describes them as among the happiest people on earth, one reason for which is possibly the charming superstition which "forbids all quarrelling in a house where there are little children. The latter, so they say, love sweet words, kind looks, and gentle voices, and if these are not to be found in the family into which they have reincarnated, they will close their eyes and forsake the earth, till a chance offers to return again amid less quarrelsome surroundings."

Perhaps the recent discovery of the North Pole explains the convenient reprint of Lord Dufferin's "Letters from High Latitudes" (Frowde), though without any such particular occasion their inclusion in the "World's Classics" would scarcely be disputed. There is in the account of this voyage of half a century ago an angle of human interest and picturesqueness which contrasts pleasantly with the stricter science expected in authentic records today. Lord Dufferin possessed something of the capacity for observation of that earlier traveller, Sir Walter Raleigh, and more than his restraint, and gave out to the world a vast amount of impressions concerning the countries where his little schooner yacht touched, especially Iceland. The introduction to the present volume by R. W. Macon, master of University College, Oxford, is the frankest eulogy, yet interesting, too.

The Third Volume of H. O. Sommer's "Vulgate Version of the Arthurian Romances" (Carnegie Institution) contains part i of the famous Old French prose-romance, "Lancelot del Lac." This is the third member of the so-called Walter Map, or Vulgate, cycle of the Arthurian romances —the cycle which Dr. Sommer is engaged in publishing—and it is much the longest, being equal in bulk (approximately) to all the rest put together. The editor intends issuing this romance in three parts (including the "Agravain"), and the whole will not fall far short of being double the length of "David Copperfield." To be sure, it is hardly the work of a single hand. As was explained in our notice (May 26, 1910) of the first two volumes of this publication, Dr. Sommer's edition is merely a printed transcript of the British Museum MS. Additional 10292-4, with occasional collations from other MSS. In the present volume these collations are much more meagre than in the previous volumes. Nevertheless, this third volume is of very superior interest to the first and second—containing respectively the "Estoire del Saint Graal" and the "Merlin"—for no text of the "Lancelot" has been printed since the sixteenth century, which was not true of the two romances just mentioned. Only time will show whether the MS. used by Dr. Sommer is one of the better MSS. of this work. It is a reasonable conjecture, however, that the large collection of MSS. of the prose romances in the libraries at Paris—much the largest in the world—will be found to contain the best text of the "Lancelot" as well as of the other branches of the cycle. In the case of the "Lancelot" it is known that the MSS. show very material variations.

As regards the intrinsic interest of the present romance, one must confess that, despite the unparalleled reputation which it enjoyed in the Middle Ages, it is not easy reading for the twentieth century man—much less easy than the admirable modernization by Paulin Paris, which has rendered the main outlines of the story familiar to students of mediæval literature for the past thirty years or more. The endless fighting and the absurd extravagances of the *amour courtois*, which constitute so large a part of the book, weary the modern reader. After making these deductions, however, we still have in this romance an interesting reflection of feudal society in war and in peace. The narrative of the wars of Claudas leaves one with a vivid impression of feudal strife—its confusion and its violent contrasts of treachery and loyalty—and it would be hard to point to more charmingly tender pictures of childhood than we have here in the early histories of Lancelot and Lionel. On the other hand, the account of Lancelot's love-affair with Guinevere is stiff and artificial with the artifice of the "Courts of Love." But for the author of the "Mort Artu," who breathed into the two lovers something of the passion of their great originals—Tristan and Iseult—it is safe to say that their story would not be still a living one, as it is, in the modern world. The Middle Ages, however, were not conscious of the above-mentioned defects, and the scene—contained in this volume—in which Lancelot first kisses Guinevere has been rendered forever memorable by the greatest poet of the period in the incomparable episode of Paolo and Francesca.

A country with a most unique political status is Sarawak, situated in the northwestern portion of Borneo. Although it is nominally an independent state, governed by its Rajah, Sir Charles Brooke, as an absolute monarchy, with an administrative council, it is at the same time under British protection. S. Baring-Gould and C. A. Bampfylde, late resident of Sarawak, have recently produced as collaborators a readable volume entitled "A History of Sarawak under its Two White Rajahs" (London: Henry Sotheran & Co.). The story reads like a fairy tale. Sir James Brooke, the first rajah, was born at Benares, in India, in April, 1803, and was the son of an Englishman in the employ of the East India Company's Civil Service. While he was on a yachting tour in Malaya, Brooke visited Sarawak, and later aided its weak native governor in suppressing an insurrection; in return he was made Rajah and Governor of Sarawak, a feudatory province of Brunei. Rajah Brooke gained the good will of the natives, steadily strengthened his position, brought about various territorial accessions, and succeeded in forcing the Sultan of Brunei to bequeath to him the governorship of Sarawak in perpetual right. He immediately set himself to the task of putting the government of his state on a sound footing, of reorganizing the revenue system, suppressing piracy and head-hunting, and bringing about peace and freedom from oppression. In his policy and actions Sir James Brooke was guided by no personal ambition, the great desire of his heart having been the amelioration of the lot of the oppressed natives whom he came to love. His services as Rajah, instead of enriching, left their author "broken by illness and weariness of heart, with threatening poverty." He died in 1868, after twenty-seven years as ruler, leaving behind him "one of the noblest records of a life devoted to the cause of humanity." The present Rajah, Sir Charles Brooke, is a nephew of the first Rajah, and has administered the state since the death of his uncle, nearly half a century ago. The guiding principle of his policy has been sympathy between the ruled and the rulers, with the result that the wheels of government run with a singular smoothness. Mr. Alleyne Ireland, who was sent out from the United States by the University of Chicago to study British and other tropical colonies, published in 1905 his preliminary report, wherein, after commenting severely on the methods adopted in the Philippines by the United States, he turned to Sawarak as offering a sharp contrast. He declared that in no other country which he had ever visited were there to be observed "so many signs of a wise and generous rule, such abundant indications of good government, as are to be seen on every hand in Sarawak."

Walter G. Shotwell's "Life of Charles Sumner" (Crowell), though compressed by means of thin paper into a manageable volume, is in reality of considerable compass,

extending as it does to more than three hundred and twenty thousand words. For readers who wish an abundance of personal details, old-fashioned summaries of writings and speeches, and a general tone of unquestioning approval, the book should prove eminently acceptable. The narrative shows intelligent use of Pierce's "Memoir," and acquaintance, often intimate, with the Massachusetts politics of the time. Unfortunately, however, for the historian, Mr. Shotwell's point of view is so exclusively that of Sumner that the critical value of the work is slight. Only once or twice does he seek to defend Sumner against imputation or animadversion, and then only at quite unimportant points, while of "apparatus" there is none, not even a footnote. There is no indication that the author, any more than the man whose life he writes, understands the real nature of negro slavery, or the causes of secession, or the profound political issues involved in reconstruction. It is, indeed, curious that, a generation after Sumner's death, it should be thought worth while to offer the public a biography which, however meritorious as a piece of orderly narration, is historically no more enlightened than Sumner himself might have written had he framed his own Apologia.

"Italian Fantasies" (Macmillan), by Israel Zangwill, is a highly colored book written largely in neo-Carlylese. The author is for the full emotional flavor, and quite frankly scorns those writers who deal in tinctures. He summons up what he loves to call the "Magnificences," accosts them, buffets them when they need it. He is best, it seems to us, in rather simple description, as in the essay on the Gonzaga Palace at Mantua; he is most characteristic when he muses cosmically on life and death, anent the Naples Aquarium, or overhears the gossip of the carpenter's family concerning Jesus. Machiavelli, Lucrezia Borgia, Dante, St. Francis, are among the biographical topics. For your reviewer almost everything seems shockingly overwritten. But tastes differ, and Mr. Zangwill's style and favorite doctrine may be judged from an extract that represents him favorably:

> Only less arrogant [than seeking "impressions" of nations] is it to place one's soul in patronizing "Appreciation" before some great historic structure—a cathedral, a mosque, a palace, a library. These works of man so immensely transcend any man's works that he fits into them as ludicrously as a mouse. A cathedral that represents the genius and labors and sacrifices of generations towers so immensely out of all proportion to any individual that he can only recover a reasonable relation to it by fusing himself into the life and stature of the race. To be solely concerned with its impingement upon his own soul is an impertinence, to pass his life in contriving such impingements is to live by robbery, and to enjoy these secular products of human solidarity on the Paterian pretext that the only reality is the fleeting and isolated Ego, is peculiarly paradoxical.

Many readers will, with us, on the whole, approve the sentiment, while preferring rather to take the chances with the isolated ego of Pater than with Mr. Zangwill vociferously "fusing himself with the life and stature of the race." It is doubtful if an immoderate person can understand Italy. Getting excited about Italy is a different matter. It may be symptomatic that the single illustration in this volume, a good color print after Stefano da Zevio's Madonna of the Rose Garden, reproduces the least Italian picture ever painted by an Italian artist.

"The Favourites of Henry of Navarro" (Badger), by Lo Petit Homme Rouge, covers wide historical ground, gathers together a number of facts hitherto not accessible in one volume, gives the authorities upon both sides of disputed questions, and with admirable impartiality sums up the five women—Marguérite de Valois, Corisanda (Diane, Duchess of Gramont), Gabrielle D'Estrées, Henriette D'Entragues, and Marie de' Medici—most closely associated with Henry's life. At the same time he sketches briefly the almost numberless women with whom Henry had ephemeral *liaisons*, and crowds his pages with persons not familiar to the general reader. The author writes pleasantly enough, though his time-worn trick of taking the reader into his confidence with, "We will now return," or, "As we shall see further on," soon becomes irritating, but through the very scope of his effort to be at once accurate and comprehensive, his book falls between two stools. It is too sketchy for the serious student; the reader familiar with French history will find in it little that is new except a few unimportant facts concerning Henry's various mistresses, and those who do not know French history will be confused by the accumulation of facts, events, dates, and authorities, compressed into one volume, and made less clear by the author's failure to arrange them in logical sequence. He also fails to make his men and women live for us, except Henry himself, whom (alas for Ivry and the oriflamme of war!) we see very vividly—a gross, uncleanly creature. The book is illustrated with six portraits, is well indexed, and has carefully prepared footnotes, and an appendix containing the names of the women associated with Henry's life, the names of his natural children and their descendants, and two songs attributed to him.

Dr. Delos F. Wilcox, in "Great Cities in America" (Macmillan) considers the organization of government in Washington, New York, Chicago, Philadelphia, St. Louis, and Boston. Charter change is now going on so rapidly in this country that any fresh collection of data is valuable, but it is one thing to gather facts, and another thing to interpret their significance. Dr. Wilcox tells about "the political pirates in control of the city administration" of Philadelphia, and in his summary of conditions in great cities he observes that "everywhere are proofs of extravagance, waste, and downright thievery." If one asks why, the answer that Dr. Wilcox's work seems to give is that there is a peculiar depravity of human nature in American cities. He intimates that this is to be attributed to immigration, remarking that "the presence of the children of so many nations in one community offers the greatest obstacle to the municipal salvation of the great cities of this country." But is there a marked influx of immigrants from any country lacking decent municipal institutions, and is there a great city in the world that does not have a mixed population? Sounder analysis might discover that the American defect is rather in the character of the institutions than in the character of the people living under them.

"The Humane Movement," by Roswell C. McCrea (The Columbia University Press), is a descriptive survey of the work and methods of humane societies. The matter includes programmes of lectures, a directory of names of officers of societies, names of special policemen employed, sample educational leaflets, etc. The bibliography is also strikingly comprehensive, ranging from children's books of animal stories to such weighty treatises as Hobhouse's "Mind in Evolution" and Wassman's "Comparative Studies in the Psychology of Ants and Higher Animals." In the chapter on antivivisection a quotation is made from a prize essay to the effect that it does not matter how vivisection may be restricted or what scientific gains may accrue, the taking of life is a sin and should be condemned as such. "It would be better indeed to die of lockjaw, diphtheria, tuberculosis, cancer, scrofula, or all combined, than to be responsible for such offence." Under the head of "bird protection," statistics are cited to the effect that 200,000,000 bird lives are sacrificed annually to supply the demands of fashion, but it does not appear that this inspires such a degree of indignation as in the case of a small sacrifice of life for the advancement of medical science. The gist of State laws for the protection of children and of animals is given in a tabulated synopsis difficult to follow and really not economical of space. Within the 110 pages thus occupied on a system resulting in numerous blank compartments, it would have been feasible to have given a codified statement of the laws themselves.

"How to Judge a Book" (Houghton), by Edwin L. Shuman, is described with sufficient accuracy by its sub-title, "a handy method of criticism for the general reader." Mr. Shuman believes that it differs from other volumes of similar purpose by respecting "the right of every individual to shape his reading primarily by his own tastes, rather than by the dictates of any other man's taste, however enlightened." "He believes, furthermore, that the general reader is primarily interested in contemporary fiction. Accordingly, a large part of his book is occupied with an analysis and valuation of the constituent elements of fiction, with numerous applications to contemporary writers. Except for his recommendation to begin with one's interests and work upward to the masterpieces, instead of beginning with the masterpieces and working downward to one's interests, he proposes nothing especially novel or debatable.

Like a voice from the thirteenth century is Comte de Colleville's "Un Crime du Second Empire: le Guet-Apens de Castelfidardo" (Paris: F. Juven). In it the aged Legitimist relates with mediæval fervor the formation and ignominious snuffing out of the Papal army, which the fanatic Mérode organized in 1860 and the boastful turncoat Lamoricière led to defeat at Castelfidardo and Ancona. Colleville's thesis is that the Papalists were betrayed by Napoleon III into believing that he would not allow the Italians to attack their nondescript army. The count, who is an immovable Ultramontane, brings no new proof to support his insinuation; but perhaps his

own display of pious zeal is the best historical contribution in his book. He and a few of his friends evidently took seriously Lamoricière's declaration that they were crusaders defending the Pope against new Islamites, to wit, the people of Italy.

The merit of W. Cunningham's "Christianity and Social Questions" (Scribner) is a clear understanding of the nature of the Christian religion, and a firm belief that Christian organizations for social betterment must hold to Christian principles and methods. Dr. Cunningham's chapters on "Mundane Theocracies" and "Non-Christian Methods of Reform" are specially to the point. He insists that the task of the church is a spiritual one, and can be accomplished only by spiritual strength and through spiritual means. His presentation of the case against what is termed Christian Socialism is a strong one. At all points his reasoning is cogent, and he possesses abundant mastery of facts, as might be expected from his earlier volumes on "Western Civilization in its Economic Aspects" and "Growth of English Industry and Commerce." The present volume he defines as "an attempt to set forth, from a Christian standpoint, the relative importance of all the forces which make for human welfare, or militate against it."

In his medley of reminiscences of his pastorate of the American Church at Berlin from 1894 to 1908, Dr. J. F. Dickie presents a curious example of ex-cathedra optimism running riot in literature. Nearly everything is lovely in Berlin, and nearly everybody with whom the author comes in contact is perfect; hence "In the Kaiser's Capital" (Dodd) ought to satisfy his Imperial Majesty, to whom the volume is by permission dedicated. We are gravely told that "there is nothing he (the Emperor) touches that he does not adorn" (witness a six-page sermon at sea quoted in full); "whoever has looked at close range into that eye never ceases to admire and marvel"; the Empress is "that noblest of all women"; and even for the Jew-baiter, Stoecker, Dr. Dickie has a kind word after his funeral: "it was universally acknowledged that a great man had gone home to God." And so we need not be surprised that even certain sinister aspects of the Thiergarten lose all sombreness in the eyes of the genial doctor. "When one has grown weary of the weight of life and wishes to throw it back to God who gave it, out to the Thiergarten he goes and shoots himself there. It is red with the blood-spots of many a suicide, and yet kind Nature washes out the stains . . . The gladsome faces of the riders as they gallop past you in groups effectually vanish (sic) every dreary thought, and the Thiergarten has only pleasant associations." Perhaps the severest censure of which the author's kind heart is capable is reserved for a deplorable feminine weakness which crops out in connection with the Berlin registration office. "I have known," Dr. Dickie remarks sadly, "matrons of seventy or unmarried ladies of a similar age to give themselves out as forty-five or, at most, fifty." The book contains a number of anecdotes of distinguished men—the bright sayings recorded, including the author's own, always come "quick as a flash"—but the authenticity of at least one of them is open to question:

At a little dinner where the Emperor was present Harnack was placed between two young American ladies. They were sisters, and I heard him tell this story: "Once before I was placed between two sisters. Their name was Hagen. I noticed that the name of the one was A. Hagen, and the name of the other was C. Hagen. My host came up to me afterwards and said that he hoped that the young ladies and I had had a good time together. I answered in one of the few *bon mots* I have made in my life—'between A. Hagen and C. Hagen I found B. Hagen (*Behagen, i. e.*, comfort and pleasure).'"

This story has often and often been told. It refers to the Hagen sisters, charming actresses who flourished more than half a century ago. The *bon mot* is generally credited to the Vienna actor and wit, Friedrich Beckmann.

Robert Lynd's "Home Life in Ireland" (McClurg) does not pretend to be scientific; it is a series of desultory and pleasantly written essays on the Irish people, their characteristics, and their lives. The author is an Ulster man, so that he is more interested in the industrial than the agricultural problems of his country, but he is an ardent Home Ruler, and an admirer of the Sinn Féin movement, to which he devotes a chapter. The Sinn Féin policy is to unite all Irishmen, whether Unionists or Nationalists, for Irish ends. They are invited by the Sinn Féin, as Dean Swift invited them in the eighteenth century, to boycott English goods. "Burn everything that comes from England," said Swift, "except the coals and the people." The strength of Sinn Féin seems to lie in having a non-political as well as a political side, though one cannot imagine that a Sinn Féin enthusiast would long remain a Unionist. Mr. Lynd thinks that the Sinn Féin school of Nationalism is the one with which the future will have to reckon. He admires the work of the Gaelic League, and believes that the revival of that language is essential for Ireland's regeneration. The book is attractively got up and well illustrated from photographs of scenes of Irish peasant life.

The annual statement of the *Deutsche Zentralstelle für Internationalen Briefwechsel*, the object of which is to promote a regular interchange of letters between the pupils of the German and those of the French, British, and American schools, announces that it has during the past year received for distribution from German students 3,139 registrations, 2,012 of which were in English, and 1,127 in French, making a total since the foundation of the bureau in 1897 of 31,392. A marked increase in the number of English letters is noted. There is bitter complaint that the number of French schoolgirls who are studying German is hopelessly inadequate to the task of coping with the epistolary ardor of the French-learning *mädchen*; they, as well as the French-speaking Swiss and Belgians, are all too busy learning English. It has been difficult, too, to find enough students in Great Britain who are willing to write German letters. In fact, the whole enterprise would have fared badly, if it had not been for the extraordinarily lively interest in the German language among the high schools of North America. German students have been fairly put to their trumps to muster a sufficient number of English replies. The bureau complains that it finds it hard to decipher German script when written by an American hand, and that the ambiguity of American baptismal names makes it difficult to tell the girls from the boys, a matter of some importance in an enterprise of this kind. A number of letters from teachers and students point out the merits of the scheme. A pupil, by sending his name through his teacher to *Die Deutsche Zentralstelle für Internationalen Briefwechsel*, Fechnerstrasse 6, Leipzig, may obtain the "Rules" for a two-cent stamp. Membership costs six cents (international money order), and for an adult, fifteen cents. Those desiring French correspondence should address *Review of Reviews*, Bank Buildings, Kingsway, London, W. C.

Adams Sherman Hill, professor of rhetoric and oratory in Harvard from 1876 to 1904, and since then emeritus professor, died at his home in Boston, December 26. Dr. Hill was born in Boston in 1833, and graduated at Harvard in 1853, receiving a degree from the law school two years later. For thirteen years he acted as law reporter, correspondent, and editor in Washington, New York, and Chicago, and was then called to Harvard. His books are: "Principles of Rhetoric" (1878), "Our English" (1889), "Foundations of Rhetoric" (1892), and "Beginning of Rhetoric and Composition" (1903).

Science

Edison, His Life and Inventions. By F. L. Dyer and T. C. Martin. 2 vols. New York: Harper & Bros. $4.

The authors announce this biography as the authentic and authorized life of Mr. Edison, and, being intimate associates of the inventor, they have had his constant assistance during its preparation. Few men have been subjected to more searching and contrary criticism; on the one hand, he is hailed as a wizard before whose spell the doors of the temple of nature open wide to disclose the mysteries of the universe; on the other hand, he is sneered at as a charlatan, who has gathered about him able and unsophisticated young men and then appropriated their achievements. He is, of course, neither the one nor the other; many failures record the difficulty of dominating natural forces, and for his successes he has always provided the ideas which have been put into practicable shape by himself and his associates.

There are two types of the inventor. The first is the man who guards jealously his ideas and works them out in isolation; the results of such a method may be of the highest importance, but they must depend less on the complexity of detail than on the novelty of the idea; the other type, of which Edison is certainly our most distinguished example, takes the scientific and philosophic ideas of the time and develops them on a large scale for practical and commercial use. A glance at Edison's most important achievements shows them to be almost exclusively of this latter charac-

ter. The scientific principles of the telegraph, the telephone, the phonograph, the electric light and dynamo, the separation of iron ore by magnets, the manufacture of cement, and the many other problems which have engaged his attention had been discovered and described by others, but they all lacked the touch which has adapted them to a large and practical use. It is evident that no man can carry out such complex undertakings unaided; he can only direct the computations and experiments to be made by a corps of assistants, reserving for himself critical and decisive manipulations. Such a method of work will always arouse criticism; in literature Dumas used the same plan, but it is significant that when the master mind was removed the Dumas novel ceased, and the same will be true when Edison releases his guiding hand.

It is quite safe to say that no man has modified so profoundly the material civilization of his age as Edison. He has with an unerring instinct been able to see the practical possibilities which lie in scientific discoveries. He is a great reader and, with the aid of a retentive memory, he coördinates to his purpose many apparently unrelated laws and facts of science. Added to these advantages, he has a patience and industry which are truly astonishing. Nothing is more extraordinary than the power of continuous application, without rest and sleep, which he has enjoyed and practised, together with the curious influence of personality that can excite others to sustained effort beyond their natural inclination.

But this book does not owe its principal interest to a description of invention and mechanical developments. The subject of the biography has an individuality so strong and so unusual that we follow his career with the keenest attention. From the time of his early boyhood, when he started a chemical laboratory in the baggage car of the train on which he sold papers, through his struggles and wanderings as a telegraph operator, and during his later experiences as an inventor and master of great industries, his whole life is a record of a unique personality. Life presents itself to such a man in an aspect quite out of the ordinary, and its story gives us the same kind of pleasure as the drama or novel.

"The Gait of the American Trotter and Pacer" (Jenkins), by Rudolf Jordan, jr., is a painstaking, serious study. The object of the book is to ascertain just what a horse does with his legs when he is moving. That, at any rate, is the scientific purpose. The practical purpose is to inquire into the sorts of shoeing best suited to different gaits; that is, admitting that the varieties of conformation and action in horses are infinite and that each horse is a law unto itself, the author seeks for certain underlying principles of motion and shoeing which are applicable to all horses. He proposes a method for studying the tracks of horses, which is to drive a horse over a cultivated field provided with proper measurements, the details of which are too complicated to explain in a mere word. The book is often rather vaguely expressed. Much is said, for instance, of "pointing," by which is meant, we suppose, the direction of the feet with relation to the direction of the horses. But there is no definition. We are, however, not disposed to find fault with so earnest and conscientious an inquiry; it is addressed chiefly to horsemen.

Prof. R. P. Williams has had very extensive experience in teaching chemistry. It is to be doubted, however, if all the claims made by him in the preface of his "Essentials of Chemistry, Experimental, Descriptive, Theoretical" (Ginn) are substantiated. Undoubtedly, he has accumulated a large amount of material, but teachers of chemistry in these days have found it wise to omit much that has been given in the past. Pedagogic methods do not now call for the inclusion of out-of-date methods in a modern text, just as we now no longer speak of electrical phenomena in terms current in the days of Faraday and Davy. Except for the half-dozen pictures of famous chemists, the illustrations in the book are of little or no use and often mean nothing. It is to be regretted that the author has perpetuated the erroneous statement that Drummond invented the limelight (p. 60). The student is also likely to get a thoroughly wrong impression from the definition of a base given on page 138, where it is stated that a base turns red litmus blue. He might conclude that anything which turns red litmus blue must be a base, whereas it is well known that several normal salts produce this change in color. On page 187 it is noted that nearly one million tons of sulphuric acid are made in the United States each year. These figures are about ten years old. The book is backward, too, in having no mention in the index of radium and radioactive phenomena.

Capt. George Ernest Shelley, the distinguished ornithologist, nephew of the poet, died recently at Bournemouth. His publications are "Birds of Egypt" (1872), "Monograph of the Nectarinidæ" (1880), and "Birds of Africa" (1896).

Drama

"William Rowley, His 'All's Lost by Lust,' and 'A Shoemaker, a Gentleman,' with an Introduction on Rowley's Place in the Drama," by Charles Wharton Stork (Publications of the University of Pennsylvania), grapples with one of the most difficult problems of the Elizabethan drama. With only four extant plays wherein Rowley's name stands alone on the title-page, to furnish a standard of his characteristics, and with the knowledge that he had a hand in a great many other plays, one might well be discouraged from this Psyche-like task of sorting out his work. Yet, if Dr. Stork has misgivings, he never betrays them, and, once started, does not look back. The results of his study are scarcely convincing. His method may be observed from the following passage. Speaking of "A Fair Quarrel," which early records stamp as the joint work of Middleton and Rowley, he states confidently:

My analysis of the play agrees, scene for scene, with that of Miss Wiggin, who gives Middleton the main plot, excepting I and III, 2, and Rowley the minor plot. Rowley's rapidity of dramatic movement made him the more suitable of the two to write the opening scene. Act III, scene 2, I give to Rowley, because of the primitive womanliness of Anne, who is most gentle and winsome, qualities quite foreign to Middleton's heroines, etc.

Any one who has happened to make a study of this problem will no doubt examine Dr. Stork's statistics of his impressions with considerable interest. More than that, by the very nature of the case, they do not deserve to be called. Included in the volume is the text of the two plays mentioned in the title, the first play having been recently reprinted for the Belles-Lettres series; the second is based upon the only known edition of 1638. Both plays are accompanied by brief textual notes.

It is a relief to find that of the recent works of Germany's much-discussed actor-author, Frank Wedekind, at least one, "Der Stein der Weisen" (imported by G. E. Stechert & Co.), is not sex-ridden, as his writing is wont to be. It is a one-act play in verse, called an incantation, and is introduced Shaw-fashion by a bit of personal history. For the author tells us that it owes its inception to a controversy with the *Berliner Tageblatt* which had employed an offensive phrase in rejecting some of his work. Accused of self-adoration Wedekind was reminded of the words of Ibsen, and resolved to sit in judgment upon himself. The result was Basilius Valentinus, a necromancer, in which he attempts to reflect his own personality with a few touches reminiscent of Faust. There is also a *famulus*, Leonhard, who reminds one of Wagner, besides another itinerant scholar named von Blutenburg. The little play contains more original ideas than the prose plays of the author. The figure of Porphyrius, the monk, who has come to deliver the papal ban, is, of course, a caricature; but Guendolin, the fool, who stands for humor, is a delightful impersonation. Basil is wont to call him whenever beset with annoyances that sap his strength; but even the fool, like the *famulus*, rebels against the cruel task-master. Although Basil parts with the philosopher's stone to bribe him, Guendolin wounds the master with his own bow and arrow and leaves him, taking the stone as a cap ornament. At Basil's death, Porphyrius, who has been his prisoner, makes escape. When Leonhard reappears and finds himself released from bondage, he sets out to enjoy his freedom by taking unto himself a wife and rearing children—a genuine bit of Wedekind irony.

A still later play of Wedekind's returns to his favorite theme. "In allen Wassern gewaschen" (imported by G. E. Stechert & Co.) is a one-act tragedy presenting an extraordinary phase of that trade which has been the subject of recent investigation in this country. There is a variety of cleverly drawn characters, among them the agent Salzmann. The woman in the case is of unusual intelligence, but hopelessly infatuated with a bankrupt sovereign, whose throne she hopes to save. The American nabob who figures in the transaction has, however, nothing American about him, unless his monstrous name, Chagnaral Tschamper from Atakama, is meant to suggest the ra-

cial conglomerate of America's population. In repulsiveness the work surpasses anything so far achieved by the radical wing of Young Germany. In comparison Wedekind's earlier works are Puritan in spirit and speech. He may have had an ethical motive in writing it, just as he had in his tragedy of adolescence, "Frühlings Erwachen" ("Spring's Awakening"), which is available in a poor English translation. When Brandes called Wedekind the Mephisto among the writers of his generation, he certainly came nearer summarizing in one word the salient traits of Wedekind's individuality than did the French critic who regards him as a moralist. For there is probably no other writer in Germany to-day who takes such a diabolical delight in obscuring his ethical motives by a more than brutal frankness and an insistent undernote of cynicism.

Music

HUMPERDINCK'S NEW OPERA.

For the second time within a few weeks, the Metropolitan Opera House has had the honor of establishing the traditions for a new European opera. Time was when such traditions were not regarded as worth having, a conspicuous instance being that of Wagner rehearsing his "Tannhäuser" in Paris, raising the dust on the stage in stamping the correct time, to which the conductor paid no attention whatever. We have changed all that. Just as Giacomo Puccini came all the way from Italy to make sure that the music of "The Girl of the Golden West" was taken in exact accordance with his intentions, so Engelbert Humperdinck has been here from Germany a month, advising Alfred Hertz and the singers in regard to details of the execution of his "Königskinder." He will do the same thing in Berlin and some of the other German cities in which the novelty is to be produced forthwith; but nowhere else will he find artists so able to give points, as well as take them, as here, where his cast includes Geraldine Farrar, Louise Homer, Hermann Jadlowker, Otto Goritz, and Albert Reiss, all of whom, at the dress rehearsal, on which this report is based, showed their best powers.

Though new as an opera, "Königskinder" is not altogether a novelty. After the extraordinary success (1893) of his fairy opera—"Hänsel and Gretel"—a success comparable only to that of "Cavalleria Rusticana," or of "Pinafore"—it was taken for granted that Humperdinck would at once produce another opera. Instead of doing so, he began to write incidental music to plays. One of these plays was "Königskinder," by "Ernst Rosmer," which is the assumed name of Frau Max Bernstein of Munich, whose father, Heinrich Porges, was Wagner's Boswell, and one of his principal aids at the production of "Parsifal" in Bayreuth (1882). He was called there the "Blumenvater" because he was responsible for the good musical behavior of the flower girls in the second act of that work. Humperdinck was another important helper at that festival, and by an odd coincidence he, also, had assisted in training the flower girls, having been sent to them separately by Wagner in the cities where they lived, to convey his directions before they went to Bayreuth. These details help to explain why not only the music of "Königskinder," but the play also has an unmistakable Wagnerian flavor. This was already noticeable when this work was produced as a melodrama, with incidental music, and it is emphasized in the opera, in which the composer has expanded these incidental numbers and added to them much new matter.

Humperdinck followed a correct instinct in converting this melodrama into an opera. When spoken words and music go together, the music obscures the words and the words jar on the musical sense. Schumann, Richard Strauss, Max Schillings, and other prominent composers have tried to wed music to plain words, but never with success. In the case of "Königskinder" the conversion of the play into an opera was distinctly called for, because the story really demands musical treatment. It is one of the best plays ever written by a woman, being not only well constructed, but remarkably clever as an imitation "Märchen." It is, indeed, so much like the typical fairy tale that one naturally looks over one's copy of Grimm —and then of Andersen—in the firm conviction that it must be in one of these books; but though there are tales of King's children and goosegirls in them, they are not like Ernst Rosmer's. Her goosegirl is an enchanted princess living in the pine forest with a sorceress, who vainly tries to teach her the arts of witchcraft. The girl exercises them, however, in her own way, over a prince who comes along. He tries to elope with her, but magic bonds prevent her from leaving. A Woodcutter, a Broommaker, and a Fiddler from the town of Hellabrun come to consult the witch as to the best way of getting a successor to their late king. She tells them to take for their sovereign the first person entering the town-gate at the stroke of twelve, and allows the goosegirl to go with the Fiddler. The next day, when the gates are opened, it is she, with her flock of geese, who appears, to the indignation of the townspeople, who drive her away, together with the Prince, who, disguised as a swineherd, had knelt before her and put his crown on her head. He now tries to find his kingdom again, but they go astray in the forest, dwell for a time in a cave, and finally, in a storm, having found the witch's abode and eaten some poisoned cake left by her, die and are buried under a shroud of snow before the townspeople and their children, having at last become enlightened, find them.

Humperdinck is totally unlike the other prominent opera composers of the day. To him melody and emotion are the main elements in an opera, as no one who has heard "Hänsel and Gretel" need be told. The new score is fashioned along the same lines, the vocal melody being simple—sometimes like a folktune—while the orchestral score is of Wagnerian texture and beauty. Unlike Strauss and Debussy, who make dissonance the rule and consonance the exception, he uses dissonance only when it is called for by a discord in the plot or dialogue. An essay might be written on the difference this makes in the effect of the music; for one thing, it restores the thrill of modulation, which has always been one of the most powerful engines of emotion, but which becomes inert if the key is changed in every bar. The preponderance of euphony over cacophony also affects the orchestral coloring, which, in "Königskinder," is often of ravishing beauty. That Humperdinck understands the art of building a climax is repeatedly attested; even in "Hänsel and Gretel" there is nothing more effective than the music which, when the gates open, hovers like a halo about the princely goosegirl. Of absolute musical invention there is perhaps less than in "Hänsel and Gretel"; but as compared with Puccini's latest score, "Königskinder" is a well of melody undefiled. It will help to perpetuate the name of the creator of a new kind of music drama, the fairy opera.

One of the most interesting features of the MacDowell Club Christmas festival, held at the Plaza on Monday evening of last week, was the singing of rare old English madrigals and carols by a choir of twenty-five solo voices from the MacDowell chorus, under the direction of Mr. Kurt Schindler. Mr. Schindler is a connoisseur in the field of musical research, and music-lovers will not soon forget the concert of old French madrigals given by him last winter. The sixteenth and seventeenth century English madrigals, which had their first production here last Monday, proved no less interesting than the French; most of them were collected by Mr. Schindler in England last summer from various sources. The MacDowell choir will also assist at the Philharmonic concerts of January 3 and 6, when all the pieces on the programme will be by French composers, and the soloist the eminent Parisian operatic tenor, Edmond Clément. The full choir includes one hundred and fifty picked singers, and it has, in the short time of its existence, come to occupy an important place in the musical life of this city, much like the St. Cecilia Club of Boston, which is now under the Boston Symphony management.

Josef Hofmann is quoted as saying that "an artist does not go to Berlin to be heard, but to be criticised."

BURLINGAME PUBLIC LIB.

The organizer of a series of Sunday concerts in a Southern city sends us a set of five programmes, containing nothing but the most serious music by the great masters, including arias of sacred music. "I am sorry to say," he writes, "that the ministers, in their fear of an open Sunday, are trying to stop us. Think of it! A real, live string quartet playing the classics weekly in a city of 25,000 souls, and some of the best intelligence in the town trying to stop it!" There was similar opposition to Sunday concerts in New York two decades ago; now we have several every Sunday, and no minister has ever been able to report any harm resulting from them.

Louis Conterno, for nearly twenty-five years leader of the band of the Fourteenth Regiment, died December 22. He was the composer of several marches, including "The Owl," "American Valor," "Red Cloud," "Formation," and "The Coming Regiment."

Art

Worcester Porcelain: A description of the ware from the Wall period to the present day, illustrated by ninety-two collotypes and seventeen chromo-lithographs. By R. L. Hobson, B.A., author of the catalogues of, and guides to, the British pottery and porcelain in the British Museum. London: Bernard Quaritch.

This is far more than a sumptuous work for the library table; it is an invaluable monograph for collectors of one of the most interesting occidental porcelains. As a piece of plate making and printing it is a monument to the publisher's enterprise and good taste. The author says modestly that "it is chiefly on the illustrations that this book bases its claim to consideration," and these are, indeed, extraordinary. The resources of chromo-lithography have made it possible to portray in the actual colors and—a very different matter—to a considerable extent in the actual tone, a group of the finest procurable specimens of old Worcester, most of them from private collections. Viewed without reference to its reading matter, the volume makes a miniature museum of the porcelains produced in a single city from the beginning of the industry in 1751, down to to-day.

The accompanying letter press, however, is not perfunctory. Some chapters, indeed, might be criticised as being a little overweighted with citations from original documents and other details. But the narrative is very readable, as a whole, and it treats the history of an interesting artistic product as no Anglo-Saxon pottery has before been treated. To the earlier researches of R. A. Binns and J. E. Nightingale, and to the chemical investigations of Henry Eccles, the author, naturally, is indebted. His book, however, is not a mere compilation, for it records numerous discoveries and surmises of his own. Mr. Hobson properly emphasizes eighteenth-century Worcester. The products of the factory in the early part of the succeeding century underwent the deterioration which marked all the arts and which reached its worst degradation in the mid-Victorian period. The first porcelains sent out from Worcester had a Georgian elegance and fineness of proportions, and a certain trigness of technical finish, that were all their own. The glaze of that period, as Mr. Hobson observes, was always soft and glossy, and yet without the "fatness" that is common to most of the soft paste porcelains. It never "crazed," or split up into a network of fine cracks, a circumstance that probably gave it that fitness for general use to which the factory owed its survival.

The enthusiasm of John Wall, M.D., Oxford graduate, successful practitioner at Worcester, and painter of such talent that he might be called an amateur Gainsborough, originally led several of his wealthy fellow citizens who were anxious to bring a new manufactory to the city to decide in favor of porcelain making. One argument was that the introduction of high class artists and artisans would increase the Whig voting strength. Otherwise Worcester had no such natural claim to become a potting centre as had the Staffordshire towns. It is generally asserted that almost none of the materials for ceramics was at close hand. The river Severn, however, offered inexpensive transportation of the required clays, and Mr. Hobson's researches have definitely established the fact that the use as an ingredient of soapy rock from further down the river was not, as often stated, a later development, but that it began with the first firings. The introduction of this material was probably due to Dr. Wall himself, who may have learned it as a trade secret from somebody connected with an ill-fated porcelain enterprise at Bristol, regarding which some information has been unearthed.

From this beginning the Worcester soft paste porcelain industry soon became as well established and as characteristic an institution as the annual music meeting which has also survived to this time. It was, in fact, before the west county notables assembled for musical edification that the first public exhibition of the porcelain was made, on September 20, 1752. "What would the modern collector not give," asks Mr. Hobson, "for a true and faithful report of that exhibition, accurately describing the novelties offered and retailing the verdicts of the local connoisseurs?" Such a record, he cannot reproduce, though he exhibits a number of pieces known to belong to the first years of the factory, including at least one bowl which is believed to have been decorated by Dr. Wall himself.

The subsequent story of the factory at Worcester belongs to the history of the fictile arts in Great Britain. The works were sold in 1772. Dr. Wall died four years later. George the Third visited the shops in 1788, and showed his royal approval in a practical way. For a time, a competing enterprise was conducted in the same city, which the older industry eventually absorbed. Since 1862, a joint stock company has controlled the factory.

In covering the technical and artistic questions raised by a study of the output of an enterprise which has been obliged to be self-supporting, since the government has never subsidized it, Mr. Hobson shows his customary good judgment. He is not insular in matters of opinion. He is without illusions as to the artistic excellence of the ware when it is compared with the best porcelains of other countries. He knows what an exotic British porcelain is. The derivation of the Worcester patterns of various periods from Meissen, from Sèvres, from the Far East, is traced ingeniously and patiently, for Mr. Hobson finds that "the tracking of the Worcester designs and pursuing them to their ultimate source is a fascinating task for the collector who is something more than a dilettante. It is, besides, a sure way of enlarging one's horizon and of gaining that wider knowledge of porcelain in general without which the collector specialist is but a one-eyed creature." He likes best the Rococo period, "the brightest phase in the history of European porcelain. Careless, gay, and extravagant, it reflected perfectly the irresponsible spirit of the age of Boucher and Fragonard—an age of gallants and coquettes, of pretty costumes and picturesque poses." His work, however, of tracing the connections between Worcester and the other pottery centres in the decades after the reaction had taken place in "favor of the more sober pseudo-classic forms which were but ill-suited to the brightly glazed material," is equally thorough and painstaking.

Much attention is paid to the cribbing of Oriental patterns by the earlier Worcester artists, and their methods are interestingly compared with those followed since the more recent revival of the Japanese taste in European decorative art, beginning about 1868. "The Worcester decorators," Mr. Hobson writes, "adopted it with enthusiasm, but this third edition of Japanese patterns differed entirely from its predecessors. It was no longer a close imitation of the Japanese porcelain ornament which engaged their attention, but rather the utilization of designs of every kind, whether on ivory, metal, lacquer, or pottery." In comparing the present-day Worcester ware with that of the Wall period, Mr. Hobson, though conceding the remarkable manipulative skill of some of the artists now employed, maintains that "the modern porcelain is cold-

er and harder, and the general effect of the finished ware is less harmonious."

"A Painter's Progress" (Scribner), by Will H. Low, takes up the life artistic as experienced by the writer. Upon this leading thread are strung many ensamples from ancient and modern art, and there are sixteen illustrations. The six chapters were so many lectures delivered before the Art Institute of Chicago on the Scammon foundation. It is easy to see why they pleased. Mr. Low takes up certain vital problems of the artist with entire informality and with the warrant of one who knows. It is amusing to read that when for want of funds he was about to leave Paris, Carolus Durand could not be dissuaded from addressing his pupil's "municipality" for a subsidy. Needless to say, the petition never reached the city fathers of Albany. Mr. Low recalls that precisely such a subsidy given on the recommendation of a humble teacher by a poor village made possible the brilliant career of Paul Baudry. Perhaps the most interesting chapter is that on the education of the artist. Mr. Low believes in beginning with sculpture, and makes the novel suggestion of using modern sculpture for drawing classes, saving the antique as a reward for the proficient. On the more general issue he writes:

The study and production of the artist's profession, especially as understood in Europe, constitutes in itself a liberal education, and he is a dullard indeed who arrives at a respectable proficiency in art without having gleaned by the way a fairly good education.

We should be inclined to amend this statement by saying that life and society afford the artist more readily than they do most men an equivalent for formal schooling. The professional training of an artist no more implies culture than that of a dentist does. Mr. Low's account of his long service of the Leah of illustration is very interesting. It was in the end illustration, the drawings for Keats's "Lamia," that emancipated him. His advice to young artists is to hold their ideals intact, bide their time, and meanwhile do any work required for self-support. Here it is better to do something quite apart from your more personal ambitions. Our best bope for the future Mr. Low sees in the growing desire for civic art. He tells of a grimy miner who, standing before one of his own mural panels at Wilkes-Barre, remarked, "Well, I suppose that picture makes me a bit poorer, for it's paid for by the people of this county, but somehow I'm glad it's there." The present writer is glad that Mr. Low stood before artistic Chicago in confessional mood.

From Munich comes the report of the death of Ludwig von Löfftz, at the age of sixty-four. He was a pupil of Diez, and professor at the Munich Academy of Art.

The antiquary, Albert Hartshorne, has died at Worthing in his seventy-second year. He wrote on monumental effigies and other kindred subjects, among his books being "The Recumbent Monumental Effigies in Northamptonshire," "Old English Glasses," and "The Sword Belts of the Middle Ages."

The death is announced, in his fifty-sixth year, of Pierre Lagarde, the artistic director of the Paris Opéra. He had exhibited many times at the Salon.

Jean Robie, a member of the Belgium Academy, has died at the age of eighty-nine. He obtained a medal at the Paris Salon in 1851.

Finance

AT THE END OF THE YEAR.

The closing week of the year is traditionally a period for retrospect and introspection; for "taking of stock" in the largest sense of the term; sometimes for regrets concerning the past and good resolutions concerning the future; always for cool and deliberate survey of the events which have marked the twelvemonth past. In a year so crowded as 1910 has been with surprises, anomalies, perplexities, and disappointments, it is natural that the reckoning should be cast with more than the usual care, and of this we shall undoubtedly see abundant evidence in the financial outgivings of the next few days.

Whether the last week of such a year is a period when Wall Street's forecast of the financial future can be trusted for its prophetic insight is perhaps a different question. In the closing week of 1905, prices advanced with seeming enthusiasm, in the face of very severe stringency in the money market, which, as the sequel proved, was a far more correct barometer of the coming year's disturbed conditions than was the Stock Exchange.

The closing week of 1902 was similarly marked by a vigorous rise on the Stock Exchange; but call money went at 9 per cent., time loans pressed close at the maximum legal rate, and the New York banks reported loans $10,000,000 in excess of net deposits, whereas even at the close of the feverishly active financial year 1901, deposits had shown a $43,000,000 excess. It was the money market again whose prophecy turned out correct; the year 1903 was a period of heavy liquidation, forced by the bank position. On the other hand, no one in Wall Street can have forgotten the atmosphere of financial gloom and pessimism which prevailed in the closing days of 1903 and 1907. In each of those two instances the mood of Wall Street, as we can judge it nowadays, reflected what had happened, not what was about to happen. For 1904 and 1908 were years of surprisingly substantial recovery.

The last week of 1909 is not so far away as to make it possible to forget the singular incorrectness with which the Wall Street community looked forward to the immediate future. Talk on the Stock Exchange had to do with the coming "January rise" and the resumption, after the easing-off of the money strain, of the boom in stocks which had been carried through the autumn. How promptly, how completely, and with what disconcerting effect on financial plans and expectations, the violent financial reaction of 1910 began with the first month of the year, is now a part of history.

What was the matter? This question has been asked often enough in the course of 1910; it will be reëxamined by many thoughtful people, during the next few days. Most serious men who reflect upon it will arrive at three conclusions: First, the panic of 1907, here and abroad, was an economic event which meant more than our great financiers were willing to admit. Second, the excessively rapid recovery of 1908, with its "Sunshine movement" and its resumption of widespread speculation for the rise in every market, meant very much less than was asserted at the time Third, the great law of supply and demand has continued in operation upon every market and with all its usual consequences—among them, the consequence that the increasing of supply when demand is already insufficient, and the making good, through use of extended credit, of deficiencies in real demand, are sure eventually to cause reaction more violent because of its artificial postponement.

But all this is no new discovery. Precisely the same things were said, immediately after the panics of 1857 and 1873 and 1893, about the unreality and needlessness of those panics. Precisely the same early and premature attempt to resume the previous booming was witnessed in 1859 and in 1874 and in 1895. And precisely the same secondary reaction overtook all the markets before they had really begun to build on stable ground for the great achievements of the future.

But if this has been so regular a sequel to first-class financial panics, it will certainly be asked by some one, How did it happen that our great financial leaders and our conspicuous captains of industry were so completely deceived when exactly the same combination of circumstances arose again after 1907? The problem is really curious—perhaps it is more psychological than

financial. Some people who have reflected on the matter might reply that our financiers are opportunists, and pursue the practice of making the most of the visible tendencies of the hour. Others might possibly suggest that if large financiers have great blocks of securities of their own which they are holding on borrowed money, and which they must sell to the investing public, they must strenuously combat the impression that anything in the general situation will encourage postponement of such investment buying.

Still others would probably account for the attitude of the leaders by their innate hopefulness, by their knowledge of the unpopularity of pessimism, even when warranted by the facts, and by their somewhat habitual belief that booming things artificially is the preliminary to a genuine boom. Mr. Harriman's exploits in the markets of 1908 were applauded, even by Europe, on the ground that they had averted the natural consequences of 1907. But after all, considered in longer retrospect, did they avert such consequences? Perhaps the comment of to-day would be, that employment of concentrated credit may make the financial stream run up-hill for a season, but will always find it more or less difficult to keep it at the top.

BOOKS OF THE WEEK.

Almanach de Gotha, 1911. Gotha: Justus Perthes.

Bardeen, C. W. A Little Fifer's War Diary. Syracuse: The Author.

PROVENCE, LANGUEDOC, GASCONY

In Two Volumes

Each Set of Two Volumes Contains over 200 Illustrations (some in Photogravure) from Original Photographs. Per set (of 2 Vols.), $5.00 net.

These volumes are the fruit of many successive summers spent in wanderings in "rare unspoiled France" where the tourist and his suit-case are practically unknown.

With pen and camera the authors picture the Cathedrals of France, presenting the views of the consecrated structures as they appear to-day and telling their life story, with its drama and its glory in the days of old, before secularism sought to lay its paralyzing hand upon them.

G. P. PUTNAM'S SONS, NEW YORK & LONDON

LETTERS of JOHN DONNE

Ed., with notes, by CHARLES E. MERRILL, JR.

This limited edition is the first *verbatim et literatim* reprint of a notable book (almost lost to students for some 250 years) that enables us to realize the identity of the poet and the saintly Dean of Walton's admiration. (600 *copies printed on handmade paper. Small quarto, old style boards, slip case, frontispiece portrait.*)

RED-LETTER DAYS OF SAMUEL PEPYS

Selections from the Diary. Ed. by E. F. ALLEN; Introd. by F. B. WHEATLEY.

Typical passages giving in little the enlivening chronicle of Mr. Pepys, who turns himself inside out with such astonishing frankness in his immortal *Diary. (12mo. Cloth. Illus. $1.25 net.)*

STURGIS & WALTON CO.
